Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate->

<https://gradschool.psu.edu/graduate->admissions/how-to-apply/). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Ordinarily, an entering student will have successfully completed a baccalaureate degree in accounting or comparable accounting coursework. If the undergraduate major was not accounting, an applicant should have completed the following minimum core of accounting course work (or equivalent):

- financial and managerial accounting principles
- intermediate financial accounting I and II
- cost accounting
- federal taxation
- auditing

With program approval, all four courses in the certificate may be applied to the online Master of Professional Accounting degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate program students who wish to have the certificate courses applied to the master's degree program must formally be admitted to the master's degree program. Admission into the master's degree program is a separate step and is not guaranteed. Upon admittance to the master's degree program, certificate courses completed with a grade of B or better may be transferred into the program.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Course		
ACCT 504	Auditing Theory and Practice	3
Electives		
Choose 3 from the following 7 courses:		9
ACCT 510	Business Tax Planning Theory and Practice	
ACCT 532	Accounting Information and Decision Systems	
ACCT 545	Strategic Cost Management	
ACCT 550	Professional Responsibilities and Ethics in Accounting	
ACCT 561	Financial Statement Analysis II	
ACCT 572	Financial Reporting I	
PADM 523	Governmental and Nonprofit Accounting	
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by

graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **CRITICAL THINKING:** Graduates will objectively identify accounting problems, and research and apply appropriate solutions.
2. **APPLY:** Graduates will successfully apply professional standards to a variety of situations.
3. **COMMUNICATE:** Graduates will effectively communicate the results of their analysis regarding various accounting problems and questions.
4. **CONDUCT:** Graduates will be cognizant of ethical and legal considerations in business

Professional Licensure/Certification

Many U.S. states and territories require professional licensure/certification to be employed. If you plan to pursue employment in a licensed profession after completing this program, please visit the Professional Licensure/Certification Disclosures by State (<https://www.psu.edu/state-licensure-disclosures/>) interactive map.

Additive Manufacturing and Design Graduate Credit Certificate Program

Person-in-Charge	Allison Beese
Program Code	AMD
Campus(es)	World Campus

The overall goal of the graduate AMD Certificate is to educate post-baccalaureate students and working engineers in the fundamental principles and applications of additive manufacturing. The AMD Certificate provides an entry for industry practitioners and existing workforce to gain knowledge and skills for additive manufacturing. Many workers may already have a graduate-level degree yet seek opportunities for professional development and education, particularly in additive manufacturing and design. The 12-credit curriculum will expose students to the knowledge and skills necessary to work effectively across AMD domains.

Effective Semester: Spring 2023

Expiration Semester: Spring 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The admission requirements for the students enrolling in the online AMD Certificate will be based on a combination of academic records, resume and applicable work experience, personal statement of interests, and three letters of recommendation from a previous professor or supervisor who can attest to the applicant's academic potential. Applicants will be expected to have a Bachelor of Science or four-year Associate's degree from an accredited institution in engineering, engineering technology, manufacturing, materials science, or related field. An undergraduate cumulative grade point average of 3.0 or better on a 4.0 scale in the final two years of undergraduate studies is required. Official GRE scores are not required but will be considered if submitted.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits

Complete three of the following four non-laboratory courses, for a total of 12 credits:		12
EDSGN 562	Design for Additive Manufacturing	
ESC 545	Engineering and Scientific Principles of Additive Manufacturing	
IE 527	Additive Manufacturing Processes	
MATSE 567	Additive Manufacturing of Metallic Materials	
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

The overall goal of the graduate AMD Certificate is to educate post-baccalaureate students and working engineers in the fundamental principles and applications of additive manufacturing and design. Specific objectives for online students taking the AMD Certificate are to:

1. Apply foundational knowledge, critical thinking, problem solving, and creativity in the uses of additive manufacturing across industries.
2. Become competent engineers in additive manufacturing while maintaining the highest ethical standards in applying additive manufacturing to industry-relevant problems.
3. Identify the barriers to industry adoption associated with additive manufacturing technologies.
4. Articulate the value proposition for additive manufacturing in a given industry.

Adult Basic Education Post-baccalaureate Credit Certificate Program

Person-in-Charge	Esther Prins
Program Code	ABE
Campus(es)	World Campus

The goal of the program is to build educators' capacity to provide high-quality, research-based instruction in adult basic education (ABE), especially literacy and numeracy. The program is intended for people who are working, or wish to work, with adults who struggle with reading, writing, math, and/or English language proficiency. ABE instruction typically occurs in adult literacy, family literacy, GED, English as a second language (ESL), or developmental education classes offered by community-based organizations, community colleges, school districts, libraries, and alternative schools, among others. Delivered online through the World Campus, the 12-credit certificate includes three required courses and one elective, which allows students to tailor the program to their specific interests, such as ESL, program planning and administration, distance education, educational technology, adult learning, or other topics.

Effective Semester: Spring 2020

Expiration Semester: Spring 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Total Credits	12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- ADULT LIT & NUMERACY:** Students will learn theories and methods of adult learning to more effectively teach adult literacy and numeracy.
- TEACHING ADULTS:** Students will learn and understand models, motivation, issues, and instructional procedures of adult and distance education.
- ADULT LEARNING:** Students will learn and understand the history, theories, and models of adult learning.
- PROGRAM PLANNING:** Students will learn about program planning, including administering and designing courses and activities in an AE program.
- EVALUATION and RESEARCH of AE PROGRAMS:** Students will learn research and evaluation models and methods in AE programs.

Adult Education in the Health and Medical Professions Graduate Credit Certificate Program

Person-in-Charge	Elizabeth Tisdell
Program Code	MEDADT
Campus(es)	Harrisburg

The primary goal of the Graduate Certificate in Adult Education in the Health and Medical Professions is to assist medical/health professionals in increasing their knowledge and competence in educating adult learners in medical education/health science settings.

The objectives are to promote: awareness of how learning theory informs practice; effective methods for teaching adults; development of a reflective practice; understanding of program/instructional design.

Effective Semester: Summer 2020

Expiration Semester: Summer 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants must submit the following materials:

- A one-page resume
- A statement describing professional goals, experience, and responsibilities (2 pages maximum)

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
ADTED 460	Introduction to Lifelong Learning and Adult Education	3
ADTED 501	Foundations of Medical Education	3
ADTED 505	The Teaching of Adults	3

Electives

One 3-credit graduate elective related to the candidate's particular interest related to health or medical education, and could include other graduate courses in the Adult Education Program or another related area

3

Total Credits

12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- Know:** Graduates will demonstrate in-depth understanding of foundational knowledge of medical education and adult education. A demonstration will include the analysis and application of key educational constructs across a variety of formal, nonformal and informal health and medical settings.
- Apply:** Graduates will be able to design creative curriculum, courses, and workshops and teach innovative ways for engaging adult learners in health and medical settings.
- Critical Thinking:** Graduates will develop a critically reflective practice, whereby they regularly engage in reflection about their underlying assumptions and beliefs concerning the purpose of education, the role of educator, the role of the learner, context, and diversity and equity in the education of adults
- Communicate:** Graduates will be able to convey ideas or arguments in clear, concise, well-organized written papers and oral presentations.

Adult Gerontology Acute Care Nurse Practitioner Graduate Credit Certificate Program

Person-in-Charge	Sheri Matter
Program Code	AGACNP
Campus(es)	World Campus

The purpose of the Adult Gerontology Acute Care Nurse Practitioner certificate is to prepare individuals with a master's degree or higher in nursing seeking additional certification as an Adult Gerontology Acute Care Nurse Practitioner. The goal of this certificate is to prepare nurses to

provide direct care of adults/older adults with acute and complex illness in acute care health care settings. Applicants will have an individualized plan of study based on review of graduate transcripts.

Effective Semester: Fall 2022

Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants are required to have a master's degree in nursing from an ACEN or CCNE accredited institution. In addition, undergraduate chemistry and statistics are required. Students need to submit two recommendations, a goal statement, and official transcripts from all post-secondary institutions attended (<http://www.gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>). Applicants are required to have two years of experience as an RN in an acute care hospital setting.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Advanced Principal Graduate Credit Certificate Program

Person-in-Charge	Gerald LeTendre
Program Code	ADVPRN
Campus(es)	University Park

The program will build the capacity of students to achieve more equitable access and outcomes for students who become school leaders and who can be responsible for developing and sustaining a learning-centered school culture targeting excellence, equity, and efficiency. The courses will address the four major areas of competence outlined in the Pennsylvania Department of Education's Guidelines for school leaders:

- 1) contextual analysis based on a thorough understanding of qualitative and quantitative data;
- 2) skill development in team behaviors that advance action learning team effectiveness;
- 3) coaching one's peers in developing and implementing team-based action learning and learning; and
- 4) writing a case study on the effects of the team-based action learning process on achieving equitable student outcomes.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Master's degree in education or education-related field; Level I and Level II certificates (including but not limited to regular and special education, school psychologist, principal, school counselor, speech and language clinician, occupational and physical therapist, reading specialist, and home and school visitor); three years experience in a school leadership role.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits

EDLDR 841	Data Informed Leadership	3
EDLDR 842	Coaching for Leadership Capacity and Systems Change	3
EDLDR 844	Constructing Educational Case Studies for Peer Professional Development	3
EDLDR 895	Internship (3 one-credit courses)	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Understand and apply multiple sources of qualitative and quantitative data to identify and act upon problems of practice within an educational setting using data informed strategies.
2. Develop leadership skills for building communities of practice toward the improvement of academic excellence, equity and, student well-being.
3. Develop and apply a set of coaching strategies to support team based action learning.
4. Document action learning through the development of case studies which reflect a contextual analysis of their school, informed by multiple sources of data and describe the ways in which system level change was conceived and implemented.

Agricultural Biosecurity and Food Defense Graduate Credit Certificate Program

Person-in-Charge	Gretchen Kuldau
Program Code	AGBIO
Campus(es)	World Campus

This 12-credit graduate certificate program is designed to provide students with broad training in the field of agricultural biosecurity.

Courses cover animal and plant health, and food defense aspects of agricultural biosecurity and food defense. Content is both theoretical and applied but with an emphasis on practical application of knowledge gained. A distance education format is used to accommodate the needs of professionals already active in this area.

The certificate program is an attractive option for those who desire advanced graduate training but do not require the full Master's degree program. It is also ideal for students who wish to move into the degree program once all admissions requirements are fulfilled (e.g.,GRE); however, successful completion of a certificate program neither implies nor guarantees admission to a graduate degree program at Penn State. Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Courses taken in the certificate program may be applied toward a graduate degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>).

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). AGBIO 520	Agricultural Biosecurity: Protecting a Key Infrastructure	3
AGBIO 521	Food Defense: Prevention Planning for Food Processors	3
AGBIO 801	Veterinary Infectious Disease Diagnostic and Surveillance Systems	3
AGBIO 802	Plant Protection: Responding to Introductions of Threatening Pests and Pathogens	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Graduates will be able to describe the four basic steps in agricultural biosecurity preparedness, response and recovery, and recommend actions to support each step.
2. Graduates will be able to identify main threats to plant-based agriculture and will demonstrate knowledge of the current status of national preparedness and future needs against these threats.
3. Graduates will learn, recognize, and apply measures to prevent intentional contamination of the food supply.
4. Graduates will demonstrate knowledge of diagnostic and surveillance systems used to detect infectious diseases and protect against animal agricultural biological attack.

AI Engineering Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MSEAIE
Campus(es)	Great Valley World Campus

The Graduate Certificate in AI Engineering is a program for students who aim to pursue a career in AI or Machine Learning Engineering and become responsible for designing, building, and maintaining machine learning models, and models for natural language processing. Students develop knowledge and skills relevant to programming, machine learning, and natural language processing. A certificate will be awarded upon completion of the courses.

Courses taken in the certificate program may be applied toward a master's degree in Software Engineering, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
DAAN 862	Analytics Programming in Python	3
A-I 570	Deep Learning	3
A-I 574	Natural Language Processing	3
A-I 801	Foundation of Artificial Intelligence	3
Total Credits		12

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Engineer AI-based solutions using machine learning, natural language understanding, search and planning, agent systems, reinforcement and deep learning techniques.
2. Analyze, architect, design, implement and test AI-based systems.

Analytics for Managers Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	ANMGR_GCT
Campus(es)	Great Valley

The Analytics for Managers Graduate Certificate provides students with the knowledge and expertise to become data-savvy managers who can effectively communicate complex business problems and data-driven decisions to the management and general business audiences. Companies are producing enormous amounts of “big data” from their everyday operations. However, there is still a lack of leaders with the proper mix of empirical and managerial savvy who can provide actionable insights from that data.

The program is designed for business professionals who want to augment their managerial expertise with a quantitative skill sets. Along with fundamental concepts in data-driven decision making, effective communication and visualization of those decisions, the program allows students to choose between general business analytics or specialize in a specific analytics area such as Accounting, Marketing, or Human Resources. Upon completion, students will be conversant in utilizing appropriate tools and techniques for presenting what happened, analyzing how and why it happened, predicting future trends, and prescribing future strategies.

Effective Semester: Fall 2023
Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>)

[gcac-300/gcac-305-admission-requirements-international-students/](#)) for more information.

1. Applicants must hold either 1) a baccalaureate degree from a regionally accredited U.S. institution or (2) a tertiary (post-secondary) degree that is deemed comparable to a four-year bachelor’s degree from a regionally accredited U.S. institution. This degree must be from an officially recognized degree-granting institution in the country in which it operates. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Admission into the master’s program is a separate process and is not guaranteed. Certificate program students who wish to have the certificate courses applied to the master’s degree program must apply and be admitted to the master’s program. Upon admittance to the master’s program, certificate courses completed with a grade of B or better will be applied to the degree.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the graduate certificate, students must successfully complete 9 credits of course work with 6 required credits. All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Code	Title	Credits

ACCTG 804	Data Analytics in the Accounting Profession	
BUSAD 843	People Analytics	
IE 575	Foundations of Predictive Analytics	
DAAN 871	Data Visualization	3
MKTG 811	Driving Business Success with Marketing Analytics	
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- Effectively communicate technical knowledge, including ideas, data analysis, findings, or decision justification in written formats in a manner appropriate to the audience.
- Identify the appropriate statistical method/tool for a given business problem/scenario and perform the subsequent analysis.

- Identify business situations in which one can apply statistical analysis and prescribe actionable insights based on the analysis.

Ancient Languages Postbaccalaureate Credit Certificate Program

Person-in-Charge	Daniel Falk
Program Code	ANCLNG
Campus(es)	University Park

Advanced study in classical studies, ancient history, ancient philosophy, biblical studies, Egyptology, or ancient Near Eastern studies requires demonstrable proficiency in one or more ancient languages. The certificate in Ancient Languages, comprising 12 credits, is designed to provide proficiency in at least one ancient language for students who have completed an appropriate undergraduate degree and are planning to pursue graduate work in one of these fields. Training in a second ancient language is offered, and a writing-intensive course in a subject relevant to the student's interest will strengthen preparation for graduate-level research and writing.

Effective Semester: Fall 2024
Expiration Semester: Summer 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The applicant's baccalaureate degree must be in any humanities field that includes at least one year of study in an ancient language.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/>)

gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/).

A grade of B or better must be earned in each course to satisfy the certificate.

Code	Title	Credits

Applied Behavior Analysis Graduate Credit Certificate Program

Person-in-Charge	David Lee
Program Code	APPBA
Campus(es)	World Campus

This program is intended for those who seek advanced knowledge in the field of applied behavior analysis. The 21-credit curriculum is specifically designed to prepare students to sit for the Board Certified Behavior Analyst (BCBA) certification examination. After completing the program, students will be able to:

1. Define, apply, and explain behavior principles in response to applied situations.
2. Use evidence-based methods to collect, display, interpret, and communicate behavioral data.
3. Select, implement, and explain evidence-based methods of assessment for behavioral program implementation.
4. Select, implement, and explain evidence-based interventions to affect socially significant behavior change for clients.
5. Explain, communicate, and engage in professional practice using current ethical guidelines in behavior analysis.

Effective Semester: Spring 2020
Expiration Semester: Spring 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Applied Demography Graduate Credit Certificate Program

Person-in-Charge	Eric Baumer
Program Code	APDEM
Campus(es)	World Campus

The primary goal of the program is to provide an introduction to concepts, measures, data, software, and methods used in applied demography with an emphasis on applications in the public and private sectors. Professionals who complete this 12-credit program will be able to apply demographic analysis in their careers. This certificate will allow them to support organizations and better understand and anticipate the effects of population change. This program is ideal for those interested in careers as applied demographers, data analysts, market research analysts, marketing specialists, and local, state, and regional planners.

Effective Semester: Fall 2021
Expiration Semester: Fall 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>

[gcac-300/gcac-305-admission-requirements-international-students/](https://gradschool.psu.edu/graduate-education-policies/gcac-300/gcac-305-admission-requirements-international-students/)) for more information.

Applicants must have successfully completed at least an undergraduate-level statistics course with a grade of C or better.

Applicants are expected to submit the following:

1. Completed official online Graduate School application (<http://gradschool.psu.edu/prospective-students/how-to-apply/>) and payment of a nonrefundable application fee.
2. Statement of purpose: a 2-3 pages essay articulating career and educational goals that demonstrate the student's written communication skills and basic statistical knowledge.
3. A current curriculum vitae (vita) or résumé.
4. Three letters of recommendation that attest to the student's readiness for graduate study and document the requisite minimum of two years of work experience. Letters must be submitted through the online application system. Within the online application you will be asked to enter the names and e-mail addresses of three individuals who will be providing your recommendation. Those individuals will receive a note via e-mail asking them to complete a brief form that will serve as your recommendation. Please inform all recommenders they must submit the form in order for your application to be complete.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
APDEM 801		3
APDEM 802		3
APDEM 803	Applied Demography in Practice	3
SOC 573	Demographic Techniques	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Students will be able apply basic technical competence in demographic methods, GIS applications to population questions, and demographic data sources and their use.

- Students will be able to apply basic working knowledge of the theoretical and methodological processes of population change and recognize how the components of population change (fertility, mortality, and migration) interrelate with each other and other social processes.
- Students will be able to recognize demographic principles and population trends that impact decision making regarding business, non-profit public sector, health and environmental issues.
- Students will be able to identify demographic data sources and problem-solving examples of applied demographic knowledge and skills.
- Students will be able to address questions and planning objectives of managers, administrators, and government officials by examining case studies of how to use demographic methods.
- Students will be able to analyze and interpret aggregate data and use it to inform public policy decisions and investments.

Applied Statistics Graduate Credit Certificate Program

Person-in-Charge	Prabhani Kuruppumullage Don
Program Code	STATC_GCT
Campus(es)	World Campus

The graduate certificate in Applied Statistics helps quantitative professionals in a variety of fields become knowledgeable and skillful in applied statistics. The certificate was designed specifically for researchers working with statistical data who wish to advance their careers, and for those who seek career changes.

Effective Semester: Fall 2021
Expiration Semester: Summer 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>

[gcac-300/gcac-305-admission-requirements-international-students/](https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/)) for more information.

Qualified applicants will have successfully completed one course in statistics and have knowledge of matrix and linear algebra.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Students earn the certificate by completing 12 credits of instructor-led online course work. Two 3-credit courses are required, and the remaining 6 credits are selected from a list of electives. Students who successfully complete the certificate earn 12 academic credits and receive the graduate certificate in Applied Statistics. Students subsequently admitted to the Department of Statistic's professional Master of Applied Statistics degree program may count up to 15 credits of certificate courses toward the M.A.S. degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Applied Statistics must apply and be admitted to that degree program. Admission to the Applied Statistics graduate degree program is a separate step and is not guaranteed.

Business Analytics Graduate Credit Certificate Program

Graduate Program Head	Chris Solo
Program Code	BAN
Campus(es)	World Campus

The 9 credit graduate certificate program in Business Analytics (BAN) prepares business professionals to explore and analyze large data sets to support data-driven business decisions. The program covers the entire life cycle of a data analytics project using the descriptive/prescriptive/predictive framework for business analytics:

- descriptive (What happened?),
- predictive (What will happen?) and
- prescriptive (What should happen?)

Target audiences include business analysts, analytic systems designers and the data scientists who have a focus on problems arising in the contexts of business decision-making. The certificate program builds on basic analytic concepts that professionals are expected to have and provides a practical approach to expanding these analytic skills to perform tasks in various areas of business such as marketing, supply chains, operations, forensics, and risk.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Exceptions to GCAC-305 (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) will be considered by the program. Exceptions may or may not be granted by the Graduate School.

Admissions Prerequisite Requirement

Prior knowledge of statistics – Applicants should have knowledge or experience in quantitative work such as science, engineering, or business. The objective is to establish a baseline knowledge and to prepare the student for the advanced coursework in this program. Applicants from other disciplines will be considered based on prior academic and professional experience. Qualified applicants should have successfully completed an undergraduate- or graduate-level course in statistics or be able to show significant experience using statistics in a professional capacity. If a foundation in statistics is absent, the program may require the completion of a fundamental STAT course prior to entry.

Additional Requirements

Along with the submission of the online application and the nonrefundable application fee, the following is required:

- Transcripts - Submit official transcripts from all post-secondary institutions attended (<http://www.gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>).
- Vita or Résumé – Submit a one- to two-page listing of your professional experience.
- Statement of Intent – Describe how your professional experience and goals align with the Certificate in Business Analytics. Do not exceed 500 words.Upload to the online application.

GRE or GMAT test scores are NOT required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/>)

gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/).

Code	Title	Credits
Required Courses		
BAN 830	Descriptive Analytics for Business	3
BAN 840	Predictive Analytics for Business	3
BAN 550	Prescriptive Analytics for Business	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- Communication Skills:** Students will know how to formulate and articulate results, analysis, and strategic action plans individually and collaboratively in written, oral, or presentation form.
- Professional Skills and Problem Solving:** Using relevant tools, analytic theories, and professional observations students will be able to conduct analyses that transform data into meaningful information.
- Integrative Understanding:** Students will understand how to apply data and analytics to the full spectrum of business analytics practice (descriptive, predictive and prescriptive).

Business Architecture Graduate Credit Certificate Program

Person-in-Charge	Brian Cameron
Program Code	BUSARC
Campus(es)	World Campus

The Graduate Certificate in Business Architecture is offered by the Smeal College of Business. Business Architecture (BA) is a rapidly growing field within Enterprise Architecture and IT Strategic Planning. Business architecture aligns strategic objectives and tactical initiatives that often involve the use of enterprise information technology.

This 9-credit graduate certificate will provide a holistic approach to business architecture that produces a common understanding of the

organization, its sources of innovation/distinctiveness, and an approach for effective organizational transformation and strategy execution. Course content focuses on: (1) understanding and applying the concepts of modeling approaches to an enterprise, (2) understanding and fostering sources of organizational innovation, (3) understanding effective enterprise transformation and business strategy execution.

Effective Semester: Spring 2021

Expiration Semester: Spring 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Exceptions to GCAC-305 (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) will be considered by the program. Exceptions may or may not be granted by the Graduate School.

Other admissions requirements include:

- **Statement of Purpose** – Applicants must describe how professional experience and goals align with the Certificate in Business Architecture, not to exceed 500 words.
- **Vita or Résumé** – Provide a one- to two-page listing of professional experience and education.
- **Application** – Completion of the Graduate School certificate application (<http://gradschool.psu.edu/prospective-students/how-to-apply/>).

GRE/GMAT scores are NOT required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Business Process Integration Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	ISBPI_GCT
Campus(es)	Great Valley World Campus

The Graduate Certificate in Business Process Integration is a program for students who aim to pursue a career as a Business Analyst or IT Manager where skills will include responsibilities to analyze, architect, design, implement and manage the technical support aspects of an organizational IT system to meet the business needs.

Courses taken in the certificate program may be applied toward a master of science degree in Information Science, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Summer 2024

Expiration Semester: Summer 2029

Admission Requirements.

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>

Business Sustainability Strategy Graduate Credit Certificate Program

Person-in-Charge	Eric Foley
Program Code	BUSSUS
Campus(es)	World Campus

The Graduate Certificate in Business Sustainability Strategy (BSS) is offered by the Smeal College of Business. The BSS covers intermediate to advanced content for integrating sustainability into core business strategy and operations. The integration occurs by identifying and managing the environmental and social impacts of a business in order to drive profitability, reduce cost and risk, and build long-term value. BSS provides students with knowledge, skills, and practical tools for developing a sustainability strategy and measuring financial, environmental and social returns.

The nine-credit graduate certificate is aimed toward students that wish to further graduate study in the area of Business sustainability. Course content focuses on: (1) an exploration of sustainability and what it means to business regarding changes to the regulatory, consumer, and competitive landscape; (2) analysis of differences across a variety of domestic and international markets; (3) strategy development including external and internal analysis, employee engagement, governance, and ensuring sustainability is built in, not bolted on; and (4) the latest business models and sustainable design solutions to drive business value and environmental/social performance up and down the value chain.

Effective Semester: Spring 2024

Business-to-Business Marketing Graduate Credit Certificate Program

Person-in-Charge	Meg Meloy
Program Code	B2BMKT
Campus(es)	World Campus

The Graduate Certificate in Business-to-Business Marketing is offered by the Smeal College of Business. The graduate certificate is a 9-credit program that can be completed in one calendar year.

Through the Certificate Program, students will gain a unique understanding of business markets that prepares them for a job in Business-to-Business (B2B) marketing. They will learn fundamental concepts, theories, and tools specific to B2B marketing strategy, B2B innovation, and B2B analytics. The certificate is focused on creating, delivering, and harvesting customer value. The focus on proven tools and frameworks, in close collaboration with the Institute for the Study of Business Markets, ensures close alignment with B2B marketing practice.

Effective Semester: Fall 2024

Expiration Semester: Fall 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Children's Literature Graduate Credit Certificate Program

Person-in-Charge	Elisa Shaw Hopkins
Program Code	CHDLIT
Campus(es)	World Campus

The goal of the program is to provide students with an in-depth background in the theories and genres of literature for children and youth while also considering pedagogical (broadly construed) and cultural implications.

The program does not lead to any initial teacher certification, but may assist students with recertification. Students should check with their specific state departments of education for regulations regarding recertification. At least half of the course credits taken must be at the 500 or 800 level.

Effective Semester: Summer 2022

Expiration Semester: Summer 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Clinical Research Graduate Credit Certificate Program

Person-in-Charge	Cheryl Thompson
Program Code	HYCLRS
Campus(es)	Hershey

In the current medical climate, there is a growing need for academic clinicians and health care professionals who are trained in clinical research. Unfortunately, there are few programs that offer the didactic preparation for the unique requirements of a clinical researcher.

The primary goal of this program is to provide a formal, structured program that will prepare certificate candidates to pursue a successful career in clinical research. The curriculum includes courses in biostatistics, epidemiology, clinical trials, decision and cost-effectiveness analysis, outcomes measurement, quality management, health care economics and policy, scientific communication, and SAS statistical analysis computing. The 12-credit program offers courses on weekday evenings, enabling the student to continue clinical or employment activities. Certificate candidates will be able to complete the 12-credit requirement in 2 semesters.

Effective Semester: Fall 2020
Expiration Semester: Fall 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The successful applicant must have completed a medical, nursing, or baccalaureate degree from a regionally accredited institution. Fellows and junior faculty members with current appointments at the Penn State College of Medicine, as well as nursing graduates and public health personnel, are target candidates for the certificate program.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- Statistical tests:** Students will be able to understand basic statistical tests, and perform statistical inference.
- Statistical software:** Students will be able to use statistical software to conduct basic data analysis.
- Measures of disease frequency:** Students will be able to calculate and interpret measures of disease frequency and association in epidemiological studies.
- Analyzing epidemiological data:** Students will be able to conduct appropriate statistical analyses of epidemiological data and interpret the results.

Community and Economic Development Graduate Credit Certificate Program

Person-in-Charge	Laszlo Kulcsar
Program Code	CEDEV
Campus(es)	World Campus

The Graduate Certificate program in Community and Economic Development prepares student to confront the multidimensional challenges faced by community development practitioners. The main objective of the certificate program is to educate professionals who will assume leadership roles in helping establish and maintain viable communities. Recipients of the certificate will become deeply involved in assisting localities with a variety of issues, including: developing new organizations and new industries; growth management; protecting the environment; revitalizing downtown areas; enhancing the local quality of life; assisting educational, social, health and human service systems; and developing vital infrastructure—in short, working with communities to help them shape their own futures. The certificate program will teach the theory, skills and tools that allow practitioners to address the important issues in community and economic development. The certificate program emphasizes topical problems, drawing from the experiences of both students and the faculty. Students in Community and Economic Development gain a broad understanding of the dynamics of communities and their social, economic and political systems. With this training, recipients will have a wide range of career opportunities in an expanding job market. Some work for local or regional governments, industrial development authorities and chambers of commerce, major corporations, non-governmental organizations, or consulting firms. Others may work for development authorities, housing authorities, planning commissions or environmental planning and development agencies.

Effective Semester: Spring 2022

Ending Semester: Spring 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Students with a 3.00 average (on a 4.00 scale) for the most recent two years of college/university education, or with an advanced degree, and with appropriate course and experiential backgrounds will be considered for admission.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/>).

[gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/](https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/)).

The Graduate Certificate in Community and Economic Development (CEDEV Certificate) requires 15 credits, consisting of five 3-credit courses. The CEDEV Graduate Certificate is designed to build a basic level of knowledge and skills required for practitioners to address the important issues in community and economic development.

The certificate program is designed primarily for professionals in the field who wish to expand their existing knowledge and for those who wish to learn about community and economic development, including those working in or interested in dealing with the variety of development issues in America's towns, boroughs, small cities and rural areas. All courses are delivered online through the Penn State World Campus.

The five required courses introduce students to the field and cover the topics of Principles of Community and Economic Development and Leadership, Rural Organization, Economic Development Planning, Population, Land Use and Municipal Finance, and Methods and Techniques of Community and Economic Development. Courses taken in the certificate program may be applied toward a graduate degree in Community and Economic Development, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree in Community and Economic Development must apply and be admitted to that degree program. Admission to the Community and Economic Development graduate degree program is a separate step and is not guaranteed.

Code	Title	Credits
Required Courses		
CEDEV 430	Principles of Local Economic Development	3
CEDEV 452	Community Structure, Processes and Capacity	3
CEDEV 500	Community and Economic Development: Theory and Practice	3
CEDEV 509	Population, Land Use, and Municipal Finance	3
CEDEV 575	Methods and Techniques for Community and Economic Development	3
Total Credits		15

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

Students will demonstrate an understanding of:

- 1. LOCAL COMMUNITY AND ECONOMIC DEVELOPMENT PLANNING:** Concepts, strategies and techniques of local economic analysis, planning, and development.
- 2. SOCIAL PROCESSES:** The social organization, processes and changes that define a community.

- PROBLEM SOLVING STRATEGIES:** Application of sociological and economic principles and strategies to problem solving in the community context.
- THEORIES AND PROCESSES:** Theories, concepts and framework of community and economic development within the framework of community decision-making models.
- GOVERNMENT FINANCING:** The interaction of population characteristics, land use, municipal funds and taxation and how they impact the management of local government jurisdictions.
- ANALYTICAL TECHNIQUES AND METHODS:** Application of research methodologies and data collecting, techniques to analyze and recommend solutions to community and economic development issues and problems.

Computer Vision Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MAICV
Campus(es)	Great Valley World Campus

The Computer Vision Graduate Certificate prepares students for working as a CV Engineer responsible to analyze, identify, architect, design, and implement computer vision based systems. Students master the following skill set essential to this industry role:

- Identifying computer vision tasks
- Framing machine vision problems (image classification, objective detection, image segmentation, activity detection, etc.)
- Designing computer vision pipelines to collect and preprocess images and videos
- Building and evaluating computer vision models based on deep neural networks and statistical machine learning techniques
- Deploying computer vision models on cloud-based infrastructure, servers, and embedded devices

Courses taken in the certificate program may be applied toward a master's degree in Artificial Intelligence, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

- The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
- Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
DAAN 871	Data Visualization	3
A-I/DAAN 572	Reinforcement Learning	3
A-I 879	Machine Vision	3
Total Credits		9

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- KNOW** - Demonstrate proficiency in mastering foundational concepts in computer vision.
- APPLY/CREATE** - Demonstrate mastery of concepts and methods for modeling, designing, developing, and testing computer vision applications.

Corporate Innovation and Entrepreneurship Graduate Credit Certificate Program

Person-in-Charge	Shawn M. Clark
Program Code	CIENT
Campus(es)	World Campus

The graduate certificate in Corporate Innovation and Entrepreneurship is a 12-credit online program for industry professionals who are interested in developing a knowledge base and skill set in the area of innovation and entrepreneurship in the corporate sector. The program focuses on all aspects of corporate innovation management, such as: ideation, product / service development, managing customer experiences, brand management, entrepreneurial leadership, innovation strategies and methods, developing innovative corporate cultures, leading innovative teams, benchmarking, competitor assessment, future trend tracking, new venture creation, and technology commercialization. The certificate is geared towards individuals working in small businesses, on up to and including global conglomerates, where innovation and continuous improvement are imperative. Individuals interested in launching startup companies will also find this program beneficial.

For students interested in furthering their understanding and knowledge of this field, a Master of Management in Corporate Innovation and Entrepreneurship is available by taking an additional 21 credits of advance study. Courses taken in the certificate program may be applied toward the M.Mgt. in Corporate Innovation and Entrepreneurship, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards the M.Mgt. in Corporate Innovation and Entrepreneurship must apply and be admitted to that degree program. Admission to the Corporate Innovation and Entrepreneurship graduate degree program is a separate step and is not guaranteed.

Effective Semester: Fall 2024

Expiration Semester: Fall 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Counterterrorism Graduate Credit Certificate Program

Graduate Program Head	Lee Ann Banaszak
Program Code	CNTRTM
Campus(es)	World Campus

The Graduate Credit Certificate in Counterterrorism provides working professionals and others with social science based training to understand and address terrorism and other threats to U.S. homeland security. The Certificate emphasizes the development of core skills such as threat analysis, management, and reporting; basic data usage and presentation; the preparation of counterterrorism briefings and

reports; and the assessment of anti-terrorism strategies. Through the Certificate course work, students learn about the motives, threats, recruitment strategies, and operational tactics of terrorist organizations. The courses focus on key elements within counterterrorism, such as diagnosing the root causes of terrorism, identifying and using sources of data, critical data gathering and analysis skills, and radicalization processes. Certificate recipients will develop the capacity to identify conditions likely to encourage terrorism; define, evaluate, and assess counterterrorism techniques and operations; and turn collected data into actionable information. In this way, they will be prepared for leadership and supporting roles in the homeland security professional workforce. The Certificate is based around four courses that in turn form the core requirements for the Counterterrorism option within the online Intercollege Master of Professional Studies in Homeland Security.

Effective Semester: Summer 2023

Expiration Semester: Summer 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Data Analytics and Engineering Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MSEDAE
Campus(es)	Great Valley World Campus

The Graduate Certificate in Data Analytics and Engineering is a program for students who aim to pursue a career in Data Architecture where skills will include responsibilities in designing, building, and maintaining infrastructure for managing and analyzing large volumes of data. Students develop knowledge and skills in programming, data modeling and design, data integration, and data warehousing. A certificate will be awarded upon completion of the courses.

Courses taken in the certificate program may be applied toward a master's degree in Software Engineering, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Applicants with undergraduate degrees in a quantitative discipline such as science, engineering, or business may apply. Students from other disciplines will be considered based on prior coursework. Applicants are generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
DAAN 846	Network and Predictive Analytics for Socio-Technical Systems	3
DAAN 871	Data Visualization	3
DAAN 881	Data-Driven Decision Making	3
Total Credits		9

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Objectives

1. KNOW - Using analytical techniques, including end-to-end data analysis, descriptive and perspective analytics techniques, to extract information from data and to help people make better decisions.
2. APPLY/CREATE - To introduce the principles of network and predictive analytics for analyzing the interrelatedness of cyber-social and cyber-technical aspects of the society.

3. APPLY/CREATE - To introduce the principles, concepts, techniques and tools for visualizing information in large complex data sets.

Data Engineering for Analytics Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MDADEA
Campus(es)	Great Valley World Campus

The Graduate Certificate in Data Engineering for Analytics is a program for students who aim to pursue a career as a Data Engineer or Information Technology Officer and be responsible to architect, implement, and monitor data pipelines, assess requirements, apply relevant techniques to create robust data solutions, oversee the development of new information systems, plan, design, and deploy an enterprise virtual infrastructure.

Courses taken in the certificate program may be applied toward a master's degree in Data Analytics, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>

([gcac-300/gcac-305-admission-requirements-international-students/](https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/)) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
DAAN 822	Data Collection and Cleaning	3
DAAN 825	Large-Scale Database and Warehouse	3
DAAN 826	LARGE SCALE DATABASES FOR REAL-TIME ANALYTICS	3
Total Credits		9

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **KNOW** - Develop and integrate big data systems for analyzing large volumes of data to discover patterns and find insights.
2. **APPLY/CREATE** - Architect, implement, and test big data pipelines to create robust data warehouse solutions.
3. **APPLY/CREATE** - Architect, implement, and test big data pipelines to create robust real-time solutions.

Dietetic Internship Postbaccalaureate Credit Certificate Program

Person-in-Charge	Denise Lawson
Program Code	DIETIN
Campus(es)	University Park

Penn State's Dietetic Internship Program is a post baccalaureate, general, supervised practice program. The internship program is structured according to the Accreditation Council for Education in Nutrition and Dietetics (ACEND) Accreditation Standards for Nutrition and Dietetic Internship Programs (DI). Upon completion of the program, students are eligible to take the registration examination to obtain the Registered Dietitian Nutritionist (RDN)/Registered Dietitian (RD) certification administered by the Commission on Dietetic Registration.

Effective Date: Summer 2023

Expiration Date: Summer 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Students who have completed a baccalaureate degree and hold a valid Verification Statement from a Didactic Program in Dietetics (DPD) may submit an application for consideration.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Students are required to complete the following graduate-level credits earning a grade a "B" or better.

Code	Title	Credits
Required Courses		
NUTR 595A	Application of Community Nutrition – Internship	3
NUTR 595B	Application of Food Service Management – Internship	3
NUTR 595C	Dietetic Enrichment Experience - Dietetic Internship	1
NUTR 595D	Application Clinical Nutrition – Internship	6
NUTR 595E	Introduction to Nutrition Research -- Internship	1
NUTR 595F	Professional Portfolio Internship	1
Total Credits		15

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Objectives

The internship program is structured according to the Accreditation Council for Education in Nutrition and Dietetics (ACEND) Accreditation Standards for Nutrition and Dietetic Internship Programs (DI). Learning objectives include:

1. Conduct projects using appropriate research methods, ethical procedures and data analysis.
2. Demonstrate professional attributes in all areas of practice.
3. Demonstrate effective communication skills for clinical and customer services in a variety of formats.
4. Perform management functions related to safety, security and sanitation that affect employees, customers, patients, facilities and food.

Distance Education Postbaccalaureate Credit Certificate Program

Person-in-Charge	Susan Land
Program Code	DISTED
Campus(es)	World Campus

The certificate in Distance Education is a postbaccalaureate program designed for educators, administrators, and trainers who want to expand their knowledge and build competencies in the field of distance education, online learning, and open education. The program provides a systems view of how to structure successful distance learning experiences for higher education, corporate, healthcare, military, non-profit, K-12, and community-based settings. The goal of the program is to provide a solid historical foundation and to assist students in learning the latest trends, issues, research, design, and applications within the field of distance education - while experiencing them firsthand as a student.

Effective Semester: Fall 2021
Expiration Semester: Fall 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Diversity and Inclusion as Strategy Graduate Credit Certificate Program

Person-in-Charge	Vilmos Misangyi
Program Code	DVINST
Campus(es)	World Campus

The Graduate Certificate in Diversity and Inclusion as Strategy is offered by the Smeal College of Business. The graduate certificate positions students to approach Diversity, Equity and Inclusion (DEI) as a strategic leadership capability. Through this certificate program students will develop the core skills and competencies needed to manage diversity effectively as well as to lead or implement diversity related change initiatives successfully.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>)

gcac-300/gcac-305-admission-requirements-international-students/) for more information.

For admission to the Graduate School, an applicant must hold either (1) a baccalaureate degree from a regionally accredited U.S. institution or (2) a tertiary (postsecondary) degree that is deemed comparable to a four-year bachelor's degree from a regionally accredited U.S. institution. Other admissions requirements include:

Application – Completion of the Graduate School certificate application (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>).

Statement of Purpose – Submit a statement describing how professional experience and goals align with the certificate.

Vita or Resume – a one-to-two-page listing of professional experience

GRE or GMAT test scores are NOT required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
MGMT 845	Leading Diverse Organizations	3
Additional Courses		
Select 6 credits from the following courses:		
MGMT 831	Strategy Implementation and Organizational Change	3
BA 804	Ethical Leadership	3
BA 835	Global Perspectives	2
BA 836	Global Immersion	1
BA 888	Executive Leadership	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Apply evidence-based approaches to resolving diversity dilemmas at work
2. Analyze organizational culture to ensure that it is conducive to managing diversity effectively
3. Apply the framework for leading the change process
4. Discuss the concept of values (personal, organizational, cultural), and how values relate to ethical decision making, ethical leadership, and ethical culture.

5. Discuss the concepts of corporate social responsibility, sustainability, stakeholder analysis, and crisis management, and apply those to specific cases.

Diversity, Ethics, and Leadership Postbaccalaureate Credit Certificate Program

Person-in-Charge	Paul Clark
Program Code	DVETHL
Campus(es)	University Park

In today's dynamic and interconnected world, organizations face complex challenges related to leadership in the fields of human resource management and employment relations. The 9-credit Post Baccalaureate Certificate in Leadership in HRER is designed to empower professionals with the knowledge and skills to navigate these challenges, foster inclusive environments, and lead ethically in diverse settings.

Courses taken in the certificate program may be applied toward a master's degree in HRER, subject to restrictions outlined in [GCAC-309 Transfer Credit](#). Certificate students who wish to have certificate courses applied towards a graduate degree in HRER must apply and be admitted to that degree program. Admission to the HRER graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

- Applicants with a 3.00 junior/senior grade-point average (on a 4.00 scale) will be considered for admission. Exceptions to the minimum grade-point average may be made at the discretion of the program for students with special backgrounds, abilities, and interests;

- All applicants submit a Graduate School application (including payment of the nonrefundable application fee), resume, and personal statement addressing their reasons for pursuing a certificate in diversity, ethics, and leadership.
- The resume and personal statement are waived if a student is currently enrolled in the MHRER or MS HRER degree programs.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All courses must be completed with a grade of C or better and a grade-point average of 3.0 to be awarded the certificate.

Code	Title	Credits
Required Courses		
HRER 865	Diversity and Ethics in the Workplace	3
LHR 464	Communication Skills for Leaders in Groups and Organizations	3
LHR 465 or LHR 409	Collective Decision Making Leadership Development: A Life-Long Learning Perspective	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **Know:** Graduates will have and be able to demonstrate the necessary advanced knowledge and competence in diversity, ethics, and leadership to excel in their careers.
2. **Think:** Graduates will be able to recognize and analyze practical, legal, and ethical challenges related to diversity, ethics, and leadership issues in workplaces.
3. **Apply/Create:** Graduates will be able to conduct independent inquiries to identify current scholarship and best practices and effectively apply relevant theories and practices when solving problems related to diversity, ethics, and leadership.
4. **Communicate:** Graduates will be able to effectively communicate knowledge of current topics to excel as professionals in diversity, ethics, and leadership.
5. **Professional Practice:** Graduates should display behavior consistent with the highest ethical standards related to diversity, ethics, and leadership.

Educating Individuals with Autism Postbaccalaureate Credit Certificate Program

Person-in-Charge	Pamela Wolfe
Program Code	AUTISM
Campus(es)	World Campus

The focus of this post-baccalaureate certificate program is to provide comprehensive, evidence-based information on creating effective educational programming for individuals with autism spectrum disorders. After completing the 12-credit program, students will be able to:

- assess individuals with autism spectrum disorders to effectively provide instruction;
- develop strategies to enhance social, behavioral, communication, and academic gains;
- strengthen professional skills to work with families; and
- develop professional competencies to work with other educators and personnel in related disciplines.

Effective Semester: Summer 2022
Expiration Semester: Summer 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Electrical Engineering Post-Baccalaureate Credit Certificate Program

Person-in-Charge	Robert A. Gray
Program Code	EE
Campus(es)	World Campus

The Electrical Engineering Post-Baccalaureate Credit Certificate provides working professionals specific electrical engineering subject knowledge or an additional breadth of electrical engineering knowledge that can support career goals or needs. This certificate provides flexibility for students to choose online technical electives that best suit their needs, without stipulation of required courses. Nine (9) electrical engineering course credit hours with a 'C' or better are required. All completed

electrical engineering certificate courses with a grade of 'B' or better can be applied to the Electrical Engineering M.Eng. degree program offered through World Campus, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree in Electrical Engineering must apply and be admitted to that degree program. Admission to the Electrical Engineering graduate degree program is a separate step and is not guaranteed. Students who earn the electrical engineering certificate with an overall GPA of 3.0 are encouraged to apply for the Electrical Engineering M.Eng. program offered through World Campus and will not need to submit letters of reference with their application. Electrical engineering technical elective subjects include: power systems, electronic communication systems, control systems and signal processing.

Effective Semester: Fall 2021

Expiration Semester: Fall 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

It is expected that students have an ABET accredited Bachelor of Science degree in Electrical Engineering (BSEE) with a GPA of at least 3.0 in the final two years of school. Admission decisions will also be based on relevant transcripts, personal statement, work experience, and recommendation letters.

Those applying for admission in the Electrical Engineering certificate program without an ABET accredited Bachelor of Science in electrical engineering (BSEE) degree may be accepted with a strong background in mathematics and evidence that they meet the prerequisites to selected certificate courses. Note: The online electrical engineering certificate does not offer online prerequisite courses.

Prerequisite math courses for students who have not earned a Bachelor of Science in Electrical Engineering degree are: Calculus I, Calculus II, Calculus III (Multivariate calculus), Differential Equations, Complex Numbers and Probability/Statistics. Evidence to meet certificate prerequisite courses may include: Electromagnetics, Electrical Communications, Control System Design, Digital Signal Processing, Power/Machines, Signal and Systems (Fourier and Laplace transforms), Physics (Calculus based), Computer Programming (C,C++ or equivalent), Electrical Circuits (Calculus based) and Electronic Circuits. It is also very helpful to have some experience in MATLAB programming. All applicants are expected to have earned a junior/senior grade point average of 3.0 or higher.

Note: Technology degrees in electrical engineering, (for example, BSEET) are generally not an equivalent BSEE degree and therefore not accepted; applicants with a technology degree must meet all deficiency requirements and prerequisites to be considered.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Minimum credits is nine (9). Minimum overall GPA is 2.0. Time limitation is five (5) years.

Code	Title	Credits
Required Courses		
Select 9 credits from the following:		9
EE 460	Communication Systems II	
EE 480	Linear Systems: Time Domain and Transform Analysis	
EE 488	Power Systems Analysis I	
EE 531	Engineering Electromagnetics	
EE 553	Topics in Digital Signal Processing	
EE 560	Probability, Random Variables, and Stochastic Processes	
EE 580	Linear Control Systems	
EE 581	Optimal Control	
EE 588	Power System Control and Operation	
EE 589	Smart Grid Control and Dynamics	
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **KNOWLEDGE.** Graduates will be able to demonstrate understanding of principles in electrical engineering knowledge in either a broad sense of electrical engineering topics or focused subject area.
2. **CRITICAL THINKING.** Graduates will be able to conceptualize, evaluate and formulate electrical engineering problems, as well as perform the analyses required for problem defining and solving.
3. **PROBLEM SOLVING.** Graduates will be able to apply advanced knowledge, techniques, skills and use software simulation to solve electrical engineering problems.
4. **COMMUNICATE.** Graduates will be able to effectively communicate, using Penn State online learning resources, their solutions to electrical engineering problems, including the use of software simulation tools such as MATLAB.
5. **PROFESSIONALISM.** Graduates will be able to demonstrate professionalism, including the accomplishment of timely assignments and professional communication.

Engineering Leadership and Innovation Management Graduate Credit Certificate Program

Person-in-Charge	David Mazyck
Program Code	ELIM
Campus(es)	University Park World Campus

The primary goal of the Engineering Leadership and Innovation Management certificate program is to provide professionals with the knowledge and skills in the key aspects of engineering business: leading teams, identifying new business opportunities, working across international and cultural boundaries, effectively managing projects, and promoting internal innovation. The certificate program highlights the changing nature of the field of Engineering, impacted by globalization and the importance of intercultural competencies and innovation management in the workforce. Upon completion of the certificate, students will have developed attributes required by today's successful engineering leaders. Specifically, these include improved ability to lead technical teams and expanded professional skills in leadership, intercultural competence, and innovation management within the engineering profession. The twelve-credit certificate program is built from the College of Engineering approved Engineering Leadership and Innovation Management (ELIM) graduate degree program.

Effective Semester: Spring 2022

Ending Semester: Spring 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>)

[gcac-300/gcac-305-admission-requirements-international-students/](#)) for more information.

Applicants must hold a baccalaureate degree in engineering, science, or a related discipline.

Applicants must have a 3.0 minimum undergraduate GPA (or equivalent). Exceptions to the minimum 3.0 grade-point average may be made for students with special backgrounds, abilities, and interests. Applicants to the Engineering Leadership and Innovation Management (ELIM) certificate must submit the following materials:

- Penn State Graduate School application form (<http://gradschool.psu.edu/prospective-students/how-to-apply/>) and nonrefundable application fee;
- A Leadership and Innovation Personal Statement that includes a statement of career and educational goals including documentation of a minimum of one year of related full-time work. Students wishing to enter the program directly from an undergraduate degree can fulfill the 1-year requirement for work experience through summer internships, summer employment, or co-op experiences plus additional experience within professional societies. Justification for this experience should be included in the Leadership and Innovation Personal Statement. The statement should be an essay (2-3 pages in length) that demonstrates the applicant's written communication skills.
- Submission of a resume
- Submission of official transcripts from all post-secondary institutions attended (<http://www.gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>).

Admissions decisions for the program are based on the quality of the applicant's credentials. The decisions are based on a review of the complete application portfolio. During the admission process, students who appear to be better suited for another graduate level program will be encouraged to apply to the appropriate program. Graduate Record Examination (GRE) scores are not required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
ENGR 501	Engineering Leadership for Corporate Innovation	3
ENGR 802	Engineering Across Cultures and Nations	3
ENGR 804	Engineering Product Innovation	3
ENGR 405	Project Management for Professionals ¹	3
Total Credits		12

¹ Related project management specific courses may be substituted for ENGR 405 per approval by the ELD office.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by

graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Objectives

1. **Engineering Leadership:** Students will be able to describe leadership within the context of engineering and evaluate leadership strategies for corporate innovation.
2. **Innovation Management:** Students will be able to identify, promote, and lead opportunities for new products and businesses in alignment with an organization's strengths and weaknesses within an existing business structure.
3. **Cross Cultural Leadership:** Students will be able to demonstrate an understanding of cultural and international boundaries, effectively considering the implications of cultural and international business differences on project implementation.

English as a Second Language Program Specialist Postbaccalaureate Credit Certificate Program

Person-in-Charge Mari Haneda
Program Code ESL
Campus(es) Berks
 University Park

The postbaccalaureate ESL Program Specialist Certificate is designed to give teachers the essential knowledge and skills to effectively work with English learners, their families, and communities in public school (K-12)

contexts. Students are required to take five three-credit courses which correspond to the ESL Program Specialist K-12 Program Guidelines of the Pennsylvania Department of Education. It involves 15 credit hours of course work, including 60 hours of integrated field experience. The program will lead to demonstration of knowledge of the fundamental concepts and teaching practices of English as a Second Language instruction and services to the growing numbers of English learners in public schools.

Effective Semester: Summer 2023

Expiration Semester: Spring 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants to the English as a Second Language certificate program must have a minimum TOEFL score of 100 with a 23 on the speaking section for the Internet-based test (iBT), or a 600 on the paper-based test.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The program is a joint offering of the Department of Curriculum and Instruction in the College of Education and the Department of Applied Linguistics in the College of the Liberal Arts at The Pennsylvania State University.

Code	Title	Credits
Required Courses		
WLED 400	Foundations of Language in Second Language Teaching	3
WLED 444	Language, Culture and the Classroom: Issues for Practitioners	3
APLNG 484	Discourse-Functional Grammar	3
APLNG 493	Teaching English as a Second Language	3
WLED 483	Evaluating Schools Performances and Programs with English Language Learners (ELLs)	3
Total Credits		15

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up

deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **English Language Development:** Develop and demonstrate an understanding of English language structure, different varieties of English, and vocabulary development.
2. **Diversity, Community, and Equity:** Demonstrate an understanding of the impact of language and culture in the educational experiences of linguistically and culturally diverse students.
3. **Language Teaching Pedagogy:** Plan, differentiate, and demonstrate student-centered teaching using Second Language Acquisition principles and effective Second Language teaching practices.
4. **Assessment:** Use multiple and appropriate formative and summative assessment measures for a variety of purposes, including classroom and student self-assessment and technology-based assessment.
5. **Professionalism:** Conduct and integrate appropriate ESL research into planning and teaching; collaborate productively with other teachers; understand and articulate the legal basis and requirements for ESL services; and pursue professional development opportunities.

Professional Licensure/Certification

Many U.S. states and territories require professional licensure/certification to be employed. If you plan to pursue employment in a licensed profession after completing this program, please visit the Professional Licensure/Certification Disclosures by State (<https://www.psu.edu/state-licensure-disclosures/>) interactive map.

Enterprise Architecture Graduate Credit Certificate Program

Person-in-Charge	Carleen Maitland
Program Code	ENTARC
Campus(es)	World Campus

The certificate in Enterprise Architecture (EA) is designed to provide an introduction to EA and increase the knowledge of professionals seeking advanced leadership roles within an organization. EA strives to align the enterprise information systems and technology with business strategy

and goals to enable the most effective use of technology to both support and grow an organization.

The certificate program is an attractive option not only for those who desire advanced education and do not want a full Master's Degree program, but also for students who might want to take a certificate to determine if they are interested in a complete professional graduate degree program in Enterprise Architecture and Business Transformation. Up to 15 credits of Penn State course work taken in non-degree status may count towards a graduate degree in EA, but completion of the course work neither implies nor guarantees admission to a graduate degree program at Penn State. Courses taken in the certificate program may be applied toward a graduate degree in Enterprise Architecture, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree in Enterprise Architecture and Business Transformation must apply and be admitted to that degree program. Admission to the Enterprise Architecture and Business Transformation graduate degree program is a separate step and is not guaranteed.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

A bachelor's degree in a related area (e.g., information sciences, business architecture, or computer science), while not required, is helpful in the successful completion of the certificate. It is expected that students will have a foundation in information technology or enterprise architecture with a minimum of two (2) years of relevant professional work experience. Applicants with less than two years of relevant professional work experience may be considered but may be required to take prerequisite courses. For admission to the certificate, a 2.75 GPA, either overall or from the last 60 undergraduate credits, is needed. GRE scores are not required for non-degree graduate students.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The certificate is highly flexible and is designed to meet the different needs of students and organizations. The courses are delivered online through the World Campus. With online delivery, the certificate can easily fit into the work schedule of professionals from around the globe.

All candidates are required to complete nine (9) credits.

Code	Title	Credits
Required Courses		
EA 871	Enterprise Architecture Foundations I	3
EA 873	Enterprise Modeling	3
EA 874	Enterprise Information Technology Architecture	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **Know**—demonstrate appropriate breadth and depth of an enterprise technology stack and the comprehension of its application towards the strategic leverage in an organization.
2. **Apply/Create**—use architecture frameworks and assessment methodologies to apply knowledge, and create new, applicable knowledge supporting advanced, creative accomplishment.
3. **Think**—demonstrate analytical and critical thinking within the enterprise architecture discipline; and, in particular, the ability to improve thinking around the use of strategic use of technology from a business perspective.
4. **Professional Practice**—know and conduct themselves in accordance with the highest ethical standards, values, and, where these are defined, the best practices of their disciplines; and, in particular, the ability to understand the current state of technologies available and know when to leverage their use towards gaining strategic advantage in an organization.

Enterprise Information and Security Technology Architecture Graduate Credit Certificate Program

Person-in-Charge	Carleen Maitland
Program Code	ENTSEC
Campus(es)	World Campus

The goal of this advanced nine-credit graduate certificate in Enterprise Information and Security Technology Architecture (ENTSEC) is to provide information technology and business professionals with advanced knowledge of the enterprise information technology stack, enterprise architecture gap analysis, analytical risk management, migration planning, governance, and measurement, as well as security and network management strategy including: intrusion detection, encryption, authentication, and network management.

The certificate program is an attractive option for professionals who may also consider completing the M.P.S. in Enterprise Architecture. Up to 15 credits of Penn State course work taken in non-degree status may count towards a graduate degree in EA, but completion of the course work neither implies nor guarantees admission to a graduate degree program at Penn State. Courses taken in the certificate program may be applied toward a graduate degree in Enterprise Architecture, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree in Enterprise Architecture must apply and be admitted to that degree program. Admission to the Enterprise Architecture graduate degree program is a separate step and is not guaranteed.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Entrepreneurship & New Ventures Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	ENTNWV
Campus(es)	Great Valley

This Revised Graduate Certificate in Entrepreneurship & New Ventures is designed specifically for current and aspiring entrepreneurs or intrapreneurs to help students conceptualize and develop new business ventures and/or new products/services to take to market. The program will engage students in a creative process including opportunity recognition, idea generation and selection, the lean start-up process, and business plan development. Using a cross-disciplinary approach, students will gain competence in writing all sections of business plan development. Students will also have an opportunity to pitch their new ventures/products.

Effective Semester: Fall 2022

Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.

It is recommended that non-business degree holders take at least one elective course prior to BUSAD 811 and BUSAD 822. Please speak to your advisor before starting certificate.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the graduate certificate, students must successfully complete 9 credits of course work consisting of 6 required credits and 3 elective credits. All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Code	Title	Credits
Required Courses		
BUSAD 811	New Ventures Ideation and Feasibility Analysis	3
BUSAD 822	New Venture Start-up	3
Choose 1 course from the following:		
ACCTG 800	Financial and Managerial Accounting	3
BUSAD/LEAD 519	Developing Creative High Performance Organizations	
BADM 828	Negotiations	
BUSAD 882	Social Entrepreneurship and Community Leadership	
MGMT 507	Positive Organizational Behavior and Wellbeing	
MGMT 823	Organizational Change: Theory and Practice	
MGMT 873	Corporate Innovation Strategies	
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

Students will also have an opportunity to pitch their new ventures/products. Upon completion of certificate, students will be able to:

1. Demonstrate understanding of the new venture process including ideation, feasibility, and plan development.
2. Demonstrate skills required to develop a new venture.
3. Effectively communicate their plan and vision to multiple stakeholders.

Family Literacy Postbaccalaureate Credit Certificate Program

Person-in-Charge Esther Prins

Program Code FMLTRC

Campus(es) World Campus

The certificate in Family Literacy, based on a multidisciplinary approach to literacy instruction involving both adult educators and early childhood education and family literacy specialists, is intended for location-bound students who work in a variety of literacy-related settings, both formal and informal. These settings include public schools and preschools (teachers, teaching assistants, reading specialists), organizations such as Head Start and grant-funded family literacy programs. The goal of the certificate is to build the capacity of the field to provide high-quality, research-based instruction and program development in family literacy. The certificate consists of a 12-credit program delivered online through the World Campus. The program objectives include strengthening program effectiveness through developing an understanding of staff roles and responsibilities as part of a collaborative family literacy team and supporting a learner-centered approach to delivering program services.

Effective Semester: Spring 2020

Expiration Semester: Spring 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
ADTED 456	Introduction to Family Literacy	3

ADTED 457	Adult Literacy	3
ADTED 458	Early Literacy Development	3
ADTED 459	Interactive Literacy and Parental Involvement: Supporting Academic Success	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- FAMILY CHARACTERISTICS:** Students will understand the qualifying and distinguishing characteristics of families, such as strengths, goals, and needs, for whom family literacy services are designed.
 - PROGRAM CHARAC:** Students will be able to identify key characteristics and quality standards for the four components of family literacy programs: Adult Education (AE), Early Childhood Education (ECE), Parent Education (PE), and Interactive Literacy Activities (ILA).
 - ROLE OF PROF DEV:** Students will understand the role of professional development in family literacy.
 - ROLE OF DIVERSITY:** Students will understand how diversity impacts family needs and delivery of program services.
 - ROLE OF AE:** Students will understand the role of adult education and how it relates to adult learners' needs and their roles as caregivers, workers, and community members.
 - CHILDREN LANG & LIT:** Students will identify key characteristics of children's language and literacy development and how parents can support their children becoming successful readers and writers.
 - PARENT ROLE:** Students will learn how to strengthen and enhance parents' knowledge of their roles and responsibilities as their children's first teachers.
8. **ENGAGE IN ILA:** Students will learn how to engage in interactive literacy activities with children and how to engage with schools and teachers.

Family/Individual Across the Lifespan Nurse Practitioner Graduate Credit Certificate Program

Person-in-Charge	Judith Hupcey
Program Code	FNP
Campus(es)	World Campus

The purpose of the Family/Individual Across the Lifespan Nurse Practitioner (FNP) certificate is to prepare individuals with a Master's degree or higher in Nursing seeking additional certification as a Family Nurse Practitioner. The curriculum includes the didactic and clinical courses required for application of the NP role and required for certification.

Effective Semester: Fall 2022

Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants are required to have a Master's degree in nursing from an ACEN or CCNE accredited institution. In addition, undergraduate chemistry and statistics are required. Students need to submit two recommendations and official transcripts from all post-secondary institutions attended (<http://www.gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>).

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
NURS 870F	Family Nurse Practitioner Role with Healthy Family/Individual	3
NURS 871F	Family Nurse Practitioner Role with Individuals and Families with Complex and/or Chronic Health Prob	3
NURS 872F	Family/Individual Across the Lifespan Nurse Practitioner Doctoral Practicum I	2
NURS 873F	Family/Individual Across the Lifespan Nurse Practitioner Doctoral Practicum II	3

NURS 876F	Family/Individual Across the Lifespan Nurse Practitioner Doctoral Practicum in Child Health	1
NURS 877F	Clinical Practice Synthesis for Family/Individual Across the Lifespan Nurse Practitioner	3

Additional Course Work May Be Required ¹*Advanced Practice Core*

NURS 802	Advanced Health Assessment of Adult Populations	
NURS 802A	Advanced Health Assessment of Pediatric Populations	
NURS 803	Pathophysiology for the Advanced Practice Nurse	
NURS 804	Pharmacologic Therapy for the Advanced Practice Nurse	

DNP CORE

NURS 510	Theoretical and Scientific Foundations of Advanced Nursing Practice (DNP Core)	
NURS 830	Evidence-Based Practice I: Inquiry and Research Methods	

Total Credits		22
----------------------	--	-----------

¹ Any or all of these courses may be waived based on the certificate program chair's evaluation of transcripts and prior courses completed.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Design and evaluate new models of care based on integration of theoretical and empirical knowledge from nursing and related disciplines.
2. Translate evidence to guide practice and improve outcomes of care.
3. Analyze data which predicts and explains variations in practice.
4. Provide inter-professional leadership within an increasingly complex health care delivery system.
5. Prepare leaders to use information systems and technology to support and improve patient care and health care systems.
6. Prepare leaders to direct and deliver high quality, cost-effective care for diverse populations.
7. Shape health policy and systems of health care in the local, regional, state, national, and international forums.
8. Perform independently at the most advanced level of ethical specialty nursing practice.

Professional Licensure/Certification

Many U.S. states and territories require professional licensure/certification to be employed. If you plan to pursue employment in a licensed profession after completing this program, please visit the

Professional Licensure/Certification Disclosures by State (<https://www.psu.edu/state-licensure-disclosures/>) interactive map.

Financial Accounting Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	FINACT
Campus(es)	Great Valley

The Graduate Certificate in Financial Accounting provides the necessary academic preparation for students to pursue further graduate accounting education and prepare for the CPA exam. Topics covered are relevant to CPA licensure and include tax planning, understanding commercial transactions, ethics, accounting information system, government and not-for-profit accounting. All courses in the certificate may be applied to Penn State Great Valley's Master of Professional Accounting degree upon successful completion.

Effective Semester: Fall 2022
Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale. Student may apply who are not undergraduate accounting degree holders, but foundation coursework will be necessary.

Courses taken in the certificate program may be applied toward Penn State Great Valley's Master of Professional Accounting degree, subject to restrictions outlined in GCAC-309 Transfer Credit. Certificate students who wish to have certificate courses applied towards the Master of Professional Accounting must apply and be admitted to that degree program. Admission to the Master of Professional Accounting graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the graduate certificate, students must successfully complete 9 credits of course work. All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- Students will be able to identify and explain the application of data mining technologies within organizations.
- Students will analyze and assess basic flaws in accounting systems and internal controls and evaluate actions/decisions in terms of ethical components.
- Students will be able to analyze an organization's financial statements and compare to industry and key competitors.

Financial Analysis Graduate Credit Certificate Program

Person-in-Charge	Alfred Warner
Program Code	FINANL
Campus(es)	Erie

The Graduate Certificate in Financial Management is designed to enhance essential skills for making intelligent financial business decisions. The required courses for the certificate provide a strong foundation in financial theory, building on the concepts of time value of money and risk management. Students will acquire technical skills for developing analytical approaches and improve critical thinking abilities through hands-on coursework and real-world case studies. Real world examples will be covered in corporate finance, investments, portfolio theory and international analysis are emphasized.

In addition to being an excellent stand-alone credential, all of the courses in the Graduate Certificate in Financial Management can be applied toward the blended M.B.A. program offered through Penn State's Behrend College. However, successful completion of the certificate neither guarantees nor implies acceptance into any graduate program at Penn State. Admission to the M.B.A. graduate degree program is a separate step and is not guaranteed. Approval to apply nondegree graduate credits toward a degree program must be granted by the student's academic adviser, the program head or graduate officer, and the Graduate School. A maximum of 15 credits earned as a nondegree student may be applied to a degree program, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>).

Effective Semester: Fall 2021
Expiration Semester: Fall 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>).

gcac-300/gcac-305-admission-requirements-international-students/) for more information.

An applicant must demonstrate fundamental competence in Finance either by attaining a B or better in FIN 300, FIN 301, or equivalent or by completing an online training module as designated by the program.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All candidates are required to take 12 credits in four courses (corporate finance, portfolio management, portfolio analysis, and either undergraduate or graduate level financial statement analysis).

Code	Title	Credits
Required Courses		
ACCTG 426	Financial Statement Analysis	3
or ACCTG 881	Financial Statement Analysis	
BADM 532	Corporate Finance	3
BADM 834	Portfolio Management	3
FIN 420	Investment and Portfolio Analysis	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Master the basic tools of financial analysis including assessment of financial statements, valuation for stocks and bonds, capital budgeting, and assessing optimal capital structure.
2. Have a clear understanding and appreciation of a wide variety of risk types including market (systematic) risk, security (diversifiable) risk, psychological risks for investors, and several unique risks for different securities such as fixed-income securities. This class measures risk in terms of standard deviation (and variance) and in terms of beta.
3. Understand and quantify the role of risk management in two key ways. First, students will explore a variety of securities that would allow an investor or firm to hedge different risks and create value with risk management. Second, applied risk management projects ask students to identify firms that could benefit from management strategies.
4. Understand the entire spectrum of derivatives including those based on fixed-income securities, interest rates, foreign exchange, and equities. Master the basic techniques for the valuation of forwards, futures, swaps, and vanilla options (calls and puts).

Financial Analytics Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	FNDFNC
Campus(es)	Great Valley

The Graduate Certificate in Financial Analytics is a program that lays the foundations for those students who aim to pursue a career in corporate finance or as a financial analyst. The topics include: fundamental economics theory, knowledge about various financial instruments, financial planning methods, quantitative analysis tools and software for decision-making, portfolio management, valuation of fixed income securities and financial derivatives, and risk management in the global market. A certificate will be awarded upon completion of the courses. It will prepare the students with the finance skills to face the real-world workplace applications.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

1. Applicants apply for admission to the program via the Graduate School application for admission (<http://gradschool.psu.edu/prospective-students/how-to-apply/>). All candidates are required to take nine credits in three courses (Econometric Analysis, Derivative Securities, and Financial Modeling).

Code	Title	Credits
Required Courses		
MFE 801	Econometric Analysis	3
MFE 527	Derivative Securities	3
MFE 816	Financial Modeling	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up

deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Have a clear understanding of the theoretical background and classical assumptions for standard econometric methods, explain their significance, and describe the effects of violations of classical assumptions.
2. Be able to use econometric software to perform an empirical analysis.
3. Be able to examine the essential financial characteristics of derivative securities such as swaps, forward, futures, and options contracts and their roles in managing individual and corporate financial risk, and apply these concepts to integrate a comprehensive risk management approach.
4. Explain the theoretical arbitrage relationships that form the basis for all derivatives pricing.
5. Be able to analyze real-world finance data, apply advanced skills such as Data Analysis tools, Advanced reporting, Monte Carlo simulation, and user-defined functions via spreadsheet and scripting programming language to make financial decisions.

Folklore and Ethnography Graduate Credit Certificate Program

Person-in-Charge Jeffrey P. Beck
Program Code CLFKET
Campus(es) Harrisburg

This 15-credit graduate certificate program offered at Penn State Harrisburg provides students with skills and practices used in projects and institutions of folklore and ethnography, which include field/folk schools and other educational settings, festivals and arts councils, historical and heritage societies, community and cultural organizations and centers, archives and record management programs, governmental agencies, cultural conservation/sustainability groups, and media production companies.

Students will leave the certificate program with a rich understanding of the way that culture informs our society, politics, individual psychology, and collective memory. But it will balance the development of specialist

knowledge with the cultivation of practical skills for cultural inquiry and documentation. Students will develop their understanding of how to perform ethical and effective qualitative research with human subjects and will have many opportunities to apply these skills in field settings. They will also be offered opportunities to train in public sector work, including museum curation, historic preservation, and public programming.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants are expected to have 3.00 GPA or above in the last two years of undergraduate work in folklore, anthropology, sociology, American Studies, ethnic studies, history, communications, or other fields related to folklore and ethnography. Applicants should submit a 300-500 word statement of interest along with their application to the program.

A student in the certificate program may also become a student in the M.A. and Ph.D. in American Studies, M.A. in Communications, or M.A. in Humanities, if the student meets criteria for admission to the Graduate School and to the graduate program; however, successful completion of the certificate neither implies nor guarantees admission to a graduate program at Penn State. Courses taken in the certificate program may be applied toward a graduate degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The Folklore and Ethnography certificate is awarded for successful completion of 9 credits of prescribed courses plus 6 credits of electives from an approved list of courses. Students must earn a grade of B or above in each course that counts toward the certificate program. Substitution of courses related to folklore and ethnography for elective credits is possible with approval in advance from the certificate coordinator.

Code	Title	Credits
Prescribed Courses		
AMST 530	Topics in American Folklore	3
AMST 531	Material Culture and Folklife ¹	3

or AMST 541	Ethnography of Technology and Media in the United States	
AMST 540	Ethnography and Society	3
Electives		
In addition to the 9 credits of prescribed course work, students must select 6 credits from the following list of elective courses:		6
AMST 417	American Beliefs and Myths	
AMST 423	Folk Groups and Genres	
ANTH 448	Ethnography of the United States	
AMST 482	Public Heritage Practices	
AMST 493	The Folktale in American Literature	
AMST 550	Seminar in Public Heritage	
AMST 595	Internship	
or AMST 495	Internship	
ANTH 422	Meso-American Archaeology and Ethnography	
ANTH 445W	Ethnographic Film	
ANTH 453	Anthropology of Religion	
ANTH 457	Jewish Communities: Identity, Survival, and Transformation in Unexpected Places	
ANTH 458	Ethnographic Field Methods	
CI 511	Educational Ethnography: History, Theory, and Methods	
CI 512	Contemporary Educational Ethnography	
CI 513	Video Ethnography in Education	
CMLIT 408	Heroic Literature	
CMLIT 480	The International Folktale	
LLED 563	Myths and Folktales in Children's Literature	
Total Credits		15

¹ Student must choose to complete one of either AMST 531 or AMST 541 (both are not required, though either may be taken as an elective, if not used to complete the prescribed courses requirement).

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Demonstrate knowledge of folklore as a field, including its history, scope, and theories, and ethnography as an important research methodology.
2. Understand and apply methods and techniques applicable to folkloristic and ethnographic field research, such as personal or group interviewing, participant observation, field note taking, audio-video recording, ethnographic data coding, and ethnographic writing.
3. Develop skills for working with folkloristic and ethnographic organizations, such as archival processing; records management; festival and public programming; cultural resource management; oral and written communication; grant-writing; and media design.

Foundations of Artificial Intelligence Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MAIFAI
Campus(es)	Great Valley World Campus

The Foundations of Artificial Intelligence Graduate Certificate prepares students for working as an AI Engineer who will analyze, identify, architect, design, and implement AI systems using various techniques. Students master the following skill set essential to this industry role:

- Identifying AI related problems
- Designing AI-based solutions based on machine learning, computer vision, natural language understanding, search and planning, agent systems, reinforcement, and deep learning techniques
- Identifying ethical concerns
- Specifying accountable AI
- Developing proof of concepts for AI solutions

Courses taken in the certificate program may be applied toward a master's degree in Artificial Intelligence, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>)

gcac-300/gcac-305-admission-requirements-international-students/) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
A-I 801	Foundation of Artificial Intelligence	3
DAAN 862	Analytics Programming in Python	3
IE 575	Foundations of Predictive Analytics	3
STAT 500	Applied Statistics	3
Total Credits		12

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **KNOW** - Demonstrate proficiency in identifying disciplines in the AI landscape and mastering foundational concepts in machine learning, intelligent agents, search and planning techniques.
2. **APPLY/CREATE** - Demonstrate mastery of concepts and methods for modeling, designing, developing, and testing data-centric AI systems.

Foundations of Data Science Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MDAFDS
Campus(es)	Great Valley World Campus

The Graduate Certificate in Foundations of Data Science is a program for students who aim to pursue a career as a Data Scientist or as a Data Analyst and be responsible for creating solutions and strategies for complex problems, applying algorithmic methods to discover patterns in data, create comprehensive analytical solutions for business problems, analyze large amounts of data, create analytics solutions for business problems, and use of data to predict future trends and events. Students develop knowledge and skills relevant to machine learning, deep learning, statistical analysis and computing, and processing large amounts of data. A certificate will be awarded upon completion of the courses.

Courses taken in the certificate program may be applied toward a master's degree in Data Analytics, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement;

see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
DAAN 545	Data Mining	3
IE 575	Foundations of Predictive Analytics	3
STAT 500	Applied Statistics	3
Total Credits		9

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **KNOW** - learning techniques to formulate and build better predictive analytical systems.
2. **APPLY/CREATE** - introduce the principles of analytical thinking for addressing different aspects of the society.
3. **APPLY/CREATE** - learning techniques to formulate and build better descriptive analytical systems.

Fundamentals of Leadership Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	LDRSHP
Campus(es)	Great Valley

The Graduate Certificate in Fundamentals of Leadership prepares you to craft the building blocks of leadership. You will acquire fundamental knowledge for the character strength-based leadership development, full range leadership development, and the effectiveness of authentic, ethical, and creative leadership. Such knowledge provides a foundation for you to become a transformational leader who cultivates human sustainability and flourishing organizations.

Effective Semester: Fall 2022
Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale. Acceptance in the Graduate Certificate in Fundamentals of Leadership Certificate program has no GMAT or GRE requirements.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the graduate certificate, students must successfully complete 9 credits of course work consisting of 6 required credits and 3 elective credits. All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Code	Title	Credits
Required Courses		
LEAD 501	Leadership Across the Lifespan	3
LEAD/BUSAD 555	Full Range Leadership Development	3
Choose from one of the following courses:		
MGMT 507	Positive Organizational Behavior and Wellbeing	3
LEAD/BUSAD 556	Diversity Leadership	
LEAD 863	Ethical Dimensions of Leadership	
LEAD/BUSAD 519	Developing Creative High Performance Organizations	

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

Upon completion of the Graduate Certificate in Fundamentals of Leadership Certificate, you will:

- Build effective communication and creativity skills as they relate to authentic transformational leadership concepts and processes.
 - Demonstrate skills required for effective communication and promoting creativity in various leadership contexts.
- Build one's own personal authentic transformational leadership competencies through self-reflection and behavioral display.
 - Prepare a personal leadership development plan incorporating feedback from others, and personal strengths and weaknesses with respect to full range leadership behaviors.
- Foster a commitment to high integrity practices in various leadership contexts.
 - Evaluate and analyze the ethical dimension of decision making.

Geodesign Graduate Credit Certificate Program

Person-in-Charge

Roxi Thoren

Program Code

GEODZ

Campus(es)

World Campus

The purpose of the graduate certificate in Geodesign is to provide students with a foundation in geospatially-oriented design through investigating interdisciplinary methods and the collaborative nature of the Geodesign process. This program is for current or aspiring practitioners, from a variety of professional backgrounds, employed in government agencies, businesses, and non-profit organizations, who see limitations in how regional and urban planning and design challenges are currently addressed. The program is designed for professional practitioners who wish to advance their careers, and for those seeking to make career changes, while remaining in their current location or maintaining full-time professional responsibilities.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The certificate consists of a five-course, 15-credit curriculum that can be completed in one year and is delivered online through the World Campus. Students must earn a "C" or better in each course that is intended to count toward the certificate.

Code	Title	Credits
Required Courses		
GEODZ 511	Geodesign History, Theory, Principles	3

GEOEZ 822	GeoDesign Models I: Evaluation and Decision	3
GEOEZ 824	GeoDesign Models II: Process and Impact ¹	3
or GEOEZ 826	GeoDesign Models III: Representation and Change	

Electives

In addition to the 9 required credits specified above, students must select at least 6 credits of GEOG courses at the 400 level or higher; courses must be approved in advance by the student's adviser. A list of acceptable electives is maintained by the program office.

Total Credits 15

¹ Students will take one of these two "Models" courses; placement is dependent on previous experience.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Discern the core principles of historic and contemporary foundations of geodesign theory.
2. Identify cumulative affects of changes in population, climate, and biodiversity, and their impacts to food and water to understand how to influence major environmental and social change.
3. Comprehend the definition of geographic space in its broadest context, including temporal, cultural, economic and other social and environmental systems – essentially nD thinking.
4. Demonstrate knowledge of the multidimensional scope and scale of projects to which geodesign can be applied.
5. Appreciate the importance of balancing the creative and scientific processes and their influence on geodesign solutions.
6. Ascertain the appropriate application of key design methodologies specific to geospatial issues, such as systems thinking, and design as an operations/resources problem.
7. Assess how to balance instant feedback with sound decision–# support tools to effectively incorporate myriad data in combination with user needs and preferences.
8. Combine design – the proposed changes to a place – with relevant science–#based and value–#based information, in a manner that explores alternative solutions from a cross–#disciplinary, decision–# driven approach.
9. Critically develop and apply ethical frameworks to appropriately evaluate culturally, socially and economically diverse environments.
10. Develop a collective understanding of other disciplines, the multidisciplinary geodesign process, and how different specialists engage and intersect with one another.
11. Demonstrate proficiency in collaboration tools for team communication, efficient document sharing, topological diagramming, time/dynamics management, and media archiving.
12. Integrate contextual data, objects, and media to represent and discover relationships and constraints of a study area.

13. Apply a working knowledge of geospatial modeling tools that assess, visualize, and compare social, economic, and environmental consequences of design configurations over time.

Geographic Information Systems Postbaccalaureate Credit Certificate Program

Graduate Program Head	Anthony C. Robinson
Program Code	GISC
Campus(es)	World Campus

The Postbaccalaureate Certificate Program in Geographic Information Systems (GIS) helps professionals in a variety of fields become knowledgeable and skillful users of geographic information systems. The program was designed specifically for experienced GIS practitioners who lack formal education in geography and GIS and wish to advance their careers, and for those who seek to make career changes. The program is offered through Penn State World Campus.

Students subsequently admitted to the Department of Geography Master of Geographic Information Systems degree program may count up to 15 credits of certificate program courses toward the M.G.I.S. degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree in Geographic Information Systems must apply and be admitted to that degree program. Admission to the Geographic Information Systems graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2022
Expiration Semester: Spring 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>)

gcac-300/gcac-305-admission-requirements-international-students/) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Students earn the Postbaccalaureate Certificate by completing four instructor-led online courses – three required and one elective. Students who successfully complete the program earn 12 academic credits.

Geospatial Intelligence Analytics Graduate Credit Certificate Program

Person-in-Charge	Greg Thomas
Program Code	GEOINT
Campus(es)	World Campus

The graduate credit certificate in Geospatial Intelligence Analytics is for aspiring geospatial intelligence professionals as well as those with experience in the field who are only able to participate part-time and at a distance, while maintaining professional responsibilities. Students can take foundational or advanced courses depending on their level of expertise. The program promotes sound theory, methodologies, techniques, ethics, and best practices in the professional application of geospatial intelligence. The 15-credit curriculum integrates the geospatial information science and intelligence disciplines in a synergistic manner. The program is well suited for the geospatial intelligence professional serving outside the continental U.S.

Geospatial Programming and Web Map Development Graduate Credit Certificate Program

Graduate Program Head	Anthony C. Robinson
Program Code	GEOWBD
Campus(es)	University Park World Campus

The Graduate Certificate in Geospatial Programming and Web Map Development helps geospatial professionals become skillful developers of software for the GIS and mapping industries. These skills include the ability to script the automation of geospatial business processes, to develop custom user interface tools on top of existing desktop applications, and to author web-based mapping applications that support the exploration and analysis of geospatial datasets. Such skills are in high demand in the geospatial industry. This program is designed specifically for geospatial practitioners who seek formal education in geospatial programming and web mapping for the purposes of advancing their professional development or seeking a career change. It covers software development in the uniquely geospatial context using a mixture of proprietary and open source languages and technologies. The core learning objectives for students in this program are:

- Apply contemporary programming principles to automate geospatial analysis and mapping processes.
- Design and implement custom user interfaces to support mapping and spatial analysis.
- Create interactive web-based mapping applications that support spatial data exploration and analysis.

The certificate is offered online through Penn State's World Campus, and students earn the certificate by completing three prescribed courses and two elective courses. Students who successfully complete the program earn 15 academic credits. Students admitted to the Department of Geography's Master of GIS degree program may count up to 15 credits of certificate program courses toward the M.G.I.S. degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to a graduate degree program is a separate step and is not guaranteed.

Effective Semester: Summer 2023
Expiration Semester: Summer 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Intermediate-level experience with professional applications of geographic information systems is expected as pre-requisite knowledge. Course work to establish that pre-requisite knowledge is available through the related Postbaccalaureate Certificate in GIS (<http://bulletins.psu.edu/graduate/programs/certificates/geographic-information-systems-postbaccalaureate-credit-certificate-program/>) program.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses

GEOG 863	Web Application Development for the Geospatial Professional	3
GEOG 585	Open Web Mapping	3
Electives		
Choose 6 credits from:		6
GEOG 486	Cartography and Visualization	
GEOG 489	Advanced Python Programming for GIS	
GEOG 868	Spatial Database Management for the Geospatial Professional	
GEOG 865	Cloud and Server GIS	
Total Credits		15

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Application - Apply contemporary programming principles to automate geospatial analysis and mapping processes.
2. Communication - Communicate the nuances of complex spatial relationships with text, voice, and visual products to broadly inform professional and non-technical audiences in a range of contexts.
3. Creation - Create interactive web-based mapping applications that support spatial data exploration and analysis.
4. Critical Thinking - Objectively analyze and evaluate a situation in the context of available geospatial programming techniques and technologies in support of problem solving and decision making.
5. Cultural Competence - Demonstrate knowledge of cultural norms that are respectful of diversity and inclusion to establish a positive and professional work environment.
6. Ethics - Demonstrate ethical conduct by producing quality work, contributing to the community, managing professional relationships by establishing honest and respectful interactions among individuals and organizations.

7. Knowledge - Apply knowledge of programming technologies to design and implement custom user interfaces in support of mapping and spatial analysis to educate, solve problems and make decisions.
8. Professional - Demonstrate conduct in alignment with professional standards in interpersonal communication, mediation, and respect for diversity while recognizing appropriate team roles in professional, community and education-based activities.
9. Research - Combine accepted programming techniques and geospatial technologies to create new solutions for previously unencountered situations.

Global Health Graduate Credit Certificate Program

Person-in-Charge	Cheryl Thompson
Program Code	GLBHL
Campus(es)	Hershey

The purpose of this 12-credit graduate certificate in Global Health is to provide students with foundational graduate-level course work in global health. All course work will be at the 500 or 800 level. Upon completion of the Public Health certificate, students will be able to:

1. Demonstrate their knowledge of the major players and issues in global health, how global health systems interact, and the social, political, and cultural determinants related to health and health systems.
2. Apply their skills to assessing global health issues and developing solutions.

Certificate course work may be transferable to the Penn State Master of Public (M.P.H.) graduate degree program subject to restrictions outlined in GCAC-309 Transfer Credit, (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>) should a student wish to continue public health training at the graduate level. Students must earn a grade of B or better for a course to be applied to the M.P.H. degree program. Students who wish to pursue the M.P.H. degree must formally apply and be admitted to the Penn State M.P.H. degree program. Admission into the Penn State M.P.H. degree program is a separate step and is not guaranteed. Admission into the M.P.H. program, and credit towards a graduate degree for specific courses is not guaranteed based on acceptance into or completion of the certificate program.

Effective Semester: Summer 2023

Expiration Semester: Summer 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants must submit the following items with their application for admission to the Public Health certificate program:

- official transcripts from all post-secondary institutions attended (<http://www.gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>)
- Resume/CV
- Statement of Purpose or Rationale for seeking a Graduate Certificate in Global Health
- Two letters of recommendation

Admission decisions are made by a faculty committee and are based on the quality of the applicant's professional and academic accomplishments. Upon approval, certificate program students will enroll in course work on a nondegree basis. Note that admission as a nondegree graduate student neither guarantees nor implies subsequent admission to a degree program. Nondegree students are not eligible to receive fellowships or graduate assistantships.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Students must complete each course with a grade of B or better in order to receive the certificate.

Total Credits	12

¹ Dr.P.H. students take PHS 577.

² Epidemiology and Biostatistics Track students only.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes.

1. Propose evidence based solutions to global health problems.
2. Employ critical thinking and appraisal of the literature to explain the global influences on determinants of health.
3. Apply social justice and human rights principles in public health policies and programs.
4. Describe the roles and relationships of the entities influencing global health.
5. Identify the relationships among patterns of morbidity, mortality, and disability with demographic and other factors in shaping the circumstances of the population of a specified community, country, or region.

Global Justice and Security Graduate Credit Certificate Program

Person-in-Charge	Ahmet Guler
Program Code	GLJSSC
Campus(es)	World Campus

This certificate program aims to study current global justice and security issues as well as international efforts to combat global crime. Global criminal activities have increased to unprecedented levels in the last three decades and transnational organized crime groups have reaped the advantages of being able to operate and carry out their illicit activities beyond national borders. International security organizations and national criminal justice agencies have also intensified their collaborative and cooperative efforts in fighting against transnational criminal activities in the world. Designed mainly for working professionals, this certificate is ideal for both domestic and international criminal justice practitioners who desire to expand their knowledge and skills

in global justice and security issues and wish to advance their careers in international security organizations. Moreover, individuals planning to work in a broad range of international security-related careers may enroll in this certificate program to increase their chances to work in international organizations.

Effective Semester: Fall 2021

Expiration Semester: Summer 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits

Global Management Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	GLBMGT_GCT
Campus(es)	Great Valley

The Graduate Certificate in Global Management is a program for students who aim to pursue a career that includes international business interests and global management competencies. Students develop knowledge and skills relevant to developing and evaluating global and international management strategies and approaches to managing diversity, communicating across cultural contexts, evaluating international business objectives, making multinational managerial finance decisions, and comparing sustainable business practices, innovation, and the design of work in different economies. A certificate will be awarded upon completion of the courses.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Penn State Great Valley's Master of Business Administration degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Business Administration must apply and be admitted to that degree program. Admission to the Master of Business Administration graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the graduate certificate, students must successfully complete 9 credits of course work. All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Code	Title	Credits
Required Courses		
Select 3 of the following courses:		9
BUSAD 542	Global Intercultural Management	
FIN 805	Multinational Managerial Finance	
IB 800	International Business Management	
BA 836	Global Immersion	
LEAD 561	Dynamic Communication in Leadership Contexts	
BUSAD/LEAD 556	Diversity Leadership	
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Critical Thinking - The students will demonstrate critical thinking skills in analyzing and describing cultural dimensions relevant to managing and working across cultural boundaries.
2. Global/Knowledge - Students will be able to demonstrate knowledge of global financial markets and their impact.
3. Cultural Competence Skills - Students will develop and implement a personal diversity leadership improvement plan to build expertise in relating with diverse individuals in the workplace.

Healthcare Supply Chain and Operations Management Graduate Credit Certificate Program

Person-in-Charge	Dinesh R. Pai
Program Code	HSCOM
Campus(es)	Harrisburg

The complexity of healthcare delivery systems – varying levels of care, technological and regulatory changes, focus on preventative care, special projects, teamwork, and more – demands effective organizational operations. The goal of this 12-credit certificate program is to better prepare healthcare professionals with those contemporary skills and concepts necessary for the effective and efficient management of the healthcare operations while delivering high-quality, appropriate care. Students will learn to analyze, develop, and implement those functions related to producing and delivering services, managing projects, reducing waste, improving process, and sourcing materials in a healthcare setting.

Effective Semester: Spring 2022
Expiration Semester: Spring 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

This curriculum is designed for working healthcare professionals. Successful applicants will normally have, before the start of their first semester, at least two years' post baccalaureate work experience in healthcare management, healthcare operations, supply chain management, or a closely allied field.

The applicant's baccalaureate degree should be in business, engineering, economics, information sciences, or a related field and the applicant should have completed a college-level course in microeconomic principles with a course in supply chain management and/or operations management strongly recommended. A minimum undergraduate GPA of 2.8 is required unless the student has earned a graduate degree from an accredited university.

Ideally, the applicant should have a working knowledge of Microsoft Excel and business statistics, plus a basic understanding of accounting principles.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

HADM 541	Health Economics and Policy	
Select one of the following:		3
BUS 510	Business Analytics and Decision Modeling	
MANGT 510	Project Management	
SCIS 546	Procurement and Supply Management	
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up

deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Explain the importance of operations and supply chain management and its role in a healthcare organization's productivity and strategy.
2. Develop and apply tools to manage projects, improve processes, strategic sourcing, and inventory management.
3. Discuss public policy issues, technology, innovations, health system components, health care regulation.
4. Apply theory and techniques of financial management such as working capital, capital budgeting, and institutional financing to health organizations.
5. Apply analytics tools to drive data driven decisions.

Heritage and Museum Practice Graduate Credit Certificate Program

Person-in-Charge	Jeffrey P. Beck
Program Code	CLHMP
Campus(es)	Harrisburg

This 15-credit graduate certificate program offered at Penn State Harrisburg provides students with knowledge of practices in the heritage and museum sector, which includes historical and heritage societies, public folk arts and folklife centers and programs, art galleries, archives and record management programs, educational institutions, cultural and governmental agencies, preservation and cultural resource management groups, and media production companies. A goal of the program is to enable students to conceptualize, deliver, and manage effective heritage and museum projects.

Effective Semester: Fall 2022
Expiration Semester: Spring 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants are expected to have 2.75 GPA or above in the last two years of undergraduate work in American Studies, history, art, architecture,

anthropology, folklore, management, communications, or fields related to museum and heritage practice.

A student in the certificate program may also become a student in the Master of Arts in American Studies, Master of Arts in Humanities, or Master of Arts in Public Administration degree programs if the student is admitted to one of these graduate degree programs; however, successful completion of the certificate program neither implies nor guarantees admission to any graduate degree program at Penn State. Certificate program students who wish to have the certificate courses applied to a degree program must formally apply and be admitted to that degree program. Students enrolled in any of these degree programs may apply credits earned toward the certificate as elective credits with program approval, subject to restrictions outlined in GCAC-309 Transfer Credit. (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>)

Certificate Requirements

Homeland Security Graduate Credit Certificate Program

Person-in-Charge	L. Marvin Overby
Program Code	CLHLS
Campus(es)	World Campus

In this 12-credit graduate certificate program, students will learn about the origins and organization of the Homeland Security Enterprise, including relevant Congressional acts, Presidential policies, and national strategies, as well as the roles and shared responsibility of key agencies and partners at federal, state, and local levels, and from the private sector. They will apply that knowledge to current situations and select scenarios based on an all-hazards and whole-community approach to homeland security and emergency management.

Courses taken in the certificate program may be applied toward a graduate degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply

and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

The certificate program offers a viable opportunity for those who seek advanced education but do not wish or have not yet determined if they are ready to pursue a full master's degree program. For students in the Intercollege Master of Professional Studies in Homeland Security (iMPSHLS), this program may be pursued to earn an embedded certificate as an additional credential.

Effective Semester: Spring Semester 2021

Expiration Semester: Spring Semester 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants are expected to have a 3.0 or higher GPA in their undergraduate work.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The curriculum consists of two required courses (6 credits) and two electives (6 credits). Students must achieve a GPA of 3.00 or above to be awarded the certificate.

Code	Title	Credits
Required Courses		
HLS 811	Fundamentals of Homeland Security and Emergency Management	3
HLS 812	Homeland Security and Homeland Defense in Practice	3
Electives		
Choose 6 credits from the following (you may only choose one MBADM course):		6
HLS 475	Critical Infrastructure Protection	
HLS 540	Comparative Homeland Security and Related Methods	
HLS 558	Whole-Community Disaster Preparedness	
HLS 804	Strategic Planning and Organizational Imperatives in Homeland Defense and Security	
HLS 813	Multifaceted Approaches to Homeland Security	
HLS 820	Emerging Threats to Homeland Security	
HLS 821	Transnational Criminal Organizations and HLS	
HLS 832	U.S. Military's Domestic Imperative: Homeland Defense and Defense Support of Civil Authorities	

HLS 875 U.S. Homeland Security Law

In addition, students may choose one of the following courses as an elective:

MBADM 571 Global Strategic Management
or MBADM 8 Managing and Leading People in Organizations

Total Credits 12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **Explain** the origins and organization of the Homeland Security Enterprise.
2. **Describe** how relevant Congressional acts, Presidential directives, and national strategies influence decision making in homeland security.
3. **Identify** the roles and shared responsibility of key agencies and partners at federal, state, and local levels, and of the private sector.
4. **Assess** current situations and select scenarios.
5. **Evaluate** the all-hazards and the whole-community approach to national preparedness and emergency management.

Hospital and Health System Preparedness Graduate Credit Certificate Program

Person-in-Charge	Eugene J. Lengerich
Program Code	HHSP
Campus(es)	World Campus

The Graduate Certificate in Hospital and Health System Preparedness provides students with knowledge and skills to protect the critical infrastructure of hospitals, medical facilities, and emergency management systems. The effective protection of critical infrastructure will allow medical facilities and emergency management systems to remain functional in the midst of natural disasters and intentional and

unintentional incidents. The curriculum will emphasize a systems-based and an all-hazards approach to preparedness. Graduates will be experienced in development and revision of an emergency operations plan, both at facility- and community-level, and exercises to test and evaluate the plan. Graduates will be expected to understand and use an evidence-based approach in designing emergency operations plans and procedures. Graduates are employed by public health, hospitals and healthcare facilities, military and law enforcement, and emergency management services. The certificate is intended for students who seek to further their career in:

- Facility management and services
- Healthcare administration and management
- Emergency management and services
- Infection and quality control

Effective Semester: Summer 2019

Expiration Semester: Summer 2024

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants are required to submit a resume, statement of purpose, 3 letters of recommendation and GRE scores. Applicants may request a waiver from the GRE requirement if they meet one of the following criteria:

- 3.00 undergraduate grade-point average (GPA) either overall or in the last 60 credits;
- 5+ years of professional work experience;
- 3.00 GPA upon completion of a graduate certificate; or
- successful completion of a graduate or professional degree.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

This 15-credit graduate certificate requires the following courses:

Code	Title	Credits
Required Courses		
PHP 410	Public Health Preparedness for Disaster and Terrorist Emergencies I	3
PHP 510	Public Health Preparedness for Disaster and Terrorist Emergencies II	3
PHP 530		
PHP 831	Public Health Preparedness and the Emergency Operations Plan	3

PHP 832	Fundamentals of Biorisk Management	3
or PHP 527	Public Health Evaluation of Disasters and Bioterrorism	

Total Credits 12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. PHP ORG: Students will be able to identify major organizations, agencies, and policies that substantially affect the practice of public health preparedness.
2. PHP APP: Students will be able to identify, design, implement, and evaluate evidence-based approaches to public health preparedness.
3. PHP EPI: Students will be able to apply basic epidemiologic principles and methods to public health preparedness.
4. PHP HOSP ERP: Students will be able identify and evaluate hospital vulnerabilities and to develop a hospital emergency response plan.
5. PHP EXER: Students will be able to plan, implement and evaluate exercises for public health preparedness.
6. PHP BIORISK: Students will be able to identify laboratory biorisks and develop and evaluate biorisk security procedures and protocols.
7. PHP LEAD: Students will demonstrate effective leadership and team-based practices and procedures.

Hospitality Management Graduate Credit Certificate Program

Person-in-Charge	Donna Quadri-Felitti
Program Code	HM_GCT
Campus(es)	University Park

The graduate certificate in Hospitality Management enabled business professionals to acquire new skills to meet the demands of the rapidly changing global hospitality industry. The certificate provides a comprehensive overview of the hospitality industry, helps students

to incorporate data analytics in their decision-making processes and provides students with skills to conduct applies research.

Credits earned in the Hospitality Management certificate apply to the Master of Professional Studies (MPS) in Hospitality Management.

Admission Requirements

Applicants apply for admission to the program via the Graduate School Application for Admission (GRADS) (<https://gradschool.psu.edu/graduate-program-resources/grads-information/grads-access/>). Requirements listed here are in addition to the Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>). Additional admissions requirements include two letters of recommendation and a resume.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
HM 800	Dimensions and Directions of the Hospitality Industry (Executive In-Resident Weekend at University Park) ¹	3
HM 560	Hospitality Data Analytics ²	3
HM 550	Hospitality Applied Research and Consulting ³	3
Total Credits		9

¹ A comprehensive overview of the hospitality industry including foundational aspects that HM master candidates will use throughout their coursework. The content will include an overview of the various segments of the industry and the current events and future trends that will impact those segments.

² This course is for both aspiring and established leaders in the hospitality industry. It offers a cross-disciplinary curriculum taught by area experts and aims at helping students analyze, understand, translate, and incorporate data in their decision-making processes when designing and executing data-driven competitive strategies.

³ This course addresses the methods and skills necessary to conduct applied research: developing research questions determining a research design, identifying appropriate research methodologies, collecting and analyzing data, and providing solutions.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up

deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **KNOW:** Graduates will master advanced knowledge of the global hospitality industry and can distinguish the unique factors characterizing hospitality businesses as compared to businesses in other industries.
2. **APPLY / CREATE:** Graduates will be able to apply data analytics and related research skills to solve problems facing the various segments of the hospitality industry.
3. **COMMUNICATE:** Graduates will display outstanding communication skills.
4. **THINK:** Graduates will demonstrate the ability to think critically about current and future challenges in hospitality management.
5. **PROFESSIONAL PRACTICE:** Graduates will be able to conduct themselves in accordance with the highest ethical standards and be able to demonstrate the relevance of advanced hospitality education to any managerial environment.

Human Resource Management Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	HRMT
Campus(es)	Great Valley

The Graduate Certificate in Human Resource Management prepares students to integrate human resource (HR) strategies and practices with organizational strategies in order to improve business performance and employee relations.

Students apply fundamental considerations for managing people in organizations, including workforce planning, forecasting, & adjustment; ethics, diversity, & employment law; talent recruitment, selection, training, development, & performance management; compensation strategy & incentives; HR risk management and employee relations. Students develop knowledge for global and intercultural effectiveness, ethical leadership of strategic change, and specialized competencies for analyzing and managing the talent that drives organizational innovation and sustainability.

Students apply fundamental considerations for managing people in organizations, including workforce planning, forecasting, and adjustment; ethics, diversity & employment law; talent recruitment, selection, training, development, and performance management; compensation strategy & incentives; HR risk management, employee relations and career management. Students develop knowledge for leading strategic change, global and intercultural effectiveness, and specialized competencies for

analyzing and ethically managing the talent that drives organizational innovation and sustainability.

Effective Semester: Fall 2022

Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the Graduate Certificate in Human Resource Management, students must successfully complete 12 credits of course work. All courses must be completed with a grade of C or better and a grade-point average of 3.0 to be awarded the certificate.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Demonstrate appropriate depth and breadth of disciplinary knowledge of key processes, responsibilities, and concerns of Human Resource Management in U.S. and global organizations.
2. Critically analyze current issues associated with managing human capital and employee relations within and across organizations.
3. Critically evaluate and make ethical decisions with consideration for multiple stakeholders.
4. Demonstrate an appreciation for the skills and challenges required in managing a diverse workforce.

Human Resources and Employment Relations Foundations Graduate Credit Certificate Program

Person-in-Charge	Paul F Clark
Program Code	HRER
Campus(es)	University Park World Campus

The program is designed for professionals who desire further education in the specialized field of Human Resources and Employment Relations (HRER). The certificate program provides flexibility for working professionals and advanced knowledge in the rapidly changing field of HRER in many areas, including dispute management and resolution, workplace diversity, work and family, trends in human resources, and technology and the workplace.

Courses taken in the certificate program may be applied toward a master's degree in HRER, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree in HRER

must apply and be admitted to that degree program. Admission to the HRER graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

- Applicants with a 3.00 junior/senior grade-point average (on a 4.00 scale) will be considered for admission. Exceptions to the minimum grade-point average may be made at the discretion of the program for students with special backgrounds, abilities, and interests;
- All applicants submit a [Graduate School application](#) (including payment of the nonrefundable application fee), resume, and personal statement addressing their reasons for pursuing a certificate in HRER Foundations;
- The resume and personal statement are waived if a student is currently enrolled in the MHRER or MS HRER degree programs

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All courses must be completed with a grade of C or better and a grade-point average of 3.0 to be awarded the certificate.

A graduate student may register for or audit these courses in order to make up

deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **KNOW:** Students will be able to demonstrate the necessary basic disciplinary knowledge and competence to develop future ER and HRM careers.
2. **APPLY/CREATE:** Students will be able to apply their knowledge by interacting effectively with organizational leaders in helping to develop and implement organizational strategies.
3. **COMMUNICATE:** Students will be able to effectively communicate knowledge of current HRM and ER topics both verbally and in writing.
4. **THINK:** Students will be able to recognize and analyze practical, legal, and ethical ER and HRM challenges in the workplace.
5. **PROFESSIONAL PRACTICE:** Students will be able to respond appropriately to practical, legal, and ethical ER and HRM challenges in the workplace using both theoretical and practical approaches and in accordance with the standards, values and best practices of their discipline.

Information Systems Cybersecurity Graduate Credit Certificate Program

Person-in-Charge	Carleen Maitland
Program Code	ISSEC
Campus(es)	World Campus

This graduate credit certificate is designed to provide students with a foundation in information systems cybersecurity. The certificate will enable those completing the program to market to academic institutions, government, and technology-based businesses. Students will be exposed to principles, models, tools, and applications in information security that specifically focus on network security, security and risk

management, digital forensics, knowledge management, crisis and disaster management, and web security and privacy.

The certificate program is an attractive option for those seeking a career change or for individuals working in the industry who have no formal undergraduate academic education in information systems cybersecurity. The certificate is also attractive for individuals who do not wish a full master's degree program or for individuals who might wish to take a certificate to determine if they are interested in a complete postbaccalaureate degree program in Cybersecurity Analytics and Operations.

Courses taken in the certificate program may be applied toward a graduate degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to a graduate degree program is a separate step and is not guaranteed.

Institutional Research Graduate Credit Certificate Program

Person-in-Charge	Kevin Kinser
Program Code	INSTRH
Campus(es)	World Campus

The primary goal of the Institutional Research certificate program is to improve the skills of individuals on college and university campuses who want to become institutional researchers or who want to strengthen their understanding of how institutional research works. The 15-credit curriculum includes research design, assessment and evaluation of student and faculty issues, enrollment management, and the integration of strategic planning with institutional finance.

Effective Semester: Summer 2024

Expiration Semester: Summer 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). International Affairs Graduate Credit Certificate Program

Person-in-Charge	Mitchell Smith
Program Code	INTLAF
Campus(es)	University Park World Campus

This program provides students, professionals, and others with an accessible, professional education in the rapidly evolving field of international affairs. The certificate builds career options in international relations, public policy, intelligence, defense policy, military affairs, counterterrorism, diplomacy, international organizations, law enforcement, international business, international law, international education, economic development, international environmental policy, and international energy policy.

Effective Semester: Summer 2023

Expiration Semester: Summer 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

All applicants submit an application (including payment of the nonrefundable application fee), two letters of recommendation, and a personal statement addressing their reasons for pursuing a certificate in international affairs and discussing their plans and goals.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The 12-credit program offers a unique balance of academic study, hands-on training, and professional development; it includes 6 credits of core courses, 3 credits in additional core courses or SIA electives, and 3 credits in additional 500 or 800 level courses. In some cases, at the discretion of the certificate program head, substitution of a relevant course from an appropriate unit may be possible.

All courses must be taken for a letter grade with at least 3.0 grade-point average maintained; no grades below a C will be counted toward the certificate.

International Security Studies Graduate Credit Certificate Program

Person-in-Charge	Mitchell Smith
Program Code	INTLSS
Campus(es)	University Park

This program provides students, professionals, and others with an accessible, professional education in the rapidly evolving field of international security studies. Students study geopolitical, cultural, and international law aspects of international affairs pertaining to security dilemmas. The certificate is a strong addition to the resume of anyone interested in a career in international relations, public policy, intelligence, defense, military affairs, counterterrorism, diplomacy, law enforcement, international organizations, or international law.

Effective Semester: Summer 2023

Expiration Semester: Spring 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

All applicants submit an application (including payment of the nonrefundable application fee), two letters of recommendation, and a personal statement addressing their reasons for pursuing a certificate in international security studies and discussing their plans and goals.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The 12-credit program offers a unique balance of academic study, hands-on training, and professional development; it includes 3 credits of SIA core courses, 3 credits in additional SIA core courses or SIA electives, and 6 credits in additional 400, 500, or 800 level courses. In some cases, at the discretion of the certificate program head, substitution of a relevant course from an appropriate unit may be possible. All courses must be taken for a letter grade with at least a 3.0 grade-point average maintained; no grades below a C will be counted toward the certificate.

Code	Title	Credits
Required Courses		
3 Credits in SIA Core Courses. Select from the following:		3
INTAF 801	Actors, Institutions, and Legal Frameworks in International Affairs	
INTAF 802	Foundations of Diplomacy and International Relations Theory	
3 Credits in Additional SIA Core Courses or SIA Electives		3
6 Credits in Additional 400, 500, and 800 Level Courses on topics relevant to International Security Studies		6
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Students will be able to identify key issues relating to international affairs.
2. Students will be able to apply the knowledge they obtain to real-world examples.

IT Analytics Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	ISITA
Campus(es)	Great Valley World Campus

The Graduate Certificate in IT Analytics is a program for students who aim to pursue a career as an IT System and Data Analyst where skills will include responsibilities to design, build, and monitor the IT infrastructure for effectively supporting business operations.

Courses taken in the certificate program may be applied toward a master of science degree in Information Science, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Summer 2024

Expiration Semester: Summer 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Labor and Collective Bargaining Postbaccalaureate Credit Certificate Program

Person-in-Charge	Paul Clark
Program Code	LBCOLB
Campus(es)	University Park

The field of labor relations is pivotal to maintaining fair and productive workplaces. The 9-credit Post Baccalaureate Certificate in Labor and Collective Bargaining is designed to equip professionals with the knowledge and skills necessary to navigate complex labor relations issues, negotiate effectively, and contribute to positive labor-management relations.

Courses taken in the certificate program may be applied toward a master's degree in HRER, subject to restrictions outlined in [GCAC-309 Transfer Credit](#). Certificate students who wish to have certificate courses applied towards a graduate degree in HRER must apply and be admitted to that degree program. Admission to the HRER graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

- Applicants with a 3.00 junior/senior grade-point average (on a 4.00 scale) will be considered for admission. Exceptions to the minimum grade-point average may be made at the discretion of the program for students with special backgrounds, abilities, and interests;
- #All applicants submit a Graduate School application (<http://gradschool.psu.edu/prospective-students/how-to-apply/>) (including payment of the nonrefundable application fee), resume, and personal statement addressing their reasons for pursuing a certificate in labor and collective bargaining;
- The resume and personal statement are waived if a student is currently enrolled in the MHRER or MS HRER degree programs.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All courses must be completed with a grade of C or better and a grade-point average of 3.0 to be awarded the certificate.

Management Essentials Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	MGMTES
Campus(es)	Great Valley

The Graduate Certificate in Management Essentials provides students with fundamental business skills that are necessary in almost any career today. The program is designed for people who are moving up the career ladder and whose responsibilities now require a diverse set of skills including people and team management, business development, and strategic decision making. Courses in this program provide a broad introduction of the core principles of business in areas such as organizational behavior, marketing, economic theory, and managing enterprises in a digital age.

The program emphasizes the role of a senior manager or business owner who is in a position of making strategic decisions for a company. Upon completion, students will learn effective leadership strategies to motivate teams and individuals, the role of organizational culture in shaping those strategies, market segmentation and product placement, how economic forces shape the markets, and strategies for managing in the digital age. These versatile skillsets are highly valued by any employer and provides confidence to business owners to adapt their strategies as markets and conditions change.

Effective Semester: Fall 2022

Expiration Semester: Summer 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement;

see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the graduate certificate, students must successfully complete 9 credits of course work consisting of 3 required credits and 6 elective credits. All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Code	Title	Credits
Required Courses		
MGMT 501	Behavioral Science in Business	3
Choose 2 elective courses from the following:		6
BA 800	Marketing Management	
BUSAD 523	Prices and Markets	
BUSAD 837	Managing Digital Enterprises	
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- Students will understand the issues surrounding the management of groups and individuals.
- Understand the key concepts, analytical perspectives, and decision tools of marketing that aid in market evaluation and planning.
- Predict firm and individual behavior based on the process of rational decision making.

Marketing Analytics Graduate Credit Certificate Program

Person-in-Charge	Chelsea C. Hammond
Program Code	MKTANL
Campus(es)	World Campus

The Graduate Certificate in Marketing Analytics is a 12-credit online program focused on building a core understanding of key functions in the field of marketing analytics. The program focuses on how marketing analytics are (1) applied within organizations, (2) conducted, and (3) meaningfully communicated and applied to business decision-making and strategy. The curriculum is geared towards college graduates interested in developing skills in marketing analytics functions, but who may have little or no formal training in the field. The certificate is industry applicable, since it is aimed at giving professionals the core knowledge they need to successfully apply marketing analytics in today's data-driven organizations.

Effective Semester: Spring 2024

Ending Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Exceptions to GCAC-305 (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) will be considered by the program. Exceptions may or may not be granted by the Graduate School.

Along with the submission of the online application and the nonrefundable application fee, the following are required:

- **Statement of Purpose** — Applicants must describe how professional experience and goals align with the Certificate in Marketing Analytics, not to exceed 500 words.

- Vita or Résumé – Provide a one- to two-page listing of professional experience and education.
- Application –Completion of the Graduate School certificate application.

GRE or GMAT test scores are NOT required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
MKTG 811	Driving Business Success with Marketing Analytics	3
MKTG 812	Evaluating Marketing Communications in the Digital World	3
MKTG 813	Data-Driven Customer Acquisition & Retention	3
MKTG 814	Analytics for Brand Management and Customer Experience	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **Communication Skills:** Students will know how to formulate and articulate results, analysis, and strategic action plans individually and collaboratively in written, oral, or presentation form.
2. **Professional Skills and Problem Solving:** Using relevant tools, analytic theories, and professional observations students will be able to conduct analyses that transform data into meaningful information.
3. **Integrative Understanding:** Using marketing theory, students will understand how to apply data and analytics to brand management, consumer behavior, market profiling, digital communications, and the acquisition and retention of customers.

Natural Language Processing Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MAINLP
Campus(es)	Great Valley World Campus

The Natural Language Processing (NLP) Graduate Certificate prepares students for working as an NLP Engineer who will analyze, identify, architect, design, and implement NLP based systems. Students master the following skill set essential to this industry role:

- Identifying NLP tasks
- Framing NLP problems (language translation, chatbots, speech recognition, language models, etc.)
- Designing NLP pipelines to collect and preprocess textual data.
- Building and evaluating NLP models based on deep neural networks.
- Implementing explainable and interpretable NLP models.
- Evaluating ethical and fairness in NLP tasks

Courses taken in the certificate program may be applied toward a master's degree in Artificial Intelligence, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Negotiation and Influence Graduate Credit Certificate Program

Person-in-Charge	Stephen Humphrey
Program Code	NEGINF
Campus(es)	World Campus

The Graduate Certificate in Negotiation and Influence is offered by the Smeal College of Business. The Negotiation and Influence certificate covers basic to advanced content on negotiation skills, delivering students a combination of negotiation theory, case discussion, and hands-on trial and error learning in an effort to identify, refine, and develop negotiation capabilities. The Negotiation certificate will provide students with knowledge, skills, and practical tools for developing the critical social relation capabilities necessary for success at work.

Course content focuses on: (1) the development of critical dyadic negotiation knowledge and skills; (2) refinement of the skills in an expansion to a multiparty context; (3) helping students identify and gain sources of power at work; and (4) learn how to influence others both with and without the use of power.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Nonprofit Administration Graduate Credit Certificate Program

Person-in-Charge	Triparna Vasavada
Program Code	CLNPFT
Campus(es)	Harrisburg

The certificate program in Nonprofit Administration is offered by the Master of Public Administration program at Penn State Harrisburg, which is accredited by the National Association of Schools of Public Affairs and Administration.

This certificate is delivered in person via Penn State Harrisburg.

Purpose/Who Should Apply/What You Will Learn

The purpose of the certificate is to provide comprehensive knowledge of the dynamics of conceptualizing, managing, and leading the nonprofit sector. You will gain knowledge in the following areas:

- Functions and uniqueness of nonprofit organizations
- Fundraising in nonprofit organizations
- Financial management of government and nonprofit organizations
- Effective leadership practices, board development, and management strategies in nonprofit organizations

The certificate is designed for individuals interested in future careers in the nonprofit sector or working in and with the nonprofit sector in various roles such as directors, CEOs, staff, board members, philanthropists, and volunteers.

The certificate program in Nonprofit Administration requires taking four courses (12 credits) – three required and one elective course.

Courses taken in this certificate program may be applied toward the completion of the MPA program.

Effective Semester: Summer 2022

Expiration Semester: Summer 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. Applicants must have a GPA of 3.0 in the last two years of undergraduate work.
2. Applicants must have at least two years of managerial or administrative experience in the nonprofit sector.

If a student who is already enrolled in a graduate degree program wishes to enroll in this graduate credit certificate program as well, he/she must do so by completing the online certificate application and paying the nonrefundable application fee.

Students who are already enrolled in the Public Administration degree program at Penn State Harrisburg must complete a "Notice of Intent" form as well in order to enroll in the certificate program. These students can choose elective courses for their M.P.A. degree program in accordance with the requirements of the certificate program in order to earn the certificate in Nonprofit Administration. Courses taken in the certificate program may be applied toward a graduate degree in Public Administration, subject to restrictions outlined in GCAC-309 Transfer

Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>).

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The certificate program consists of four graduate courses (12 credits). All courses must be at the 500 level. Students are required to take three required courses and one elective course of their choice. All courses must be taken for a letter grade with at least a 3.0 average maintained; no grades below a C will be counted toward the certificate.

Code	Title	Credits
Required Courses		
PADM 517	Nonprofit Organizations: History and Evolution	3
PADM 518	Nonprofit Organizations: Management and Leadership	3
PADM 519	Nonprofit Organizations: Resource Development and Management	3
Electives		
Students are required to take one elective 3-credit course. Students are free to choose any 3-credit course at the 500 level that is relevant to their interest. Following is the suggested list of courses from which students can choose.		3
PADM 510	Organization Behavior	
PADM 514		
PADM 516	Strategic Planning	
PADM 522	Government Financial Management	
PADM 523	Governmental and Nonprofit Accounting	
PADM 550	Policy and Program Evaluation	
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Explain the key issues in administration (leadership challenges strategic planning fundraising, volunteer management, evaluation and accountability, fundraising, government contracting) and its importance for nonprofit organizations.
2. Describe the unique role that nonprofit organization play in the society as independent organizations and collaborators in various capacity.
3. Identify and describe the unique challenges that nonprofit organization face in managing the external environment as well as internal organizational issues.

4. Apply knowledge and skills learned about leadership, management and fundraising to address the critical issues of resource development and management of organizations.

Nurse Administrator Graduate Credit Certificate Program

Person-in-Charge	Judith Hupcey
Program Code	NSGADM
Campus(es)	World Campus

The purpose of the Nurse Administrator graduate credit certificate is to prepare nurses with a baccalaureate or higher degree in Nursing for certification as a nurse administrator.

Effective Semester: Spring 2022
Expiration Semester: Spring 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants must hold a Bachelor's or higher degree in nursing from a U.S. regionally accredited institution or from an officially recognized degree-granting international institution. Official transcripts from all post-secondary institutions attended (<http://www.gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>) must accompany the application. Prior to an applicant's admission, transcripts are evaluated by the Graduate Admissions Committee to ascertain the applicant's potential for successful completion of the core courses. A recommendation regarding admission is discussed with the Associate Dean for Graduate Education and Research prior to making an offer of admission to this certificate program.

Applicants must hold a current license to practice professional nursing in the United States or a foreign country.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The certificate requires completion of three 3-credit graduate-level nurse administrator didactic courses (9 credits); an optional practicum course (4 credits) is available as well. All courses are delivered using distance technology and are available through the World Campus.

Code	Title	Credits
Required Courses		
NURS 845	Healthcare Economics and Policy for Nurse Administrators	3

Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up

deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **OBTAIN KNOWLEDGE BASE:** Students will obtain a critical knowledge base in organization development and change, appreciative inquiry, and process consultation.
2. **LEAD GROUPS:** Students will strategically lead both small group and large group change initiatives.
3. **USE RESOURCES:** Students will use various resources for developing, implementing, evaluating, and marketing organization development programs.
4. **OBSERVE AND FACILITATE CHANGE:** Students will observe group dynamics and facilitate change efforts.

Organization Development and Change: Consulting Skills Graduate Credit Certificate Program

Person-in-Charge	Susan Land
Program Code	ODCCS
Campus(es)	University Park World Campus

To become effective OD consultants and OD practitioners hands-on experience is necessary. After completing the certificate program, students will have skills and competencies that can be applied to help the organizations they serve continuously improve and maximize potential as OD consultants and OD practitioners. All candidates are required to take the 12-credits of prescribed courses related to consulting skills for organization development and change.

Effective Semester: Summer 2020

Expiration Semester: Summer 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies

(<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the Certificate in Organization Development and Change: Consulting Skills, students must successfully complete 12 credits of course work in the courses listed below.

Code	Title	Credits
Required Courses		
WFED 572	Foundations in Organization Development and Change	3
WFED 881	Marketing Organization Development *	3
WFED 884	Appreciative Inquiry *	3
WFED 582	Assessing Data: Organizational Diagnosis *	3
*TRDEV 565 is an approved substitution for one of the starred courses listed above.

Organization Development and Change: Essentials Graduate Credit Certificate Program

Person-in-Charge	Susan Land
Program Code	ODCESS
Campus(es)	University Park World Campus

The primary goal of the certificate programs is to provide essential knowledge skills in organization development and change, facilitation of groups and teams, appreciative inquiry, and process consultation. The certificate program focuses on exposing students to global issues and the way change occurs around and within organizations. Emphasis is placed on the importance of knowledge and skills when it comes to facilitating change initiatives from a humanistic perspective.

Organization Development and Change: Occupational Safety and Health Graduate Credit Certificate Program

Person-in-Charge	Susan Land
Program Code	ODCOSH
Campus(es)	University Park

Accidents in the workforce and educational environments are metaphorically similar to a line of falling dominoes. As one incident occurs, it has the ability to trigger a harmful chain reaction. Therefore the Organization Development and Change, Occupational Safety and Health Certificate Program is designed to assist workforce development professionals in building the skills and abilities needed to create and support workplaces and educational environments that are free of occupational safety and health hazards. Emphasis is placed on leadership development to promote detection, analysis, and correction of unsafe workplace conditions and procedures.

Effective Semester: Fall 2020

Expiration Semester: Fall 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to

Organization Development and Change: Operational Excellence Graduate Credit Certificate Program

Person-in-Charge	Susan Land
Program Code	ODCOE
Campus(es)	University Park World Campus

This certificate program teaches students how to change corporate culture from a continuous process improvement perspective. Recognizing that organizations either get better or worse, the focus of this certificate is on the tools and methodologies for making positive organizational impact. Emphasis is placed on the application of essential continuous improvement methodologies including lean and six sigma concepts to improve processes in any industry. A focus is also placed on the concepts and skills needed to complete project initiatives on time and within budget.

Organizational Leadership Graduate Credit Certificate Program

Person-in-Charge	Alfred Warner
Program Code	ORGLDR
Campus(es)	Erie

The Graduate Certificate in Organizational Leadership is designed to enhance essential skills for making effective decisions in changing business environments. The certificate's required courses provide a strong foundation in management theory, building on the concepts of organizational behavior and leadership. Students will acquire technical skills for developing analytical approaches and improve critical thinking abilities through hands-on coursework and case studies. Real-world examples will be covered in a team and organizational culture, leadership, negotiations, and managing organizational change.

In addition to being an excellent stand-alone credential, all of the courses in the Graduate Certificate in Organizational Leadership can be applied toward the blended MBA program offered through Penn State's Behrend Campus. However, successful completion of the certificate neither guarantees nor implies acceptance into any graduate program at Penn State. Admission to the MBA graduate degree program is a separate step and is not guaranteed. Approval to apply non-degree graduate credits toward a degree program must be granted by the student's academic adviser, the program head or graduate officer, and the Graduate School. A maximum of 15 credits earned as a non-degree student may be applied to a degree program, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>).

Effective Semester: Fall 2021

Expiration Semester: Fall 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>

[gcac-300/gcac-305-admission-requirements-international-students/](https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/)) for more information.

An applicant must demonstrate fundamental competence in Management, Economics, and Statistics either by attaining a B or better in MGMT 301, ECON 102 or ECON 104, and SCM 200 or equivalents, or by completing an online training module as designated by the program.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All candidates are required to take 12 credits in four courses (managing effective organizations, leadership and ethics, negotiations, and organizational change).

Code	Title	Credits
Required Courses		
BADM 512	Managing Effective Organizations	3
BADM 526	Leadership and Ethics	3
BADM 828	Negotiations	3
MGMT 823	Organizational Change: Theory and Practice	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Understand the individual, group, and organizational level drivers of behavior with an emphasis on discrimination and biases, motivation, decision making, communication, and organizational culture.
2. Recognize ethical issues, identify stakeholders affected by decisions and actions, analyze an ethical dilemma by applying multiple ethical theories and formulate a plan of action for resolving it.
3. Understand how leaders manage people and organizations to achieve effective and ethical performance and vary their leadership approaches in response to situational demands
4. Recognize negotiation situations, understand how negotiation works, and determine when to seek a negotiated agreement.
5. Know how to prepare for and take part in negotiations and obtain successful results.
6. Understand the fundamental theories and models of change processes, types of organizational change and the basic models for organizational structure, as well as the relationship between structure, culture, and management practices).

People Analytics and Artificial Intelligence Graduate Credit Certificate Program

Person-in-Charge	Paul Clark
Program Code	PPLAAI
Campus(es)	University Park

In the era of digital transformation and data-driven decision-making, Human Resource professionals play a critical role in shaping organizational success. This 9-credit Graduate Certificate in People Analytics and Artificial Intelligence empowers HR practitioners with cutting-edge skills to harness the power of data and artificial intelligence for more effective talent management and strategic HR decision-making.

Courses taken in the certificate program may be applied toward a master's degree in HRER, subject to restrictions outlined in [GCAC-309 Transfer Credit](#). Certificate students who wish to have certificate courses applied towards a graduate degree in HRER must apply and be admitted to that degree program. Admission to the HRER graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

- Applicants with a 3.00 junior/senior grade-point average (on a 4.00 scale) will be considered for admission. Exceptions to the minimum grade-point average may be made at the discretion of the program for students with special backgrounds, abilities, and interests;
- All applicants submit a Graduate School application (<http://gradschool.psu.edu/prospective-students/how-to-apply/>) (including payment of the nonrefundable application fee), resume, and personal statement addressing their reasons for pursuing a certificate in people analytics and artificial intelligence.
- The resume and personal statement are waived if a student is currently enrolled in the MHRER or MS HRER degree programs.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All courses must be completed with a grade of C or better and a grade-point average of 3.0 to be awarded the certificate.

Code	Title	Credits
Required Courses		
HRER 512	Research Methods and Analytics in Human Resources and Employment Relations	3
HRER 825	Strategic Business Tools for HRER Professionals	3
HRER 870	Human Resource & Employee Relations in the Age of Artificial Intelligence	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **Know:** Graduates will have and be able to demonstrate the necessary advanced knowledge and competence in people analytics and artificial intelligence to excel in their careers.
2. **Think:** Graduates will be able to recognize and analyze practical, legal, and ethical challenges related to people analytics and artificial intelligence issues in workplaces.
3. **Apply/Create:** Graduates will be able to conduct independent inquiries to identify current scholarship and best practices and effectively apply relevant theories and practices when solving problems in people analytics and artificial intelligence.
4. **Communicate:** Graduates will be able to effectively communicate knowledge of current topics to excel as people analytics and artificial intelligence professionals.
5. **Professional Practice:** Graduates should display behavior consistent with the highest ethical standards related to people analytics and artificial intelligence.

Policy Analysis and Evaluation Graduate Credit Certificate Program

Person-in-Charge	Michele Tantardini
Program Code	CLPLAN
Campus(es)	Harrisburg

The primary goal of the program is to prepare policy analysts and policy/program evaluation specialists who work for governments and not-for-profit organizations for professional analytical tasks. The 12-credit curriculum is designed to educate students in the basic concepts and analytical tools of policy analysis and evaluation profession. Courses taken in the certificate program may be applied toward a Master of Public Administration (M.P.A.) degree in Public Administration (<https://bulletins.psu.edu/graduate/programs/majors/public-administration/>) at Penn State Harrisburg, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree in Public Administration must apply and be admitted to that degree program. Admission to the Public Administration graduate degree program is a separate step and is not guaranteed.

Effective Semester: Fall 2020

Expiration Semester: Fall 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Students who are already enrolled in the M.P.A. program at Penn State Harrisburg and wish to enroll in the certificate program must complete the online Graduate School certificate application and pay the application fee just as any other certificate applicant would. They should also complete the Notice of Intent form and submit it to the program administration.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Primary Palliative Care Graduate Credit Certificate Program

Person-in-Charge	Judith Hupcey
Program Code	PRPLCR
Campus(es)	University Park

The Penn State College of Nursing offers a Graduate Certificate in Primary Palliative Care program. The primary goal of the program is to prepare individuals with a Bachelor's or higher degree in Nursing or a related health discipline in the principles and practice of primary palliative care.

Effective Semester: Fall 2022

Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Official transcripts from all post-secondary institutions attended (<http://www.gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>) are required.

Applicants must hold a bachelor's or higher degree in nursing or a related health discipline from a U.S. regionally accredited institution or from an officially recognized degree-granting international institution.

Prior to an applicant's admission, transcripts are evaluated by the program coordinator to ascertain the applicant's potential for successful completion of the core courses. A recommendation regarding admission is discussed with the Associate Dean for Graduate Education and Research prior to making an offer of admission to this certificate program.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The curriculum includes 6 credits (two 3 credit courses) of didactic content in primary palliative care and interdisciplinary management of advanced serious illness and one 3 credit course of the interdisciplinary practice of the palliative care role. The practicum course involves the application of knowledge acquired in previously completed courses related to primary palliative care. The practicum will build upon and extend students' previous experiences and fulfill mutually agreed-upon objectives based on the student's identified learning needs. All courses will be delivered using distance technology.

Code	Title	Credits
Required Courses		
NURS 824	Primary Palliative Care: An Interdisciplinary Approach	3
NURS 825	Primary Palliative Care: Interdisciplinary Management of Advanced Serious Illness	3
NURS 826	Interdisciplinary Practicum of the Primary Palliative Care Role	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Describe the fundamentals of primary palliative care for providing person-centered care to individuals with advanced serious illness and their family members including pediatric, adult, and geriatric populations.
2. Describe an interdisciplinary approach to primary palliative care.
3. Describe the interdisciplinary management of persons with advanced serious illness and their family members.
4. Demonstrate evidence-based management and communication with individuals with advanced serious illness and their family members in a healthcare setting.

5. Demonstrate the ability to work effectively in an interdisciplinary team.

Principalship Graduate Credit Certificate Program

Person-in-Charge	Kevin Kinser
Program Code	IPRIN
Campus(es)	University Park World Campus

The Penn State Principal Graduate Certificate is aligned with the Pennsylvania Inspired Leadership standards (PIL), as well as the standards of CAEP (Council for Accreditation of Educator Preparation) formerly known as the National Council for the Accreditation of Teacher Education (NCATE). The program has two important features:

1. A standardized Principal Graduate Certificate is offered so that all students receive a consistent, high quality, and uniform program.
2. The specific designated courses cover all national and PIL (Pennsylvania Inspired Leadership) standards. All course assignments and student results are aligned with these standards.

Effective Semester: Summer 2024

Expiration Semester: Summer 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
EDLDR 540	Technology Applications in Educational Leadership	3
EDLDR 559	School Improvement	3
EDLDR/C-S 560	Principles of Instructional Supervision	3
EDLDR 568	The Principalship	3
EDLDR 576	The Law and Education	3
EDLDR 595	Internship (Principal Internship)	3
Total Credits		18

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Professional Licensure/Certification

Many U.S. states and territories require professional licensure/certification to be employed. If you plan to pursue employment in a licensed profession after completing this program, please visit the Professional Licensure/Certification Disclosures by State (<https://www.psu.edu/state-licensure-disclosures/>) interactive map.

Project Management Graduate Credit Certificate Program

Person-in-Charge	Jeffrey Pinto
Program Code	PMPC
Campus(es)	World Campus

Delivering complex projects on time and under budget is a daily challenge for most corporations. More organizations now use project-based methods to accomplish such tasks, resulting in increased demand for project managers. The online Graduate Certificate in Project Management is an interdisciplinary, 12-credit program that uses problem-based learning to provide a strong foundation in project management theory and practice. The program is offered by the AACSB Accredited Sam and Irene Black School of Business and Penn State is a Project Management Institute (PMI)® Registered Education Provider (R.E.P), making this certificate a well-respected credential.

In addition to being an excellent stand-alone credential, all of the courses in the Graduate Certificate in Project Management can be applied toward the Master of Project Management degree program also offered through Penn State's World Campus; however, successful completion of the certificate neither guarantees nor implies acceptance into any graduate program at Penn State. Admission to the M.P.M. graduate degree program is a separate step and is not guaranteed. Approval to apply nondegree graduate credits toward a degree program must be granted by the student's academic adviser, the program head or graduate officer, and the Graduate School. A maximum of 15 credits earned as a nondegree student may be applied to a degree program, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>).

Effective Semester: Fall 2020
Expiration Semester: Fall 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Only applicants who demonstrate high promise of success for graduate work are admitted to the program. Admission decisions are based on:

1. Undergraduate grade-point average
2. A personal essay
3. Two submitted letters of recommendation

The applicant's cumulative undergraduate grade-point average or the junior/senior grade-point average is required to be a 3.0 or better.

The certificate in Project Management emphasizes application of course concepts to actual project management opportunities and problems. Therefore, students who currently are, or previously were, employed as project managers or project team members will derive the greatest

benefit from the program. All applicants must provide evidence of sufficient current or previous work experience that will enable them to successfully complete course assignments requiring the application of course concepts to real project management situations. This evidence may be provided in either the form of two letters of recommendation from individuals who know the applicant in a professional capacity or through nomination to participate in the program by an appropriate official within the applicant's employing organization. Those who write letters of recommendation or submit nominations on behalf of the applicant will be asked to attest to the nominee's suitability for the program of study considering factors such as the applicant's length of employment, level and areas of work responsibility, personal qualities, career goals, maturity of purpose, and program requirements to apply course concepts to work-related issues. Applicants are encouraged to consult with the program chair concerning the suitability of their work experiences in relationship to program requirements.

All students must be computer literate and have ready and reliable access to a computer and the Internet to successfully complete the certificate. They must know how to use word processing software, log on to an Internet provider, and use email. Additionally, students will use Microsoft Office in their course work that will require they have a working knowledge of Microsoft Office programs such as Word, Excel, Power Point, and Access. Access to fax facilities may be needed as an additional form of communication between student and instructor or between students.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Students complete MANGT 510, in their first semester of study and three additional courses for a total of 12 credits. MANGT 515 through MANGT 540 may be taken either concurrently or subsequently with MANGT 510.

Code	Title	Credits
Required Courses		
MANGT 510	Project Management	3
Select three of the following:		9
MANGT 515	Cost and Value Management	
MANGT 520	Planning and Resource Management	
MANGT 525	Commercial Law and Project Procurement	
MANGT 531	Organizations	
MANGT 535	Interpersonal and Group Behavior	
MANGT 540	Strategy: Corporate, Business and Project	
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Students will be able to analyze projects and identify key strengths and weaknesses in their organization and operation.
2. Students will comprehend the body of knowledge associated with projects and project management.
3. Students can explain the historical context in which the discipline of project management has evolved.
4. Students will be able to employ techniques that have become fundamental to the current practice of project management.
5. Students are able to integrate the broader managerial issues that have a bearing on the management of a project.
6. Students will demonstrate a "learning by doing" approach to recognizing and solving project challenges through cases and simulation.

Project Quality Management Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MSEPQM
Campus(es)	Great Valley World Campus

The Graduate Certificate in Project Quality Management is a program for students who aim to pursue a career in the fields of Requirements Engineering, Test Engineering and Architecture, and Project Management. Students develop knowledge and skills relevant to Requirements Engineering, Testing Strategy, Testing Infrastructure, Testing Frameworks, Testing Tools, Automated Testing, Continuous Integration, and Project Planning and Management. A certificate will be awarded upon completion of the courses.

Courses taken in the certificate program may be applied toward a master's degree in Software Engineering, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
SWENG 505	Software Project Management	3
SWENG 581	Software Testing	3
SWENG 586	Requirements Engineering	3
Total Credits		9

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Work with stakeholders of a system to generate a context of use, and from it, extract needs and constraints structured into a statement of requirements.
2. Conduct testing using principles, practices and procedures for quality assurance.
3. Critically and creatively plan and manage development of software intensive systems using project management methods and tools.

Psychology of Ethical Leadership Graduate Credit Certificate Program

Person-in-Charge	Greg Edward Loviscky
Program Code	PSYELD
Campus(es)	World Campus

The Psychology of Ethical Leadership Graduate Certificate will help students learn how to build ethical organizational cultures based on diversity, equity, and respect. Students will learn how to assess difficult ethical situations and dysfunctional behaviors, taking appropriate steps for preventing and resolving such situations. Lastly, students will learn how to lead collaboratively and leverage the talents of all individuals in service of ethical, principled organizations.

This certificate is offered as the second in a series of three stackable credentials building toward the M.P.S. in Psychology of Leadership. It follows the Psychology of Leadership Foundations certificate, which is the first of the stackable credentials, and precedes the third of the stackable credentials, which is for the Psychology of Team Leadership. While it is not a stand alone certificate, completing this as the second of the three stackable certificates also would provide a firm foundation with which to enter other programs with a leadership emphasis. It is intended for those early in their careers who wish to be competitive for promotions into leadership roles in the future. It also is intended for those early or midway in their careers who are in leadership roles and aspire to advance; are in ethics and compliance, leadership development, organizational effectiveness, or human resources roles; and who work directly with leaders and teams.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/>)

gcac-300/gcac-305-admission-requirements-international-students/) for more information.

- Earned bachelor's degree from a regionally accredited institution
- Undergraduate cumulative GPA of 3.0 or higher
- Official transcripts from all colleges and universities attended
- At least 2 years of paid, full-time work experience
- Formatted resume' showing all work experience, education, and other experience
- One letter of recommendation from a professional contact who can speak to the applicant's leadership and other skills

The language of instruction at Penn State is English. English proficiency test scores (TOEFL/IELTS) may be required for international applicants. See GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
PSY 816	Dysfunctional Leadership	3
PSY 817	Psychology of Shared and Collective Leadership	3
PSY 833	Ethics and Leadership: Psychological and Social Processes	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **APPLY/CREATE:** Apply psychological theories to leadership issues and situations.
2. **THINK:** Analyze leadership situations in order to evaluate leader behaviors and predict their effectiveness in self and others.
3. **PROFESSIONAL PRACTICE:** Analyze leadership situations with respect to ethics and understand the implications of leader behavior in self and others.

Psychology of Leadership Foundations Graduate Certificate

Person-in-Charge	Kristin Buss
Program Code	PSLDRF
Campus(es)	World Campus

The Psychology of Leadership Foundations graduate certificate will help students learn the skills needed to motivate and empower others in organizational settings. Students will learn how to leverage the diversity of individuals' traits, strengths, skills, and abilities to build high-performing organizations. Students also will set leadership development goals for themselves and create plans for achieving them.

This certificate is offered as stand alone certificate and also as the first of the three stackable certificates building towards the M.P.S. in Psychology of Leadership. Completing it would enable enrollment in the second certificate which is the Psychology of Ethical Leadership. The certificate also would provide a firm foundation with which to enter other programs with a leadership emphasis. It is intended for those early in their careers who wish to be competitive for promotions into leadership roles in the future; and to analyze their own leadership skills and identify development opportunities. It also was intended for those early or midway in their careers who are in leadership roles and aspire to advance further; or are in leadership development, organizational effectiveness, or human resources roles that work directly with leaders.

Courses taken in the certificate program may be applied toward the M.P.S. in Psychology of Leadership, subject to restrictions outlined in GCAC-309 Transfer Credit. Certificate students who wish to have certificate courses applied towards the degree must apply and be admitted to the M.P.S. program. Admission to the M.P.S. program is a separate step and is not guaranteed.

Psychology of Team Leadership Graduate Credit Certificate Program

Person-in-Charge	Kristin Buss
Program Code	PSYTL
Campus(es)	World Campus

The Psychology of Team Leadership graduate certificate will help students learn the skills needed to motivate and empower others in organizational settings. Students also will learn how to be effective leaders of or members of teams that can collaborate to achieve common goals. Lastly, students will learn how to make sound decisions about organizational problems with confidence and without bias.

This certificate is offered as the third in a series of three stackable credentials building toward the MPS in Psychology of Leadership. Students using this stackable plan should complete the Psychology of Leadership Foundations Graduate Credit Certificate followed by the Psychology of Ethical Leadership Graduate Credit Certificate and have entered the degree program before pursuing this certificate.

The certificate is also offered as a standalone program and provides a firm foundation with which to enter other programs with a leadership emphasis. It is intended for those early in their careers who wish to become more effective team members; and be competitive for promotions into leadership roles in the future. It also is intended for those early or midway in their careers who are in leadership roles and aspire to advance further; and are in leadership development, organizational effectiveness, or human resources roles that work directly with leaders and teams.

Courses taken in the certificate program may be applied toward the MPS in Psychology of Leadership, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Public Budgeting and Financial Management Graduate Credit Certificate Program

Person-in-Charge	Odd Stalebrink
Program Code	CLPFIN
Campus(es)	Harrisburg World Campus

The primary goal of this graduate certificate is to educate administrators and professionals in government and not-for-profit organizations who need to acquire additional knowledge and skills in the following areas:

1. fiscal and governmental aspects of budgeting and financial management;
2. development of organizational budgets; and
3. governmental and not-for-profit accounting.

At the end of the program students will be able to:

- Explain the significance of key topics in government financial management (governmental accounting, auditing, financial reporting,

internal controls and budgeting at the federal, state and local levels) as they relate to public sector organizations.

- Describe how government financial management can contribute toward more efficient use of public resources, increased transparency and improved accountability.
- Identify and describe the role of key actors in the government financial management process.
- Apply key financial management planning, management, and control tools to addressing resource constraints, and meeting transparency and accountability demands.

Effective Semester: Summer 2022

Expiration Semester: Summer 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

To complete the program students need to successfully complete 9 credits. Successful completion of a course is defined as a grade of B- or better.

Code	Title	Credits
Prescribed Courses		
PADM 502	Governmental Fiscal Decision Making	3
PADM 522	Government Financial Management	3
PADM 523	Governmental and Nonprofit Accounting	3
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **Explain, clearly articulate and communicate** the significance of key topics in government financial management (governmental accounting, auditing, financial reporting, internal controls and budgeting at the federal, state and local levels) as they relate to public sector organizations.

2. **Describe** how government financial management can contribute toward more efficient use of public resources, increased transparency and improved accountability.
3. **Identify** and describe the role of key actors in the government financial management process.
4. **Apply** key financial management planning, management, and control tools to addressing resource constraints, and meeting transparency and accountability demands.

Public Health Graduate Credit Certificate Program

Graduate Program Head	Cheryl Thompson
Program Code	HYGC PH
Campus(es)	Hershey

The purpose of the graduate certificate in Public Health is to provide students with foundational graduate-level course work in public health. Upon completion of the Public Health certificate, students will be able to:

1. Demonstrate their knowledge in core areas of public health, which include biostatistics, epidemiology, health services administration, and social and behavioral sciences.
2. Apply their knowledge and skills to solving public health problems.

All courses in the certificate program may be applied to the M.P.H. degree program, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Students must earn a grade of B or better for a course

to be applied to the M.P.H. degree program. Certificate program students who wish to have the certificate courses applied to the M.P.H. degree program must formally apply and be admitted to the Penn State M.P.H. degree program. Admission into the Penn State M.P.H. degree program is a separate step and is not guaranteed.

Effective Semester: Summer 2023

Expiration Semester: Summer 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants must submit the following items with their applicant for admission to the Public Health certificate program:

- Official transcripts from all post-secondary institutions attended (<http://gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>)
- Resume/CV
- Statement of Purpose or Rationale for seeking a Graduate Certificate in Public Health
- Two letters of recommendation

Upon approval, certificate program students will enroll in course work on a nondegree basis. Note that admission as a nondegree graduate student neither guarantees nor implies subsequent admission to a degree program. Nondegree students are not eligible to receive fellowships or graduate assistantships.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Students must complete each course with a grade of B or better in order to receive the certificate.

Code	Title	Credits
Required Courses		
PHS 504	Behavioral Health Intervention Strategies	3
PHS 520	Principles of Biostatistics	3
PHS 550	Principles of Epidemiology	3
PHS 571	Health Services Organization and Delivery	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by

graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

Evidence-based Approaches to Public Health

- Apply epidemiological methods to the breadth of settings and situations in public health practice.
- Select quantitative and qualitative data collection methods appropriate for a given public health context.
- Analyze quantitative and qualitative data using biostatistics, informatics, computer-based programming and software, as appropriate.
- Interpret results of data analysis for public health research, policy or practice.

Public Health & Health Care Systems

- Compare the organization, structure and function of health care, public health and regulatory systems across national and international settings.

Planning & Management to Promote Health.

- Assess population needs, assets and capacities that affect communities' health.
- Apply awareness of cultural values and practices to the design or implementation of public health policies or programs.
- Select methods to evaluate public health programs.

Policy in Public Health

- Discuss multiple dimensions of the policy-making process, including the roles of ethics and evidence.
- Propose strategies to identify stakeholders and build coalitions and partnerships for influencing public health outcomes.
- Advocate for political, social or economic policies and programs that will improve health in diverse populations.
- Evaluate policies for their impact on public health and health equity.

Communication

- Select communication strategies for different audiences and sectors.
- Communicate audience-appropriate public health content, both in writing and through oral presentation.
- Describe the importance of cultural competence in communicating public health content.

Systems Thinking

- Apply systems thinking tools to a public health issue.

Public Health Preparedness Graduate Credit Certificate Program

Person-in-Charge	Eugene J. Lengerich
Program Code	PHPGC
Campus(es)	World Campus

This graduate certificate program is designed to provide non-science students with broad training in the field of public health preparedness. A distance education format is used to accommodate the needs of professionals already active in this area.

Effective Semester: Summer 2019

Expiration Semester: Summer 2024

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

All applicants are required to submit a resume, statement of purpose, 3 letters of recommendation, and GRE scores. Applicants may request a waiver from the GRE requirement if they meet one of the following criteria:

- 3.00 undergraduate grade-point average (GPA) either overall or in the last 60 credits;
- 5+ years of professional work experience;
- 3.00 GPA upon completion of a graduate certificate; or
- successful completion of a graduate or professional degree.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/>).

[gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/](https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/)).

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Students must complete each course with a grade of B or better in order to receive the certificate.

A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **PHP ORG:** Students will be able to identify major organizations, agencies, and policies that substantially affect the practice of public health preparedness.
2. **PHP APP:** Students will be able to identify, design, implement, and evaluate evidence-based approaches to public health preparedness.
3. **PHP EPI:** Students will be able to apply basic epidemiologic principles and methods to public health preparedness.
4. **PHP HOSP ERP:** Students will be able identify and evaluate hospital vulnerabilities and to develop a hospital emergency response plan.
5. **PHP LEAD/TEAM:** Students will demonstrate effective leadership and team-based practices and procedures.

Public Sector Human Resources Management Graduate Credit Certificate Program

Person-in-Charge	Bing Ran
Program Code	CLPHR
Campus(es)	Harrisburg World Campus

The graduate credit certificate program in Public Sector Human Resources Management is offered by the Public Administration program at Penn State Harrisburg.

The certificate is designed for administrators and other professionals in government and not-for-profit organizations who need to acquire additional knowledge and skills in the following areas:

- personnel/human resource management
- labor relations
- problem solving
- planning
- management of organizational change and development

Effective Semester: Summer 2022

Expiration Semester: Summer 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

A Graduate School application (<http://gradschool.psu.edu/prospective-students/how-to-apply/>) must be completed and official transcripts from all post-secondary institutions attended (<http://www.gradschool.psu.edu/prospective-students/how-to-apply/new-applicants/requirements-for-graduate-admission/>) must be submitted.

Successful applicants typically have a 3.0 grade-point average in the last two years of undergraduate work.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The certificate program in Public Sector Human Resources Management requires taking four courses (12 credits) – two required and two elective courses.

Applicants who have graduate degrees in public administration or a related field, and who have taken graduate courses that duplicate the

content of courses in the certificate program, may substitute other PADM courses for those courses with the prior approval of the person in charge. Graduate transcripts, course syllabus, and course projects/term papers will be needed for this evaluation process.

Some certificate courses may be used toward completion of the master's degrees in Public Administration and in Health Administration, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the M.P.A. or M.H.A. graduate degree program is a separate step and is not guaranteed.

Code	Title	Credits
Required Courses		
PADM 505	Human Resources in the Public and Nonprofit Sectors	3
PADM 510	Organization Behavior	3
Electives		
Choose 2 courses from the following list of elective courses. With the approval by the certificate coordinator, students could also choose other HR-related Penn State graduate-level courses as elective courses for this certificate.		
PADM 511	Organizational Change and Development	6
PADM 516	Strategic Planning	
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Explain and apply the knowledge and skills needed to effectively manage human resources in modern organizations.
2. Explain and apply knowledge of human behavior in organizations and the role of management strategies, including leadership and motivational theory to influence behavior.
3. Explain and apply knowledge of the critical personnel management functions, such as recruitment, selection, appraisal, compensation, training, promotion, downsizing, and collective bargaining.
4. Analyze and appraise contemporary issues as they relate to human resources.

Quality Management Across Product Lifecycle Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MEMQM
Campus(es)	Great Valley World Campus

The Graduate Certificate in Quality Management Across Product Lifecycle is a program for students who aim to pursue a career as Quality Assurance Engineer/Manager, Process Engineering Manager, Test Engineer/Manager, or Project Manager where skills will include responsibilities in oversight of maintaining quality standards within a technical organization, overseeing teams responsible for implementation of manufacturing processes and equipment, design and implement test strategies to ensure product quality, or plan management of technical project from start to finish.

Courses taken in the certificate program may be applied toward a master's degree in Engineering Management, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program.

Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Quantitative Business Essentials Graduate Credit Certificate Program

Person-in-Charge	Zugang Liu
Program Code	QBUSE
Campus(es)	Great Valley

The Graduate Certificate in Quantitative Business Essentials provides students with the knowledge and skills necessary to become more efficient and effective managers and decision-makers. For students without a formal business education, this program equips them with fundamental concepts in data-driven decision making, accounting, finance, and supply chain management. For students with some business background, such as marketing, the program offers an excellent opportunity to upgrade their skills with essential tools of business.

The program emphasizes the role of the decision maker who is in a position of evaluating alternatives to make a sound and profitable business choice. Upon completion, students will be conversant in utilizing appropriate statistical techniques and interpreting reports for various business scenarios, be able to assess the financial standing of a company from its financial statements, calculate and evaluate the cost of capital for a project, evaluate the risk and return trade-off in various business decisions, and optimize their supply chain and logistics operations. These skills can be applied to any current business or to assess the feasibility of a proposed start-up.

Effective Semester: Fall 2023
Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International

applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the graduate certificate, students must successfully complete 9 credits of course work consisting of 6 required credits and 3 elective credits. All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Code	Title	Credits
Required Courses		
BUS 510	Business Analytics and Decision Modeling	3
ACCTG 800	Financial and Managerial Accounting	3

Real Estate Law and Valuation Graduate Credit Certificate Program

Person-in-Charge	Brent Ambrose
Program Code	RELWVL
Campus(es)	World Campus

The Graduate Certificate in Real Estate Law and Valuation is offered by the Smeal College of Business. Several areas of law intersect with real property (i.e. taxation, family law, estate planning, litigation, corporate practice, etc). By obtaining the knowledge and skills within this graduate certificate, students will be able to successfully navigate legal challenges within real property, understand valuation and feel comfortable negotiating real estate deals. This program will also provide business managers with the tools and skills necessary to interact with the real estate industry to efficiently utilize their firms' real estate assets. The graduate certificate is a 9-credit program that can be completed in one calendar year.

Effective Semester: Summer 2022

Expiration Semester: Summer 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Other admissions requirements include:

- Official Transcripts – Submit official transcripts from all post-secondary institutions attended, regardless of the number of credits or semesters completed. Transcripts not in English must be accompanied by a certified translation.
- Statement of Purpose – Applicants must describe how professional experience and goals align with the Certificate in Real Estate Law and Valuation, not to exceed 500 words.
- Vita or Résumé – Provide a one- to two-page listing of professional experience and education.

GRE/GMAT scores are NOT required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate

Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits

Program Code	RMTSNG
Campus(es)	World Campus

The Certificate in Remote Sensing and Earth Observation helps geospatial professionals become skillful users of imagery and sensor data in the context of geographic information systems and spatial analysis. This program is designed specifically for GIS practitioners who

lack formal education in techniques and technologies associated with spatial image analysis and earth observation methods in order to help them pursue professional development goals. The program engages key theories, current research, and contemporary techniques for the professional application of remote sensing in geospatial systems and analysis.

Effective Semester: Summer 2021

Expiration Semester: Summer 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Intermediate-level experience with professional applications of geographic information systems is expected as pre-requisite knowledge. Coursework to establish that pre-requisite knowledge is available through the related Postbaccalaureate Certificate in GIS program (<https://bulletins.psu.edu/graduate/programs/certificates/geographic-information-systems-postbaccalaureate-credit-certificate-program/>).

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Students earn the certificate by completing four instructor-led online courses – three required and one elective. Students who successfully complete the program earn 12 academic credits.

Students admitted to the Department of Geography's Master of GIS degree program may count up to 15 credits of certificate program courses toward the M.G.I.S. degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the M.G.I.S. graduate degree program is a separate step and is not guaranteed.

Code	Title	Credits
Prescribed Courses		
GEOG 480	Exploring Imagery and Elevation Data in GIS Applications	3
GEOG 883	Remote Sensing Image Analysis and Applications	3
GEOG 481	Topographic Mapping with Lidar	3
Electives		
GEOG 589 or GEOG 892	Emerging Trends in Remote Sensing Geospatial Applications of Unmanned Aerial Systems	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

Application

- Apply knowledge of various remote sensing technologies and platforms for the creation of spatial information to address challenges in the private, commercial, and societal sectors.

Communication

- Communicate the nuances of complex spatial relationships with text, voice, and visual products to broadly inform professional and non-technical audiences in a range of contexts.

Creation

- Create innovative solutions by collecting remotely sensed observations to create new knowledge as exemplified in maps and databases to generate solutions to challenging problems.

Critical Thinking

- Objectively analyze and evaluate a situation in the context of available remotely sensed observations in support of further analysis, problem solving, and decision making.

Cultural Competence

- Demonstrate knowledge of cultural norms that are respectful of diversity and inclusion to establish a positive and professional work environment.

Ethics

- Demonstrate ethical conduct by producing quality work, contributing to the community, managing professional relationships by establishing honest and respectful interactions among individuals and organizations.

Knowledge

- Apply knowledge of remotely sensed information using appropriate geographic information technologies in a variety of contexts to educate, solve problems and make decisions.

Professional

- Demonstrate conduct in alignment with professional standards in interpersonal communication, mediation, and respect for diversity while recognizing appropriate team roles in professional, community and education-based activities.

Research

- Combine accepted techniques and prior knowledge of remote sensing technologies to create new solutions for previously unencountered situations.

Sensory and Consumer Science Graduate Credit Certificate Program

Person-in-Charge	Helene Hopfer
Program Code	SNCNSC
Campus(es)	University Park World Campus

The primary goal of this graduate certificate program is to provide formal education to sensory and consumer professionals in the key areas of (i) psychophysical and biological principles and human behavior as it guides and informs sensory and consumer testing, (ii) fundamentals of good sensory practice including experimental design, method selection, analysis, and reporting, (iii) applied statistics and data analysis as used in sensory and consumer science, and (iv) the interaction of sensory and consumer science with marketing, consumer understanding, product development, and business.

The 12-credit curriculum integrates all these aspects in a synergistic manner.

Effective Semester: Fall 2019

Expiration Semester: Fall 2024

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

All individuals wishing to pursue a graduate certificate program, even those already enrolled as a graduate degree student, must apply and be admitted using the Graduate School's online application (<http://gradschool.psu.edu/prospective-students/how-to-apply/>). Applicants

need to demonstrate successful completion of undergraduate level statistics (STAT 200 or equivalent).

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Software Architecture and Design Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MSESAD
Campus(es)	Great Valley World Campus

The Graduate Certificate in Software Architecture and Design is a program for students who aim to pursue a career that includes competencies for creating large-scale software intensive systems. Students develop knowledge and skills relevant to analyzing, architecting, designing, implementing and managing the technical development aspects of a software system. A certificate will be awarded upon completion of the courses.

Courses taken in the certificate program may be applied toward a master's degree in Software Engineering, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Software Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Software Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
SWENG 587	Software Systems Architecture	3
SWENG 837	Software System Design	3
SWENG 861	Software Construction	3
Total Credits		9

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Upon completion of the certificate, students will be able to architect, design, and implement software systems along with the configuration management, continuous integration and deployment.

Solar Energy Graduate Credit Certificate Program

Person-in-Charge	Mark Fedkin
Program Code	SOLEGY
Campus(es)	World Campus

The graduate certificate in Solar Energy is designed for current and aspiring practitioners seeking advanced skills in resource assessment, project development, and system design for solar energy systems. The program is offered by the Department of Energy and Mineral Engineering through Penn State's World Campus.

Courses taken in the certificate program may be applied toward the Master of Professional Studies in Renewable Energy and Sustainability

Systems (RESS) if the student has earned a B- or better in each course, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards the M.P.S. in RESS must apply and be admitted to that degree program. Admission to the RESS graduate degree program is a separate step and is not guaranteed.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

A background in engineering, physics, or systems science is strongly recommended.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Certificate students earn the Certificate and 12 graduate credits by successfully completing each of four 3-credit, instructor-led online courses with a grade of C or better.

Code	Title	Credits
Required Courses		
EME 810	Solar Resource Assessment and Economics	3
AE 878	Solar Project Development and Finance	3
Electives		
Select 6 credits from the following:		6
EME 812	Utility Solar Power and Concentration	
AE 868	Commercial Solar Electric Systems	
EME 811	Solar Thermal Energy for Utilities and Industry	
AE 862	Distributed Energy Planning and Management	
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Evaluate solar energy systems using techno-economic, performance and/or cost/benefit analyses, including multi-parameter dynamic simulation tools.
2. Demonstrate fundamental understanding of the principles of solar energy science, including resource availability, resource intermittency, and options for solar energy conversion systems.
3. Demonstrate an appreciation for the project development and stakeholder engagement process relative to the goal of solar design: identifying stakeholder preference for solar goods and services in a given locale.
4. Evaluate project development and/or sustainability decisions in the broader context of society's interests.

Strategic Human Resources and Workplace Ethics Graduate Credit Certificate

Person-in-Charge	Paul Clark
Program Code	SHRWET
Campus(es)	University Park World Campus

This 9-credit program is designed to equip professionals with the knowledge and skills needed to excel in HR leadership roles by focusing on the strategic aspects of HR management and the ethical considerations that underpin this critical function.

Courses taken in the certificate program may be applied toward a master's degree in HRER, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree in HRER must apply and be admitted to that degree program. Admission to the HRER graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies

(<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

- Applicants with a 3.00 junior/senior grade-point average (on a 4.00 scale) will be considered for admission. Exceptions to the minimum grade-point average may be made at the discretion of the program for students with special backgrounds, abilities, and interests;
- #All applicants submit a Graduate School application (including payment of the nonrefundable application fee), resume, and personal statement addressing their reasons for pursuing a certificate in strategic human resources and workplace ethics;
- The resume and personal statement are waived if a student is currently enrolled in the MHRER or MS HRER degree programs.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All courses must be completed with a grade of C or better and a grade-point average of 3.0 to be awarded the certificate.

Code	Title	Credits
Required Courses		
HRER 512	Research Methods and Analytics in Human Resources and Employment Relations	3
HRER 825	Strategic Business Tools for HRER Professionals	3
<i>Choose 3 credits from the following list.</i>		
LHR 499	Foreign Studies	3
HRER 500	Topics in Comparative Industrial Relations	
HRER 503	Seminar in International Human Resources Studies	
HRER 803	Human Resources in Multinational Enterprises	
HRER 865	Diversity and Ethics in the Workplace	
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **Know:** Graduates will have and be able to demonstrate the necessary advanced knowledge and competence in strategic human resources and workplace ethics to excel in their careers.
2. **Think:** Graduates will be able to recognize and analyze practical, legal, and ethical challenges related to strategic human resources and workplace ethics issues in workplaces.

3. **Apply/Create:** Graduates will be able to conduct independent inquiries to identify current scholarship and best practices and effectively apply relevant theories and practices when solving problems related to strategic human resources and workplace ethics.
4. **Communicate:** Graduates will be able to effectively communicate knowledge of current topics to excel as professionals in strategic human resources and workplace ethics.
5. **Professional Practice:** Graduates should display behavior consistent with the highest standards related to strategic human resources and workplace ethics.

Strategic Leadership Graduate Credit Certificate Program

Person-in-Charge	Vilmos Misangyi
Program Code	SMEXL
Campus(es)	World Campus

The graduate certificate in Strategic Leadership is a 12-credit program designed to be an engaging, practical and comprehensive program that helps seasoned professionals learn how to formulate compelling strategies, align organizational elements in the pursuit of those strategies, and build culture and commitment across an organization. With core course work in Strategic Leadership, Strategy Formulation and Implementation, Strategic Management, and Leadership and Identity, experienced professionals gain the solid foundation needed in leadership positions.

Course content focuses on: managerial challenges of strategy implementation; ability to think strategically about organizational issues and challenges, develop effective strategies for organizational performance and success, and shape organizational cultures that facilitate strategy implementation and organizational change, the ethical and societal implications of managerial decisions, as well as an exploration of unique approaches to strategic leadership that emphasize identity issues that are critical to understanding individual and collective processes in organizational life.

Effective Semester: Fall 2024
Expiration Semester: Fall 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Exceptions to GCAC-305 (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) will be considered by the program. Exceptions may or may not be granted by the Graduate School.

Other admissions requirements include:

- **Application** – Complete a Graduate School application (<http://gradschool.psu.edu/prospective-students/how-to-apply/>) for graduate study including nonrefundable application fee.
- **Statement of Purpose** – Submit a statement describing how professional experience and goals align with the certificate.
- **Vita or Résumé** – Provide a one- to two-page listing of professional experience and education.
- **Approximately five years of relevant work and management experience preferred.**

GRE/GMAT scores are NOT required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
MBADM 571	Global Strategic Management	3
BA 888	Executive Leadership	3
MGMT 831	Strategy Implementation and Organizational Change	3
BA 865	Strategic Leadership	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- Understand how to formulate, implement, and evaluate a strategy for a global firm

- Develop a framework for leading the change process
- Demonstrate knowledge of fundamental topics, theories, concepts, and frameworks in strategic management
- Understand how to identify areas for personal development in leadership style
- Understand how to identify the progressive leadership skills needed at varying organizational levels
- Understand business cycles and organizational culture

Superintendency Graduate Credit Certificate Program

Person-in-Charge	David Gamson
Program Code	SUPER
Campus(es)	University Park

The Letter of Eligibility (LOE) program is a residential program offered at University Park and has three important features:

The Education Leadership program has received approval from the Pennsylvania Department of Education (PDE) for the courses and course sequence that lead to the PDE Superintendent Letter of Eligibility (LOE). This graduate certificate consists of the required credits for the PDE Superintendent Letter of Eligibility and will provide an additional credential for students who complete these credit requirements. The PDE Superintendent Letter of Eligibility (LOE) has additional requirements that need to be fulfilled in order for it to be awarded; contact the College of Education's Advising & Certification Center for more information.

The Penn State courses for the Letter of Eligibility (LOE) for the Superintendent/Assistant Superintendent/Intermediate Unit Director have been evaluated by Council for the Accreditation of Educator Preparation (CAEP) and The National Educational Leadership Preparation (NELP) standards. These preparation standards, formerly known as the Educational Leadership Constituent Council (ELCC) standards, have been renamed the National Educational Leadership Preparation (NELP) standards.

There are two options for obtaining the LOE: (a) for students in an Ed.D. or Ph.D. program, by pursuing the LOE as part of their doctoral coursework, or (b) for candidates only interested in pursuing the LOE, through the completion of the required 21 credits, the successful completion of the internship, and the receipt of a passing score on the Pennsylvania state mandated assessment.

Effective Semester: Spring 2021
Expiration Semester: Spring 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The PDE Superintendent Letter of Eligibility (LOE) has additional admission requirements; contact the College of Education’s Advising & Certification Center for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the Superintendency Graduate Certificate, students must successfully complete 21 credits of course work in the required courses listed below. The PDE Superintendent Letter of Eligibility (LOE) has additional requirements that need to be fulfilled in order for it to be awarded; contact the College of Education’s Advising & Certification Center for more information.

Code	Title	Credits
Required Courses		
EDLDR 533	The Politics of Local School Districts	3
EDLDR 549	School District Improvement and Systemic Change	3
C-S 551	Curriculum Design: Theory and Practice	3
EDLDR 865	Human Resources Leadership in Education	3
EDLDR 573	Public School Finance	3
EDLDR 578	Schools as Organizations	3
EDLDR 595	Internship	3
Total Credits		21

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

Core Standard #1: The leader has knowledge and skills to think and plan strategically, creating an organizational vision around personalized student success.

- 1A Demonstrates how to work with a Board of Ed to accomplish a strategic goal or objective
- 1B Demonstrates how to facilitate the development of a shared vision for personalized student success
- 1C Demonstrates how to apply strategic thinking and change strategies to address student achievement challenges at the district level.
- 1D Demonstrates how to work with a team to create and implement strategic, operational and tactical plans that demonstrate desired results.
- 1E Demonstrates how to lead a team through a district level problem solving process resulting in a plausible solution
- 1F Demonstrates how to apply a range of leadership styles appropriate to a variety of contexts.

Core Standard #2: The leader is grounded in standards-based systems theory and design and is able to transfer knowledge to his/her job as an architect of standards-based reform in the school.

- 2A Demonstrates the ability to implement a district wide standards based reform initiative.
- 2B Demonstrates how to apply systems thinking in decision making situations.
- 2C Demonstrates ability to focus adequate resources on reform efforts.
- 2D Demonstrates ability to align reform efforts with federal, state and district requirements.

Core Standard #3: The leader knows how to access and use appropriate data to inform decision-making at all levels of the system.

- 3A Demonstrates the ability to lead decision making processes appropriate to the situation.
- 3B Demonstrates how to structure problems for solution and frame issues for resolution.
- 3C Demonstrates how to use assessment and evaluation information for continuous improvement efforts
- 3D Demonstrates how to use data and information to inform decisions.

Corollary Standard #1: The leader creates a culture for teaching and learning with an emphasis on learning.

- 1A Demonstrates the ability to apply research based best practices to solve school reform problems and challenges.
- 1B Applies best practices to establish and improve the organizational climate across the education community.
- 1C. Models the attributes of a continuous learner and the expectation for others.
- 1D Demonstrates the ability to plan and execute plans to ensure the safest and most secure environment across the district.

Corollary Standard #2: The leader effectively manages resources for effect results.

- 2A Knows how to develop a budget plan that is aligned to district goals and priorities.
- 2B Exhibits the ability to ensure that technology is appropriately implemented throughout the district.
- 2C Knows how to manage resources effectively.
- 2D Demonstrates how to increase and allocate resources.

- 2E Demonstrates how to interpret the results produced.
- 2F Demonstrates knowledge of regulations and policies and how to interpret them accurately and apply them appropriately.
- 2G Demonstrates how to provide consistent and effective management practice through written policies and procedures.

Corollary Standard #3: The Leader collaborates, communicates, engages, and empowers others inside and outside the organization to pursue excellence in learning.

- 3A Demonstrates how to establish and improve the culture of learning throughout the district.
- 3B Demonstrates effective communication abilities.
- 3C Demonstrates how to involve key community district and school stakeholders in reform efforts.
- 3D Models appropriate leadership behavior and develops leadership skills in others through mentoring and coaching.
- 3E Demonstrates how to assemble appropriate stakeholders into effective teams for problem solving.

Corollary Standard #4: The Leader operates in a fair and equitable manner with personal and professional integrity.

- 4A Demonstrates impeccable personal and professional ethics at all times.
- 4B Demonstrates how to embrace and utilize diversity to improve performance and learning.
- 4C Demonstrates how to use data and information from multiple sources to improve decision making.
- 4D Demonstrates how to address conflict and resolve differences to achieve effective results.

Corollary Standard #5: The Leader advocates for children and public education in the larger political, social, economic, legal, and cultural context.

- 5A Demonstrates how to identify and interpret external influences and how they impact on local education decisions.
- 5B Exhibits continues focus on all children and their individual needs.
- 5C Exhibits sound judgment in operational and educational decisions to maximize learning opportunities of all children.
- 5D Demonstrates how to engage with governmental and political leaders to effectively address the developmental and educational needs of all children.
- 5E Demonstrates knowledge of the law.

Corollary Standard #6: The Leader supports professional growth of self and others through practice and inquiry.

- 6A Demonstrates how to use professional development as a way to increase individual and institutional capability.
- 6B Demonstrates how to engage staff and Board members in relevant professional development activities.
- 6C Demonstrates the ability to identify and nurture individual strengths and leverage the human resources to benefit the district
- 6E Demonstrates how to design professional development plans that lead to improved student learning.

Supply Chain and Operations Management Graduate Credit Certificate Program

Person-in-Charge Dinesh R. Pai
Program Code SCOPM
Campus(es) Harrisburg

The goal of this 12 credit certificate program is to better prepare operations and supply chain management professionals with those contemporary skills and concepts necessary for the effective and efficient management of the physical, informational, and financial flows that collectively form the networks that add value to firms competing on a global scale. Students will

unless the student has earned a graduate degree from an accredited university.

Ideally, the applicant should have a working knowledge of Microsoft Excel and business statistics, plus a basic understanding of accounting principles.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
MNGMT 522	Operations and Supply Chain Management	3
Electives		
Select two of the following:		6
MANGT 510	Project Management	
SCIS 540	Transportation and Distribution Management	
SCIS 546	Procurement and Supply Management	
SCIS 570	Supply Chain Engineering	
Culminating Experience		
SCIS 565	Supply Chain Strategy (Capstone Course)	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Explain the importance of operations and supply chain management and its role in a firm's productivity and strategy.
2. Develop and apply tools to manage projects, improve processes, demand forecasting, sourcing, and inventory management.
3. Apply supply chain analytics tools to drive data driven business decisions.
4. Discuss how strategic sourcing can contribute to organizational goals.
5. Apply economic concepts to transportation. Explain how modal economics have led to current transportation policy. Explain the problems with current public policy with regard to transportation.

Supply Chain Management Graduate Credit Certificate Program

Person-in-Charge	Kevin Linderman
Program Code	SCMGT
Campus(es)	World Campus

The Graduate Certificate in Supply Chain Management is a 12-credit online professional development program focused on building competence across the foundations of supply chain management. Through integration of strategic procurement, supply management, manufacturing, service operations, and demand fulfillment, this two-semester program positions students to manage and enhance the value of today's complex supply chains. In addition to core supply chain principles, topics in ethics, performance metrics, financial analysis, and information systems are covered. The certificate program starts with basic supply chain concepts that professionals are expected to know and then uses a best-practices approach to build supply chain skills and analytical capabilities.

Effective Semester: Fall 2020

Expiration Semester: Fall 2025

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Applicants should have at least two years of professional experience along with an understanding of basic accounting and microeconomic terms and principles. Spreadsheet skills and knowledge of business statistics are necessary for successful participation in the program.

Along with the submission of the online application and the nonrefundable application fee, the following is required:

- Official Transcripts – Submit official transcripts from all post-secondary institutions attended, regardless of the number of credits or semesters completed. Transcripts not in English must be accompanied by a certified translation.
- Application –Completion of the Graduate School certificate application.
- Statement of Purpose – Applicants must describe how professional experience and goals align with the Certificate in Graduate Certificate in Supply Chain Risk Management, not to exceed 500 words.
- Vita or Résumé – Provide a one- to two-page listing of professional experience and education.

GRE or GMAT test scores are NOT required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Required Courses		
SCM 800	Supply Chain Management	3
SCM 801	Supply Chain Performance Metrics and Financial Analysis	3
SCM 822	Supply Management	3
SCM 842	Operations Management and Demand Fulfillment	3
Total Credits		12

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **SCM METHODS:** Students will be able to demonstrate knowledge of best practices used in monitoring, managing and improving supply chains.
2. **SCM METRICS:** Students will be able to identify and measure essential metrics that are key indicators of supply chain performance.
3. **SUPPLY CHAIN DESIGN:** Students will be able to identify key strategic issues for designing supply chains.
4. **SUPPLY CHAIN FINANCIALS:** Students will be able to demonstrate knowledge of supply chain financial measures and be able to analyze how supply chain decisions impact the financial success of the enterprise.
5. **BUSINESS ETHICS:** Students will be able to identify business and professional ethics associated with SCM, both domestically and internationally.

Supply Chain Risk Management Graduate Credit Certificate Program

Person-in-Charge	Kevin Linderman
Program Code	SCRM
Campus(es)	World Campus

The Graduate Certificate in Supply Chain Risk Management is offered by the Smeal College of Business. Risk Management is becoming increasingly essential for Supply Chains. This certificate will provide students with foundational knowledge of Supply Chain Risk Management theory and best practices. The graduate certificate is a 12-credit program that can be completed in one calendar year.

Effective Semester: Fall 2022
Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Survey Research Methods Graduate Credit Certificate Program

Person-in-Charge	Eric Plutzer
Program Code	SURRES
Campus(es)	University Park

The certificate in Survey Research Methods shall provide supplemental training to graduate students in social science, health, education, and policy-related graduate programs at Penn State. The collection of data by questionnaire, web surveys, phone or personal structured interviews is a highly specialized technique whose "best practices" and "cutting edge" change frequently. The data collected by surveys typically violate assumptions of random sampling that undergird graduate-level courses in applied statistics. Those earning this certificate will have supplemental training in data collection and take a coherent cluster of courses in applied statistics that will provide them with superior preparation for completion of their dissertation, and for employment in the academic, public, and private sectors.

Effective Semester: Summer 2019

Expiration Semester: Summer 2024

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

All applicants must be enrolled in and have completed 18 credits in a graduate degree program at Penn State. A graduate grade-point average of 3.30 or higher shall normally be required. All applicants will be required to submit a letter from their academic adviser or department head that explains how the certificate program will enhance the student's primary course of study.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All certificate recipients will be required to complete two core courses, two additional electives at the 500 level, and one hands-on internship or apprenticeship experience.

Code	Title	Credits
Required Courses		
PLSC/SOC 518	Survey Methods I: Survey Design	3
PLSC/SOC 519	Survey Methods II: Analysis of Survey Data	3
PLSC/SOC 595A	Survey Research Practicum	1
Electives		

In addition to the required courses listed above, students must select any two additional 3-credit courses in intermediate or advanced applied statistics or interviewing techniques, as approved by the chair of the Survey Research Center (SRC) Faculty Advisory Committee.¹

Total Credits 13

¹ There is no specific list of courses because offerings in the social and behavioral sciences change frequently and are most often offered under the 597 rubric. As a general rule, these courses must be at the 500 level, and they must have prerequisites equivalent to two semesters of applied statistics. For example, offerings in SOC that require prior completion of SOC 574-SOC 575 and offerings in PLSC that require prior completion of PLSC 502-PLSC 503 would normally be eligible. We will apply comparable criteria for advanced methodology electives in departments such as (but not restricted to) Human Development and Family Studies, Education, and Psychology. These departments have offered relevant courses on topics such as:

- Hierarchical Modeling,
- Latent Class Analysis,
- Item Response Theory,
- Time Series,
- Analysis,
- Survival Analysis,
- and the Analysis of Missing Data.

In addition, some regularly offered classes, such as HDFS 526, SOC 578, and STAT 506, would satisfy the requirement.

Students accepted into the certificate program will submit a "Planned Program of Study" form annually. Approval by the Chair of the SRC Faculty Advisory Committee shall constitute formal approval for a course to count in meeting this requirement. All courses used to meet the requirements of the Certificate may be double-counted towards the student's doctoral degree program if permitted by the program.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Students will become familiar with key theoretical and methodological paradigms in modern survey research.
2. Students will acquire skills in the analysis of surveys employing clustering, differential probability of selection, and stratification.
3. Students will learn how to apply the Total Survey Error framework to data analysis and questionnaire design.
4. Students will learn about modern alternatives to sample surveys, including non-probability web panel methodology.
5. Students will integrate this knowledge in an applied internship.

Sustainability & Social Impact Graduate Credit Certificate Program

Person-in-Charge	Zungang Liu
Program Code	SUSSIM
Campus(es)	Great Valley

This Revised Graduate Certificate in Sustainability & Social Impact (originally Sustainable Management Practices) can help you manage new or existing sustainable practices in your organization. Gain a competitive advantage by understanding how adopting the 'triple bottom line' can enhance your organization's long-term viability.

Effective Semester: Fall 2022
Expiration Semester: Fall 2027

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To be awarded the graduate certificate, students must successfully complete 9 credits of course work consisting of 3 required credits and 6 elective credits. All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Code	Title	Credits
Required Courses		

BUSAD 802	Cornerstone of Sustainability	3

Sustainability Management and Policy Graduate Credit Certificate Program

Person-in-Charge	Erich Schienke
Program Code	SUSPOL
Campus(es)	World Campus

The graduate certificate in Sustainability Management and Policy is designed specifically for current and aspiring practitioners who seek advanced skills for advancing sustainability practice. The program is offered by the Department of Energy and Mineral Engineering through Penn State's World Campus.

Courses taken in the certificate program may be applied toward the Master of Professional Studies in Renewable Energy and Sustainability Systems (RESS) if the student has earned a B- or better in each course, subject to restrictions outlined in GCAC-309 Transfer Credit (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/transfer-credit/>). Certificate students who wish to have certificate courses applied towards the M.P.S. in RESS must apply and be admitted to that degree program. Admission to the RESS graduate degree program is a separate step and is not guaranteed.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). Sustainable Development in Africa Graduate Credit Certificate Program

Person-in-Charge	Kidane Mengisteb
Program Code	SDVAF
Campus(es)	University Park

Climate change has become a serious challenge to sustainable development worldwide. The African continent seems to have been disproportionately impacted by climate change. In addition to global warming, the African continent is facing rapid population growth, rapid urbanization, rapid growth of extractive industries, and rapid deforestation. All these developments have created an alarming rate of environmental degradation. The continent also has low adaptation capacity to global warming and is already producing a growing number of environmental refugees. This 12-credit Certificate in Sustainable Development in Africa aims to engage graduate students with the issues, debates, and analyses related to sustainable and equitable development in Africa. Students will learn about the key global and regional drivers of environmental degradation, how the environmental degradation has impacted African societies, and how Africa may develop effective adaptation mechanisms to withstand or even reverse the degradation process. This certificate will provide students an opportunity to engage with current topics from a specifically African perspective, and

it foregrounds competency in the UN Sustainability Goals in line with similar priorities in Penn State Global and the Sustainability Institute. Students will receive training in development theory and practice to understand the place of Africa in global environmental change. Students will learn to critically analyze the complex interrelationships and trade-offs between development and environmental costs. Students can choose to focus on an area of study such as: resource extraction (e.g., mining) and governance, food and agriculture, water, renewable energy (e.g., solar), and development practice. Students are encouraged but not required to pursue study abroad and embedded travel opportunities on the African continent with a specific focus on sustainability.

Effective Semester: Fall 2023

Expiration Semester: Fall 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Students enrolled in graduate programs at Penn State University and non-degree students currently not enrolled in a graduate degree program may apply to the African Studies Program for admission to this certificate program via the Graduate School application. The requirements for admission for students in degree programs include relevant academic background and a GPA of 3.0. Admission requirements for non-degree applicants include relevant academic background, work experience, and a GPA of 2.5 and above.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

To earn a graduate certificate in sustainable development in Africa, a minimum of 12 credits of graduate and 400 level courses is required. **No more than 3 credits may come from individual studies, and no more than 6 credits may come from 400 level courses.**

Code	Title	Credits
Required Courses		
6 to 9 credits from the following courses:		6-9
AFR 501	Key Issues in African Studies	
AFR 527	Migration, Urbanization, and Policy in the Developing World	
AFR 532	Environment and Livelihoods in Africa	
AFR 534	Political Economy of Energy and Extractive Industries in Africa (Oil and Mining)	
AFR 434	War and Development in Africa	
3-6 credit from the following relevant African Studies courses, or focal topic course offered by other units:		3-6

AFR 596	Individual Studies
AFR 464	Extractive Industries in Africa
AFR 440	Globalization and Its Implications
AYFCE 535	Youth Civic Development
INTAD 820	International Agricultural Development Seminar
FOR 440	Forest and Conservation Economics
INTAD 577	Global Agricultural Systems
FOR 418	Agroforestry: Science, Design, and Practice
GEOG 430	Human Use of Environment

Total Credits**12**

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Critically analyze key factors that impact adversely sustainable development in Africa as well as in the rest of the world.
2. Appraise Africa's environmental degradation and its impacts on African societies.
3. Analyze and evaluate different policy measures of adaptability to environmental changes and sustainable development in Africa.

System Modeling and Analysis Graduate Credit Certificate Program

Person-in-Charge	Raghu Sangwan
Program Code	MENGSM
Campus(es)	Great Valley World Campus

The Graduate Certificate in System Modeling and Analysis is a program for students who aim to pursue a career as a System Analyst, Systems Test Engineer, or System Engineer where skills will include responsibilities including being responsible for designing, building, maintaining models for system analysis and optimization, building models for system verification and testing, or development and documentation of technical aspects of system in any life cycle phase (concept, design, implementation, operation, maintenance).

Courses taken in the certificate program may be applied toward a master's degree in Systems Engineering, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024**Expiration Semester:** Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Systems Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Systems Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Required Courses		
SYSEN 532	Simulation in Systems Engineering: Discrete-Time Systems	3
SYSEN 534	Simulation in Systems Engineering: Continuous-Time Systems	3
SYSEN 880	Systems Architecture and Models	3
Total Credits		9

All courses must be completed with a minimum grade of C or better and an overall GPA of 3.0.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up

deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **APPLY/CREATE:** Use system simulation modeling for multi-level system analysis of complex systems and for identification of optimal solution alternatives
2. **APPLY/CREATE:** Apply model-based system engineering practices for design, architecting, and engineering of systems

System Quality & Risk Evaluation Graduate Credit Certificate Program

Person-in-Charge Raghu Sangwan
Program Code MENGSO
Campus(es) Great Valley
 World Campus

The Graduate Certificate in System Quality & Risk Evaluation is a program for students who aim to pursue a career as a Test Manager, Systems Test Engineer, Systems Integration Engineer, System Analyst, or Risk Analyst where skills will include responsibilities for planning test and evaluation activities and overseeing testing activities, designing and implementing test strategies to ensure system quality, developing and managing interoperability across systems, analyzing system qualities, troubleshooting test failures, or analyzing models and system risks.

Courses taken in the certificate program may be applied toward a master's degree in Systems Engineering, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards a graduate degree must apply and be admitted to that degree program. Admission to the graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

1. The successful applicant is generally expected to have a minimum combined junior/senior grade-point average of 3.0 (B) on a 4.0 scale.
2. Courses taken in the certificate program may be applied toward Master of Systems Engineering degree, subject to restrictions outlined in GCAC-309 Transfer Credit (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-309-transfer-credit/>). Certificate students who wish to have certificate courses applied towards the Master of Systems Engineering must apply and be admitted to that degree program. Admission to the Master of Software Engineering graduate degree program is a separate step and is not guaranteed.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Talent Management Graduate Credit Certificate Program

Person-in-Charge	Paul Clark
Program Code	TLNTMG
Campus(es)	University Park World Campus

The 9-credit graduate certificate in Talent Management is designed to prepare HR professionals, managers, and leaders with the knowledge and skills needed to attract, develop, reward, and retain top talent, thereby driving organizational success.

Courses taken in the certificate program may be applied toward a master's degree in HRER, subject to restrictions outlined in [GCAC-309 Transfer Credit](#). Certificate students who wish to have certificate courses applied towards a graduate degree in HRER must apply and be admitted to that degree program. Admission to the HRER graduate degree program is a separate step and is not guaranteed.

Effective Semester: Spring 2024
Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

- Applicants with a 3.00 junior/senior grade-point average (on a 4.00 scale) will be considered for admission. Exceptions to the minimum grade-point average may be made at the discretion of the program for students with special backgrounds, abilities, and interests;
- #All applicants submit a Graduate School application (including payment of the nonrefundable application fee), resume, and personal statement addressing their reasons for pursuing a certificate in talent management;
- The resume and personal statement are waived if a student is currently enrolled in the MHRER or MS HRER degree programs.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All courses must be completed with a grade of C or better and a grade-point average of 3.0 to be awarded the certificate.

A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. **Know:** Graduates will have and be able to demonstrate the necessary advanced knowledge and competence in talent management to excel in their careers.
2. **Think:** Graduates will be able to recognize and analyze practical, legal, and ethical challenges related to talent management issues in workplaces.
3. **Apply/Create:** Graduates will be able to conduct independent inquiries to identify current scholarship and best practices and effectively apply relevant theories and practices when solving problems in talent management.
4. **Communicate:** Graduates will be able to effectively communicate knowledge of current topics to excel as talent management professionals.
5. **Professional Practice:** Graduates should display behavior consistent with the highest ethical standards related to talent management.

Taxation Graduate Credit Certificate Program

Person-in-Charge	Henock Louis
Program Code	TAX
Campus(es)	World Campus

The Graduate Certificate in Taxation is a 9-credit program designed to be an engaging, practical, and comprehensive program that provides students with a working understanding of tax laws and regulations. With course work covering topics on Research and Analysis, Corporate Taxes, Pass-Through Taxes, International Taxes, State and Local Taxes, and Ethical Responsibilities, the Taxation Graduate Certificate provides a solid foundation of skills needed for leadership positions and career advancement.

Course content focuses on: the ability to think strategically about tax issues and challenges, development of effective strategies for organizational performance and success, the ethical and societal implications of tax decisions, as well as an exploration of unique approaches to strategic planning.

Effective Semester: Fall 2021
Expiration Semester: Fall 2026

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Other admissions requirements include:

- **Application** – Complete a Graduate School application (<http://gradschool.psu.edu/prospective-students/how-to-apply/>) for graduate study including nonrefundable application fee.
- **Statement of Purpose** – Submit a statement describing how professional experience and goals align with the certificate.
- **Vita or resume** – Submit a statement outlining professional experience history.

GRE or GMAT test scores are NOT required.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate

Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

Code	Title	Credits
Students will choose 9 credits from the following courses:		
ACCTG 812	TAXATION	9
ACCTG 522	Corporate Taxation and Financial Reporting	
ACCTG 823	Taxation of Pass-Through Entities	
ACCTG 826	International Taxation	
ACCTG 827	State and Local Taxation	
Total Credits		9

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- Demonstrate knowledge of fundamental topics, theories, concepts, and frameworks in tax
- Understand how to formulate, implement, and evaluate tax strategies
- Demonstrate the ability to competently analyze and explain tax laws
- Understand tax research concepts and methodologies
- Understand the ethical constructs that apply to the practice of taxation and why they are necessary

Teacher Leadership Graduate Credit Certificate Program

Person-in-Charge	Edward J. Fuller
Program Code	TLC
Campus(es)	University Park World Campus

This is a 12-credit program designed to fulfill the requirements for the Teacher Leadership Endorsement Program offered by the Pennsylvania Department of Education for those who already hold Instructional I

certification. The courses allow students to develop the professional knowledge, skills, and competencies required of candidates for the endorsement. The program has four central themes:

1. Teacher Leadership as the Gateway to Enhancing Instructional Effectiveness
2. Peer Mentoring and Its Impact on the Professional Community
3. The Role of Change in the Era of Accountability
4. The School as a Cultural and Political Entity

Effective Semester: Summer 2024

Expiration Semester: Summer 2029

Translational Science Graduate Credit Certificate Program

Person-in-Charge	Gail D. Thomas
Program Code	HYTRSC
Campus(es)	Hershey University Park

The primary goal of this certificate is to provide a formal, structured program that allows medical and health care professionals, those wanting to enter the area of health care research, and graduate students seeking a career in a health care related discipline to develop or enhance a successful career in translational science.

Effective Semester: Summer 2023
Expiration Semester: Summer 2028

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

The curriculum includes courses in 4 specific translational science clusters. Students are required to complete 15 credits, including a 10 credit core of required 500-level courses and 5 elective credits. Courses must be selected from the detailed curriculum, or by permission in advance from the certificate director. Courses are available at the Hershey and University Park Campuses enabling the student to continue employment activities or graduate school programs. Students must obtain a B or better in each course.

STAT 509	Design and Analysis of Clinical Trials	
Select one of the following:		1
PHS 500	Research Ethics for Clinical Investigators	
MCIBS 591	Ethics, Rigor, Reproducibility and Conduct of Research in the Life Sciences	
BMS 591	Biomedical Research Ethics	
Electives		
Select 5 credits from the following:		5
BBH 505	Behavioral Health Research Strategies	
BIOL 555	Statistical Analysis of Genomics Data	
BMMB 852	Applied Bioinformatics	
BMS 801	Writing Grant Proposals for Biomedical Research	
CTS 590	Colloquium	
HPA 528	Health Data Analysis for Research	
HPA 564	Research Methods in Health Services Research	
HDFS 503	Human Development Intervention: Analysis of Theories and Approaches	
HDFS 516	Methods of Research in Human Development	
KINES 588	Scientific Writing in Kinesiology	
MCIBS 555	Statistical Analysis of Genomics Data	
NUTR 540	Research Methods	
PHS 518	Scientific Communication	
PHS 519	Patient Centered Research	
PHS 521	Applied Biostatistics	
PHS 536	Health Survey Research Methods	
PHS 540	Decision Analysis for Public Health	
STAT 555	Statistical Analysis of Genomics Data	

Total Credits **15**

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

- TS STAT:** Students will be able to apply appropriate statistical principals and analyses to translational science.
- TS EPI:** Students will be able to apply basic epidemiological principles and methods to translational science.
- TS METHODS:** Students will be able to identify, design, implement, and evaluate evidence-based approaches to translational science.
- TS ETHICS:** Students will be able to apply ethical principals and meet high ethical standards in planning, conducting, and reporting of research and protection of human and animal subjects.
- TS COMM:** Students will be able to write scientific reports and journal articles and to give scientific presentations.

Trauma-Informed Psychotherapy Graduate Credit Certificate Program

Person-in-Charge	Melanie Hetzel-Riggin
Program Code	TRITH
Campus(es)	Erie

The primary goal of this certificate is to prepare mental health professionals, and those in related fields, with training and practice in trauma-focused assessment, diagnosis, and treatment. The curriculum will provide thorough training in trauma informed conceptualization of and empirically-supported treatment for post-traumatic stress disorder and other trauma-related problems.

Effective Semester: Spring 2024

Expiration Semester: Spring 2029

Admission Requirements

Applicants apply for admission to the program via the Graduate School application for admission (<https://gradschool.psu.edu/graduate-admissions/how-to-apply/>). Requirements listed here are in addition to Graduate Council policies listed under GCAC-300 Admissions Policies (<https://gradschool.psu.edu/graduate-education-policies/>). International applicants may be required to satisfy an English proficiency requirement; see GCAC-305 Admission Requirements for International Students (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-300/gcac-305-admission-requirements-international-students/>) for more information.

An applicant must have a master's degree from a regionally accredited institution of higher education in clinical or counseling psychology, counselor education, marriage and family therapy, or social work, or be concurrently enrolled as a degree student in a Penn State master's degree in clinical or counseling psychology or counselor education.

Certificate Requirements

Requirements listed here are in addition to requirements listed in Graduate Council policy GCAC-212 Postbaccalaureate Credit Certificate Programs (<https://gradschool.psu.edu/graduate-education-policies/gcac/gcac-200/gcac-212-postbaccalaureate-credit-certificate-programs/>).

All candidates are required to take 12 credits in four courses (trauma and resiliency, foundations in trauma-focused treatment, advanced trauma-focused treatment, and crisis intervention.)

Code	Title	Credits
Required Courses		
PSYCH 442	Trauma and Resiliency	3
PSYC 843	Trauma-Focused Approaches to Psychological Intervention I	3
PSYC 844	Trauma-Focused Approaches to Psychological Intervention II	3
PSYC 845	Crisis and Disaster-Related Interventions in Psychology	3
Total Credits		12

For students concurrently enrolled in a master's degree program, the certificate will be awarded upon completion of the 12 credits required for the certificate. The certificate cannot be awarded prior to completion of the master's degree.

Courses

Graduate courses carry numbers from 500 to 699 and 800 to 899. Advanced undergraduate courses numbered between 400 and 499 may be used to meet some graduate degree requirements when taken by graduate students. Courses below the 400 level may not. A graduate student may register for or audit these courses in order to make up deficiencies or to fill in gaps in previous education but not to meet requirements for an advanced degree.

Learning Outcomes

1. Describe the psychological theories, models, and research on traumatic stress.
2. Demonstrate effective assessment and diagnosis of trauma-related disorders.
3. Utilize evidence-based treatments for trauma-related disorders.
4. Utilize effective crisis assessment and intervention.

UNIVERSITY COURSE DESCRIPTIONS

The University Course Descriptions section lists all currently active courses at Penn State. Please note that not all courses are offered in any given academic semester. To find class offerings for a specific semester, please view the LionPATH Schedule of Classes (https://public.lionpath.psu.edu/psp/CSPRD/EMPLOYEE/HRMS/c/COMMUNITY_ACCESS.CLASS_SEARCH.GBL?pslnkid=PE_S201801181044562576711220).

Below are definitions for the various components of a course description.

Course-Numbering System

These course descriptions are arranged alphabetically. If any course cannot be located readily, refer to the index. Courses are numbered as follows:

Undergraduate Courses (1 to 399): General courses accepted in fulfillment of requirements for the bachelor's degrees. These courses are described in the Undergraduate Courses section (<https://bulletins.psu.edu/university-course-descriptions/undergraduate/>).

Advanced Undergraduate Courses (400 to 499): Courses open to graduate students and to juniors and seniors and, with the special written permission of the head of the department or the chair of the program sponsoring the course, to qualified students in earlier semesters. These courses are described in the Undergraduate Courses section (<https://bulletins.psu.edu/university-course-descriptions/undergraduate/>).

Graduate Courses (500 to 699; 800 to 899): Courses restricted to students registered in the Graduate School, seniors with an average of at least 3.50 (500- and 800-level only; excludes 600-level), and other students who have been granted permission to enroll by the dean of the Graduate School. These courses are described in the Graduate Courses section (p. 847). Undergraduate students who wish to enroll in 500- or 800-level courses should review the policy and follow the necessary procedures outlined in GCAC-507 Undergraduate Students Taking Graduate Courses (<http://gradschool.psu.edu/graduate-education-policies/gcac/gcac-500/gcac-507-undergraduate-students-taking-graduate-courses/>).

Medical Courses (700-799): Courses restricted to students registered in the College of Medicine. These courses are described in the College of Medicine Courses section (<https://bulletins.psu.edu/university-course-descriptions/medicine/>).

Law Courses (900-999): Courses restricted to students registered in Penn State Law and Dickinson Law. These courses are described in the Penn State Law Courses section (<https://bulletins.psu.edu/university-course-descriptions/pennstatelaw/>) and Dickinson Law Courses section (<https://bulletins.psu.edu/university-course-descriptions/dickinsonlaw/>).

Common Course Numbers

The following course numbers for which students may register have been set up for common use by major programs, with University Senate approval, to encourage innovation and provide flexibility in designing programs, but in no case may a course be scheduled for 0 credits.

First-Year Seminar 187. Listed under some liberal art-related academic headings, this course has prerequisites of first-semester standing and enrollment in the College of the Liberal Arts.

Research Project Courses 294, 494. 1-12 credits. Supervised student activities on research projects identified on an individual or small-group basis. A specific title may be used in each instance and will be entered on the student's transcript.

Internship 295, 395, 495. 1-18 credits. Supervised off-campus, non-group instruction including field experiences, practica, or internships. Written and oral critique of activity required. A specific title may be used in each instance and will be entered on the student's transcript.

Independent Studies 296, 496. 1-18 credits. Creative projects, including research and design, that are supervised on an individual basis and that fall outside the scope of formal courses. A specific title may be used in each instance and will be entered on the student's transcript.

Special Topics 97, 197, 297, 397, 497; 98, 198, 298, 398, 498. 1-9 credits. Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest. Several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript.

Foreign Studies 99, 199, 299, 399, 499. 1-12 credits. Courses offered in foreign countries by individual or group instruction. A specific title may be used in each instance and will be entered on the student's transcript. These courses typically carry the International Cultures (IL) attribute.

Graduate Common Courses

Colloquium 590. Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

Research Topics 594. Supervised student activities on research projects identified on an individual or small-group basis.

Internship 595. Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Individual Studies 596. Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Special Topics 597, 598. Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Foreign Studies 599. Courses offered in foreign countries by individual or group instruction.

Thesis Research 600, 610. In registering for thesis research, a student uses the appropriate number (600, 610) preceded by the abbreviation designating the major field. The numbers 600 (on campus) and 610 (off campus) are available for credit in thesis research in all graduate major programs. The bursar assesses charges for these courses at the current rate of tuition, according to the student's status at the time of registration.

Ph.D. Dissertation 601, 611. The numbers 601 and 611, with associated special fees, are available to Ph.D. degree candidates who have passed the comprehensive examination and met the two-semester residence requirement. They may be used for dissertation preparation work during its later stages, when the academic activity of the candidate consists

partly (611) or solely (601) of work on the completion of research and writing of the dissertation.

SUBJ 601 and SUBJ 611 do not carry academic credit. They are entered on the academic transcript to indicate the registration and the nature of the candidate's academic activity. A candidate registered for SUBJ 601 is classified as a full-time student, while one registered for SUBJ 611 is classified as a part-time student.

The numbers 600, 601, 610, and 611 may not appear in the Schedule of Courses for each semester.

Supervised Experience in College Teaching 602. May be offered by any graduate program in a department that also offers undergraduate courses. A graduate program with no counterpart undergraduate program may offer SUBJ 602 when cooperative arrangements are made with an administrative unit that does not offer graduate degrees but that uses graduate assistants in its teaching. SUBJ 602 may be offered in any semester and is subject to the following restrictions:

1. SUBJ 602 will not be counted in fulfilling any specific credit requirement for an advanced degree.
2. SUBJ 602 will be graded (A, B, C, D, F). The grade will appear on the student's transcript.
3. SUBJ 602 will not be used in calculating grade-point averages.
4. SUBJ 602 shall be offered only in those graduate programs that want to provide opportunity for supervised and graded teaching experience. Enrollment will be restricted to students for whom the major program is prepared to provide such experience.
5. SUBJ 602 will be counted as a part of the student's credit load unless the program specifies otherwise.

Foreign Academic Experience SUBJ 603. Foreign study and/or research approved by the graduate program for students enrolled in a foreign university constituting progress toward the degree.

Colloquium 890. Continuing, professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

Capstone Experience 894. Supervised, professionally oriented student activities that constitute the culminating experience for the program.

Internship 895. Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Individual Studies 896. Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Special Topics 897, 898. Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester. A specific title may be used in each instance and will be entered on the student's transcript. Multiple offerings may be accommodated by the use of suffixes A, B, etc.

Foreign Studies 899. Courses with a professional orientation offered in foreign countries by individual or group instruction.

Course Attributes and Suffixes

Attributes and attribute values are course designations that are used to define specific characteristics for courses. The search for specific types of courses uses attributes and attributes are the most important notation for a course to satisfy a given requirement.

Suffixes are letters that follow a course number and allow for easier identification of a course's characteristics. Not all attributes and characteristics are captured in available suffixes and suffixes are not the feature used to determine if a course satisfies a requirement. The degree audit and what-if reports use attributes, not suffixes, to determine applicability of a course to a requirement.

Bachelor of Arts

Attributes

- BA: Arts
- BA: Humanities
- BA: Natural Science
- BA: World Cultures
- BA: Quantification
- BA: Social and Behavioral Sci
- World Lang (12th Unit)
- World Language (All)
- Exceeds 12th Unit

Cultural Diversity

Attributes

- International Cultures (IL)
- United States Cultures (US)

Suffixes

- U: United States Cultures and/or International Cultures and Honors
- Y: United States Cultures and/or International Cultures and Writing Across the Curriculum

General Education

Attributes

- GenEd: Writing/Speaking (GWS)
- GenEd: Quantification (GQ)
- GenEd: Arts (GA)
- GenEd: Health Wellness (GHW)
- GenEd: Humanities (GH)
- GenEd: Natural Sciences (GN)
- GenEd: Social & Beh Sci (GS)
- GenEd Integrative: Interdomain

Suffixes

- N: Inter-Domain
- Q: Inter-Domain and Honors

First-Year Engagement Program

Attribute

- First-Year Seminar

Course Subject

- PSU: First-Year Seminar

Suffixes

- S: First-Year Seminar
- T: First-Year Seminar and Honors
- X: First-Year Seminar and Writing Across the Curriculum

Writing Across the Curriculum**Attribute**

- Writing Across the Curriculum

Suffixes

- M: Writing Across the Curriculum and Honors
- W: Writing Across the Curriculum
- X: Writing Across the Curriculum and First-Year Seminar
- Y: Writing Across the Curriculum and United States Cultures and/or International Cultures

Honors Courses**Attribute**

- Honors

Suffixes

- H: Honors
- M: Writing Across the Curriculum and Honors
- Q: Inter-Domain and Honors
- T: First-Year Seminar and Honors
- U: United States Cultures and/or International Cultures and Honors

Undergraduate Course Lists

Below are links to course lists that contain courses that are approved to satisfy either General Education, Bachelor of Arts, or other University Degree Requirements (e.g., Writing Across the Curriculum, First-Year Seminar, etc.). These lists updated periodically throughout the academic year.

General Education Requirements

- Arts Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/arts/>)
- Health and Wellness Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/health-wellness/>)
- Humanities Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/humanities/>)
- Inter-Domain Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/inter-domain/>)
- Natural Sciences Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/natural-sciences/>)
- Quantification Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/quantification/>)
- Social and Behavioral Sciences Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/social-behavioral-sciences/>)
- Writing and Speaking Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/writing-speaking/>)

Bachelor of Arts Degree Requirements

- Arts Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-arts/>)
- Humanities Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-humanities/>)

- Natural Sciences Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-natural-sciences/>)
- Quantification Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-quantification/>)
- Social and Behavioral Sciences Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-social-behavioral-sciences/>)
- World Cultures Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-world-cultures/>)
- World Language (12th Unit) Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-world-language-12th-unit/>)
- World Language (All) Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-world-language-all/>)
- Exceeds 12th Unit of World Language Courses (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/ba-exceeds-12th-unit-world-language/>)

Other University Degree Requirements

- First-Year Seminar (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/first-year-seminar/>)
- International Cultures (IL) (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/international-cultures/>)
- United States Cultures (US) (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/united-states-cultures/>)
- Writing Across the Curriculum (<https://bulletins.psu.edu/undergraduate/general-education/course-lists/writing-across-curriculum/>)

Course Credits

In accordance with Senate Policy 42-23 (<https://senate.psu.edu/policies-and-rules-for-undergraduate-students/42-00-acquisition-of-credit/#42-20>), for the typical student, a total of forty-five (45) hours of work planned and arranged by the University faculty is required to gain 1 credit. While the distribution of time varies from course to course, generally one-third of the time is devoted to formal instruction and two-thirds of the time to outside preparation. Course credit by instruction may be achieved by a variety of educational experiences that allow the student to work toward mastery of the course objectives. With the acknowledged goal of educational excellence, more than the minimum established here may be required for mastery of course objectives.

The number of credits for each course is indicated in parentheses and can be earned with classroom, practicum, or laboratory work as designated in LionPATH.

A department may schedule an entire section in an undergraduate course for fewer credits than the maximum authorized. In 400-level courses, a department may schedule an individual student for fewer credits than the maximum authorized. In no case, however, may the course be scheduled for 0 credit, or may the total credits scheduled for any student exceed the maximum number authorized for the course.

Repeatable and Variable Credit Courses

Some courses are designated as repeatable; they may be taken more than once for credit. These courses may be repeated indefinitely unless the department stipulates a maximum number of credits allowed. These courses appear with the maximum number of credits allowed following

the number of credits for the course—for example (1.5 credits/maximum of 3).

Courses may have variable credits, such as (1-3), (2-6), or (3-10). Here, the larger number signifies the total credits that can be accumulated for the course over an indefinite number of semesters, unless otherwise specified. For example, a course listed with (1-6) could be taken six semesters for 1 credit each semester, or two semesters for 3 credits each semester, or once for 6 credits, etc.

In some courses with variable credits, students may be permitted to accumulate more than the larger number shown. Such courses will be listed as, for example, (1-3 per semester, maximum of 12).

Any special departmental limitations are indicated by footnotes.

Prerequisites, Concurrent Courses, Co-requisite Courses, and Recommended Preparation

See also: Senate Policy 34-60 (<https://senate.psu.edu/policies-and-rules-for-undergraduate-students/34-00-course-scheduling/#34-60>).

Prerequisites, concurrent courses, and co-requisite courses approximate the necessary specific coursework or general academic knowledge, background, or semester classification required to succeed academically in a given course.

- Prerequisites are courses or other requirements that must be completed prior to the start of a given course.
- Concurrent Courses are similar to prerequisites except that they may be taken prior to, or in the same semester as, the given course.
- Co-requisite Courses are pairs of courses required to be taken together in the same semester.

Registration in a given course is limited to students who have satisfied the stated prerequisite, concurrent, or co-requisite requirements. The course instructor has the right to permit students to take the course without having the stated prerequisite, concurrent, or co-requisite requirements, if the student demonstrates mastery of the material through some other means.

Recommended Preparation relates to preparatory skills or companion courses deemed useful, but not necessary, for successful completion of a course. Recommended preparation has no bearing on registration in a given course.

GRADUATE COURSES

Accounting (ACCTG)

ACCTG 501: Research Methods in Accounting

3 Credits

An introduction to the methods and techniques of contemporary research in accounting.

Prerequisite: ACCTG507, a course in statistical inference

ACCTG 502: Accounting Research and Analysis

3 Credits

This course prepares DBA students to consume and produce accounting research. Students will also be equipped with a solid understanding of the philosophy of science and know how to design a research study to avoid common threats to validity. Students will also be instructed on the proper etiquette they should employ when serving in the academic community-especially as it pertains to scholarly peer reviews.

ACCTG 512: Financial Accounting Theory and Reporting Problems

3 Credits

Measurement and reporting of financial information for external purposes, with particular attention to current problems in asset and income measurement.

Prerequisite: ACCTG511

ACCTG 524: Managerial Accounting

3 Credits

CONCEPTS AND TECHNIQUES OF ACCOUNTING FOR PLANNING, CONTROL, AND MOTIVATION.

Prerequisite: ACCTG511

ACCTG 566: Corporate Disclosure in the Capital Markets

3 Credits

ACCTG 566 provides a broad perspective of accounting that spans beyond the Generally Accepted Accounting Principles (GAAP) by exploring the role of financial accounting (and more broadly, corporate disclosure) in the capital markets. This includes discussions about (i) how accounting information flows in the capital markets and why it is so crucial to a well-functioning economy, (ii) key capital market stakeholders, their incentives, and their relation with corporate disclosure, (iii) various disclosure types and venues and their decision usefulness, (iv) the role of corporate governance in ensuring the provision of useful accounting information, (v) earnings management types, incentives, and settings, (vi) the standard setting process, and (vii) the role of emerging technologies in shaping corporate communications with the market. The course will also expose students to the history of accounting to provide insight into how and why accounting has morphed into its current state. Finally, throughout the course, there will be discussion and tie-ins to academic research on capital markets with an emphasis on corporate disclosure research.

Prerequisite: ACCTG 472, BA 840

ACCTG 573: Topics in Financial Reporting

3 Credits

This course examines the accounting for complex business transactions with an emphasis on understanding the "why", rather than exclusively the "how". There is a focus on the economic substance of transactions and developing a deep understanding of the Financial Accounting Standards Board Conceptual Framework. This enables one to analyze the consistency of current financial reporting standards within a conceptual framework while considering alternative accounting treatments that can better reflect the economic substance of transactions. An overview of the conceptual and practical issues surrounding the accounting for investments, fair values, business combinations, consolidation of financial statements, structured transactions, derivatives, and hedging activities and foreign operations will also be covered with the intent for developing an awareness of academic research related to the economics of and accounting for complex business transactions.

Prerequisite: ACCTG 472

ACCTG 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ACCTG 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ACCTG 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ACCTG 597C: **SPECIAL TOPICS**

2-4 Credits

ACCTG 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ACCTG 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ACCTG 800: Financial and Managerial Accounting

3 Credits

The purpose of this course is to prepare students to interpret, evaluate, and use both financial and managerial accounting information. Accounting information can be used to evaluate an organization's financial position, to plan future activities (both short-term and long-term), to motivate behavior, and to evaluate performance. The course also focuses on corporate governance and ethical issues.

ACCTG 801: Tax Law and Policy

3 Credits

This course will provide an overview of domestic and international tax policy issues by examining applicable tax reforms, theories of tax law, and interdisciplinary topics. This course will focus on the taxation of individuals including applicable requirements, deductions, and consequences. Additionally, this course will examine relevant tax issues in relation to divorce proceedings, settlement agreements, attorney fees, and sales.

ACCTG 802: Topics in Corporate and Tax Law

3 Credits

This course is designed to teach students about the federal income taxation of corporations and provide an overview of federal estate and gift taxation law. Half of the course will be allocated to topics in federal income taxation of corporations and half of the course will be allocated

to topics in federal estate and gift taxation. This course will deepen students' understanding of taxed corporate entities by focusing on topics such as mergers and acquisitions; bankruptcy; corporate tax reform; and tax exemption among other topics. Additional topics covered will include valuation; power of appointment and revocation; and tax exclusions and deductions (marital and charitable).

ACCTG 803: Forensic Accounting and Litigation Support

3 Credits

Study of investigative accounting, consulting and litigation support activities undertaken in forensic accounting engagements.

Prerequisite: ACCTG403W and ACCTG472 Prerequisite or concurrent: ACCTG881

ACCTG 804: Data Analytics in the Accounting Profession

3 Credits

ACCTG 804 provides Master of Accounting in Accounting Analytics (MAA) students with knowledge designed to prepare them for entry-level positions in the rapidly-evolving field of Accounting. The course will give students an overview of basic programming tools and techniques that can scale to larger data sets, specifically related to financial information and reporting systems, and decision making by both entities and individuals. The course will include an overview of the Python programming language, with a focus on Python modules that are relevant for basic data analytics. The course will also provide students with a comprehensive understanding of the Extract-Transform-Load process, including processes related to obtaining data, cleaning data, visualizing data, and analyzing data. The course will also include an overview of blockchain technology as it relates to the Accounting profession. An introduction to the ethical use of data will also be provided during the course.

ACCTG 805: Applied Accounting and Financial Analytics

3 Credits

ACCTG 805 impounds knowledge gained from prior coursework and serves as the culminating experience for students enrolled in the Master of Accounting in Accounting Analytics (MAA) program. This course provides an advanced application of the Python programming language to the analysis of large-scale datasets which lie at the intersection of accounting and finance. Students will build upon prior work with the Python programming language and acquire more advanced syntax and building blocks for use in Python. They will also build upon prior work with the Extract-Transform-Load process and learn how to acquire, import, modify, join, summarize, visualize, and analyze datasets in order to better understand the relationships between accounting information and capital markets such as how stock prices respond to earnings information, what financial statement information best predicts accounting irregularities, and how eXtensible Business Reporting Language (XBRL) can be harnessed to make more uniform comparisons across companies. Prior work with designing and using relational databases will be enhanced in this course, with a continued emphasis on using data in an ethical manner. The course will be structured around hands-on programming sessions and accompanied by individual assignments to gauge students' mastery of the Python language and multiple projects built around using data to gain insights about the real-world relationships between accounting information and capital

market outcomes. Specific topics will vary based on current issues and instructor interest.

Prerequisite: ACCTG 804

ACCTG 806: Taxes and Business Planning

3 Credits

Effects of tax regimes on decision-making, tax planning and market outcomes. Also, ethics, tax research, and policy.

Prerequisite: ACCTG405

ACCTG 811: Financial Accounting

3 Credits

Accounting rules, practices and applications that characterize the accounting presentations that for-profit organizations provide to the public. ACCTG 811 is part of a series of four accounting courses designed to provide students with the core accounting knowledge needed for an accounting career in industry. This course introduces students to the basic principles, procedures, and objectives of financial accounting that govern the reporting of information about a business to individuals, institutions and other external groups. Course content focuses on: upon (1) conveying the conventions and institutional framework that define accounting rules and practice, including basic exposure to Generally Accepted Accounting Principles; (2) developing familiarity with financial statements; (3) teaching fundamental accounting transactions; and (4) training students in rudimentary analysis of the financial statements.

ACCTG 812: TAXATION

3 Credits/Maximum of 999

Introduction to U.S. federal income tax, covering the basics of taxation of individuals, corporations, flow-through entities and property transactions. ACCTG 812 is part of a series of four accounting courses designed to provide students with the core accounting knowledge needed for an accounting career in industry. This course introduces students to the U.S. federal income tax system. It discusses the pervasive nature of taxation in the U.S. economy and teaches students how to recognize major tax issues, with an emphasis on understanding how they impact economic decision-making. Course content focuses on: (1) developing familiarity with the tax research process and the basic principles of tax planning, (2) the taxation of individuals, and (3) the taxation of business entities including corporations and partnerships.

Prerequisite: ACCTG 811

ACCTG 813: Auditing

3 Credits/Maximum of 999

Principles of the risk-based approach to the audit of financial statements, with special focus on financial information systems.

Prerequisite: ACCTG 811

ACCTG 814: Managerial Accounting

3 Credits/Maximum of 999

Examination of the internal organizational accounting procedures that establish accountability within organizations.

Prerequisite: ACCTG 811

ACCTG 821: Analysis and Interpretation of Tax Law

3 Credits

ACCTG 821 provides accounting and law students who are interested in the practice of taxation with an overview of U.S. federal income tax system research. The course focuses on resolving tax law questions in support of economic decision making and tax return position defense. Students learn to conduct and document in-depth legal research and analysis within the domain of tax law. This writing intensive course hones students' writing skills within the domain of tax law and business decision making. Additionally, the course provides an in-depth understanding of the ethical constructs that guide and limit the practice of taxation.

Prerequisite: ACCTG 405

ACCTG 822: Corporate Taxation and Financial Reporting

3 Credits

ACCTG 822 provides accounting students with knowledge about the taxation of corporations. The course focuses on the tax law treatment of corporate formations, operations, distributions, mergers, and acquisitions. Additionally, students learn about Accounting Standards Codification Topic 740–Income Tax, planning for corporate structure classification, and related ethical considerations.

ACCTG 823: Taxation of Pass-Through Entities

3 Credits

ACCTG 823 provides accounting students who are interested in the practice of taxation a survey of the law defining the taxation of pass-through entities including partnerships, S-corporations, limited liability companies, and trusts. The course focuses on the tax law treatment of formation, operations, distributions, mergers, and acquisitions to the entity and its owners. Planning for structure classification and limitations thereof are embellishments to the basic tax law applicable to pass-through entities.

ACCTG 826: International Taxation

1.5 Credits

ACCTG 826 provides Taxation students knowledge about international tax. The course focuses on the United States taxation of income earned by foreign individuals and entities (inbound transactions) as well as the taxation of U.S. taxpayers operating in foreign jurisdictions (outbound transactions). Students will learn to evaluate legal jurisdiction, residency, and income sourcing, along with planning to optimize transfer pricing and income deferral. In addition, the course provides for an in-depth understanding of treaty utilization and the foreign tax credit in order to limit the same income being taxed by multiple jurisdictions as well as analyzing ethical considerations relating to international taxation.

ACCTG 827: State and Local Taxation

1.5 Credits

ACCTG 827 provides Taxation students knowledge about state and local tax. The course focuses on state taxation of entities and individuals, including constitutional restrictions. In particular, students will acquire the knowledge necessary to recommend solutions that are in conformity

with both corporate and personal tax laws. Additionally, the course provides for an in-depth understanding of sales and use tax in order to both promote compliance as well as limit tax exposure to the extent permitted by law.

ACCTG 829: Tax Research and Analysis

3 Credits

ACCTG 829 is the capstone course for students in the M.Acc. in Taxation program, providing a culminating experience near completion of the program. The course focuses on resolving tax law questions in support of economic decision making and tax return position defense. Students learn to conduct and document in-depth legal research and analysis within the domain of tax law. This writing intensive course hones students' communications skills within the domain of tax law and permits students to build on content knowledge learned in other Taxation core courses. Additionally, the course provides an in-depth understanding of the ethical constructs that guide and limit the practice of taxation.

ACCTG 831: Advanced Auditing

3 Credits

The goal of this course is to advance knowledge in contemporary issues in auditing and in auditing research and case analysis. The focus includes implementing the auditing principles, standards, procedures, and practices, and applying them in case analysis. Topics comprise integrated auditing of financial statements and internal controls; continuous auditing; assurance services on nonfinancial information; auditing of computer-based systems; emphasis on auditing software and computer auditing techniques used to evaluate accounting systems controls and test accounting data integrity; forensic accounting and fraud detection; and the nature and use of expert systems in accounting with emphasis on their use as an audit tool.

Prerequisite: ACCT 532, ACCT 550, ACCTG 512, ACCTG 873, BLAW 444

ACCTG 873: Advanced Topics in Financial Reporting

3 Credits

Financial disclosure and reporting for complex business enterprises and activities; current issues in financial reporting.

Prerequisite: ACCTG471 and ACCTG472

ACCTG 881: Financial Statement Analysis

3 Credits

Analysis of financial reports to identify business strategy, assess performance and economic standing, and value claims.

Prerequisite: ACCTG471 and ACCTG472 Prerequisite or concurrent: B A 531

ACCTG 895: Internship

1-6 Credits/Maximum of 6

Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships.

ACCTG 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester.

Accounting - CA (ACCT)

ACCT 501: Financial Statement Analysis

3 Credits

Study of financial reporting, financial statement analysis, capital markets, asset pricing and impact of ethical, legal, regulatory and environmental concerns.

Prerequisite: admission to M.B.A. or MS/IS Program

ACCT 504: Auditing Theory and Practice

3 Credits

Auditing theory pertaining to the regulatory environment, risk assessment, internal controls, materiality, computerization, analytical procedures, sampling, fraud, ethics, and professional responsibilities. ACCT 504 Auditing Theory and Practice (3) This course provides in-depth coverage of the theory and practice of auditing. Topics may include the regulatory environment, risk assessment and planning, internal controls, materiality, computerized auditing, analytical procedures and sampling, accounting fraud, ethics and professional responsibilities. Students are expected to apply professional judgment in practical applications of course concepts, building on technical knowledge acquired in undergraduate accounting coursework.

Prerequisite: ACCTG403

ACCT 510: Business Tax Planning Theory and Practice

3 Credits

Tax theory pertaining to corporations, partnerships and conduit entities, estates, trusts, ethics, and professional tax responsibilities. ACCT 510 Business Tax Planning Theory and Practice (3) This course provides in-depth coverage of the theory and practice of tax planning for corporations, partnerships and other related pass-through entities. Topics will include tax research, corporate formation and capital structure, corporate non-liquidating distributions, corporate acquisitions and reorganizations, consolidated tax returns, partnership formation and operation, special partnership issues, S corporations, taxation of gifts, estates and trusts, and professional responsibilities and ethics.

ACCT 532: Accounting Information and Decision Systems

3 Credits

The study of business processes, transactions cycles, and internal control structure with an emphasis on computerized accounting information systems. ACCT 532 Accounting Information and Decision Systems (3) The course includes the study of business processes, transactions cycles, and internal control structure with an emphasis on computerized accounting information systems. The course explores the need for communication of information across functional areas to meet an organization's contemporary auditing, professional and legal considerations. The role of information systems is demonstrated

by a focus on reporting objectives, management needs, transaction trails, documentation, security, internal controls, and the integration of accounting systems in the evaluation and selection of software.

ACCT 540: Accounting for Managerial Decisions

3 Credits

Application of accounting to monitoring and improving the internal operation of an organization. ACCT 540 ACCT 540 Managerial Accounting (3) Accounting is the language of economic activity. Managers in all organizations - business, government, and not-for-profit - use accounting information to make decisions. As such, managerial accounting is an important competency area for MBA graduates. Managerial Accounting addresses resource-related questions from a cost perspective. Relevant issues include resources consumed and the related cost of producing goods and providing services, and the effectiveness and efficiency of resource usage.

Prerequisite: ACCT 501

ACCT 545: Strategic Cost Management

3 Credits

Current managerial accounting topics such as activity-based costing, theory of constraints, performance measures and their use in organizations.

Prerequisite: ACCT 540

ACCT 550: Professional Responsibilities and Ethics in Accounting

3 Credits

The study of ethical systems and ethical decision making and their application in Accounting. ACCT 550 Professional Responsibilities and Ethics in Accounting (3) This course provides students with a foundation in professional codes of conduct and ethics adopted by professional associations and licensing boards for accountants, auditors, and fraud examiners. Topics include research into and discussions of selected historical and contemporary ethical cases and issues as they relate to accounting and business. The course includes an introduction to the concepts of ethical reasoning, integrity, objectivity, independence, core values, and professional issues in accounting. The course provides a working knowledge of ethical and justice theories on which students will be able to build as their careers progress. Some of the ethical issues that they may have to address include corporate social responsibility, distributive justice, accounting and economic development, accounting and the environment, professionalism, whistleblowing, and tax avoidance and evasion. Students will gain an understanding of the ethical foundations from which they can address the ethical issues that they will face as a professional.

ACCT 561: Financial Statement Analysis II

3 Credits

The exploration of conventional and advanced methods of analyzing financial statements, including earnings quality and financial distress assessment. ACCT 561 ACCT 561 Financial Statement Analysis II (3) The objective of this course is to explore conventional and advanced analytical methods of analyzing financial statements. Expanding on the material covered in a financial accounting or financial statement analysis course and using actual financial statements, students: ♦ review and apply the traditional methods for analyzing financial statements,

such as ratio analysis, trend analysis, and common-size analysis ♦ apply advanced tools for analyzing financial statements, such as financial distress prediction models and earning manipulation prediction models ♦ evaluate accounting policies and disclosures and their impact on the financial statements through the assessment of earnings quality. Evaluation methods include case studies of actual companies and a comprehensive project to analyze the financial statements of a publicly-traded company. This course typically will be offered once a year.

Prerequisite: ACCT 501

ACCT 572: Financial Reporting I

3 Credits

Accounting theory and practice for reporting consolidations, foreign currency transactions, and preparing financial statements for governmental and NGOs. ACCT 572 Financial Reporting I (3) This course covers accounting theories and procedures as they pertain (a) to the preparation of financial statements for consolidated entities, (b) to the use of foreign currency and (c) to the financial reporting of activities of governmental and of not-for-profit entities. Contemporary reporting issues are reviewed and explored. This course may utilize textbooks, lectures and/or cases. It is guided by financial reports. It explores the means of preparing certain financial statements and the ways of interpreting them. This course is recommended for students who did not take Advanced Accounting and/or Governmental Accounting at the undergraduate level.

Prerequisite: ACCTG472

ACCT 573: Financial Reporting II

3 Credits

Topics involving consolidated financial statements, special purpose entities, derivative financial instruments, and use of the Financial Accounting Research System (FARS). ACCT 573 Financial Reporting II (3) This course covers (a) advanced topics related to the preparation of consolidated financial statements, (b) accounting for derivative financial instruments, (c) accounting for off-balance sheet financing and special purpose entities, and (d) the use of the Financial Accounting Research System (FARS) to explore advanced financial reporting issues. This course relies upon textbooks-based, lecture-based, and case-based learning. It is guided by financial reports. It explores the means of preparing certain financial statements and the ways of interpreting them. It is assumed that students taking this course have either completed ACCT 572 or have completed courses providing significant coverage of consolidations, foreign currency transactions, governmental accounting and not-for-profit accounting at either the undergraduate or graduate level.

Prerequisite: ACCTG572

ACCT 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ACCT 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including research and design, that are supervised on an individual basis and which fall outside the scope of formal courses.

ACCT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ACCT 834: Information Technology (IT) Auditing

3 Credits

This course centers on auditing elements of the information technology environment that are required for any financial or operational audit that is significantly dependent on computerized systems. This course exposes students to the key areas of IT auditing - security, system development, operations including business resilience - using a risk management and controls approach. The course helps students develop the ability to evaluate automated and manual controls within the IT infrastructure for potential impacts on critical attributes like confidentiality, availability, and privacy. Control failures will be covered to highlight the unique judgment decision making paradigm that auditing brings to the operation of the IT control environment. Finally, the IT related frameworks and regulations that exist within the United States will be examined.

Concurrent: ACCT 504

Acoustics (ACS)

ACS 501: Elements of Acoustics and Vibration

3 Credits

Vibrational acoustics including mechanical oscillation, forced and damped response, vibration of strings, membranes, rods, bars, and plates. ACS 501 Elements of Acoustics and Vibration (3) Acoustics is a broad subject that crosses and interacts with many engineering, science, mathematics, medical, and artistic disciplines. This course provides a thorough foundation necessary for studying structural acoustics and vibration problems and the exploration of acoustic waves in solids. A detailed analysis of the single-degree-of-freedom mechanical mass-spring system provides the building block for exploring lumped-element models of more complicated acoustic systems and the phenomena of resonance for forced and damped systems. Multiple-degree-of-freedom mechanical systems are used to investigate the coupled oscillation between oscillating systems, the design of vibration absorbers, and methods for modeling the low frequency behavior of guitars, violins, and vented-boxed loudspeakers. Extending the mass-spring model to an infinite number of degrees-of-freedom leads to a development of the wave equation and its solutions for longitudinal acoustic waves in elastic solids. Boundary conditions and the concept of mechanical impedance are used to explore standing waves in a bounded elastic medium and the transmission of waves between media with different elastic properties. Transverse waves on an elastic string, while fundamentally different from longitudinal waves, obey the same differential equation of motion and the same application of boundary conditions and mechanical impedance. For both longitudinal and transverse wave systems, the mechanical impedance approach and the method of separation of variables are used to study systems with specified boundary conditions. Longitudinal and

transverse waves in structures with varying cross-section, density, or elastic properties are also explored. Torsional waves in elastic solids are explored with application to systems with various cross-sectional shapes. Membranes serve as a two-dimensional extension of transverse waves on an elastic string, and provide mode shapes which may be described using rectangular and cylindrical coordinates (with Bessel function solutions). The fourth-order differential equation of motion for flexural bending vibrations of thin beams is derived and solutions are explored using the separation of variables approach for boundary value problems. Finally, the flexural vibration of two-dimensional rectangular and circular plates are investigated. Homework problem sets will illustrate theory and applications to real world problems.

ACS 502: Elements of Waves in Fluids

3 Credits

Thermodynamic and hydrodynamic foundations of linear acoustics in fluids with applications to lumped-elements, reflection, refraction, radiation, attenuation, enclosures, and waveguides. The purpose of this course is to provide the foundation for understanding the behavior of waves in fluids in the "linear acoustic" limit for first-year graduate students entering the Graduate Program in Acoustics. The course provides a common ground for students coming from a broad range of varying undergraduate programs in sciences, engineering, mathematics, and the arts. This self-consistent foundation will be built upon an understanding of thermodynamics and the consequences for the behavior of gases and gas mixtures (i.e., ideal gas equations-of-state, heat capacity), and hydrodynamics (both dissipative and non-dissipative) as expressed from the Eulerian perspective. This perspective will be used to develop techniques for understanding oscillations in lumped-element acoustical networks that are smaller than the wavelength of sound and will be applied to extended media in which waves propagate, are reflected and transmitted through interfaces between media with different acoustical properties, and are refracted through media with continuously-varying acoustical properties. The same equations will be applied to the excitation of sound waves that propagate in 3-dimensions by vibrating bodies that are smaller than the wavelength of sound. Those results will be extended by superposition of such "compact sources" to produce both discrete and continuous one- and two-dimensional arrays. The directional properties and strength of such extended sources will be examined. The behavior of sound within 3-dimensional rectangular enclosures is studied via the method of "separation of variables" to identify the sound modes in such enclosures, their characteristic frequencies, and the selective excitation and detection of such modes. The frequency dependence of the density of modes is introduced to motivate the relationship between the modal and raytracing (i.e., ballistic) perspectives. The techniques of "statistical energy analysis" will be applied such enclosures to quantify architectural phenomena such as reverberation time and critical distance. Those results will be extended to non-rectangular enclosures and to rectangular and cylindrical waveguides, focusing on the concept of group and phase speed and the coupling of sources to planewave and higher-order waveguide modes. Attenuation of sound waves is also treated from the hydrodynamic perspective and results are derived for boundary-layer dissipation, classical thermoviscous sound absorption within bulk fluids, and the relaxation-time approximation is applied for sound absorption by chemical association-dissociation in seawater and the effects of humidity on collision-times in air. Problem sets that illustrate the theory and applications are a central component of this course.

ACS 503: Signal Analysis for Acoustics and Vibration

3 Credits

This course will provide students with an in-depth treatment of time/frequency analysis of acoustic or vibration signals with direct connection to physical measurements. Students will build an awareness of the various techniques of signal analysis and a proficiency with these techniques and the language of signal analysis, skills that will facilitate their independent reading and learning beyond this course. Students will develop their ability to check answers for validity. Applications will be discussed in the context of actual measurements as students explore the implications and limitations of conventional techniques as applied to real signals in the background of real noise. Building on these insights, the students will demonstrate proficiency in the application of the techniques of signal analysis using common analysis-software packages and will develop proficiency in interpretation of the results.

ACS 505: Experimental Techniques in Acoustics

2 Credits

Properties of acoustical and vibrational transducers, electronic and other instrumentation used in fundamental data measurement, acquisition and analysis.

Prerequisite: ACS 501 , ACS 502

ACS 513: Digital Signal Processing

1-3 Credits

Discrete linear systems, transforms, digital filter design and applications, discrete fourier transforms, spectrum analysis.

ACS 514: Electroacoustic Transducers

3 Credits

The theory, design, and calibration of passive, linear, reciprocal electroacoustic transducers for use in both air and water media.

Prerequisite: PHYS 443

ACS 515: Acoustics in Fluid Media

3 Credits

Wave propagation in stationary and moving fluids; acoustic radiation and scattering; standing waves in ducts and cavities.

Prerequisite: E MCH524A ; PHYS 443

ACS 516: Acoustical Data Measurement and Analysis

2-3 Credits/Maximum of 3

Presents the engineering applications of recent developments in correlation and spectral analysis to acoustical measurement problems.

ACS 519: Sound-Structure Interaction

3 Credits

Acoustic radiation from and effects of fluid-loading on vibrating infinite and finite plates and shells. Acoustic transmission through and reflection

from elastic plates and shells, acoustic excitation of elastic plates and coupling between panels and acoustic spaces.

Prerequisite: ACS 501 , ACS 502 , E MCH524B

ACS 521: Stress Waves in Solids

3 Credits

Recent advances in Ultrasonic Nondestructive Evaluation: waves; reflection and refraction; horizontal shear; multi-layer structures; stress; viscoelastic media; testing principles.

Prerequisite: E MCH524A , E MCH524B

Cross-listed with: EMCH 521

ACS 523: Signal Analysis for Acoustics and Vibration II

3 Credits

This course is concerned with the time and frequency-domain analysis of discrete-time signals and discrete-time linear systems, with an emphasis on developing and applying analysis techniques with applications in acoustics and vibrations. In this course, students will learn how to apply amplitude and frequency modulation to signals, evaluate the stability and causality of systems, extract features from measured acoustic signals, and design and use common filters (i.e. infinite impulse response, finite impulse response, adaptive, and tracking).

Prerequisite: ACS 503

ACS 524: Transducers II and Acoustics System Modeling

3 Credits

The course covers current research in the design analysis and performance prediction for acoustic transducers and acoustical systems that include transducers. Examples of such systems are microphones, loudspeakers, piezoelectric sources and sensors, and systems that include one or more of these devices. This course builds on the understanding developed in ACS 514 to synthesize knowledge necessary for understanding and analyzing the nonlinearities in transducer systems to enable improved designs with reduced distortion or compensation for nonlinear behavior.

Prerequisite: ACS 514

ACS 530: Flow-Induced Noise

3 Credits

Introduction to the basic and applied aspects of flow-induced noise created by subsonic flows of various complexities. ACS 530ACS 530 Flow-Induced Noise (3) The objective of this course is to introduce the basic and applied aspects of flow noise created by subsonic flows of various complexities. Basic concepts of noise and pressure fluctuations induced by unsteady fluid flows are discussed, including theoretical as well as experimental approaches. For a given class of flow, mechanisms for the creation of unsteady wall pressures and forces, radiated sound, and fluid-structure interactions are detailed. Various prediction schemes are presented which range from purely theoretical to empirical. The intent is to keep the material practical while at the same time introducing the student to a wide variety of specific topics. Some of the topics to be presented include: basic fluid mechanics, fundamental flow noise theory, flow noise measurement issues including wave vector-frequency spectral estimates of unsteady pressures and forces, compact

Green's functions, unsteady forces and noise created by bluff bodies in flow, vortex shedding noise, wall pressure fluctuations and acoustics associated with turbulent boundary layers, including separated layers and transition zones, unsteady forces and noise due to flow over lifting surfaces, edge acoustic scattering mechanisms, axial-flow fan noise, rotor/flow interactions, turbulence ingestion, centrifugal blower noise, and noise generated by flow in pipes. The prerequisite for this course is a solid understanding of the fundamentals of acoustics, as demonstrated by successful completions of ACS 501 and 502. Students with a minor in Acoustics from accredited universities may also have the proper background to take this course. Although basic fluid mechanics is covered in the course, any previous courses or experience in this area will be beneficial. Homework problems will be assigned weekly and graded. Some of the homework may involve reading technical papers and providing a written synopsis. The average of all homework grades will constitute one-third of the final course grade. Another third will come from the mid-term exam and the final third from the final exam.

Prerequisite: ACS 501 and ACS 502

ACS 537: Noise Control Engineering I

3 Credits

As the first of three courses, this course provides an orientation to the program and covers fundamentals of noise control. ACS 537 Noise Control Engineering I (3) This course will introduce students to the application of acoustic and vibration fundamentals to the analysis and reduction of noise and vibration problems in industrial and residential settings. Topics will include: source-path-receiver model, human hearing and psychoacoustics, human response to noise and vibration, sound quality metrics and criteria for quantifying noise, acoustic standards related to noise and vibration control, instrumentation for measuring and analyzing noise and vibration, noise sources (distributed sources, impact sources, flow noise), absorption (materials, measurement, placement), control of sound in large and small rooms, partitions and barriers, mufflers, and vibration control techniques. Homework will combine problem solving with analysis of case studies. Group projects may be used to encourage collaborative approaches to problem solving.

Prerequisite: BS in engineering or related field, or instructor approval

ACS 542: Physical Principles in Biomedical Ultrasonics

3 Credits

Physical principles of advanced ultrasonic imaging and quantitative data acquisition techniques in fields of biology and medicine. E MCH (ACS) 542 Physical Principles in Biomedical Ultrasonics (3) This course focuses on the phenomenon of ultrasound in the context of medical and biological applications, systematically discussing physical principles and concepts. Concepts of wave acoustics are examined and practical implications are explored - first, the generation and nature of acoustic fields and then their formal descriptions and measurement. Real tissues attenuate and scatter ultrasound in ways that have interesting relationships to their physical chemistry, and the course includes coverage of these topics. This course also includes critical accounts and discussions of the wide variety of diagnostic and investigative applications of ultrasound that are available in medicine and biology. The course encompasses the biophysics of ultrasound and its practical applications to therapeutic and surgical objectives. The course utilizes finite element methods for simulation.

Cross-listed with: EMCH 542

ACS 580: Contemporary Research in Acoustics

1 Credits

Contemporary research activities in acoustics: major research thrusts, including current research methodologies and their limitations.

Prerequisite: ACS 501, ACS 502, ACS 505, ACS 590, ACS 594 or equivalent

ACS 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ACS 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

ACS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ACS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ACS 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ACS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ACS 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ACS 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

ACS 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Additive Manufacturing and Design (AMD)

AMD 500: Legal Issues in Additive Manufacturing

2 Credits

This course explores the legal rules related to the ownership, enforcement and management of information related to additive manufacturing. It is directed primarily to students working in fields outside of the legal profession. Primary areas of focus include intellectual property ("IP") law (patents, trademarks, copyrights and trade secrets), product liability and cybersecurity law, as well as the legal rules for related industry practices such as licensing. In addition to understanding the legal framework, students will apply the course teachings to develop managerial skills such as: understanding legal contracts and license agreements; protecting company secrets; developing invention and design rights; branding distinctive products and services; designing products in light of tort liability rules; and adhering to best data protection practices.

AMD 501: Statistical Methods for Additive Manufacturing

3 Credits

This course explores the theoretical and practical underpinnings of statistical methods and tools for additive manufacturing (AM). It is primarily directed to engineering students working in fields outside of statistics and data science to design and develop statistical methods and tools for data analytics in AM. The primary areas of focus are statistical methodologies such as statistical process control, statistical design and analysis of experiments, predictive analytics, and reliability modeling. In addition to understanding statistical methodologies, students will apply the course teachings to design and implement the appropriate methodologies to model and analyze AM processes. Through this analysis, students will develop the skills for data-driven manufacturing informatics and decision making. Recommended preparation for the course includes basic concepts on probability and statistics, and the use of computing software (e.g., Matlab or Python).

Recommended Preparation: Basic concepts on probability and statistics, and the use of computing software (e.g., Matlab or Python).

AMD 502: Cybersecurity for Additive Manufacturing

2 Credits

This course explores the intersection of cybersecurity and additive manufacturing (AM) by examining information security, information assurance, design, fabrication, and industrial security to defend AM from emergent threats using current research literature, theory and practical analysis of data and analyses, and provides general methodologies to address cybersecurity principles across a digital manufacturing enterprise. Students will examine networks, quantify assets on the network, determine attack perimeters and vulnerabilities using commonly available network and cybersecurity tools, all while using the theme of advanced manufacturing technologies. Students will analyze current, known attacks and exfiltration of data and how best cyber practices

can help secure and defend the relevant data. Students will recognize how different modalities of sensing and machine parameters can be manipulated to cause harm to the part, the printer, and the process. The course will follow issues concerning intellectual property of the digital manufacturing paradigm; case studies on techniques for attacking and defending design intent; and review recent literature on cyber security within the AM process.

AMD 527: Additive Manufacturing Processes

4 Credits

The course will cover the fundamentals of Additive Manufacturing (AM) processes. During the course the students will leverage their background in computer-aided manufacturing to learn the Digital Work Flow steps from Design to Manufactured AM parts. They will learn and gain experience in the various data representation, algorithms and software tools, processes, and techniques that enable advanced/additive manufacturing. Computational algorithms will be researched and evaluated. Detailed research investigations into the fundamental process models of various additive manufacturing (AM) processes using polymers, metals, and other material will provide insight into the operating principles, capabilities, and limitations of AM processes. In addition to theoretical knowledge, the students will gain hands-on experience with AM machines and understand the complete process steps through design, fabrication, and measurement of example parts. The students will study the range of applications of AM across a spectrum of industries (e.g., aerospace/automotive, medical devices, and consumer products) while developing an understanding of the requirements, constraints, and business case for the applications. After completing this course, students will have a fundamental understanding of the research in AM processes and prepare them for additional depth in follow on courses. Additionally the students will be able to appropriately utilize (e.g., evaluate, select, design) this developing technology in the future of manufacturing and digital transformation of manufacturing.

Cross-listed with: IE 527

AMD 545: Engineering and Scientific Principles of Additive Manufacturing

4 Credits

In additive manufacturing (AM), components are fabricated via sequential joining using a bonding agent, curing, sintering, or fusing. AM fabrication of metals, ceramics, polymers, and organics has been demonstrated and is actively being used in industry and academia. ESC 545 / AMD 545 explores these processes with a focus on the fundamentals of sintering and fusion of metals, ceramics, and polymers. The topic is multi-disciplinary, requiring examination of individual AM system components, the physics of energy-material interactions, and the materials science at play during heat-reheat cycles. Opportunities for process sensing and real-time control are explored, as well as the role of post-process technologies in realizing serviceable components. These topics will lead to a discussion of methods and strategies to optimize component properties and characteristics. Current and potential impacts of AM on society are also covered.

Recommended preparations: A course in engineering materials and/or engineering analysis is highly desired but not required.

Cross-listed with: ESC 545

AMD 562: Design for Additive Manufacturing

4 Credits

Additive manufacturing (AM, colloquially 3D printing) is rapidly changing the face of modern manufacturing. This layer-by-layer manufacturing approach allows for parts to be created with significant levels of complexity and in cost-effective small batches, with reduced raw material waste when compared with traditional manufacturing processes. This technology has given rise to the need for Design for Additive Manufacturing (DfAM) techniques capable of accounting for both the possibilities and restrictions offered by AM in product design. However, due to the relative youth of the technology, understanding of how to properly establish and evaluate these design considerations is still evolving. In this course, students will be exposed to research in the field of DfAM that aims to establish an understanding of both opportunistic possibilities (e.g., lattice structures, topology optimization, and mass customization) and quantify restrictive limitations (e.g., minimum feature size and support material removal) when designing products for creation with additive manufacturing. The material will be presented through a combination of literature investigations and design exercises viewed through the lens of research in the DfAM field. The objectives of the course include describing the role that DfAM plays in the greater field of additive manufacturing, identifying similarities and differences between existing DfAM approaches and frameworks, synthesizing opportunistic DfAM approaches and how they improve product quality and novelty, identifying and quantifying restrictive DfAM considerations through experimentation, and identifying and discussing key areas of future research to advance the field of DfAM.

CONCURRENT: IE 527

Cross-listed with: EDSGN 562

AMD 566: Metal Additive Manufacturing Laboratory

3 Credits

This course will provide in-depth and hands-on laboratory experience in metal-based additive manufacturing. The laboratory activities will expose students to all aspects of the additive manufacturing workflow for metal components, starting with conceptual design, proceeding through fabrication, post-processing, and part inspection. Laboratory activities will include part design and analysis, process simulation and modeling, build preparation and machine set up, fabrication and post-processing, and non-destructive inspection and measurement. Laboratories will include computational design tools and simulation models as well as fabrication and post-processing (e.g., heat treatment, machining). Finally, the laboratory activities will also stress safe powder handling, equipment, and laser safety, which is particularly important when working with metallic powders and feedstocks. The laboratory is intended for students that have a basic understanding of the different additive manufacturing processes and are gaining familiarity with the engineering and science of additive manufacturing. The laboratory activities will provide students with the scientific foundation and research skills necessary to rigorously ascertain the performance of additively manufacturing materials, processes, and parts. Upon completion of the laboratory, students should be able to describe the workflow for additive manufacturing, identify main cost drivers, and describe the differences when using metals versus polymers. They should also understand the key tradeoffs between design, manufacturing, and materials as it relates to the additive manufacturing processes utilized in the laboratory activities.

Recommended Preparation: This course is intended for students that have a basic understanding of the different additive manufacturing

processes and are interested in gaining familiarity with the engineering and science of additive manufacturing

Cross-listed with: ME 566

AMD 567: Additive Manufacturing of Metallic Materials

3-4 Credits

This course will expose students to the state of the art in understanding processing, structure, and property relationships in materials fabricated using additive manufacturing (AM). There will be a strong focus on metallic alloys, but polymers, ceramics, and advanced materials will also be briefly discussed. The emphasis of the course will be on understanding the links between processing and the resulting structure, as well as the microstructure and the mechanics of the fabricated materials. Initially, we will discuss the types of AM and the feedstock materials required for these processes. We will then focus on metals, and discuss the energy sources used in AM (lasers, electron beams), and their interactions with the material. We will discuss the molten pool characteristics and the solidification microstructures. We will relate the microstructures seen in AM to the resulting mechanical properties (elastic deformation, plastic deformation, fracture, fatigue performance, and residual stress/distortion). Finally, we will discuss specific case studies for metals, polymers, ceramics, and advanced materials.

Cross-listed with: MATSE 567

AMD 575: Aerospace Materials

3 Credits

Advanced materials are critical to improve performance, safety, and sustainability of air flight and space exploration in extreme environments. This course provides a survey of engineering knowledge on existing and future advanced materials for aerospace applications, and provides multiple opportunities for students to apply this knowledge and to analyze existing tailored aerospace materials of high performance. First, class participants will review the origins of the material properties: atomic bonding and packing, grains and boundaries, interfaces/interphases, and micro-structuring. Second, the participants will learn about common aerospace materials (metal alloys, ceramics, and polymer composites); how these materials satisfy the tight performance requirements and withstand extreme environments. Third, novel material design (nanocomposites and metamaterials), mostly in the nano and micro scales, and how their micro-structures drive their advanced properties will be discussed, together with their current challenges in applications (material design, scalable fabrication, and certification).

Prerequisites: AERSP 470 or ME 560 Recommended Preparations: Students should have knowledge on solid works (stress-strain constitutive relations, coordinate transfer, etc.), basic undergraduate-level math for engineering majors (ODE, matrix calculation, Cross-listed with: AERSP 575

AMD 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

AMD 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including non-thesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

AMD 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

AMD 600: Thesis Research

1-15 Credits/Maximum of 999

Thesis Research

Adult Education (ADTED)

ADTED 501: Foundations of Medical Education

3 Credits

This course provides an overview of medical education, and considers how it operates as a specific form of adult education. ADTED 501 Foundations of Medical Education (3) The primary focus of this course is to explore the foundations of medical education by providing an overview of medical education, and considering how medical education operates as a specific form of adult education. It is especially relevant to educators working with adult learners in medical education, nursing education, or health education. More specifically, the course will focus on how insights from adult learning theory can contribute to the theory and practice of medical education in designing curriculum and developing an appropriate pedagogy in both classroom and clinical teaching contexts. It will examine recent and future trends in US medical education in light of the context of: the guidelines of the American Association of Medical Colleges (AAMC); the current health care system; and comparative trends in medical education in other countries. The course will examine research in medical education, and help students focus on the connections of research and educational philosophy/theory with developing their own teaching practice in medical education in classroom settings (face to face and online), and in clinical teaching settings. Finally, it will briefly explore trends in medical education assessment, and issues in continuing medical education. Objectives are: 1. To provide an overview of the foundations of Medical Education as Adult Education 2. To consider the development of medical education in light of its history and recent trends in health care in both a U.S. and international context 3. To analyze and discuss adult learning theory as related to medical education in both classroom and clinical settings 4. To examine some of the research in medical education assessment strategies used in evaluating medical education 5. To develop a philosophy of medical education that guides the development of curriculum and pedagogy in different medical education settings 6. To develop specific strategies for medical education teaching practice for both classroom and clinical contexts In addition to ongoing participation, evaluation is predominantly based on the following: 1. A paper where students discuss their philosophy of medical education and what it suggests for curriculum development in light of course readings and class discussion 2. A collaborative book review and presentation of a recent book in medical education 3. A final paper or project exploring an issue in medical education in depth

Prerequisite: ADTED460

ADTED 502: Program and Instructional Design in Medical Education

3 Credits

This course focuses on program planning and instructional design in a medical setting with an emphasis on teaching with simulation. ADTED 502 Program and Instructional Design in Medical Education (3) Participants of this course will explore a variety of program and curriculum planning and instructional design approaches to teaching in a medical setting, with a particular emphasis on the use of simulation as an instructional design. Program planning is informed by models from the adult education literature and curriculum planning informed by the field of medical education which will provide a framework for preparing participants in the assessing, planning, developing and evaluating simulations as an instructional design. The course will provide participants with the both theoretical understanding and direct practical experience so they are able to effectively plan and develop effective simulations for teaching in a medical setting. In addition, this course is taught in six sessions (9-5pm) which is a suitable format for teaching the content and the work schedule of medical students/faculty who will be taking this course.

Prerequisite: ADTED460

ADTED 505: The Teaching of Adults

3 Credits

Examination of direct and indirect teaching; contracts, application of current technology, andragogy, motivation, evaluation; knowledge of research.

Prerequisite: ADTED460

ADTED 506: Program Planning in Adult Education

3 Credits

Intensive study of theoretical foundations, policies, evaluation models, methods, and materials in program planning in adult education.

Prerequisite: ADTED460 , ADTED505

ADTED 507: Research and Evaluation in Adult Education

3 Credits

Guided discussion and reading in selected research and evaluation methods and trends as applied in adult education settings.

Prerequisite: ADTED460 ; introductory statistics course; introductory research design course

ADTED 508: Globalization and Lifelong Learning

3 Credits

Examination of globalization discourses and their relationships, implications and impacts on lifelong learning processes and contexts. ADTED 508ADTED (CI ED) 508 Globalization and Lifelong Learning (3) The course is designed to help students to critically examine the nature and impacts of globalization on lifelong learning. The main goal is to enhance the students' ability to learn and work in a globalizing world and to challenge traditional perspectives about globalization and lifelong learning. As such, the course will adopt a critical perspective on

globalization while helping the students to develop a reflective stance on the theory and practice of lifelong learning. A central focus of the course will be to develop a critical analysis that contributes to the building of a more active and socially responsible adult learner. Students will be evaluated using a number of assignments/projects. The major research paper, class presentation, two critiques of theories of lifelong learning, country profile of lifelong and a short reaction paper will count for 90% of the course grade. Class participation will be awarded 10%.

Cross-listed with: CIED 508

ADTED 509: Language, Literacy, Identity, and Culture in a Global Context

3 Credits

Examines the relationship between issues of language, identity and culture for adult learners in an increasingly global context. ADTED 509 ADTED (CI ED) 509 Language, Literacy, Identity, and Culture in a Global Context (3) This core required course provides graduate students in the ADTED Ph.D. program a critical overview of the literature, theories, and scholarship examining the complexities inherent in an increasingly diverse global and post-colonial sphere. Explorations of historical, theoretical, postcolonial perspectives will be the focus, as will the daily portrayals of diverse peoples by the media. Participants in the course will be expected to familiarize themselves with the readings portraying the complexities of ethnicity, indigeneity, race, gender, and social class. Evaluation will focus primarily on writing a scholarly paper, preparing video materials that illustrate the issues, writing their personal educational histories, and participating in class.

Prerequisite: ADTED508

Cross-listed with: CIED 509

ADTED 510: Historical and Social Issues in Adult Education

3 Credits

Social and historical foundations of adult education in the United States and selected nations.

Prerequisite: ADTED460

ADTED 515: Foundations of Educational Research

3 Credits/Maximum of 999

Students read the philosophical foundations of education research, study how philosophies influence methodologies, and analyze current educational problems. This course is designed for students entering doctoral programs in the College of Education. Our students are studying to become education researchers within a highly politicized environment. For example, particular definitions of education research and government policies that favor some types of research practices over others provide opportunities for and set limits upon the work of education researchers. Public controversies likewise contribute to challenges faced by education researchers who find their work affirmed or discounted by particular definitions and policies. In order to explore these controversies and to allow students to begin identifying their own "positionality" with regard to research, this course begins with a reading of the history and philosophies of education research (primarily focusing on the United States). The course goals are: - to identify underlying assumptions of competing forms of social inquiry, each determined to uncover new knowledge; - to bring those assumptions to bear on education research in chosen fields of study; and - to begin to develop one's own positions in order to direct further study and research. Specifically, through instructor

facilitation and group discussions, students will come to understand major philosophical perspectives that permeate and drive research methodologies in education: positivism, postpositivism, interpretivism, critical theory, poststructuralism, and pragmatism. These understandings allow students to recognize the methodological assumptions that inform published research studies and to discover how methodologies might inform the research they wish to conduct as students and practitioners. Although the course is not required by any particular doctoral program in the College of Education, it is suggested for students who consider research important to their future careers and who see benefits in exploring the methodological options available.

Cross-listed with: CI 515, EDPSY 515, HIED 515

ADTED 521: Doctoral Proseminar

3 Credits/Maximum of 999

An orientation to the field of adult education and to doctoral study in the Adult Education Program at Penn State. This course provides both an orientation to the field of adult education as an area of study and an initial seminar for doctoral students to understand the process of graduate study in this program. It is intended for both practitioners who have experience working with adult learners and people with little or no experience who have an interest in learning about the field. We will take a broad view of adult education and will accommodate the interest of persons concerned with nonformal education, informal learning, and formal learning in diverse settings. The principal aim is to develop a basic understanding of adult education in a global context as well as to begin preparing students for candidacy. The focus of the course will be on the sociohistorical context of its methods, agencies, programs, and issues.

ADTED 531: Course Design and Development in Distance Education

3 Credits

In depth study of the practices of designing courses taught by print, broadcast, and telecommunications media to adult distance learners.

Prerequisite: ADTED470 , INSYS415

ADTED 532: Research and Evaluation in Distance Education

3 Credits

Study of previous, current, and needed research strategies, and issues concerning evaluation in distance education.

ADTED 533: Global Online and Distance Education

3 Credits

Students will explore the historical and current developments of online and distance education in different regions of the world.

ADTED 542: Perspectives on Adult Learning Theory

3 Credits

Introduction to adult education learning theory, principles, and models of adult learning by adults alone, in groups, and in communities.

ADTED 543: Comparative and International Trends in Adult Literacy Education

3 Credits

This course critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and comparative framework. CI ED (ADTED/AFR) 543 Comparative and International Trends in Adult Literacy Education (3) This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century: the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives. This course investigates questions such as: What does it mean to be literate in the 21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis? Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge production itself.

Cross-listed with: AFR 543, CIED 543

ADTED 545: Global Perspectives on Race, Gender, and Lifelong Learning

3 Credits

This course introduces students to some of the major bodies of literature related to race and gender, with a focus on how these intersectional perspectives help to shape our understanding of adult education and lifelong learning. The first part of the course is an overview of several key concepts including global theories of race and gender relevant to diverse societies in distinct geographical locations. The second part of the course explores the intersection of race, gender, and education through the writings of critical feminist scholars. Through this course, students will learn how to analyze race, gender, and class not as independent categories but deeply interconnected spheres of subjective and objective experiences. Students will also learn how theories of race and gender can inform their analyses of adult education policy and practice.

Cross-listed with: CIED 545

ADTED 549: Community Junior College and the Technical Institute

2-3 Credits/Maximum of 3

Distinctive contributions to meeting the need for postsecondary education; development, functions, curriculum and instruction, government, administration, and finance.

Cross-listed with: HIED 549

ADTED 550: Qualitative Research in Adult Education

3 Credits

Introduction to the theory, principles, and practice of qualitative research.

ADTED 551: Qualitative Data Analysis

3 Credits

Students learn to analyze data qualitatively by engaging in, and continuously reflecting on the process. ADTED 551 ADTED 551 Qualitative Data Analysis (3) The course is designed for graduate students wishing to gain competencies in qualitative data analysis. It is especially suitable for students needing guidance in completing the data analysis phase of their masters' or doctoral research. The course takes a thoroughly hands-on, inductive approach. Students learn the skills and principles of qualitative data analysis by engaging in, and reflecting on, the process. Texts will be consulted, as needed, but only as resources to assist in the students' on-going work, not as blue prints to follow. Using their own data, the instructor will guide students in selecting and using appropriate strategies and techniques for qualitatively analyzing data. Students will work in teams. Each work team will make periodic progress reports - in the form of oral class presentations. It is expected that students will actively participate in class discussions and in their work teams. Each student will also submit a diskette that contains samples of the work he or she has generated while using qualitative data analysis computer programs. Each student will also submit a final paper that articulates what he or she learned about the qualitative data analysis process.

Prerequisite: ADTED550 and LDT 574

ADTED 552: Participatory Action Research

3 Credits

Examines origins, historical development, main characteristics, methodological assumptions and models, practice of participatory action research adult education and community development. ADTED 552 ADTED 552 Participatory Action Research (3) This course is designed to provide students with a critical overview of the theory and practice of participatory action research (PAR). The course begins with an examination of the meaning and nature of participatory action research. Related issues such as the major differences between PAR and the orthodox, traditional research paradigm will be discussed. This will be followed with a discussion of the historical roots of PAR and a critical examination of its epistemological assumptions and philosophical roots. The course will explore the various models of doing PAR with particular reference to the guidelines, phases, methods, and techniques. Finally, the course will critically examine a selected number of case studies from various regions. Students will be evaluated using a variety of assignments. The scholarly paper, a case study of PAR practice, annotated bibliography and three reaction papers will count for 90% of the course grade. Class participation will be awarded 10%.

ADTED 560: Teaching Reading to College Students and Adults

3 Credits

Reading literacy for adults, including college reading, Adult Basic Education (ABE), and General Educational Development (GED) programs.

Prerequisite: LL ED440 or teaching experience

ADTED 561: Family Literacy

3 Credits

Examines the research related to the four components of family literacy, program effectiveness, and theoretical underpinnings. ADTED 561 ADTED 561 Family Literacy (3) Open to graduate students who are interested in literacy, adult education, early childhood education, family studies, communication, and related fields, this 3-credit course provides a research-based study of family literacy. Family literacy comprises four components: Adult literacy instruction, early childhood education, parenting education, and parent - child interaction. Research about the four components and the program as implemented in the USA (primarily under the Goodling Even Start Act) and internationally will be studied in addition to the theoretical underpinnings of the concept of family literacy. Students will be required to conduct original or library research related to family literacy and present their findings both in class and in a written paper that could be publishable. Students may choose to do research related to the projects of the Goodling Institute for Research in Family Literacy in the College of Education; students' papers may have the opportunity to be disseminated through the Institute. The research project, presentation, and paper will be counted as 50% of the course grade. Class participation (including email discussion groups) will be awarded 20% of the course grade while the remaining 30% will be awarded to short reaction papers to the assigned readings.

ADTED 562: Politics, Language and Pedagogy: Applying Paulo Freire today

3 Credits

Examines the work of Paulo Freire as it applies to community action projects. ADTED 562 / CIED 562 Politics, Languages and Pedagogy: Applying Paulo Freire Today (3) The life and work of Paulo Freire will be the focus of this advanced graduate seminar. Freire was one of the foremost adult educators of our time. Graduate students participating in the course will read and reflect on his vision and how it evolved over time, critiques of Freire, the ways in which his ideas have been applied in diverse geographic and practice settings (e.g., education, community development), and implications for research, policy, and practice. Students will explore how elements related to Freire's work, such as conscientization, transformative action, and pedagogy for liberation, influence pedagogy and community action projects. Readings will include Freire's books, scholarship on Freire, and case studies of Freirean projects, among others.

Cross-listed with: CIED 562

ADTED 564: Social and Cultural Contexts of Learning and Work

3 Credits

Examines the relationship between learning and work with special attention given to how certain forms of learning are legitimized. ADTED 564 Social and Cultural Contexts of Learning and Work (3) This course is designed to provide students with the knowledge and skills required to critically examine the concepts and meanings of learning and work and their relationship to community. The course focuses on formal, nonformal, informal, and incidental learning, with particular emphasis given to how different types of knowledge and different forms of learning are legitimized. The course will allow students to develop and understand the social context in which learning and work operate and how those concepts shape and impact the community. Students will write critiques

of readings as well as a major literature review, participate in class discussion, and do a class presentation.

Prerequisite: CI ED500 , ADTED542

Cross-listed with: CIED 564

ADTED 570: Comparative and International Adult Education

3 Credits

Critical and comparative analysis of adult education theory and practice outside North America, including international agency involvement.

Prerequisite: ADTED460

Cross-listed with: CIED 570

ADTED 575: Administration of Adult Education

3 Credits

Organization of a program of adult education; legal status, finances, selection of teachers, learning personnel, housing; other administrative problems.

Prerequisite: ADTED506 or EDLDR480

ADTED 580: Adult Education Research Seminar

1-3 Credits/Maximum of 3

A seminar dealing with specific research topics and methods in adult education. Open to advanced students in adult education.

Prerequisite: ADTED507 , EDPSY400 , EDPSY475

ADTED 581: Social Theory and Lifelong Learning

3 Credits

This course offers an in-depth coverage of social theory, especially as it intersects with research and practice in adult education and lifelong learning. Considering that educational research, educational practice, and the politics of justice in education are informed by specific theoretical frameworks, this course will explore historical and epistemological foundations of theories and engage core modernist theories, postmodern and critical theories, and the theorizing found in Global South discourses.

Cross-listed with: CIED 581

ADTED 588: Professional Seminar: Research and Adult Education

3 Credits

Review of research in adult education, current and past, with analysis of its directions, effects, methodology, quality, financing, and prospects.

Prerequisite: ADTED460 , ADTED507

ADTED 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ADTED 594: Research Topics

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

ADTED 595: Internship in Adult Education

3-9 Credits/Maximum of 9

Supervised student internship in adult education agency.

Prerequisite: ADTED460

ADTED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including non-thesis research, supervised on an individual basis and which fall outside the scope of formal courses.

ADTED 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

ADTED 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ADTED 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

Ph.D. Dissertation research.

Prerequisite: passing score on the Ph.D. comprehensive examination

ADTED 602: College Teaching

1-3 Credits

Experience in teaching in the Adult Education Program.

Prerequisite: Advanced standing in the Adult Education graduate program.

ADTED 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

Aerospace Engineering (AERSP)

AERSP 504: Aerodynamics of V/STOL Aircraft

3 Credits

Jet wings, high lift devices, propellers and ducted propellers, circulation and boundary layer control, unsteady airfoil theory.

Prerequisite: AERSP407

AERSP 505: Aero- and Hydroelasticity

3 Credits

Interaction of elastic systems having several degrees of freedom with fluid flows in various configurations.

AERSP 506: Rotorcraft Dynamics

3 Credits

Modeling and analysis techniques for dynamic response, vibration, aeroelastic stability, and aeromechanical stability of rotary-wing vehicles.

Prerequisite: AERSP504 , E MCH571

AERSP 507: Theory and Design of Turbomachinery

3 Credits

Theory and principles of machinery design: compressors, turbines, pumps, and rotating propulsors; opportunity to work out design examples.

AERSP 508: Foundations of Fluid Mechanics

3 Credits

Mathematical review, fluid properties, kinematics, conservation laws, constitutive relations, similarity principles, the boundary layer, inviscid flow, vorticity dynamics, wave motion.

AERSP 509: Dynamics of Ideal Fluids

3 Credits

Irrotational flow theory, two-dimensional and axisymmetric flows, airfoil theory, complex variables, unsteady phenomena; flow with vorticity, finite wing theory.

Prerequisite: AERSP508

AERSP 511: Aerodynamically Induced Noise

3 Credits

Review of fluid mechanics. General theory of aerodynamic sound. Noise radiation from jets, boundary layers, rotors and fans. Structural response.

AERSP 514: Stability of Laminar Flows

3 Credits

The stability of laminar motions in various geometries as influenced by boundary conditions and body forces of various kinds.

AERSP 518: Dynamics and Control of Aerospace Vehicles

3 Credits

Dynamical problems of aircraft and missiles, including launch, trajectory, optimization, orbiting, reentry, stability and control, and automatic control.

Prerequisite: AERSP413 or AERSP450

AERSP 524: Turbulence and Applications to CFD: DNS and LES

3 Credits

First of two courses: Scalings, decompositions, turbulence equations; scale representations, Direct and Large-Eddy Simulation modeling; pseudo-spectral methods; 3 computer projects.

Prerequisite: AERSP508 or M E 521

Cross-listed with: ME 524

AERSP 525: Turbulence and Applications to CFD: RANS

3 Credits

Second in two courses: Scalings, decomposition, turbulence equations; Reynolds Averaged Navier Stokes (RANS) modeling; phenomenological models; 3 computer projects.

Prerequisite: AERSP508 or M E 521

Cross-listed with: ME 525

AERSP 530: Aerothermochemistry of Advanced Propulsion Systems

3 Credits

Physics and chemistry needed to analyze high performance rocket propulsion systems including reacting high temperature radiating gas and plasma flows.

Prerequisite: AERSP312 or M E 420

AERSP 535: Physics of Gases

3 Credits

An introduction to kinetic theory, statistical mechanics, quantum mechanics, atomic and molecular structure, chemical thermodynamics, and chemical kinetics of gases.

Cross-listed with: ME 535

AERSP 540: Theory of Plasma Waves

3 Credits

Solutions of the Boltzmann equation; waves in bounded and unbounded plasmas; radiation and scattering from plasmas.

Prerequisite: E E 471

Cross-listed with: NUCE 540

AERSP 550: Astrodynamics

3 Credits

Applications of classical celestial mechanics to space flight planning. Determination and construction of orbital parameters by approximation methods. Perturbation techniques. AERSP 550 Astrodynamics (3) This course covers the mathematics and practices in orbital mechanics as applied to space mission analysis, design and operation. The major topics are: the n-body problem, the two-body problem, Keplerian orbits, the Kepler problem (position as a function of time), three-dimensional specifications of Keplerian orbits (orbital elements), Lambert's problem (determining the trajectory between two specified points with a given time of flight), impulsive transfers, the Hohmann transfer and its extension to other problems, the sphere of influence, the patched-conic approximation, the restricted three-body problem, linear orbit theory

(relative motion between vehicles in neighboring orbits), gravitational modeling, perturbation methods (Encke's method and variation of elements), orbit determination, tracking kinematics, and time systems.

Prerequisite: AERSP450 or E MCH409 or PHYS 419

AERSP 552: Interplanetary Astrodynamics

3 Credits

This course focuses on mathematics and practices in interplanetary astrodynamics. Major topics include: astrodynamics applied to interplanetary space missions, the N-body problem, orbit transfers, Lambert's problem, gravity assists, planetary entry, descent and landing, planetary ephemerides, tracking sources and measurements, and spacecraft navigation. Other topics may be covered as time permits.

Recommended Preparations: AERSP 450 Sufficient proficiency in computer programming to code and debug a complex computer program. Fundamental knowledge in astrodynamics, as would be found in an junior or senior astrodynamics course.

AERSP 554: Statistical Orbit Determination

3 Credits

When tracking satellites in orbit, large amounts of tracking data (range, range-rate, azimuth, elevation) is collected. To convert this data to physical orbital elements of the satellite's orbit, this data must be filtered, and this filtering is done using methods of statistical orbit determination. This course focuses on the mathematics and practices in statistical orbit determination for analyzing large amounts of satellite tracking data. Major topics include: classical orbit determination techniques, probability and statistics, least-squares solution, weighted least squares, statistical interpretation of the least-squares problem, Cholesky decomposition, Gauss-Markoff theorem, sequential estimation algorithms, extended sequential estimation algorithms, square root filters, state noise compensation algorithm, state noise compensation algorithms, smoothing algorithms, minimum variance, maximum likelihood, Bayesian estimation. Other topics may be covered as time permits.

AERSP 560: Finite Element Method in Fluid Mechanics and Heat Transfer

3 Credits

Application of finite element techniques to viscous/unsteady fluid flow/heat transfer problems.

Prerequisite: AERSP312 , AERSP313

AERSP 565: System Identification

3 Credits

This course will cover topics related to identifying frequency response function as well as linear state space models from input-output data. Topics include continuous and discrete time models, frequency response functions, model structure & parameterization, non-parametric models, subspace methods, observability & identifiability, model order estimation, sparse approximation and relationship to maximum likelihood estimation & Kalman filtering.

AERSP 566: Applied Optimal Estimation

3 Credits

This course will cover topics from basic linear and nonlinear stochastic processes to well-known Kalman filtering methods to recently developed nonlinear estimation methods at a level of detail compatible with the design and implementation of modern control and estimation of dynamical systems. These diverse topics will be covered in an integrated fashion, using a framework derived from stochastic processes, estimation, control, and approximation theory.

Recommended Preparations: Consistent with coursework in undergraduate engineering programs, proficiency is required with linear algebra, calculus and control theory. In addition, proficiency with a scientific programming language (e.g., MatLab, Python) i

AERSP 571: Foundations of Structural Dynamics and Vibration

3 Credits

Modeling approaches and analysis methods of structural dynamics and vibration.

Prerequisite: AERSP304 , E MCH470 , M E 450 , or M E 570
Cross-listed with: EMCH 571, ME 571

AERSP 575: Aerospace Materials

3 Credits

Advanced materials are critical to improve performance, safety, and sustainability of air flight and space exploration in extreme environments. This course provides a survey of engineering knowledge on existing and future advanced materials for aerospace applications, and provides multiple opportunities for students to apply this knowledge and to analyze existing tailored aerospace materials of high performance. First, class participants will review the origins of the material properties: atomic bonding and packing, grains and boundaries, interfaces/interphases, and micro-structuring. Second, the participants will learn about common aerospace materials (metal alloys, ceramics, and polymer composites); how these materials satisfy the tight performance requirements and withstand extreme environments. Third, novel material design (nanocomposites and metamaterials), mostly in the nano and micro scales, and how their micro-structures drive their advanced properties will be discussed, together with their current challenges in applications (material design, scalable fabrication, and certification).

Prerequisites: AERSP 470 or ME 560 Recommended Preparations: Students should have knowledge on solid works (stress-strain constitutive relations, coordinate transfer, etc.), basic undergraduate-level math for engineering majors (ODE, matrix calculation, Cross-listed with: AMD 575

AERSP 583: Wind Turbine Aerodynamics

3 Credits

Analysis of wind turbine performance, aeroacoustics, and loads; turbine selection for site-specific application.

AERSP 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AERSP 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

AERSP 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

AERSP 597A: **SPECIAL TOPICS**

3 Credits

AERSP 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

AERSP 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

AERSP 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Provides an opportunity for supervised and graded teaching experience in aerospace engineering courses.

AERSP 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

AERSP 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

AERSP 880: Wind Turbine Systems

3 Credits

Wind turbine technology and the critical elements of turbine systems design.

AERSP 886: Engineering of Wind Project Development

3 Credits

An overview of the wind project development process and technical considerations for onshore and offshore applications.

African American Studies (AFAM)

AFAM 501: Seminar in African American Studies

3 Credits

A survey of the academic field of African American Studies.

AFAM 502: Blacks and African Diaspora

3 Credits

Seminar in the theory and history of Blacks in the African Diaspora.

AFAM 503: Sexual and Gender Politics in the African Diaspora

3 Credits

A seminar in the theory and history of sexual and gender politics in the Black Diaspora from the Colonial Era forward.

Prerequisite: AF AM501

AFAM 520: Readings in African History

3 Credits

AFR 520 is a graduate seminar that gives students an overview of key literatures, methodologies, and debates in recent scholarship concerning various areas of precolonial, colonial, and postcolonial African history. Its broad temporal framing reflects the long, diverse histories of African peoples and their relations to Europe, the Americas, and Asia, while also allowing for examination of more recent and localized histories. Beginning in the era of transatlantic slavery and continuing to the present day, the selected texts constitute a sweeping examination of African history. In addition to covering a wide geographic scope—with works situated in North, East, South, and West Africa—the books engage with themes including slavery, health and healing, gender, religion, colonialism, nationalism, postcolonialism, and China's work on the continent. In addition to covering more recent additions to African historiography, course readings and assignments will encourage students to refine their research questions, interrogate the craft of history, strengthen their analytical writing, and expand the contours of their own fields. Graduate students will be prepared to: teach on the most recent studies of North and Sub-Saharan African history; more efficiently read and review academic texts; and carefully consider how they would frame, market, and detail their prospective dissertations as a potential book. This course is open to graduate student across departments.

Cross-listed with: AFR 520

AFAM 525: Trans of Color Critique

3 Credits

A history of transgender struggle has fomented intellectual formations that interrogate racial and gendered logics and proffer alternative structures of engagement, but commitment to any conceptualization of trans critique has often fallen back on assumptive ascriptions to non-racial analysis. Gathered at the concomitant study of race, gender,

sexuality, class, and socio-spatiality, *Trans of Color Critique* provides an opportunity to (re)consider the analytical and material possibilities and tensions tendered by the articulation of transgender and non-white. Engaging with trans (and queer) of color theory as a particular approach to the political and as its own mode of knowledge production, we will not only take up the mutual constitution of race and gender, but center how whiteness has come to construct the burgeoning field of trans studies. In this graduate seminar we will consider the ways in which these multiply marginalized knowledges aim a critical challenge at our Western knowledge traditions. The course considers how race as a modality of analysis and trans of color critique as a praxis can in turn amplify, extend, and complicate the framework and analytical interventions offered by trans studies. Rather than attempt to be exhaustive, we will focus on the urgent interventions offered by trans of color critical theory, especially as it relates to foundational disruptions of Western epistemologies, medicalization, humanism, movement and displacement, decolonial critique, carcerality, violence and death, and futurity.

Recommended Preparation: Prior coursework in Women's, Gender, and Sexuality Studies is recommended as well as familiarity with critical cultural and social theory.

Cross-listed with: WMNST 525

AFAM 544: Race and American Politics

3 Credits

In this seminar, we will explore what race is, why it matters, and how it shapes attitudes, behaviors, policies, and institutions. While this is a political science course, the seminar draws ideas and insights from a broad array of disciplines in the social sciences and humanities. It demonstrates that an explicit consideration of race is needed to fully comprehend American politics. Students emerge from the course with an understanding of the scholarly approaches and key substantive debates.

Cross-listed with: PLSC 544

AFAM 553: Comparative Racial and Ethnic Politics

3 Credits

Since its founding, the United States has had to balance the American creed of equality for all, on one hand, with racial inequality, on the other hand. Is this challenge something exclusive to the United States? This course will provide students the opportunity to analyze how race and ethnicity are constructed across the globe as well as how race and politics interact across state borders. Students will examine how race is constructed and racial ideologies are developed in several countries including the U.S., South Africa, France, Australia and Brazil. By the end of the semester, students should be able to fully engage and contribute to broad literatures on the politics and policy of race and racism. They should readily be able to answer questions such as: What role do countries and their institutions play in developing racial ideologies and racial hierarchies? What political purpose do ideologies such as "racial democracy" serve? How might social scientists best compare notions such as U.S.'s "race problem," Latin America's "shade problem" and Europe's "immigrant problem"? What are the perils of cross-border comparisons, and how, if possible, can social scientists account for state differences in their analyses? The major objectives of the course are to: (1) analyze the effects of historical, social, economic, cultural and global forces on the development of racial and ethnic politics in various countries; (2) define and critically analyze concepts relevant to the study of racial and ethnic politics; (3) identify, critique and apply major academic theories and debates regarding issues of

race, ethnicity, inequality and reconciliation; (4) build analytical skills so that students will be able to effectively engage and communicate in public and scholarly discourse about race and ethnic politics; (5) improve writing skills, especially as they relate to manuscript and book reviews; (6) become cognizant of the difficulties that scholars must navigate as they approach topics related to the politics, race, ethnicity as well as comparative/cross-state analysis; and (7) develop a series of best practices to address methodological and theoretical challenges to studying race comparatively.

Cross-listed with: PLSC 553, PPOL 553

AFAM 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

AFAM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

African Studies (AFR)

AFR 501: Key Issues in African Studies

3 Credits

A seminar to review leading issues in African Studies and African development.

AFR 505: African Studies Methodology

3 Credits

This course is an interdisciplinary research seminar in African Studies for graduate students in the humanities. In the seminar, students will explore key debates and issues in the field while examining the diversity of theoretical and methodological approaches that scholars of African Studies have used to approach these debates. Through research articles that each employ a different set of methodological tools to examine questions of modernity and tradition, development, gender, ethnicity, conflict, and transnationalism, students will understand the possible approaches that can be employed to identify a research questions, gather evidence, and analyze it. Through reading and discussing such research articles, and discussing with scholars who visit class to present their research, students will gain conceptual tools to advance a research project in methodologically-grounded ways. While some topics will apply more directly to the student's individual research project, the themes studied are those that all scholars of African Studies should have some knowledge and mastery over, and each module will give students an opportunity to experiment by applying the theory and methods referenced in the scholarly literature to primary sources relevant to the student's own research. See syllabus in supplementary materials for more information.

AFR 510: Post-Colonial Theory

3 Credits

The term post-colonial within itself has manifold meanings and implications. It is also considered a controversial term as many wonder exactly what is post to colonialism. In this class, we will explore colonial

discourse theory, the roots of European imperialism and racism, and feminist constructions in relation to post-colonial theory. We will engage with and read critical theory, literature, and film to analyze the relations of power that (re)generate the roles of domination and dominated, and the in-between states of negotiation.

Cross-listed with: ENGL 510

AFR 512: Decolonial Methods for Interdisciplinary Research

3 Credits

This course surveys contemporary scholarship in multiple disciplines to provide an overview of decolonial research methods and analytical frameworks. Each week, the readings will engage a different topic related to historical and contemporary ways of thinking about land, personhood, and power. Intended for students who are interested in initiating their own research projects in the future, the course is structured to enable students with little prior knowledge of archives or research methods to plan, begin, document, and revise an original project. Combining the study of theoretical readings with weekly research and reflection, students will develop critical tools for thinking, speaking, and writing about colonialism at the University and in a subject area of their choice. Theories are enabling, dynamic, and helpful tools for approaching texts, objects, situations, places, narratives. In this course, they will encounter things both familiar and unfamiliar in ways that unsettle not only their expectations but also their presumed relationship to what they know, where they are, and what might happen next.

Recommended Preparations: Students should have taken at least one research methods course.

Cross-listed with: EDCE 512

AFR 520: Readings in African History

3 Credits

AFR 520 is a graduate seminar that gives students an overview of key literatures, methodologies, and debates in recent scholarship concerning various areas of precolonial, colonial, and postcolonial African history. Its broad temporal framing reflects the long, diverse histories of African peoples and their relations to Europe, the Americas, and Asia, while also allowing for examination of more recent and localized histories. Beginning in the era of transatlantic slavery and continuing to the present day, the selected texts constitute a sweeping examination of African history. In addition to covering a wide geographic scope—with works situated in North, East, South, and West Africa—the books engage with themes including slavery, health and healing, gender, religion, colonialism, nationalism, postcolonialism, and China's work on the continent. In addition to covering more recent additions to African historiography, course readings and assignments will encourage students to refine their research questions, interrogate the craft of history, strengthen their analytical writing, and expand the contours of their own fields. This course is open to graduate student across departments.

Cross-listed with: AFAM 520

AFR 526: African Social and Cultural Systems

3 Credits

The African continent may be the most diverse of all the continents in its composition of ethnic groups, social and kinship arrangements, belief systems, and political processes. Its cultures have been subjected to further transformation by different colonial governance structures, decolonial apparatuses, differing ideals of modernity, and differing interactions with religions like Christianity and Islam. However, with all the differences and transformations, what are the elements that tell us about societies across the continent? This course details various social and cultural systems, from a regional perspective, to provide background knowledge to help students develop their understanding of the many different societies on the continent. The regional focus is further divided by into topics such as kinship relations, governance, and religion. As each region and topic area is covered, students will begin to understand areas of intersection, fissures brought by modernity, bridges and divides across ethnicities and regions: Kinship This subsection of the course on kinship provides an analysis of how kinship theories of social formation can facilitate our understanding of the different dimensions of African social practices in historical and contemporary Africa. It propels students' understanding of multiple theories of kinship, with a focus on the relationships between kinship and life-span relations, pension sharing, circular migration, gender, politics, and patronage. Governance Most African countries, irrespective of their degree of economic sophistication, are characterized economically by dual forms of governance—one that derives its authority from the state and the other that may be construed as traditional. The traditional governance section of the course addresses three overarching questions: (1) Why have traditional institutions of governance remained relatively robust in post-independent Africa even when faced with relatively hostile governments? (2) What are the levels of adherence and allegiance of rural Africans to traditional institutions? and (3) How are disputes resolved within traditional institutions? Religion There are three dominant forms of religions in Africa: Christianity, Islam, and Traditional African religions. These practices of these religions were affected by the experiences of colonialism and postcolonialism as well as Africa's subsequent integration into the global economy. All of these religions are related to various forms of social organization, authority, and power and may vary between regions and ethnic groups.

AFR 527: Migration, Urbanization, and Policy in the Developing World

3 Credits

This course examines the dynamics of migration and urbanization processes, as well as their policy implications, in non-industrialized regions of the world.

Cross-listed with: SOC 527

AFR 530: Perspectives on African Language Research in the Global South

3 Credits

The innovations and challenges of the Global South extend beyond an agenda that redresses exclusions. Rather, these are deep-seated challenges to the core tenets of language research as well as new directions for theories and practices on language research in the Global South in general. A renewal of southern epistemologies requires an understanding of the absences such knowledge implies. To engage with the transformative potential of non-Eurocentric thinking, the course explores the relevance of a decolonial imagination that makes it possible to envisage an alternative reality and justice that engenders "radical

hope." Topics central to the course are the decolonization of research methods, feminist perspectives on African languages, Southern Multilingualisms and education, digitization of African cultural practices, indigeneity, an engagement with "Indigenous cosmovisions," and reinvented traditional concepts, such as ubuntu or sumac kawsay, that suggest that the formation of other worlds is feasible. These newly reinvented cosmovisions render it feasible to move beyond the limitations of Western-centric politics and knowledge production. The course is far more than a critique of the Global North's scholarship. It will cultivate a decolonial imagination, consequently producing African language knowledge with the South, and not on the South.

Cross-listed with: APLNG 530

AFR 532: Environment and Livelihoods in Africa

3 Credits

An enquiry into the relationships between the environment, resource control, resource conservation, rural livelihood systems and poverty in Africa. AFR 532 Environment and Livelihoods in Africa (3) The seminar examines the relationships among the environment, resource control, conservation and rural livelihoods in sub-Saharan Africa. Readings will allow students to develop a critical understanding of the ideology and epistemology of environmental management, resource control, rural development and poverty in sub-Saharan Africa. Students will be encouraged to interrogate modernist doctrines such as population-environment narratives, poverty-stewardship narratives and related environmental ideologies/narratives that embody sustainability and rural (under)development in sub-Saharan Africa. Through case study examples, students will use these conceptual foundations to trace the relationships between sustainability and poverty in a number of livelihood systems and resource control regimes. Some examples are resource (land/water) management between the state and nomadic pastoral systems; land reform and rural peasant livelihood systems; mining and rural livelihood systems; and national parks, trans-frontier parks and rural livelihood systems.

AFR 534: Political Economy of Energy and Extractive Industries in Africa (Oil and Mining)

3 Credits

Given the rising global demand for energy and resources, Africa's production of oil and solid minerals has already produced very significant positive as well as negative impacts on the continent's political, economic, and social conditions. This seminar examines the extractive industry-driven changes in Africa's political economy, as well as in the continent's foreign relations. Students will examine the institutional basis under which the expansion of the industry is taking place in Africa. This will involve discussions of the institutional characteristics of Africa, including issues of land tenure and property rights laws, how institutional systems are changing in order to facilitate the industry's expansion, and the repercussions of these changes upon society. The course also interrogates the relevance of international efforts to mitigate some of the adverse impacts of the industry. Among such efforts is the UN Guiding Principles for Business and Human Rights. Overall this seminar examines the industry's impact on Africa's socioeconomic development and global relations, and concludes with how African countries might deal with the adverse impact of the Oil and Mining industry.

Cross-listed with: INTAF 534, PLSC 534

AFR 537: Gender, Sexuality and Islam in Africa: Exploring Contemporary Feminist Scholarship

3 Credits

A course about discourses of sexuality and gender in studies of Islam in Africa, with South Africa as a case study.

Cross-listed with: WMNST 537

AFR 543: Comparative and International Trends in Adult Literacy Education

3 Credits

This course critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and comparative framework. CI ED (ADTED/AFR) 543 Comparative and International Trends in Adult Literacy Education (3) This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century: the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives. This course investigates questions such as: What does it mean to be literate in the 21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis? Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge production itself.

Cross-listed with: ADTED 543, CIED 543

AFR 550: African Feminisms

3 Credits

African feminisms are deeply rooted in the continent's rich historical traditions and diverse cultural contexts. In this interdisciplinary graduate seminar, students will become familiar with the theoretical frameworks that guide African feminist scholarship, as well as the activist histories from which they emerged. This course will consider the epistemological foundations of African feminist thought and how they differ from feminisms in other parts of the world. This course will also examine key areas of conjuncture - how African feminisms map on to larger transnational movements. Particular emphasis will be placed on the fluidity of African gender systems, the ways in which African women have negotiated politics, religion, militarism, sexuality, and violence, and the role of creativity, art, and beauty in nurturing and sustaining activist momentum. Students in the course can expect to engage with a number of different types of texts: documentaries, feature films, memoirs, novels, newspapers, scholarly books, and articles.

Cross-listed with: WMNST 550

AFR 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

AFR 597: Special Topics

1-9 Credits

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Agricultural and Biological Engineering (ABE)

ABE 500: Research Methods

3 Credits

Foundation in research philosophies, methodologies, issues and policies; measures of research quality; critical thinking and discourse; research report writing; professional development; research ethics. A B E (BRS) 500 Research Methods (3) A B E/BRS 500 is a course designed to assist students entering and advancing in their research career to: better investigate and practice the art of scientific investigation; openly explore and discuss what it means to be a part of the scientific and research enterprise at a major academic setting; gain skills and experiences in critical evaluation and discourse; learn the process of developing and preparing a research proposal from initial concept to near-final written product; better understand the expectations for responsible and ethical conduct as a scientist/student/individual; and further develop their philosophies and capabilities as future scientists and professionals. During this course students will continually read, think, discuss, write, critique, re-read, re-think, re-write, and communicate with other students, faculty, and professionals. The course will provide a setting to allow them to further develop their personal, professional, academic, and scientific goals and capabilities.

Cross-listed with: BRS 500

ABE 504: Mechanics and Properties of Particulate Materials

3 Credits

Constitutive equations for cohesionless and cohesive particulate materials; measurement of properties; application to storage, flow, and consolidation.

ABE 513: Applied Finite Element, Finite Difference, and Boundary Element Methods

3 Credits

Applications of numerical methods in the areas of structures, fluid dynamics, heat and mass transfer, and machine design.

ABE 517: Surface Transport of Agricultural Pollutants

3 Credits

Understanding and modeling the surface transport processes of agricultural pollutants; particularly erosion, sediment transport, and movement of sediment-attached constituents.

ABE 559: Biological and Agricultural Systems Simulation

3 Credits

Continuous simulation modeling of biological and physical systems, numerical simulation techniques, validation and verification, difference measures, sensitivity analysis. A B E 559 A B E 559 Biological and Agricultural Systems Simulation (3) This course enables the student to better understand system behavior and prediction, with a focus on biological and physical systems. Using a diagramming-based model development package and standard spreadsheet programs, the student will be able to: identify a system, labeling components, boundaries, and environment; represent a system in mathematical terms; develop a working simulation model; evaluate a model through statistical means. The applications used within this course are oriented towards graduate students in the Colleges of Agricultural Sciences and Engineering. The course is offered every Fall semester, with an expected enrollment of 10 students. Grading is based on homework and in-class assignments, and a final project.

Prerequisite: MATH 111 or MATH 141

ABE 568: Food Safety Engineering

3 Credits

Predictive microbiology and modeling, conventional and novel detection and enumeration methods, conventional and novel processing methods, applied to plant layout, construction materials, and equipment design for microbial food safety. A B E 568 A B E 568 Food Safety Engineering (3) This course introduces diverse topics in microbial food safety from an engineering perspective. Topics include the following: the roles of engineering, plant layout, construction materials, equipment design, predictive microbiology and modeling, conventional and novel detection and enumeration methods, conventional and novel processing methods, emergency contingency plans, and current responsibilities and regulations of federal agencies for food safety. Students will be evaluated through homework, exams, design project reports and presentations. The course will be offered every other Fall semester with expected enrollment of 10-15.

Prerequisite: A B E308

ABE 587: Computational Ecohydrology

3 Credits

Ecohydrology is an integrative science that studies mutual interactions between hydrological, biogeochemical, and ecological processes. The lectures of the course will discuss the fundamental processes controlling the flow of water in the biosphere (in land, atmosphere, soil, and plants) and the interactions with ecological processes, implications of ecohydrological feedbacks covering broad range of issues including global environmental change, land use change, global desertification/land degradation, urbanization, soil erosion, and the food-energy-water nexus. The computational lab will provide hands-on experience on ecohydrological analysis with geographic information system software

and ecohydrologic model. The course will also introduce students to parallel computing and optimization methods.

Recommended Preparation: Previous coursework in hydrology is expected

Cross-listed with: CE 587

ABE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ABE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ABE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ABE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ABE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ABE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in development of instructional materials, organizing and conducting lectures, laboratories, and evaluating students in undergraduate Agricultural Engineering courses (1-499).

ABE 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

ABE 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

ABE 884: Biomass Energy Systems

3 Credits

Theories and applied technologies for production and conversion of biomass into energy and co-products.

ABE 885: Biomass Harvesting and Logistics

3 Credits

Biomass harvesting and handling scenarios and relevant cost analysis and systematic considerations.

Prerequisite: A B E884

ABE 888: Conversion Technologies for Bioenergy Production

3 Credits

Applications of chemical, biochemical, thermochemical, and bioseparation technologies for the production of bioenergy.

Prerequisite: A B E884

Agricultural and Environmental Plant Science (AEPS)

AEPS 502: Current Issues in Agricultural Innovation

2 Credits

Current Issues in Agricultural Innovation was designed to expose students to a broad overview of modern agricultural research topics and to consider how Scientific, Ethical, Legal and Social Issues impact their adoption. In this class, we will explore how modern agricultural technologies, particularly those related to cropping systems and plant-based foods, can provide substantial economic and nutritional benefits, while simultaneously reducing risks to the environment and human health generated by agricultural practices. We will also explore the risks of agricultural innovations and potential problems associated with them. Agriculture research and science innovation often intersect with ethical considerations and this theme will be one of the main topics and also dispersed throughout each of the class meetings. We will examine the social dimensions of scientific research and technology development. This includes reading and discussing work on how social contexts influence scientific research and technology diffusion, on variations among the public and expert on perceptions of research and technology risks, on differences between public and private research institutions, and on validity and integrity in regulatory systems.

AEPS 510: Ecology of Agricultural Systems

3 Credits

This course overviews current research on agroecological processes and management for long-term agricultural sustainability and ecosystem services given current and emerging issues such as population growth and climate change. Emphasis is placed on learning via reading and discussing the recent agricultural and agroecological scientific literature. Students gain experience critically analyzing scientific papers and theories and develop scientific communication and teaching skills through presentations and facilitation of class discussion. Students also briefly present their graduate research and facilitate discussion of one article that they select for the class to read.

Prerequisite: BIOL 546 or HORT 445 or the equivalent (Classic Ecology, Population Ecology or Plant Ecology)

AEPS 515: Professional Development for the Plant Sciences

3 Credits

Graduate students in the Plant Sciences receive excellent exposure and training in their field of expertise. However, in today's competitive and diverse job market, successful students will also benefit from exposure to professional development, career exploration, and leadership training. In addition to providing discussion-based content related to professional development, this product-oriented course will introduce students to tools and skills and provide space for practice and reflection. After completing this course, students will be able to: 1) Get the most benefit from their graduate program, 2) Identify possible future careers, and 3) Position themselves to be prepared and competitive for their chosen profession. Thus, this course will aid students as they both adjust to new expectations in Graduate School and actively navigate a path towards the career of their choice.

AEPS 555: Effective Scientific Communications

3 Credits

Students will learn to effectively present their research to scientific and non-scientific audiences. The overall goal of the course is to develop student skills in spoken and written communication of scientific concepts, methods, and data, and to provide effective evidence-based recommendations for practical application of such knowledge. In addition, students will develop skills in writing testable hypotheses, evaluating experimental approaches, considering alternative approaches, and envisioning expected outcomes of a research plan.

Cross-listed with: PPATH 555

AEPS 573: Interpreting Data from Experiments with Quantitative Treatments

3 Credits

Interpreting Data from Experiments with Quantitative Treatments (AEPS 573) is an applied regression course that employs statistical analysis in the context of agricultural/horticultural experimentation. Analytical approaches include: descriptive statistics, data distribution(s), data graphing/representation, correlation, least squares linear regression, general linear models, mixed linear models, generalized linear mixed models, non-linear regression models, and discrete response regression models. Graphical techniques are demonstrated to identify unusual observations and recognize relationships. Discussions will focus on identifying the best models with linear, polynomial, and multiple linear regression techniques for data obtained from both observational and designed experiments. Fixed and/or mixed model approaches will be used for experiments with designs and treatment structures common to agricultural and horticultural experiments, such as blocked designs, and factorial and augmented factorial treatment structures. Analysis of covariance will be discussed in detail to include situations with homogeneous and nonhomogeneous slopes and factorial experiments involving repeated measures and/or additional indicator variables. Analysis of covariance will also be presented as an alternative to blocking. Practical applications of nonlinear and logistic regression methods will also be discussed.

Prerequisites: AEPS 808; ENT 535; STAT 500

AEPS 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

AEPS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

AEPS 600: Thesis Research

1-15 Credits/Maximum of 15

No description

AEPS 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description

AEPS 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

AEPS 610: Thesis Research Off-Campus

1-15 Credits/Maximum of 999

No description.

AEPS 808: Applied Computational Analysis

3 Credits/Maximum of 999

Comprehensive appraisal of designs for field, greenhouse, and growth-chamber experiments; and techniques for data collection, analysis, inference, and presentation. This course provides practical guidance in effective design, management, and interpretation of parametric experimentation by agricultural, environmental, and/or horticultural researchers. After successfully completing the course, students will be able to: define and specify appropriate experimental designs for field, greenhouse, and growth chamber research with consideration of the planned hypotheses, methodologies, and available resources; interpret/classify types of response data, describe components of experimental error and develop sampling/data collection strategies for control of error, bias, and confounding. Students will demonstrate proficiency in data organization and pre-processing for computational analysis; distinguish the required assumptions of analysis of variance (ANOVA), describe procedures to assess and resolve initially noncompliant data sets; implement software code for data analysis by experimental design; invoke appropriate mean separations, contrast statements, covariate structures, and linear estimators as necessary to optimize inference; employ software output to construct tables/figures that clearly depict sources/parameters/statistics; and construct line-, bar-, or scatter-plot graphs to describe mean response and/or significant trends/differences. The objective of Applied Computational Analysis is to expand the

student's ability to conduct research through proficient experimental design, methodology, data analysis, and results inference.

AEPS 851: Applied Plant Population Biology

3 Credits

The course is designed to give potential superintendents and managers of large land holdings (such as golf courses, highway roadsides, game lands, military installations) and areas surrounding agricultural operations), the skills necessary for making sound ecological decisions regarding the choice and management of plant materials utilized in agriculture, land restoration and revegetation.

Agricultural Biosecurity (AGBIO)

AGBIO 520: Agricultural Biosecurity: Protecting a Key Infrastructure

3 Credits

Course will explore intentional and unintentional threats to the agriculture- food system, history and current approaches for safeguarding this key infrastructure.

Prerequisite: permission of the instructor

AGBIO 521: Food Defense: Prevention Planning for Food Processors

3 Credits

Course prepares current and aspiring professionals to learn, recognize and apply measures to prevent intentional contamination of the food supply. FD SC (AGBIO) 521 Food Defense: Prevention Planning for Food Processors (3) This course will not only provide participants with knowledge of the domestic and international food industry, but it also provides tools for food industry and homeland security professionals to develop food defense programs to protect the food supply from terroristic activities leading to intentional contamination. The course will introduce and apply: examples where intentional contamination has been used in the food industry; biological, chemical and physical hazards of primary concern in the food industry; methods for detecting hazards in the food supply; systems employed to monitor foodborne illness in the general public; management practices employed in food production to deal with recalls and other crises; vulnerabilities and mitigation procedures unique to food production; as well as agencies, resources, and tools needed to protect, prepare, and respond to intentional contamination incidents. This course is a required course for the certificate program in Agricultural Biosecurity as well as the Master of Professional Studies in Homeland Security/Agricultural Biosecurity Option. These principles also will be incorporated into a food defense plan, recall plan, and emergency preparedness plan for an assigned food establishment.

Cross-listed with: FDSC 521

AGBIO 594: Agricultural Biosecurity and Food Defense Capstone Experience

3 Credits

Culminating experience in the iMPS-HLS for the online Agricultural Biosecurity and Food Defense option.

Prerequisite: AGBIO520 , AGBIO521 , AGBIO801 , and AGBIO802

AGBIO 801: Veterinary Infectious Disease Diagnostic and Surveillance Systems

3 Credits

This course provides knowledge of diagnostic and surveillance systems used to detect infectious diseases and protect against animal agricultural biological attack.

Prerequisite: AGBIO 520

Cross-listed with: PATH 801

AGBIO 802: Plant Protection: Responding to Introductions of Threatening Pests and Pathogens

3 Credits

This course provides knowledge of plant biosecurity, plant disease, regulations, and technologies using case study examples.

Cross-listed with: PPATH 802

Agricultural Economics and Rural Sociology (AEREC)

AEREC 503: Agricultural Marketing

3 Credits

Economic analysis of food marketing firms and institutions; identification and measurement of dimensions of market performance; public policy.

Prerequisite: ECON 502

AEREC 533: Rural Development Research Methods and Topics

3 Credits

Advanced theories and methods for rural economic development research.

Prerequisite: ECON 521

Cross-listed with: CEDEV 533

AEREC 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

AEREC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and fall outside the scope of formal courses.

AEREC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of specific interest.

AEREC 597A: **SPECIAL TOPICS**

3 Credits

AEREC 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

Agronomy (AGRO)

AGRO 501: Graduate Student Dialogue

1 Credits

Orientation discussion group for incoming graduate students. Review departmental policies and learn about the diverse faculty programs in the department. AGRO 501 Graduate Student Dialogue (1)The objectives of this course are to (i) provide orientation on departmental policies and procedures to incoming graduate students, (ii) introduce students to the wide array of faculty research programs in the department, and (iii) build camaraderie among the cohort of students. This course is required of new graduate students in the department, yet inapplicable to '500-level major field' credit requirement. The course is graded pass/fail with emphasis on weekly classroom participation.

AGRO 518: Responses of Crop Plants to Environmental Stress

3 Credits

Physiological and ecological aspects of the response of crop plants to environmental stresses in establishment, persistence, and reproduction.

Prerequisite: AGRO 410W

AGRO 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AGRO 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

AGRO 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

AGRO 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

AGRO 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

Supervised training in teaching methodology for classroom and laboratory type instruction. Supervision provided by faculty member responsible for course.

AGRO 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

AGRO 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

American Studies (AMST)

AMST 500: Theory and Methods

3 Credits

Introduction to graduate work in American Studies through exploration of the approaches, materials, and interpretations of the field.

AMST 502: Problems in American Studies

3-6 Credits/Maximum of 6

A variable-content course, addressed each term to a specific problem, topic, or period in American culture.

AMST 510: U.S. Literature and Culture

3 Credits

Studies exploring the relationship between literature and culture in American Studies.

AMST 511: Pivotal Books

3-9 Credits

Exploration of a number of books which have been particularly influential in shaping thinking about American civilization.

AMST 520: Topics in Popular Culture

3 Credits

A detailed exploration of aspects of American popular culture, including popular culture's relationship to society and scholarship.

AMST 530: Topics in American Folklore

3 Credits/Maximum of 9

This is an advanced topics seminar in folklore studies. It will provide students with a command of the research literature in a specific area of folklore research, based on the topic defined by the instructor.

AMST 531: Material Culture and Folklife

3 Credits

Investigation of American material culture and folklife, including topics such as traditional design, cultural landscape, architecture, art, craft and food.

AMST 533: American Civilization in the Eighteenth Century

3-9 Credits

Detailed investigation of specific topics in eighteenth-century American civilization.

AMST 534: American Civilization in the Nineteenth Century

3-9 Credits

Representative interdisciplinary investigation of social, historical, economic, and aesthetic forces predominant in nineteenth-century America.

AMST 535: American Civilization in the Twentieth Century

3-9 Credits

Detailed investigation of specific periods or topics in twentieth-century American civilization.

AMST 536: American Civilization in the Twenty-first Century

3 Credits

Detailed investigation of specific topics in twenty-first century American civilization.

AMST 540: Ethnography and Society

3 Credits

An advanced course on ethnographic theories, methods, and case studies, emphasizing current controversies and new strategies in field work.

AMST 541: Ethnography of Technology and Media in the United States

3 Credits

Applied widely across the humanities and social sciences, ethnographic approaches to the study of culture encompass a wide variety of qualitative research methods that range from intimate personal interviews to participation in large group events. This seminar presents a detailed study of how the integration of technologies into the fabric of everyday life in the United State has both enabled the creation of new cultural forms and redefined existing social and cultural life. Students will engage with foundational and emerging works that apply the theories and methods of ethnography to the close study of technology and media use and culture, as well as works that demonstrate how emerging technologies may be applied in ethnographic research. In addition to

presenting the relevant literature, this seminar will provide students with rigorous training in the requisite skills and concepts that define ethnographic practice, and offer opportunities for students to apply these skills and concepts to produce significant field research. Examples of technological forms considered could include video games, 3D printing and maker technologies, genetic technologies, mobile phones and devices, and a variety of internet technologies.

AMST 550: Seminar in Public Heritage

3 Credits

A study of the ways Americans use and understand heritage in public settings.

Prerequisite: AMSTD482**AMST 551: Seminar in Local and Regional Studies**

3 Credits

Detailed investigation of local and regional historical themes and topics, emphasizing research methods.

AMST 560: Seminar in Race and Ethnicity

3 Credits

Studies exploring issues of race and ethnicity in America that can be addressed with theories and methods of American Studies.

AMST 561: Seminar in Gender and Culture

3 Credits

Thematic study of gender issues in American history and culture.

AMST 562: Topics in Religion and American Culture

3 Credits/Maximum of 6

Contrary to notions about the secularization of American society, a large number of Americans continue to report that religion plays an important role in their everyday lives. At the same time, changing demographic, political, and cultural environments in the United States have contributed to a massive reorganization of the American religious landscape since 1970. Thus religion, it seems, is a timely issue in the study of American culture, one which will doubtless open up new avenues of American Studies research in the future. This seminar is a detailed study of aspects of religious history and culture in the United States. It will offer students an overview of the current engagement of American Studies with the study of religion and ask students to consider new pathways in this research for the future.

AMST 570: Topics in American Art

1-6 Credits

Various themes within the American arts will be explored under this rubric.

AMST 575: Museum Internship

3 Credits

A supervised museum internship experience featuring a "hands on" introduction into aspects of the curatorial profession.

AMST 579: Readings in American Studies

3-9 Credits

Directed readings in selected areas of American Studies. AM ST 579 Readings in American Studies (3-9) This course will cover major readings in a selected area of American Studies. The readings are designed to represent past and current scholarship in an area of research undertaken by a student or students. The selection of readings will be directed by a faculty member in consultation with the student(s). The readings typically cover areas that are not covered in depth within other American Studies offerings. Outcomes of the course include historiographies and theoretical essays, annotated bibliographies, and book reviews.

Prerequisite: AM ST500

AMST 580: Projects in American Studies

1-6 Credits/Maximum of 6

Independent exploration within American Studies; evidenced by major paper, film, exhibition or specialized examination.

AMST 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AMST 591: Seminar in American Studies

3 Credits

An advanced seminar covering particular themes and issues in American Studies.

Prerequisite: AM ST500

AMST 595: Internship

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

AMST 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

AMST 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

AMST 600: Thesis in American Studies

1-15 Credits/Maximum of 999

A thesis supervised by the American Studies Program.

Prerequisite: AMSTD500

AMST 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

AMST 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

Prerequisite: AM ST500 and permission of the doctoral program director

AMST 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

AMST 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Anatomy - MD (ANAT)

ANAT 503: Gross Anatomy

6 Credits

Gross structure, organization, and function of the human body with laboratories devoted to dissection of the human body.

ANAT 505: Histology and Embryology I

2 Credits

Light and electron microscopic structure of cells, specialized tissues, organization, basic organogenesis, correlation between cellular structure and physiological function.

ANAT 506: Histology and Embryology II

2 Credits

Continuation of ANAT 505; microscopic structure of cells, specialized tissues, organization, basic organogenesis, correlation between cellular structure and physiological function.

Prerequisite: ANAT 505

ANAT 512: Human Embryology and Teratology

2 Credits

Study of developing human embryo including gamete production and fusion, implantation, organogenesis and major abnormalities of organ systems.

ANAT 515: Developmental Neurobiology

2 Credits

Development of the nervous system in all its aspects.

Cross-listed with: NEURO 515

ANAT 585: Human Anatomy and Development B: Human Development

1 Credits

Explores human embryology and organogenesis beginning at the third week of gestation through parturition. ANAT 585 ANAT (PHARM) 585 Human Anatomy and Development B: Human Development (1) This course will provide a concise but thorough description of embryology of the major systems in the human. It will provide an awareness of how genetics, environment, and maternal-fetal relationships impact on normal human development, and the importance of understanding embryology for biomedical and translational research. An emphasis will be placed on the role of molecular biology in normal embryology and human development. Primary literature will be consulted for a description of major signaling pathways and key signaling molecules associated with each system. Some discussion of abnormal development will be included.

ANAT 586: Human Anatomy and Development C: Stem Cell Biology and Regenerative Medicine

1 Credits

Exploration of stem cell biology and the role of stem cells in regenerative medicine. ANAT 586 ANAT (PHARM) 586 Human Anatomy and Development C: Stem Cell Biology and Regenerative Medicine (1) This course will provide an evaluation of stem cell biology and regenerative medicine. In particular, discussions will focus on the five sources of embryonic stem cells (adult stem cells, amniotic fluid-derived stem cells, embryonic stem cells derived using in vitro fertilization technologies, somatic cell nuclear transfer cloning-derived stem cells, and stem cells derived by parthenogenetically-activating oocytes). In addition to providing detailed information on the biology underlying stem cells, group discussions will focus on ethical advantages and disadvantages for each of the five distinct types of stem cells. Work will then turn to current understanding of changes in transcriptome and proteome control of differentiation. As well, discussions will focus on attempts to use stem cells in regenerative medicine. This course will be designed as a mixture of didactic lectures with a particular focus on the current literature. This latter aspect of the course is essential in that much of our current understanding of stem cells has not yet made it into any common text books.

ANAT 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ANAT 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANAT 597: Special Topics

1-9 Credits/Maximum of 999

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ANAT 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ANAT 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ANAT 602: Supervised Experience in College Teaching

1-6 Credits/Maximum of 99

Supervised experience in the development of instructional materials, the organization and conduct of lectures/laboratories, the evaluation and counseling of students.

ANAT 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

ANAT 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Animal Science (ANSC)

ANSC 500: Current Issues in the Animal Sciences

2 Credits/Maximum of 2

Exploration of current controversial issues and impactful innovations in animal agriculture with a focus on their discovery and future applications. Students will develop an understanding of the contribution of seminal research papers that changed paradigms in the Animal Sciences and develop a deeper understanding of the scientific method and its potential impact on the world.

ANSC 501: The Ethics of Scientific Scholarship

2 Credits

Consideration of the scientific method relative to scholarship and the ethical issues faced by scientists. Fulfills the students' Discussion-based Education SARI requirement.

ANSC 502: Grantsmanship

2 Credits

Consideration of the scientific method relative to grantsmanship, including formulation of hypotheses, objectives, experimental design, development of a complete grant proposal, and the peer review process.

ANSC 503: Professional Skills for Graduate Students

2 Credits

This course will be focused on four main areas: project management, reproducible science, soft skills, and preparation for the job market. Students will be given an overview of strategies and tools that can be used to improve the execution of their scientific projects. Those

concepts will then be put into practice through the development of management, data analysis, and publication materials using students' current or proposed projects. Hands-on sessions will include the financial reality of carrying out a scientific project, and the application of tools designed to improve science reproducibility, transparency, and data sharing. Finally, students will prepare materials that will be useful for future job applications. The course will provide students with important skills needed for a successful graduate school experience that are fundamental, but often not formally taught. Students will receive training in aspects of project management, reproducible science, communication, networking, and career preparation.

ANSC 504: Communication of Scientific Information

2 Credits

Development of skills in scientific writing and speaking, including preparation of manuscripts, scientific posters and technical documents, and design and delivery of oral presentations (e.g., platform talks, webinars, seminars).

ANSC 506: Ruminology

3 Credits

Physiological, biochemical, and microbiological activities occurring within the rumen and the relation of rumen function to animal response.

Prerequisite: at least one course in each of the following areas: animal nutrition, physiology, microbiology, and biochemistry
Cross-listed with: NUTR 506

ANSC 515: Advanced Physiology of Reproduction in Farm Animals

1-6 Credits

Advanced physiology of reproduction in farm animals.

Prerequisite: 3 credits each of reproductive physiology, systemic physiology, and endocrinology

ANSC 543: Animal Genomics

3 Credits

Foundations in genomics, proteomics, epigenomics, and basic bioinformatics, and their applications in animal breeding, health, production, reproduction, nutrition, and medicine. AN SC 543 Animal Genomics (3) Genomics is a branch of genetics concerned with the study of genome sequence, assembly, and analysis of the structure and function of genomes. It is an interdisciplinary field involving the marriage of molecular biology, robotics, and computing. The course is designed to foster an appreciation for the importance of genomics as applied to animal agriculture and medicine and to provide a knowledge base that enables students to successfully move on and master advanced topics in genomics. Additionally, the course will introduce students to approaches and techniques used to sequence and analyze animal genomes and provide a hands-on learning environment to familiarize students with genome databases and basic bioinformatics tools. The course will combine lecture discussion of current literature with hands-on genomic analysis with focus on genome structure & organization, genome sequencing & annotation, animal genome projects & comparative mapping, single nucleotide polymorphism (SNP) discovery & genome-wide association study (GWAS), genomic selection, non-coding RNA, microarray analysis, proteomics, epigenomics, phylogenomics, and systems biology. Each topic will have one or more computer-based lab

sections that are designed to provide students with further information related to the topic, with a particular focus on how to navigate genome databases and how to carry out basic bioinformatics analysis for their research projects. This course is suitable for graduate students, professional research scientists, and any student who has a BS in life science and wants to learn more about animal genomics and its sub-disciplines.

ANSC 590: Colloquium

1-9 Credits/Maximum of 9

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ANSC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ANSC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ANSC 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ANSC 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ANSC 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ANSC 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Experience in developing, organizing, and conducting lectures/laboratories; evaluation and counseling students and related resident education activities.

ANSC 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

ANSC 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Anthropology (ANTH)

ANTH 508: Visualizing Anthropological Data

3 Credits

Recommended Preparations: STAT 500; STAT 511; Or a standard introductory statistics course or an equivalent course at the student's previous institution. Anthropology is a four-field discipline comprising dozens of sub-disciplines, each one characterized by particular theoretical and methodological approaches. As a consequence, the data that anthropologists regularly collect, analyze, and display are diverse in nature, scale and complexity. The purpose of this course is to expose anthropology graduate students to the field's wide range of approaches for managing and visualizing anthropological data. Course content will focus on ways of organizing, analyzing, and representing anthropological datasets. Lectures, practicums, and discussion will center on the criteria and rationale behind visual representations and how these are related to research questions, hypotheses, models, and goals.

ANTH 509: Proposal Writing

3 Credits

This course provides practical training and experience in proposal writing and revisions for graduate students in anthropology and related disciplines.

Prerequisite: STAT 451

ANTH 521: Current Literature in Archaeology

1 Credits/Maximum of 1

Seminar designed to expand general knowledge of archaeology through exposure to current research and related issues in contemporary archaeology. ANTH 521 ANTH 521 Current Literature in Archaeology (1) This seminar is designed to expand general knowledge of archaeology through exposure to current research and related issues in contemporary archaeology. We accomplish this by examining the best of recent journal literature. We may also occasionally read a chapter from an edited book. We will normally read and discuss one article per week, although we might increase that number in cases where articles have been followed by published debates. Articles should be selected from a list of approved journals that will be supplied in class. Each article must be approved in advance by the course professor. The presenter should follow the standard outline for article discussion that will also be supplied in class. Faculty: Frances Hayashida, Kenneth Hirth, George Milner, Dean Snow, and David Webster

ANTH 541: Current Literature in Integrative Anthropology

1 Credits/Maximum of 6

This course (Journal Club) is a survey and discussion of recent, cutting-edge research papers across anthropology, including human ecology, archaeology, biological anthropology, and especially on work that is integrative among these areas of research and/or connects to other disciplines. This course will provide students with experience in making

critical evaluations of the use of theory, method, and analysis in the field of anthropology.

ANTH 545: Seminar in Anthropology

1-9 Credits/Maximum of 9

Critical analysis of research in selected areas of anthropology.

ANTH 556: Social Organization of Traditional Societies

3 Credits

Cultural bases of social organization of traditional societies.

ANTH 559: Human Ecology

3 Credits

Within the anthropological and environmental sciences, human ecology (incorporating environmental anthropology, ecological anthropology, cultural ecology, behavioral ecology and evolutionary ecology) is the study of dynamic interactions between people and the environment, past and present. The readings are designed to give students an overview of the fundamental ecological processes that pattern human behavioral responses to environmental variability and how and why human behavior recursively shapes environmental variability. These incorporate a wide range of topics with an emphasis on how human social behavior and resource use are integrated into ecological processes and their services at multiple scales. In so doing, the course takes a holistic perspective of the human experience; one that views cultural, biological, environmental, demographic, and technological processes as interconnected phenomena, and human behavior and practices as components of complex adaptive systems. The topics covered are especially timely in our contemporary political and environmental context, and will explore the relevance of human ecology for these on-going debates.

ANTH 560: Ecology, Evolution, and Human Behavior

3 Credits

This course provides fundamental theory to understand the nature of the dynamic relationship between human decision-making and the natural and social environment. We focus on ecological anthropological theory operating at multiple scales, from the individual to the population, to the community. We will learn how such theory has been applied in the development of a wide range of questions in ecological anthropology, with a focus on key empirical studies of resource use and reproduction, population growth, subsistence and social intensification, disturbance dynamics, niche construction, and cooperation.

ANTH 562: Laboratory Methods in Anthropology

3-9 Credits/Maximum of 9

Supervised laboratory research, utilizing materials from physical anthropology or archaeology or cultural anthropology.

ANTH 563: Current Literature in Biological Anthropology

1 Credits/Maximum of 1

Seminar designed to expand general knowledge of Biological Anthropology through exposure to current research and issues in contemporary Biological Anthropology.

ANTH 566: Infectious Diseases in Anthropological Populations

3 Credits

Surveys infectious diseases in history and prehistory; introduces concepts from microbiology, immunology, and epidemiology, applies them to past human populations. ANTH 566 ANTH 566 Infectious Diseases in Anthropological Populations (3) Throughout history, more people have died of infectious diseases than of any other causes. Such diseases are therefore of great importance in human ecology and demography. Yet anthropologists have paid scant attention to the implications of infectious diseases for human populations, especially populations in the past. This course attempts to correct that oversight. The course is designed for graduate students and advanced undergraduates in anthropology and related fields (biology, population studies, health sciences). The primary focus will be the role of infectious diseases in human population ecology, but enough background will be provided on the biology of infectious diseases to make the course as self-contained as possible. Thus, we will review basic information about the biology of pathogen-host interactions, including some elementary microbiology and immunobiology. (Note that the course is not intended to replace introductory-level courses in those fields.) We will also discuss the evolutionary arms race between the human host and its pathogens, especially in the evolution of pathogen virulence. Once this basic background has been provided, the remainder of the course will deal with infectious diseases in past human populations. What was the role of infectious diseases in population regulation? How did human population structure affect infectious disease dynamics? How did infectious diseases contribute to the mortality "crises" that are known to have affected many preindustrial societies? To address these questions, we will review recent insights based on mathematical models of the epidemic process. The focus will not be on the mathematics per se—indeed, students need not have any special mathematical background. But they will be expected to learn Stella, a computer language for dynamic modeling. (Stella was chosen because it is easy to learn, and yet allows construction of sophisticated models without requiring any attention to the underlying math.) Toward the middle of the semester, students will break into 2-4 groups, each of which will select a particular disease or class of diseases, develop some models of them using Stella, and present the results to the class as a whole. The entire class will then work together to explore and extend the models developed by the separate groups. Grading will be based on the group presentations, in which all students are required to participate. Participation in general classroom discussion will also be taken into account. Since the class will combine formal lectures with a more seminar-like format, active student participation is essential for a good grade. This course will be offered once a year with an enrollment of 15.

ANTH 571: Principles of Human Evolutionary Biology

3 Credits

Mechanisms and quantification of human genetic variation and survey of evolutionary aspects of human ecology, life cycle, and population biology.

ANTH 572: Advances in Anthropological Methods

3 Credits

This lecture-based course will provide exposure to current data collection methods and analyses in integrative anthropology research, and offer specific examples of application. The course will focus especially on the creative application of newly available technologies to help address major outstanding issues in biological anthropology, or on how the

combination of traditional approaches and modes of data collection with advances in computational or statistical analysis can advance the field. Research design issues, data limitations and computational analysis requirements, and anticipated future developments will be considered for each method and subject area combination. Students will be exposed to the challenges, limitations, and processes of ultimately successful research studies and programs, to provide a practical awareness and guidance towards the development of their own research projects and careers in anthropology.

ANTH 573: Anthropology Research Practicum

3-12 Credits/Maximum of 12

This course will provide a structured and supervised research experience to first-year students in the anthropology graduate program, providing both 1) hands-on exposure to anthropological laboratory and/or analytical methods, and 2) related professional development preparation to benefit the students' ongoing graduate training and future research careers. Specifically, with the help of anthropology faculty, students will identify a suitable, rotation-type research experience that can be conducted reasonably over the course of the semester. Meanwhile, the classroom experience will involve discussions on the research-related topics most relevant to the students' level of training and development. Likely topics include the development of research questions and study designs, power calculations, tools and strategies for literature survey, research funding options and strategies, data management and archiving, publication formats and journal outlets (including preprint servers), the publication preparation/submission/review process, academic conferences and traditional and non-traditional networking opportunities (including the effective use of social media), effective structures for research presentations in both poster and podium formats, and scientific outreach opportunities. Students will also read papers relevant to their research interests, and update the class regularly on the progress, challenges, and learnings from their ongoing research experiences/projects.

ANTH 575: Population, Food, and Traditional Farming

3 Credits

This course explores the relationship between demographic processes (fertility, mortality, migration) and traditional farming, especially farming near the subsistence level. ANTH 575 Population, Food, and Traditional Farming (3) This course explores the complex relationship between demographic processes and traditional agriculture. It starts with the premise that traditional agriculture, at least agriculture near the subsistence level, is primarily demographic in its motivation: the main purpose of a small-scale, preindustrial family farm is to create and support a family, i.e. produce children (fertility) and keep them alive (survival). This idea will be the starting point for re-examining existing theories about population and agriculture, and for formulating new models of the traditional farming household as a demographic enterprise. Some of the topics to be addressed include: (1) the slippery concepts of 'population pressure', 'over-population', 'population regulation', 'carrying capacity', and 'sustainability'; (2) some basic ecology and economics of subsistence production and consumption; (3) the debate over agricultural intensification; (4) the effects of under-nutrition on fertility and mortality; (5) the nature of the household labor force; (6) the household demographic life cycle and its economic implications; (7) seasonality and the allocation of household labor; (8) the demography of the 'hungry season' (9) risk management and food shortages; and (10) household wealth differentials and their demographic implications.

The first half of the course will be in lecture format, the second will be more like a seminar. At about the mid-point of the semester, students will split into groups of 2-4 (depending on class size). Each group will select an ethnographic/demographic/economic monograph on traditional agriculture from a list provided by the instructor, prepare and present a PowerPoint presentation on it, and lead an extended classroom discussion of it. Each presentation ought to take up at least two or three class periods. The course grade will be based on the presentation and on general seminar participation (approximately 80 percent presentation and 20 percent participation, including doing the required readings). This course should appeal to graduate students and advanced undergraduates in anthropology, geography, crop and soil science, demography, rural sociology, agricultural economics, and behavioral ecology.

Prerequisite: ANTH 408

ANTH 579: Spatial Demography

3 Credits

This graduate course will expose students to spatial analysis tools and analytical methods applied to demographic research. ANTH (SOC) 579 Spatial Demography (3) The improved application of spatial data and methods to demographic research is a critical methodological challenge facing demographers today. This graduate seminar is designed to focus on substantive demographic research topics while exposing sociologists and demographers to challenges in, and opportunities for, using geographic information systems (GIS), spatial analysis, and spatial statistics in their own research. Substantive foci will include readings and discussions of spatial perspectives on topics such as racial/ethnic segregation, spatial mismatch/entrapment, poverty, crime/delinquency, migration, health inequalities, wellbeing, maternal and child health, environmental justice, and population and environment relations. Similarly, the seminar will highlight connections between spatial concepts and data availability (e.g., Modifiable Areal Unit Problem - MAUP; data privacy), other emerging methodological approaches to studying society (e.g., contextual modeling, multi-level modeling and the area of neighborhood effects) as well as the integration of different types of data (e.g. qualitative data and quantitative data). Throughout the course lectures and discussions will be complemented with lab sessions introducing spatial analysis methods and GIS and spatial analysis software. The lab sessions will include the use of among other software GeoDa, CrimeStat, R, and ArcGIS (including Geostatistical Analyst and Spatial Analyst extensions). These lab sessions will introduce many methodological and technical issues relevant to spatial analysis (e.g., error, data validation, data integration, cartography, exploratory spatial data analysis, spatial regression modeling, geographically weighted regression, point pattern analysis and geostatistics). Assignments for the courses include up to two writing assignments, up to four lab assignments, and a final project which will be presented as a short 15-minute presentation as well as submitted as a term paper. The writing assignments will include an annotated bibliography/brief literature review within a selected demographic theme area and a profile of a well-known demographer and their adoption of spatial thinking/perspectives/methods. The lab assignments will focus on building geospatial databases, basic spatial analysis, exploratory spatial data analysis, and spatial regression modeling. The courses will include other labs and assignments that will be completed for no grade; these are intended as mechanisms/opportunities for developing and enhancing familiarity with selected software, data resources, and analytic methods.

Prerequisite: Graduate course in statistics, i.e., SOC 574 or ANTH 509

Cross-listed with: SOC 579

ANTH 588: Method and Theory in Archaeology

3 Credits

Methodological strategies and tactics in archaeological research; major theories in cultural anthropology as applied to archaeological data.

ANTH 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ANTH 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Prerequisite: prior approval of proposed assignment by instructor

ANTH 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ANTH 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ANTH 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ANTH 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at the Pennsylvania State University.

ANTH 603: Foreign Academic Experience

1-12 Credits/Maximum of 12

Foreign study and/or research constituting progress toward the degree at a foreign university.

Applied Behavior Analysis (ABA)

ABA 500: Science and Behaviorism

3 Credits

This course will provide students with a foundation in the assumptions and philosophies of Applied Behavior Analysis. Students will learn about the development and advancement of behavioral theory. Special emphasis will be placed on the application of behavioral theory to

problems of social significance and research-based clinical practice. Finally, considerations for extending behavioral theory beyond traditional areas of application will be discussed throughout the course.

ABA 510: Behavioral Assessment and Intervention: Functional Skills

3 Credits

This course will provide students an overview of the foundations and applications of evidence-based practice for teaching functional skills across ages, environments, and types of skills. Students will learn how to identify and apply evidence-based practices to teach clients and stakeholders. Special emphasis will be placed on behavioral assessment, behavior-change procedures, and selecting and implementing interventions. Finally, considerations and guidelines related to approaching functional skill instruction and the synthesis of evidence-based practice and research will be discussed throughout the course.

Recommended Preparation: Students are recommended to take ABA 522 and ABA 533 prior to taking this course.

ABA 511: Behavioral Assessment and Treatment

3 Credits

This course provides students with the research-based principles and procedures of applied behavior analysis. The course teaches students how to review research-based procedures, analyze, interpret, and develop research-based intervention programs for a wide range of populations and behaviors. The course provides advanced discussion on the empirical and theoretical underpinning of behavior intervention procedures.

ABA 512: Behavioral Assessment and Intervention: Problem Behavior

3 Credits

This course will provide students an overview of the foundations and applications of evidence-based practice for reducing problem behavior. Students will learn how to identify and apply evidence-based practices to reduce problem behaviors. Special emphasis will be placed on behavioral assessment, behavior-change procedures, and selecting and implementing interventions. Finally, considerations and guidelines related to approaching reduction of problem behavior and the synthesis of evidence-based practice and research will be discussed throughout the course.

Recommended Preparation: Students are recommended to take ABA 522 and ABA 533 prior to taking this course.

ABA 522: Behavioral Research Methods

3 Credits

This course will examine the multiple facets of behavioral research and single-case design. Students will learn to conduct single-case design research and critically evaluate published behavioral research to apply to their own research. Special emphasis will be placed on the analysis, strategies, tactics, and application of single-case experimental research methodologies related to research-based clinical practices. Finally, the ethical implications of the aforementioned areas will be discussed throughout the course

Prerequisite: enrollment in the Applied Behavior Analysis program or permission of instructor

ABA 533: Principles of Behavior Analysis

3 Credits

This course will provide students with a foundation in the concepts, principles, and techniques of Applied Behavior Analysis. Students will learn about the relationship between behavior and environment and the variables that influence behavior and affect meaningful change. Special emphasis will be placed on the application of learning principles related to research-based clinical practice. Finally, considerations and guidelines for the use of behavioral techniques and principles will be discussed throughout the course.

ABA 534: Advanced Principles of Behavior Analysis

3 Credits

This course will provide students with a foundation in the experimental analysis of behavior. Students will learn the historical discovery of the principles of behavior described in basic and translational research and the contemporary application of experimental analysis. Special emphasis will be placed on the translation of research to inform research-based clinical practice. Finally, the implications of the experimental analysis of behavior on understanding behavior will be discussed.

Prerequisite: ABA 533 Principles of Behavior Recommended Preparation: Recommended preparation for this course includes completion of ABA 500 and ABA 522

ABA 544: Behavioral Systems Support

3 Credits

ABA 544 Behavioral Systems Support concentrates on personnel supervision and management knowledge with additional components of skill training. The class will include the research/evidence-based practices for behavioral system-wide instructional techniques, personnel management, and supervisory methodologies. Within the course, students will be exposed to evidence-based behavioral staff training methodologies for a variety of environments (e.g., group home, business, health, educational, etc.), behavioral skills training for parents/caregivers, and training methodologies within organizations. Behavioral research-based personnel and behavior-analytic supervisory management related to staff management, behavioral treatment integrity, performance management (e.g, assessment, expectation, and feedback), ethics, and functionally-based assessment and performance feedback will be taught.

Prerequisite: ABA 511; ABA 533

ABA 555: Behavioral Intervention in Autism & Developmental Disabilities

3 Credits

For many decades, behavior analysis has contributed significantly to the understanding and treatment of autism and related developmental disabilities. This course will provide students with the knowledge and skills needed to work with individuals with autism and related developmental disabilities not only in early intervention efforts but across the entire spectrum of settings, age ranges, and developmental levels. Autism and related developmental disabilities will be addressed in terms of assessment, education, and treatment. Some specific areas targeted that are characteristic of autism will include language, social skills, self-injury, sleep disorders, and stereotypic behavior. Some specific educational strategies emphasized will include discrete trial training,

incidental teaching, prompting and fading. The students will gain a knowledge of the major issues related to the use of behavior analysis with individuals with autism and related developmental disabilities including education issues such as due process and inclusion and legal and ethical issues surrounding the certification of behavior analysts. Students also will learn how to evaluate the research related to various treatments and educational practices for autism.

Prerequisite: enrollment in the Applied Behavior Analysis program

ABA 566: Behavioral Pediatrics

3 Credits

ABA 566 Behavioral Pediatrics provides an overview of behavioral pediatrics and discusses the role of Behavior Analysis within this field. Behavior analysis significantly contributes to the field of behavioral pediatrics. This course will provide an overview of behavioral pediatrics and evaluate research related to operant contingencies in infant, child, and adolescent learning, social development, and behavioral/medical pediatric issues. Research-based behavior analytic interventions and change procedures also will be assessed and evaluated as they apply to skill development, behavioral reduction, medical compliance and adherence, and behavioral interventions for medical/behavioral issues. Behavioral approaches to health promotion and injury prevention will be discussed.

Prerequisite: ABA 511; ABA 533

ABA 577: Case Conceptualization and Development

3 Credits

The purpose of this course is to give students an overview of case conceptualization and development according to the foundations of behavior analysis. The course will include behavior assessment foundations related to types of behavior assessment and their relationship to the development of research-supported treatments. Students will be asked to learn ABA assessment methods to evaluate specific behavior within broad diagnostic categories, develop data analysis methods based upon ABA research, and analyze and justify behavior treatment decisions based upon research.

Prerequisite: ABA 511; ABA 533

ABA 588: Ethics in Research and Professional Practice

3 Credits

This ethics course will provide students with an overview of ethical and legal issues related to applied behavior analysis research and practice. Students will learn the current Behavior Analysis Certification Board's ethics standards, review the application of ethical practice and research codes, apply ethical research and codes to ethical situations, and identify and develop possible new ethical issues and guidelines.

Prerequisite: enrollment in the Applied Behavior Analysis program or permission of instructor

ABA 594: Research Topics

1-15 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

ABA 594A: RESEARCH TOPICS

1-9 Credits/Maximum of 18

Supervised research project in behavior analysis for degree candidates.

ABA 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

ABA 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Applied Demography (APDEM)

APDEM 801: Principles of Demography

3 Credits

This course examines fundamental concepts and ideas in Demography, and U.S. and world population trends associated with these concepts. APDEM 801 Principles of Demography (3) This course provides an overview of demographic research and scholarship as a basis for the Applied Demography certificate and the Masters in Professional Studies degree in Applied Demography. The scope of the course content is broad, rather than in-depth, covering central disciplinary concepts and associated key theoretical ideas and empirical population trends. In particular the course investigates topics such as population growth, transitions in family patterns, fertility patterns and policy, immigration and growing population diversity, race and ethnic population inequality, internal migration and residential segregation, health and mortality patterns, population aging, and economic well-being and the environment. Building on insights from the study of the above topics, students conduct a comparative population analysis of a developed vs. developing country or of two regionally dispersed U.S. states using census and vital statistics demographic data to document five or more key over-time population trends. Results from this analysis are then used to address applied demography questions about the relationships with outcomes for either business demography or public policy demography. Students will learn fundamental disciplinary concepts, central theoretical scholarship ideas, major empirical U.S. and world population trends, and experience a hands-on skill-enhancing population data analysis project which integrates knowledge and application learning.

APDEM 802: Data, GIS, and Applied Demography

3 Credits

This course provides an overview of key demographic data sets, and promotes familiarity with, and appropriate use of, these data. This course offers a comprehensive introduction to the wide variety of different government (and commercial) data sets that are among the most frequently utilized by practicing applied demographers. While US data sets are emphasized throughout the course international data products also will be discussed. Raw population data needed for demographic

research comes from a variety of sources. The course will introduce students to the fundamental principles and design considerations of the different types of data collection systems that are used: censuses, 'rolling' censuses, surveys, vital statistics and administrative records. While contemporary issues are often studied using the latest available data many demographic questions necessitate the inclusion of a historical perspective (e.g., studies of population change) and as such linking and analyzing data across time also will be discussed. The analytical sections of the course will focus on the strengths and limitations of data products (e.g., including issues of data reliability and appropriate data use). A review and discussion of future directions in data collection and data sources wraps up the course. Enormous amounts of demographic data are now made available in aggregate form for geographical units (neighborhoods, cities, counties, states). These aggregate data are of interest in their own right but also are increasingly relevant to questions related to the role of geographic context on individual-level demographic outcomes. In this course students will learn about nested and non-nested geographical hierarchies of different data products and fundamental principles for handling and analyzing geospatial demographic data (e.g., how and when data sets can be linked together, how to visualize demographic data, spatial coverage, the influence of scale, and how to detect, and the consequences of, spatial dependence). This is a hands-on applied course in which students will be expected to access, understand, manage, and analyze different kinds of demographic data sets. The emphasis on data interpretation and analysis will be on descriptive statistical analysis, data visualization, and exploratory spatial data analysis using open source and/or available software.

APDEM 803: Applied Demography in Practice

3 Credits

This course provides an overview of applications in applied demography in business, non-profit organizations, public policy, and health; including a focus on international applications. Students will learn to apply critical and analytic skills to case studies, identify the most appropriate data sources and methods to help solve practical problems (e.g., business siting; school redistricting; emergency evacuation; labor market projections; relief efforts). Emphasis throughout will be on recognizing and reinforcing best practices in the use, linkage, and interpretation of data in real world situations.

APDEM 804: Business Demography

3 Credits

This course provides a broad coverage of business demography questions that draw upon knowledge, data, and methods associated with applied demography. The course begins with an overview of the goals of business demography applications, major data and methods, and mega population trends that address practical problems in business. The course addresses several key topics in business demography. Part 1 focuses on the application of local and national population characteristics and dynamics to target consumer behavior marketing and market segmentation. The analysis of demographic data integrated with consumer characteristics data is fundamental to corporate decision making on generational marketing strategies. Part 2 analyzes the impact of demographic factors on business site selection, notably population growth trends and the human capital characteristics of local area labor markets. Integration of current and projected population characteristics with sales data informs local, national, and world business site selection decisions. Part 3 focuses on the impact of mega demographic trends

in population size, growth, characteristics, and dynamics on corporate investment strategies in local labor markets, states, nations, and international locations. Part 4 examines within-corporation human resource management problems involving the demography of work force size and characteristics. Worker population entry, turnover, and the flow of individuals through positions in the workplace are analyzed. Part 5 focuses on the interface between demographic characteristics of business client and worker populations and compliance with local, state, and national regulations in the conduct of business. Issues of business non-discrimination and the dynamics of community population characteristics are considered. This course covers a diverse set of topics related to business and corporate activities. It provides students with a substantive understanding of key business demography topics and the population data and analytical tools to help them address practical problems faced by business decision makers. The course concludes with a consideration of possible newly emerging applied business demography issues and future data challenges and opportunities.

APDEM 805: Public Sector Demography

3 Credits

This course provides an analysis of selected public sector, non-profit, and public policy demography issues that draw upon knowledge, data, and methods associated with applied demography. The course begins with an overview of the goals of public sector demography applications, major public data sources and methods, and mega population trends that address practical problems in the public sector. The course addresses such topics as the following: Part 1 focuses on the impact of area population characteristics and change on the allocation of public program resources. Changes in current and projected target population groups in local, state, and national areas is a key factor in public infrastructure and program funding as well as human service program planning. Part 2 focuses on the impact of cohort population change for elementary, secondary, and college educational system planning. Understanding school enrollment population projection techniques is fundamental in this area of applied demography. Part 3 examines the demographic dynamics of agency client populations and within-organization work force size and characteristics. Worker population entry, turnover, and the flow of individuals through public sector and non-profit organization workplaces are topics of interest. Part 4 focuses on population data and trends that are the bases for apportionment of governmental representation among areas and population groups. Redistricting area populations for voting equity is an important local, state, national, and international applied demography issue. Part 5 examines the interface between area population characteristics and change and compliance with local, state, and national non-discrimination policy regulations related to public program activities, such as law enforcement, school administration, etc. This course covers a diverse set of topics related to public sector, non-profit, and public policy organizational activities. It provides students with a substantive understanding of key applied demography issues of interest to public sector administrators and governing boards. The course concludes with a consideration of possible newly emerging applied public sector demography issues and future public data challenges and opportunities.

APDEM 806: Applied Demography & Health

3 Credits

This course provides an overview of data, methods, and techniques in applied demography used to help address public health questions. This course provides a wide-ranging coverage of substantive health

questions that draw upon data and analytical methods closely associated with applied demography. The course opens with an overview of the substantive connections between health and applied demography.

The remainder of the course is divided up into three main parts: (1) Local/Regional Health Assessments; (2) Methods and Case Studies in Morbidity and Mortality; and (3) Emergent Trends in Applied Demography and Health. Part 1 focuses on data needs and commonly used methods (and their limitations) related to local/regional community health assessments - including diverse contexts (rural-urban, developed and developing countries). These data and methods are utilized to examine health disparities, health service planning (based on catchment area analysis and location-allocation modeling as well as methods for measuring accessibility and utilization of health services), environmental pollution, and emergency/disaster response. Part 2 covers the connections between demographics and the epidemiological transition. This section includes a broad focus on a specific classification of human health and disease (i.e., provisioning care and disease prevention, communicable disease, non-communicable disease, and accidents and other causes of injury and death). Across each classification of health and disease the heterogeneity of data needs, time scales, spatial scales, and population at risk is wide. Applications of methods and use of case studies will facilitate the discussion of these different kinds of contemporary health challenges. Part 3 focuses briefly on the future, including an examination of global health questions (broad processes and forecasts associated with migration, urbanization, and environmental change) and new types of data and methods (including challenges and opportunities) that applied demographers will likely use in the next decade. This course covers a diverse set of topics related to human health. Some of the most important health problems of the early 21st Century (in the U.S. and globally) relate to health inequalities in access to resources (e.g., access/use of health services) and in the variation in individual exposure to risks (e.g., environmental pollution, neighborhood deprivation, obesogenic environments, and crime), and how both access to resources and exposure to risk are associated with health disparities across populations (by race, socioeconomic status, gender, age, and other forms of social stratification). This course will provide students with an understanding of key health topics, and specific data and analytical tools that can be used to address them.

APDEM 807: Small Area Estimation

3 Credits

This course provides an overview of applications in small areas population estimation techniques used in public policy, business and academia, including case studies from the United States and other international programs. In particular, the course considers the growing needs of the public and private sector and non-profit organization to produce and disseminate quality disaggregated data on population that support public policy programming and business planning. It considers small area data sources and different methodological approaches to small area estimation. Building from relevant policy examples, students will conduct a review of classical design-base approaches and apply indirect and inference techniques using auxiliary information. Students will recognize, identify and apply, with diverse types of demographic and socio-economic data, small area estimation methods, using open source and/or available software. From these insights, students will also compare case studies based on data disaggregation and Big Data Analytics.

Recommended Preparations: APDEM 801, APDEM 802, SOC 579, and SOC 573

APDEM 808: Capstone Project

3 Credits

Students will utilize methods acquired during their program and apply them in a Capstone. This is a Capstone course and a requirement for all students in the M.P.S. in Applied Demography. During their final semester, students will work closely with a faculty adviser (selected to match the student on substantive and/or methodological expertise) on a self-selected applied demography-related project. The student is expected to draw on data and methods encountered during their prior course work. At the end of the semester the student will be required to make a formal peer presentation to other enrolled students and all their faculty advisers. The student also will be required to submit a final report/paper to their faculty adviser by the end of the semester. The format of the course will vary by student, their faculty adviser and the scope and nature of the Capstone project itself. The intent is that the student conduct an independent study-like project that results in a both a formal oral presentation and a written report.

Prerequisite: APDEM 801, APDEM 802, APDEM 803, SOC 573

Applied Linguistics (APLNG)

APLNG 500: Practice Teaching in ESL

3 Credits

Provides instructional support and professional mentoring for second language teachers during the practice teaching experience.

APLNG 510: Health and Aging in Multilingual Contexts

3 Credits

This course focuses on anthropological approaches to health and aging in multilingual contexts.

APLNG 512: Language and Adult Lifespan Development

3 Credits

The effects of adult cognitive development and decline on the production and comprehension of language in mono- and multilinguals. APLNG 512 Language and Adult Lifespan Development (3) This graduate seminar is designed to provide a theoretical and practical introduction to research on adult lifespan development and language processing among multilinguals. It will be offered every other year as one of the course options in language in society, an area of concentration for both the MA TESL and PhD in APLNG degree programs in LALS. This course is also part of a LALS sequence in Language, Health, and Aging. While the main draw will be graduate students in LALS, the course may be of interest to graduate students in bio-behavioral health, gerontology, and human development and family studies. The expected total enrollment is 15. Topics covered in course readings and activities include: theories of adult lifespan development and cognition; language processing among monolingual young, middle-aged, and older adults; multilingualism and adult lifespan development, with particular attention to the effects of aging on bilingual processing, second language acquisition, and language attrition; and research methods proper to cross-sectional and longitudinal studies of language development over time. Over the course of the semester, students will also plan, prepare, and conduct a quantitative experiment or qualitative study on one of these topics. Through participation in a variety of activities, students will 1) become familiar with the research literature on language processing and adult

lifespan development, with particular attention to multilingualism, 2) develop critical skills in interpreting and comparing cross-sectional and longitudinal research designs in adult development studies, 3) develop practical skills in conducting such research and analyzing the results. Evaluation of students includes three components: 1) weekly presentation of results from required readings, 2) participation in an empirical research project conducted by the group, 3) summary paper describing the results of that research project.

APLNG 530: Perspectives on African Language Research in the Global South

3 Credits

The innovations and challenges of the Global South extend beyond an agenda that redresses exclusions. Rather, these are deep-seated challenges to the core tenets of language research as well as new directions for theories and practices on language research in the Global South in general. A renewal of southern epistemologies requires an understanding of the absences such knowledge implies. To engage with the transformative potential of non-Eurocentric thinking, the course explores the relevance of a decolonial imagination that makes it possible to envisage an alternative reality and justice that engenders "radical hope." Topics central to the course are the decolonization of research methods, feministic perspectives on African languages, Southern Multilingualisms and education, digitization of African cultural practices, indigeneity, an engagement with "Indigenous cosmovisions," and reinvented traditional concepts, such as ubuntu or sumac kawsay, that suggest that the formation of other worlds is feasible. These newly reinvented cosmovisions render it feasible to move beyond the limitations of Western-centric politics and knowledge production. The course is far more than a critique of the Global North's scholarship. It will cultivate a decolonial imagination, consequently producing African language knowledge with the South, and not on the South.

Cross-listed with: AFR 530

APLNG 570: Second Language Reading

3 Credits

Theoretical and practical introduction to concepts, methods and practices of research and instruction of second language reading development. APLNG 570 APLNG 570 Second Language Reading (3) This graduate seminar is designed to provide a theoretical and practical introduction to the assumptions underlying and principles embodying a variety of approaches to second language reading development and instruction. In addition, it seeks to explicate the role of second language reading in the larger context of second language development. It will be offered every other year as one of the course options in language learning and teaching, an area of concentration for both the MA TESL and PhD in APLNG degree programs in LALS. While the main draw will be graduate students in LALS, the course may be of interest to graduate students in the foreign language departments and linguistics. The expected total enrollment is 15. Topics addressed in course readings and activities include: 1) the epistemological underpinnings of the notion of second language literacies; 2) psycholinguistic, critical and sociocultural approaches towards second language reading; 3) variables affecting second language reading performance; 4) strategies and instruction to influence second language reading development; 5) assessment of second language learners' reading performance, and 6) critical evaluation of instructional materials for a variety of second language learning contexts. Through participation in a variety of activities, it is expected that students will: 1) develop an understanding of second

language literacies, 2) develop critical understanding of the variables and processes involved in L2 reading, 3) develop a principled conception of L2 reading instruction, 4) integrate L2 reading into the broader disciplinary area of second language learning and L2 proficiency, and 5) develop practical skills of designing and evaluating L2 instructional materials. Evaluation of students learning includes the following components: 1) completion and discussion of required readings; 2) presentation of key instructional approaches; and 3) completion of a paper addressing a theoretical, instructional or research issue in second language reading.

APLNG 571: Usage-Based Approaches to Second Language Learning and Teaching

3 Credits

This course provides a broad exploration of usage-based approaches to second language learning and teaching. It considers the roles played by cognition, usage, and communication in shaping how we acquire, process, and use language and builds an awareness of language as a complex adaptive system that emerges gradually through usage. Building on these insights, participants will explore and critique foundations to contemporary research about the cognitive processes underlying language structure, language learning, and language teaching.

APLNG 572: Communication in Second Language Classrooms

3 Credits

The study of communication in second language classrooms. APLNG 572 APLNG 572 Communication in Second-Language Classrooms (3) This course focuses on investigating and understanding the dynamics of communication in second/foreign language instructional settings. Students will examine different variables that influence the nature of communication in second/foreign language classrooms including: teachers' control over the patterns of classroom communication, students' perceptions of the patterns of classroom communication, students' knowledge and use of language, and students' use of language for learning and second language acquisition. Each variable will be evaluated for its theoretical and pedagogical contribution to communication, learning, and second language development. In addition, through understanding the basic theoretical tenants of and actively participating in reflective teaching, students will examine, frame, and manage the dilemmas of classroom practice, become aware of and question the assumptions and values they bring to teaching, become attentive to the institutional and cultural contexts in which they teach, and recognize their responsibilities for their own professional development. Finally, students will be exposed to sociocultural perspectives on mediated language and literacy instruction and recognize their relevance for second language teaching, learning, and classroom communication. Faculty: Karen E. Johnson

APLNG 574: World Englishes: Pluralizing Policy, Pedagogy, and Proficiency

3 Credits

This course explores the global spread of English, the diversification of its norms, and their pedagogical and policy implications. APLNG 574 World Englishes: Pluralizing Policy, Pedagogy, and Proficiency (3) This course analyzes how the English language aids globalization and how globalization changes English. English now features multiple grammatical systems and norms in diverse speech communities, adopts new modes of literacy and discourse practices, and enters into fluid relationships with other languages and cultures. These changes call for

a reconceptualization of language standards, linguistic identities, literacy practices, and English language teaching. After studying the historical and geopolitical bases for the rise of English, the course explores the implications of contemporary forms of transnational relations, digital technology, and popular culture for diversifying the structure, norms, and usage of the English language. The course aims to develop in students a sensitivity to the changing norms in English, provide pedagogical resources for teaching English according to local repertoires, examine strategies for facilitating intercultural communication, and articulate policies on the role of English in a multilingual world. While students specializing in teaching English as a second language (TESL) will find this course useful to inform their teaching of English worldwide, doctoral candidates in applied linguistics will find it important to understand how the plural norms of English invite new research on issues such as language acquisition, discourse analysis, and sociolinguistic identities. The course will be of interest to students of English who are increasingly interested in the way World Englishes affect multilingual creative writing and composition practices. In addition, the course will be of interest to students in Education who have to address the diversification of English in the changing demography of students in national and international classrooms.

APLNG 575: Language Ideology

3 Credits

This course is designed to offer a range of perspectives on language ideology as an analytical construct.

APLNG 576: Language Socialization across Home, School, and Community Contexts

3 Credits

A survey of research on language socialization from a variety of sociocultural groups across a range of sociolinguistic contexts.

APLNG 577: Language Analysis

3 Credits

An overview of cognitive/conceptual/functional approaches to language analysis with applications to research, second language acquisition, and language pedagogy.

APLNG 578: Computational and Statistical Methods for Corpus Analysis

3 Credits

A hands-on introduction to the core and advanced computational and statistical methods for analyzing corpus data. APLNG 578 Computational and Statistical Methods for Corpus Analysis (3) This course will provide a hands-on introduction to the core and advanced computational and statistical methods for analyzing corpus data. Topics to be covered include basic UNIX tools and python scripting for text processing; state-of-the-art computational tools for automatic and computer-assisted corpus compilation and annotation; computational tools for querying and analyzing raw and linguistically annotated corpora; and statistical methods used in interpreting information extracted from text corpora. Prior experience in computational and statistical analysis is not assumed. By the end of the course, students will be expected to have a good grasp of the computational and statistical techniques necessary for processing, annotating and analyzing corpus data, and to be able to implement these methods in their own corpus-based research projects. This course will be highly applied, and there will be substantial

opportunities for demonstrations, exercises, and discussions. Students will be evaluated on participation in in-class activities and discussions, completion of a series of lab assignments designed to help them practice the computational and statistical techniques introduced, and a final research project. This course serves as the methods component of the two-course sequence in corpus linguistics offered in the Department of Applied Linguistics.

APLNG 579: Seminar in Applied Corpus Linguistics

3 Credits

This graduate seminar is designed to expose students to a wide range of corpus-based studies to answer questions of interest to applied linguists and language educators. We will examine studies that use large text corpora for describing and analyzing native and learner language from diverse perspectives as well as for language teaching and learning, focusing on theoretical, methodological, and empirical/pedagogical issues. Students will develop hands-on skills applicable to research topics of their own interest. Previous knowledge of corpus linguistics or a programming language is not assumed.

APLNG 580: Proseminar in Applied Linguistics

1 Credits

This team-taught seminar introduces PhD students to the scholarly areas and research perspectives in Applied Linguistics represented by department faculty. APLNG 580 Proseminar in Applied Linguistics (1) This team-taught pro-seminar is the cornerstone of the PhD program in Applied Linguistics. Its aims are to foster an intellectual community among incoming PhD students and department faculty and to provide the students with an overview of the scholarly expertise and research perspectives in Applied Linguistics represented by department faculty. The areas to be covered include: second and foreign language and literacy development and pedagogy; technology and language learning; language testing and assessment; language policy and planning; language uses in community, workplace, professional and academic settings from local, national, and international perspectives; language and identity; language and health; sociocultural theory; discourse and conversation analysis; and corpus linguistics. This is a required course for those entering the PhD program in Applied Linguistics and will be offered every fall. The enrollment will depend on the number of admitted students to the PhD program with a maximum number of 10. Through participation in discussions with individual faculty members, and readings when appropriate, it is expected that students will become familiar with 1) the scholarly expertise of the participating faculty members and 2) key concepts and research perspectives associated with their areas of specialization in the field of Applied Linguistics. Evaluation of student learning includes completion and discussion of readings. The department's Director of Graduate Studies will be responsible for scheduling the weekly meetings, for collecting feedback from individual faculty members on student contributions/performance and for assigning grades to students.

APLNG 581: Discourse Analysis

3 Credits

Overview of theories and approaches to the analysis of spoken and/or written discourse. APLNG 581 APLNG (CAS) 581 Discourse Analysis (3) This course is designed to provide an overview of the various theories of and approaches to the analysis of spoken and written discourse, e.g., speech act theory, conversation analysis, pragmatics, contextual

analysis, functional/cognitive grammar, grammar and interaction. These and other approaches are intended to serve as analytic tools and frameworks for students to ultimately design and carry out their own research projects within the course of the semester. Research projects may focus on any aspect of language use, such as language and grammar, language and interaction, language and culture, language socialization, language and cognition; projects may center on some phenomenon of English or may involve other languages, as long as the student is capable of conducting an in-depth analysis of the particular phenomenon under investigation in that language.

Cross-listed with: CAS 581

APLNG 582: Seminar in Approaches to Language Use

3 Credits

Examines the historical and contemporary landscape of research on language use.

APLNG 583: Methods of Language Assessment

3 Credits

Introduces methodology for selecting, developing, applying, and analyzing tests and questionnaires for research and evaluation in communication and language education. APLNG 583/APLNG 583 Methods of Language Assessment (3) This course introduces standard methodology for selecting, writing, and analyzing language tests and research questionnaires. Major focus will be given to reliability and validity issues and the study of current testing research paradigms. Course activities will include reading texts and articles, completing assigned exercises, writing and analyzing a testing/questionnaire instrument, and the preparation and presentation of a research paper reporting test development findings or addressing an approved assessment issue. The course is aimed at promoting the skills necessary to be effective judges and developers of language tests. This will involve learning to conduct item analyses, to understand principles of classical and item response measurement theory, to appreciate current and past language assessment issues, to carry out appropriate statistical analyses by computer or calculator, and to produce assessment research of publishable quality. In addition, the course will provide introduction to issues in latent trait/item response theory, item banking, computer adaptive testing, and instructional program evaluation. Faculty: Karen Johnson

APLNG 584: Sociocultural Theory and Second Language Learning

3 Credits

The course is an introduction to research on second language learning from a sociocultural theoretic perspective. APLNG 584/APLNG 584 Sociocultural Theory and Second Language Learning (3) The course is designed to be a graduate level introduction to research on second language learning and teaching informed by sociocultural theory of mind and cognitive development. The course will initially focus on the general principles of the theory as laid out in the writing of L. S. Vygotsky, his colleagues and modern interpreters of the theory. It will then consider in detail the research that has been carried out over the past 15 years on L2 learning and teaching from a sociocultural perspective. Topics to be covered include the following: a brief history of cultural psychology; mind as a mediated cultural construct; activity theory; the genetic method; internalization and appropriation; the zone of proximal development; inner and private speech (including

gesture); collaborative learning, prolepsis, and scaffolding; the role of artifacts and social relationships in development; interface between sociocultural research and language pedagogy; language testing from a sociocultural perspective; regulation in a first and other languages; metacognition in a first and other languages; identity in a first and other languages; the relationship of sociocultural theory to other theories of second language acquisition. The course has two primary objectives: to provide students with a solid foundational and critical understanding of the principles of sociocultural theory and for them to carry out a research project on second language learning using the genetic method and sociocultural theory principles to interpret data. Given that second language acquisition has become a dominant paradigm within applied linguistics, developmental psychology, and educational psychology, the course is particularly relevant for students not only in the graduate program in Linguistics and Applied Language Studies (LALS), but also to those working in psychology and education, as well as those pursuing the applied linguistics concentration in the language departments. It also serves as a complement to the other courses in applied linguistics offered by LALS in that it exposes students to a very theoretical perspective from what is often encountered in graduate courses in applied linguistics. As such, it challenges them to think in different ways about mind, learning, development, teaching, and assessment. The requirements for the course are: completion of required readings; in-class presentation of one research study selected from the L2 literature; submission of two brief (4-5 pages maximum) critical analyses of two research studies drawn from the relevant research literature; completion of a significant research project (topic to be negotiated with the professor). Course to be offered every other year beginning 2003-04. Maximum enrollment 12.

APLNG 585: Pragmatics in Language Learning and Teaching

3 Credits

Survey of literature on teaching and learning of second language pragmatics.

APLNG 586: Analyzing Classroom Discourse

3 Credits

A theoretical and practical introduction to concepts and methods associated with the analysis of classroom discourse.

APLNG 587: Theory & Research in L2 Teacher Education

3 Credits

Examines the historical and contemporary landscape of theory and research in second language teacher education.

APLNG 588: Design and Research of Technology-Mediated Language Learning

3 Credits

Using computer and multimedia technologies to support materials development and second language acquisition research.

APLNG 589: Technology in Foreign Language Education: An Overview

3 Credits

Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with SPAN 589)

Cross-listed with: CMLIT 589, FR 589, GER 589, SPAN 589

APLNG 591: Seminar in Second Language Acquisition

3 Credits

Seminar in second language acquisition by second/foreign language learners and implications for language pedagogy and assessment. APLNG 591 APLNG 591 Seminar in Second-Language Acquisition (3) This course focuses on the foundational research and theories of second language acquisition. Course content covers the theoretical underpinnings of models and research on the acquisition of second languages and communicative competence with direct implications for language pedagogy and assessment. Faculty: Sandra Savignon

APLNG 592: Qualitative Research in Applied Linguistics

3 Credits

This course offers an introduction to qualitative research methods in applied linguistics. APLNG 592 APLNG 592 Introduction to Qualitative Research in Applied Linguistics (3) This course is designed to acquaint students with the background, methods, and current status of qualitative research in the field of applied linguistics. The main goals of the course are: 1) to familiarize students with a range of contemporary qualitative approaches to second language research; 2) to develop students' ability to select appropriate methods for particular research questions, 3) to develop critical awareness of issues related to validity and ethics in research design and writing; 4) to enhance students' skill in the collection and analysis of qualitative data. The class will review a range of approaches to qualitative research (e.g., ethnography, conversation analysis, diary study, case study) as well as issues of ethics and quality in research design, implementation and presentation. Students will be evaluated on reading and discussion (20%), assignments (30%), book and article reviews (20%), and final project (30%). APLNG 592 is a required course for the Ph.D. in Applied Linguistics, one of two courses on research methods contributing to the core curriculum. In addition, this course will be beneficial to students in Applied Linguistics options in the foreign languages (French, Spanish, and German).

APLNG 593: Experimental Research on Language

3 Credits

Standard methodologies for planning, conducting, interpreting, and reporting research in Applied Linguistics. APLNG 593 Research Design and Methodology in Applied Linguistics (3) This course introduces standard methodologies for planning, conducting, interpreting, and reporting research in Applied Linguistics. Course activities will include reading texts and articles, completing assigned exercises, participating in group discussions, criticizing research articles, and conducting formal research projects. Students are encouraged, but not required, to focus the research project around their individual thesis or dissertation research and/or to target the research project for publication in a professional journal. The course is aimed at promoting the skills necessary to being effective consumers and producers of research. This will involve learning to formulate research questions, to select appropriate research designs, to appropriate statistical analyses by computer and/or calculator, and to interpret and report the results of studies.

APLNG 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

APLNG 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

APLNG 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

APLNG 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

APLNG 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

APLNG 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Students experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

APLNG 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

APLNG 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

APLNG 802: Focus on English: Teaching Form, Meaning and Use

3 Credits

Develops an understanding of the various domains of the English language as relevant for adult English language learning and teaching. APLNG 802 Focus on English: Teaching Form, Meaning, and Use (3) This course explores various domains of the English language (phonological, lexical, grammatical, pragmatics) in relation to adult English language learning and teaching. Attention is paid to the various components (form, meaning, and function) of these domains and how each component works within larger stretches of discourse. Students will come to understand: language as communication, meaning-making, social practice; grammar as both structure, arrangement, rules and choices; and

language teaching concerned with both language form and language use. The major topics covered include the sound system, lexicon, grammar, tense & aspect, modality, spoken & written texts, discourse & genre, and pragmatics. Students will engage in a variety of data analysis activities that assess their knowledge of the various domains of language and engage in practical activities that require them to apply these understandings to adult English language teaching. This course is one of four required courses that make up the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

APLNG 804: Focus on Learners: Identity, Community and Language Learning

3 Credits

Explores how individual identities shaped by cultural differences, social positioning, institutional roles and structures influence English language learning and teaching. This course explores how individual identities shaped by cultural differences, social positioning, and institutional roles and structures influence the learning and teaching of English in an increasingly globalized world. This course will enable students to: a) recognize the multiple dimensions of one's cultural, linguistic, and educational backgrounds, b) understand the roles and values associated with varieties of English, c) become sensitive to the complex social, cultural, political, and institutional factors that affect adult English language teaching and learners' language learning in diverse instructional settings, d) create culturally responsive curricula that is appropriate for adult English language learning communities in diverse instructional settings. The major topics covered include: developing an understanding of language identities; recognizing diverse instructional settings as cultural contexts of learning; and applying these understandings to adult English language teaching. Students will engage in a variety of practical activities in which they reflect on their own language learning and cultural experiences, conduct an exploration of a bi/multilingual/cultural community and its related instructional settings, and write a final reflective paper that examines learners' identity, community and English language learning in diverse instructional settings. This course is one of four required courses in the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

APLNG 806: Focus on Classrooms: Planning and Supporting Language Learning

3 Credits

Develops a critical awareness of one's teaching practice and highlights instructional planning and classroom interactions with adult English language learners. This course will guide candidates to analyze the interactional patterns and discourse of diverse instructional settings and the factors that impinge upon planning and supporting effective instruction for adult English language learners. Students will: a) examine their own beliefs and knowledge about language learning and language teaching and become aware of the impact of such knowledge and beliefs on instructional practices; b) recognize the highly situated nature of teachers' instructional decisions and practices and develop an awareness of instructional language & classroom discourse that supports English language development; c) devise, select, and/or adapt a wide range of curricular resources to meet the linguistic, social, cultural and educational needs and goals of English language learners; d) develop lesson plans, evaluate curricular units and write teaching objectives; e) connect instruction to local and global activities and problem-solving using the imagination, collaboration, computer and other technological resources. Students will observe several English language instructional

settings, recognize instructional models and classroom interactional patterns, review and adapt textbooks, and develop their own materials using authentic language texts. A focus will be on writing clear teaching objectives and lesson plans and the use of new technologies to support adult English language learning. This course is one of four required courses in the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

APLNG 808: Focus on Instruction: Teaching and Assessing Language Learning

3 Credits

Develops an understanding of and ability to use effective teaching and assessment practices that support adult English language learning. This course facilitates the candidate's understanding of and ability to use effective teaching and assessment practices that support adult English language learning. Students will: a) recognize the highly situated and interpretative processes involved in English language learning and teaching and be able to reflect on, critically analyze, and evaluate their own instructional practices; b) understand subject matter content from an instructional perspective, learn to anticipate areas that may require additional instructional support, and carry out a range of appropriate instructional strategies and activities that support English language development; c) demonstrate an understanding of the central issues and current approaches to the teaching of English language speaking, listening, reading, writing, grammar, as well as approaches to language instruction that are content-based and focused on English for specific purposes; d) recognize the interconnectedness of teaching and assessment, assess students' knowledge using multiple forms of assessment, and address students' diverse needs, backgrounds, and English proficiency as they plan instruction. Major topics will include concepts surrounding second language assessment as well as classroom strategies to evaluate and monitor adult learners' English language learning. Also, students will explore the central issues and techniques for teaching oral communication (listening and speaking), literacy (reading and writing), and grammar. Students will complete a curricular development project, teach and videotape classroom lessons for mentor instructor feedback. A focus will be on guiding students to develop their own teaching practices appropriate to a group of adult English language learners in the specific context in which they live and work. This course is one of four required courses that make up the Post-Baccalaureate Credit Certificate in Teaching English to Speakers of Other Languages (TESOL).

Architectural Engineering (AE)

AE 530: Computer Modeling of Building Structures

3 Credits

Theory and application of structural analysis using the direct stiffness method. Modeling assumptions, validation, interpretation of computer output. A E 530 Computer Modeling of Building Structures (3) This course addresses the theory and application of structural analysis using the direct stiffness method with matrix formulation, applying computer programs to the analysis of two- and three-dimensional structures. Topics include validation and interpretation of results from computer analyses, as well as practical analysis techniques and the design of building structures to satisfy building code requirements. The course is designed to provide students with the ability to create computer models representative of actual building response and in line with prevalent modeling techniques implemented using commercial structural analysis

software. Primary objectives include developing an understanding of the process used by computers to solve structural systems, with emphasis on the use of computer models in the analysis and design process to satisfy building code requirements. This is a mandatory course for students in the structural option within the integrated undergraduate-graduate degree program in architectural engineering (B AE/M AE), and it is a valuable course for all structural engineering graduate students. Students must have completed an undergraduate course in structural analysis of determinate and indeterminate systems. Since some homework problems require proportioning structural members to resist combined loading conditions, the course prerequisites include introductory courses on the design of steel and concrete members. Also required is the knowledge of elementary matrix algebra and exposure to advanced programming of electronic spreadsheets. This course involves significant instruction in the AE Department computer laboratory, which is equipped with several commercial structural analysis software programs capable of handling large structural models.

Prerequisite: A E 401 , A E 402 and A E 430

AE 531: Legal Aspects of Engineering and Construction

3 Credits

Basic legal doctrines, contractual relationships between parties, analysis of construction contract clauses, contract performance, and professional practice problems.

Prerequisite: C E 431W

Cross-listed with: CE 531

AE 532: Post-Tensioned Concrete Building Design

3 Credits

This class will explore a set of structural solutions that are often selected when buildings need long spans and/or thinner structural solutions, including efficient transfer members. Students will develop an ability to analyze and design pre-stressed concrete with a specific focus on Post-Tensioned (PT) applications to buildings. PT Design will specifically be applied to building solutions as applicable to ACI 318 and PTI Standards. Content will interweave a focus on the analysis and design of one- and two-way PT slabs systems, beams and girder systems, while also covering lateral systems and the repair and rehabilitation of aging PT projects. Discussions on new innovative PT research ventures will be included. The goal of this class is threefold: 1) take on the role of a designer and create structural solutions in PT, 2) apply fundamental knowledge of pre-stressed concrete to evaluate serviceability and strength to see if members that were designed have sufficient capacity, and 3) learn commercially available software to design gravity systems at a larger content than isolated slabs.

Prerequisite: AE 430; Concurrent: AE 431

AE 534: Analysis and Design of Steel Connections

3 Credits

Connection analysis and design for steel buildings with an emphasis on the AISC Specification. A E 534 A E 534 Analysis and Design of Steel Connections (3) This course covers the theory of steel connection analysis and design including member, bolt and weld limit states as described in the AISC Specification and the Manual of Steel Construction . With sound knowledge in the basics of steel connection limit states, specific shear, moment and bracing connections are studied in detail.

Along with the fundamental theory applied to each connection type, use of the applicable design aids contained in the Manual of Steel Construction is covered. This course is expected to be particularly useful for students entering the structural design profession upon graduation or those engaging in steel connection research. This course is required of students enrolled in the MAE Structural Option in the Architectural Engineering Department. Additionally, this course is commonly taken by structural engineering graduate students in both the Architectural Engineering and Civil and Environmental Engineering Departments. Student evaluations are based on their performance on a mid-semester exam, a final exam, out of class assignments, projects, and presentations. This course will generally be offered each fall, with an anticipated enrollment of 25-35 students.

Prerequisite: A E 401 and A E 430

AE 535: Historical Structural Design Methods

3 Credits/Maximum of 999

Qualitative, graphical, and quantitative methods of structural design as practiced from ancient Rome through the nineteenth century. This course will explore, qualitatively and quantitatively, methods of structural analysis and design used from 100 BC through the end of the nineteenth century, with an emphasis on nineteenth century design methods. The course will increase students' appreciation for the effectiveness of obsolete structural analysis and design methods. Participation in the course will prepare students for successful preservation of historic structures by introducing the process by which these structures were conceived and designed.

AE 537: Building Performance Failures and Forensic Techniques

3 Credits

This course provides a background in identification, evaluation, and analysis of a broad set of architectural and structural performance failures.

Prerequisite: A E 401 , A E 402 , A E 430

AE 538: Earthquake Resistant Design of Buildings

3 Credits

Introductory engineering seismology, basic principles of structural dynamics, application of earthquake design provisions of model building codes to design of buildings. A E (C E) 538 Earthquake Resistant Design of Buildings (3) The main objective of this course is to familiarize students with basic principles of design of buildings to resist earthquake effects. Since building design is governed by the Building Code, currently, International Building Code that adopts American Society of Civil Engineers (ASCE) document ASCE-7 for load determination, the seismic provisions of ASCE-7 will be used as the basis for design. The course starts by introducing earthquake phenomenon and engineering seismology concepts. The basic principles of structural dynamics are then covered for single degree of freedom systems starting from free vibration to random loading so that students learn how a ground acceleration time-history subjected to the base of a building can be converted to a time varying effective seismic load on the mass. After introduction of response spectrum, introductory material on multi-degree of freedom systems is introduced so that students can determine natural frequencies and mode shapes for multi-story buildings and perform modal superposition analysis to determine displacement and force responses. Next, the principles of earthquake resisting design related to

energy dissipation, ductility, over-strength, and redundancy followed by seismic provision of the building code are discussed. The main design principles related to the two main materials for building construction consisting of reinforced concrete and structural steel are next discussed. The focus will be to illustrate how lateral load resisting systems such as shear walls, moment resisting frames, or braced frames made with such materials as appropriate are designed to resist earthquake effects based on respective material code provisions, that is, American Concrete Institute (ACI) for concrete and American Institute of Steel Construction (AISC) for steel. The last part of the course will introduce seismic retrofit, base isolation systems and the concept of performance based design.

Prerequisite: A E 401 , A E 402 , A E 430

Cross-listed with: CE 538

AE 540: Computational Design & Optimization for Buildings

3 Credits

This course focuses on emerging computational approaches for creative multi-factor parametric research, early-stage design and optimization of buildings. It begins with an overview of the principles of parametric design and visual programming before covering strategies for design space exploration and optimization in depth. Topics include computational design fundamentals such as problem parameterization and formulation; heuristic, gradient-based, and interactive optimization; multi-objective optimization; surrogate modeling; and data visualization for decision-making. Beyond traditional optimization, it highlights ways in which elements of a building design optimization problem (variables, the geometric definition, constraints, objectives) can be interactively interpreted, manipulated, and connected, often using data science techniques, to provide effective feedback and guidance during building-related research and design, which can include both qualitative and quantitative goals. Although the theory of these subjects is described, the emphasis is on how they can be used in research to improve the design and construction process.

Recommended Preparations: Basic understanding of calculus, linear algebra, at least one major building engineering subdiscipline (structural, mechanical, lighting/electrical, acoustics, construction), and programming concepts.

AE 542: Building Enclosure Science and Design

3 Credits

The building enclosure: nature, importance, loadings; building science: control of heat, moisture, air, hygrothermal analysis; design: walls, windows, roofs, joints. A E 542 A E (C E) 542 Building Enclosure Science and Design (3) The building enclosure, or envelope, is the environmental separator in any building and is, like the superstructure and the service systems, one of the major physical components of the building. The primary objective of this course is to develop an understanding of the nature, importance, functions, and performance of the building envelope in general. The necessary building science—concerning primarily heat, moisture, and air—is covered, and hygrothermal analysis procedures are developed. A generalized categorization system for enclosure elements, i.e., walls (both above- and below-grade), roofs, and other enclosure sub-assemblies is proposed. General design strategies are developed. The design of specific wall systems (both above- and below-grade), roof systems, base floors, windows, and their joints is then addressed in some detail. The integration of structures (composite action, restraints, etc.), service systems (especially energy consumption), and finish (exterior and interior) is considered in sonic detail. Evaluation is based on an

equal combination of assignments (6) and examinations (2). This course complements courses in architecture, civil engineering, architectural engineering, and mechanical engineering.

Cross-listed with: CE 542

AE 543: Research Methods in Architectural Engineering

3 Credits

Research skills, critical thinking, academic writing, presentations, use of electronic media, and experimental design applied to AE research topics. A E 543 Research Methods in Architectural Engineering (3) This is a course intended primarily for graduate students in Architectural Engineering. Other students interested in Architectural Engineering research may also take the course. The main objective of the course is to build research skills for students pursuing an M.S. or Ph.D. degree in Architectural Engineering. The research skills to be targeted are critical thinking, academic writing, presentation, oral communication, and use of electronic media, based on materials from architectural engineering projects and literature. These skills will be developed through a series of lectures and exercises to include architectural engineering research topics, such as novel building physical characteristics and occupant performance/environmental perceptions. Lectures in academic writing will cover proposal, report, paper, and thesis writing requirements for Architectural Engineering students. Students will write several assigned essays and term project to gain experience in different academic writing forms as well as architectural engineering research topics. Students are encouraged to use their actual research for the semester project. Based on the project content, each student will then be required to develop an in-class presentation. This part of the course will cover presentation preparation and the critical thinking that is embedded into oral communication skills. The electronic media portion of the course will cover topics such as electronic databases relevant to architectural engineering research topics, search engines, publishing, use of web materials, ethics, and legal considerations. All of the assignments are designed to develop critical thinking through instructor and peer feedback. In addition to the three major targeted areas of research skills development, this course will begin and end with a focus on architectural engineering research topics. The introductory part of the course covers the topics and methods for the four focus areas within the Architectural Engineering program, while the closing portion emphasizes interdisciplinary research efforts and encourages students to thinking in that direction. For example, while experimental design is directly applicable to each individual focus area, the specific instrumentation is area (focus) dependent. Nevertheless, knowledge of different specific data collection methodologies from multiple Architectural Engineering options can enhance the understanding of integrated architectural engineering research topics. Overall, the communication established in all of the course assignments can be used to help develop new architectural engineering research ideas and polish existing ones, which will be helpful to students who are taking the course during their first or second semester in residence.

AE 546: Analysis & Design of Interdependent Building Systems through Data Analytics

3 Credits

A building is an interdependent system of systems, which consists of tens of thousands of building components that spatially or functionally depend on each other. These interdependencies increase the complexity of analysis, research, design, and construction of buildings, and require a high level of multi-disciplinary coordination. This course utilizes Building

Information Modeling (BIM) as an integration platform and central database to coordinate the interdependencies between various building functionalities and support multi-disciplinary coordination. The course begins with an overview of BIM in the construction project lifecycle and addresses operational details of BIM tools for modeling, scheduling, and 4D simulation. Lecture content covers graph theory as a data analytics tool, and the use of graph databases to analyze the information embedded in BIM models for the analysis of system interdependencies. Graph algorithms will be applied to support system optimization. The latest research on BIM and graph analysis will be reviewed and discussed with a focus on the interdependency of building systems. Based on the latest research studies, students complete a semester-long group project that focuses on analyzing building information from a graph perspective for holistically improving building systems or construction activities.

Recommended Preparation: Enrollees should have a working knowledge of Building Information Modeling tools.

AE 549: Data Science in Architectural Engineering

3 Credits

This course aims to equip building science researchers and engineers with the tools for efficiently and effectively transforming data into knowledge, decision, and action. In particular, the course explores parametric and non-parametric regression methods, unsupervised clustering, classification, decision trees, random forests, and support vector machines. Additional advanced statistical learning methods are incorporated as they emerge and become relevant to the field. The course considers the multiple phases of statistical analysis, including data cleaning and pre-processing, exploratory analysis, model building and testing, data visualization, and reporting. Statistical learning topics are motivated through application and case studies involving thermal/building/renewable energy systems, energy efficiency, indoor air quality, and environmental engineering. This course provides a foundation for graduate researchers to engage in follow-on study of more advanced statistical learning methods, while also providing fundamental and beneficial data analysis skills to industry-bound students.

Prerequisite: STAT 401

AE 551: Combined Heat and Power System Design for Buildings

3 Credits

Thermodynamic and thermo-economic analyses methods for determination of optimal, on-site, total energy systems for commercial buildings. AE 551 Combined Heat and Power System Design for Buildings (3) Building systems consume about 40% of the primary energy resources utilized in the United States each year and are responsible for a proportional fraction of air contaminants (NO, SO, fine particulates, CO) and greenhouse gas, CO₂. A conventional energy supply mix for building (grid electricity, site fossil fuel heating) results in approximately 50% primary fuel energy utilization. Advances in scalable, low emissions, electric power generating devices are leading to incorporating on-site power production into the building design. The "waste heat" general is of such a quality that it can be utilized at the site in heating, hot water, absorption cooling, and dehumidification applications. The simultaneous utilization of a primary fuel to generate both the electrical and thermal components in Building Combined Heat and Power (BCHP) can result in total primary fuel utilization values of 85% or greater, electric power reliability increases and significantly reduced emissions, particularly greenhouse gases. This course examines the underlying thermodynamic principles involved in BCHP, pollutant and greenhouse

emission mechanisms and levels associated with both Separate Heat and Power (SHP) and BCHP designs for a given building site. Economic and regulatory principles that govern the application feasibility of a BCHP design for a given building configuration are examined. At the end of the course, students will have the skills and tools necessary to perform an assessment of the feasibility of a BCHP application to a given building site. Specific combinations of distributed, electric power generation equipment (micro-turbines, fuel cells, diesel engines, wind-power) and thermal "waste" utilization from these generating systems will be discussed and analyzed. Case studies are utilized to illustrate the evaluation processes. Using the SHP design methods and principles (ducted air supply systems, hydronic heating and cooling systems, etc.) covered in AE 454 (Advanced HVAC) and central system methods covered in AE 557 (Centralized Cooling Production and Distribution Systems) or AE 558 (Centralized Heating Production and Distribution Systems) for commercial buildings, students will learn how to achieve and establish the same building performance objectives using Combined Heat and Power (CHP) technologies. Since the use of CHP for various building types requires reducing transients in thermal and electric load profiles, the relationship of the structural characteristics of the building (thermal mass) and the use of combinations of artificial lighting vs. day-lighting to the utilization of CHP is investigated.

Prerequisite: A E 454 ; A E 557 or A E 558

AE 552: Air Quality in Buildings

3 Credits

Indoor air pollutants, their sources and health effects; transport of pollutants; modelling of pollutant concentration in buildings.

Prerequisite: A E 454 , A E 455 , M E 410

AE 553: Building Energy Analysis

3 Credits

Fundamentals of building energy dynamics and the simulation of energy flows in a building; validation of programs; practical applications.

Prerequisite: A E 454 , A E 455 and M E 410

AE 555: Building Automation and Control Systems

3 Credits

Advanced techniques in the theoretical analysis and practical design of the automatic comfort controls used in building thermal systems. A E 555 Building Automation and Control Systems (3) A E 555 complements and expands upon the material covered in the undergraduate HVAC control systems course. The objectives of this course are to provide students with an enhanced capability to design advanced building control systems and to ensure proper operation through the use of comprehensive design and analysis tools and evaluation methods. Particular emphasis will be placed on systems integration, fault detection, diagnosis and correction, optimization and performance monitoring. Reference materials will be drawn from recent technical papers and conference proceedings and cover both model-based predictive control and data-driven modeling and control. Students will develop skills to stimulate building control system performance for a wide range of system designs and to implement advanced control strategies and sequences relevant to modern integrated building systems.

Prerequisite: A E 457

AE 556: Solar Engineering of Thermal Processes

3 Credits

Advanced quantitative methods of predicting transient active and passive solar process performance with an emphasis on building solar applications.

Prerequisite: M E 410

AE 557: Centralized Cooling Production and Distribution Systems

3 Credits

Central cooling plant and distribution components and systems; thermal, hydraulic, and economic modeling for planning and design.

Prerequisite: A E 454 ; or M E 411 , M E 410

AE 558: Centralized Heating Production and Distribution Systems

3 Credits

Description and analysis of central heating plant and distribution components and systems; thermal and economic modeling for planning and design.

Prerequisite: A E 454 ; or M E 411 and M E 410

AE 559: Computational Fluid Dynamics in Building Design

3 Credits

Theory and applications of building environmental modeling with Computational Fluid Dynamics (CFD). A E 559 A E 559 Computational Fluid Dynamics in Building Design (3) This course will be a primary interest to Architectural Engineering graduate students in the Mechanical Systems emphasis. Other students interested in the application of Computational Fluid Dynamics (CFD) to Architectural Engineering may schedule the course if they have satisfied the prerequisites. The main objective of this course is to build the knowledge necessary for successful simulations of building indoor and outdoor environments using CFD. The skills developed in the course build on the knowledge of fluid mechanics and building mechanical systems. The course will also add to the available pool of electives for students in the integrated BAE/MAE program. The first part of the course covers general CFD topics on the solution of Navier-Stokes partial differential equations. Different concepts necessary for the solution of the partial differential equations expressing the conservation laws will be introduced along with a CFD software package. In this phase, the course focus will be on the derivation of different equations and their solutions. Analytical solutions will be derived when possible, while most of the problems will require use of numerical solutions. Several homework assignments will require development of small computer programs. The introduced CFD software package will prepare students for the second part of the course that is more applied. The use of CFD in building design is different from its use for other engineering applications because of the domain size and specific boundary conditions such as diffuser airflow, wind, or solar radiation. Most of the time, appropriate boundary conditions distinguish successful from unsuccessful applications of CFD. To address the issues of quality control in CFD simulations, the American Society of Heating, Refrigerating, and Air Conditioning Engineers (ASHRAE) recently developed CFD guidelines that the course will follow from the beginning. The actual guidelines will be introduced to fortify everything learned during the course. Evaluation will be based primarily on analytical homework assignments (30%), two projects (30%), a mid-semester quiz

(20%), and a final examination (20%). This course will be offered each Spring, with an anticipated enrollment of 10 students.

Prerequisite: A E 454 , M E 410

AE 561: Science of Light Sources

3 Credits

In-depth scientific principles of light generation in modern electric light sources, and the resultant characteristics that influence their use for buildings.

Prerequisite: A E 461

AE 562: Luminous Flux Transfer

3 Credits

Radiative transfer applied to lighting analysis; methods for computing direct and interreflected illumination; nearfield photometry.

Prerequisite: A E 461 , CMPSC201 or CMPSC202

AE 563: Luminaire Optics

3 Credits

Optical design of reflectors and refractors for lighting systems; manufacturing methods.

Prerequisite: A E 464

AE 564: Color Science

3 Credits

This course provides students with an understanding of the research that led to the development and application of various metrics for the assessment of color appearance, the performance of light sources and the specification of object colors. Students will learn the scientific theory and practical application of color measurement, including the fundamental theories and computational modeling of human color vision. The goal of this course is for the students to apply knowledge of colorimetry and photometry to evaluate light sources and quantify the color appearance and properties of objects. Students will gain a detailed understanding of the fundamental quantities commonly used in illumination engineering (e.g., color temperature, color rendition metrics, etc.), their use, and limitations. The course is grounded in past and current research literature. Students will build on existing theoretical frameworks and methodologies, allowing students to synthesize new knowledge and produce scholarly work in this field.

Recommended Preparations: A basic understanding of human vision, lighting design practice, and the units applied to lighting measurement

AE 565: Daylighting

3 Credits

Design concepts, solar position, sky luminance distribution models, integration of daylighting and electric lighting controls, physical modeling, computer analysis techniques.

Prerequisite: A E 461

AE 566: Windows and Glazing

3 Credits

This course consists of three major sections. It begins with the basics of solar and sky radiation and the theoretical knowledge in the intersectional area between radiometry and photometry related to building windows and glazing materials. Subsequently, based on the necessary understandings of the above fundamentals, students will learn the multipane window analytical method to characterize and design window and glazing optical and thermal behaviors in terms of both radiometric and photometric aspects. In the meanwhile, the effects on building energy, visual, and thermal performance by such characteristics will be analytically explained to students. The last section in this class focuses on the synthesis of theoretical knowledge and analytical methods by discussing and exploring certain emerging research questions in the area, such as optimization, dynamic functions for solar radiation modulation, integration of nano-structured glazing materials, laminates, and films. In this process, certain data modeling techniques and flexible computational tools will be incorporated with the analytical methods learned above to propose, explore, and express solutions and ideas for the emerging research problems in the building window area.

Recommended Preparation: A basic understanding and knowledge background of building lighting and mechanical systems.

AE 569: Research Topics in Illumination Engineering

3 Credits

Seminar on prior and current research in illumination engineering which define current recommendations and design practice.

Prerequisite: or concurrent: A E 461

AE 570: Production Management in Construction

3 Credits

Applications of production management tools to capital facility projects; theory of production systems in construction; development of production control manual. A E 570 A E 570 Production Management in Construction (3) A E 570 explores the use of production management to efficiently manage the delivery processes of capital facility projects. Students will learn about fundamental models of managing project processes and about tools to manage projects as production systems. The procurement, design, and construction processes that are used in capital facility projects are not usually through of in production process terms. Yet, doing so can develop a deeper understanding of the complexities of capital facility projects and enable project production to be efficiently managed. Production management emphasizes managing projects as complex wholes focusing on the relationships between the parties and tasks to optimize total process performance. A E 570 analyzes the latest production thinking and management tools to manage capital facility projects. The learning objectives of this course are for students to: a) recognize that capital facility projects are complex production systems and understand how principles of production relate to construction projects; b) understand the principles and methods of new production management methods like lean construction; c) be able to apply specific production management tools to specific problems identified on projects, especially those encountered on high performance sustainable building projects; and, d) understand how to use the latest production management planning and control tools to

improve the management of capital facilities projects. A E 570 will be offered each spring with an anticipated enrollment of 25 students. This course uses classroom demonstration, case-based materials, in-class game simulation, and computer software to demonstrate key concepts and production tool applications. Assessment is conducted through out-of-class assignments, homework exercises, and a major project requiring appropriate tool to remedy the problem. The final grade for this course will be based on: Construction process analysis assignment - 15% Experiment design assignment - 25% Homework exercises and classroom participation - 25% Major project, including class presentation - 35% Students entering this course are expected to have knowledge of the construction industry, project delivery processes, and construction means and methods.

Prerequisite: A E 475 , A E 476 or C E 432

AE 571: International Construction Management and Planning

3 Credits

Evaluation of international project environments and participants, modeling and planning international projects.

Prerequisite: A E 570

AE 572: Project Development and Delivery Planning

3 Credits

Methods employed by owners and developers to initiate capital facility projects; defining project objectives, constraints, participants, financing, and delivery methods. A E 572 A E 572 Project Development and Delivery Planning (3) The course explores the methods used by capital facility owners and developers to initiate a project. Many vital decisions are made and critical activities performed early in a project that have major bearing on how the project is completed. These include defining the project objectives, identifying constraints, recognizing stakeholders, and selecting financing and delivery methods. The course explores the latest project development and delivery techniques used to support these decisions. Students will learn how early development activities shape a project, and how building industry professionals are helping to support these activities. Students will develop knowledge and perspective to help their decision-making skills. As the course title implies, special focus will be on high performance delivery planning. The learning objectives of the course are for students to: 1) Understand what occurs in the early stages of project formation as capital facility owners and developers initiate a project; 2) Understand the methods owners and developers use to progress through the capital facility process; 3) Understand the different types of acquisition strategies, project delivery methods, and contractual systems to achieving capital facility owner objectives; and, 4) Understand the decision-making needs of high performance sustainable building projects. Offered in the Fall semester, the course uses case-based materials, hands-on computer simulation, and other classroom demonstration. Case study projects assigned by the instructor, individual homework exercises, and a group project requiring students to apply development techniques to a current downtown State College capital facility development site from the assessment for the course. Students entering this course are expected to know how the construction industry operates, including project delivery methods, engineering economics, preconstruction, and construction means and methods.

Prerequisite: A E 475 , A E 476 or C E 432

AE 573: Construction Automation and Robotics

3 Credits

The goal of this course is to provide an understanding of the challenges confronting automation and robotics in the construction domain, and the current state of such technologies; an advanced understanding of automation and robotics, and the fundamentals needed to begin computer programming for construction automation and robotics. The student will gain hands-on experience in several aspects of construction automation and robotics, including but not limited to: application of wearable sensors for construction safety and health monitoring, use of immersive technology for training, and application of mobile robots for mapping and hazard detection at construction sites. This course is of value to both future construction industry professionals and researchers in the areas of construction safety, robotics, and training.

Recommended Preparations: Basic understanding of machine learning, programming and MATLAB

AE 575: Virtual Facility Prototyping

3 Credits

AE 575 is designed for students who wish to gain a more thorough understanding of the application of virtual facility prototypes in the construction industry. This course examines how building information modeling, advanced visualization, and virtual and augmented reality technology can be used to improve decision-making on construction projects. It builds upon a fundamental understanding of physical design and construction planning information in virtual models of building projects. Topics include virtual prototyping research and applications, design methodologies for interactive virtual prototypes, building design, construction, and operation visualization techniques, and virtual and augmented reality applications for the built environment.

AE 576: Building Information Modeling Execution Planning

3 Credits

AE 576 is designed for students who wish to gain a thorough understanding of research and application of Building Information Modeling (BIM) on Architecture/Engineering/Construction (AEC) projects and within AEC organizations. This course explores advanced topics related to the BIM Project Execution Planning Procedure, including research into advanced BIM and information management approaches. Students will learn how to design a BIM approach to maximize value to a project. Additionally, AE 576 examines the organizational strategy, execution and project procurement to leverage BIM implementation. Students will research planning approaches for organizations to develop their BIM strategy through assessing organizational maturity, aligning BIM vision and objectives to organization's mission and goals, and develop organizational roadmaps to integrate BIM within an organization. The course delves into planning detailed BIM implementation within the operations of an organization through establishing organizational goals and BIM objectives; identifying BIM uses; designing processes; and determining information, infrastructure, and personnel needs. Students should have a general understanding of the AEC industry as a prerequisite to taking this course.

Recommended Preparations: General understanding of the Architecture/Engineering/Construction (AEC) industry.

AE 579: Sustainable Building Project Leadership

3 Credits/Maximum of 999

Examines leadership skill sets, team competencies, and strategic methods for leading sustainable building construction projects and retrofits. AE 579 is focused on the cultivation of leadership competencies that enable the evolution of sustainable methods for design, construction, and operation of buildings. It is intended for students with backgrounds in design, construction, engineering, building operations, and facilities management. AE 579 focuses on the processes and analysis techniques required to lead sustainable projects. The course is intended to support the career advancement of building design and construction professionals, developers, operators, and energy managers. An emphasis is placed on the integrative processes required to design healthy and productive buildings and that promote regenerative effects on site, energy, materials, water, occupant health, and society. The goal of the course is to cultivate leadership and integration skills needed to spearhead the design, construction, commissioning, and operation of sustainable buildings. Course topics include the business case for high performance buildings; guiding metrics and frameworks, analysis tools; integrative team competency requirements, design and delivery methods, and recent research topics that have advanced the practices of high performance building delivery. The course is intended to build upon specialized programs of study in architectural engineering, architecture, and facilities management, and to provide students with an interdisciplinary and integrative perspective of building delivery.

AE 596: Individual Studies

1-9 Credits/Maximum of 9

CREATIVE PROJECTS, INCLUDING NONTHESIS RESEARCH, WHICH ARE SUPERVISED ON AN INDIVIDUAL BASIS AND WHICH FALL OUTSIDE THE SCOPE OF FORMAL COURSES.

AE 597: Special Topics

1-9 Credits/Maximum of 9

FORMAL COURSES GIVEN ON A TOPICAL OR SPECIAL INTEREST SUBJECT WHICH MAY BE OFFERED INFREQUENTLY; SEVERAL DIFFERENT TOPICS MAY BE TAUGHT IN ONE YEAR OR SEMESTER.

AE 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

AE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

AE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

AE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the professional at the Pennsylvania State University.

AE 603: Foreign Academic Experience

1-12 Credits/Maximum of 999

Foreign study and/or research constituting progress toward the degree at a foreign university.

AE 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

AE 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

AE 862: Distributed Energy Planning and Management

3 Credits

Theories and practices of distributed energy production and management in the context of regional and integrated energy grid structures.

AE 868: Commercial Solar Electric Systems

3 Credits

Theories and practices of solar electric systems including component selection, performance simulation, grid interconnection, codes, and design documentation.

AE 878: Solar Project Development and Finance

3 Credits

Economic analysis of solar energy projects, project development process, energy policies, finance methods, and economic analysis tools.

AE 882: MAE Capstone Design Project

3 Credits

This course serves as the capstone project course for the Integrated (IUG) Master of Architectural Engineering degree. Students conduct independent investigations into the design and analysis of building systems and/or construction processes for an actual building project, with an emphasis on systems integration, sustainability, and performance. Each student proposes the scope of work they will address on their building project, which must include topics from one or more of a student's MAE graduate-level courses and be approved by the course instructor. Students may also investigate topic areas that lie beyond those covered in formal coursework. Students perform research into engineered building system options and construction processes that meet established project criteria, conduct technical analyses, finalize their recommendations, prepare a written report on their work, and deliver a final project presentation. Meetings with the instructor/project adviser(s) are scheduled throughout the semester to review progress and provide feedback on the student's work. While most student projects

are conducted independently, students may also work as part of a multi-disciplinary team (consisting of students from different undergraduate option areas) where integration across subject areas is a major design consideration in addition to the focused work in the student's AE option area.

Prerequisite: AE 481W **Corequisite:** AE 483**AE 897: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Architecture (ARCH)

ARCH 501: Analysis of Architectural Precedents: Ancient Industrial Revolution

3 Credits

Analysis of architectural precedents from antiquity to the turn of the twentieth century through methodologies emphasizing research and critical inquiry. The 20th century Italian architectural historian and theorist Manfredo Tafuri argued that architecture was intrinsically forward-looking and utopian: "project" in both the sense of "a design project" and a leap into the future, like "projectile" or "projection." However, he also argued that architectural history, understood deeply and critically, is indispensable if that leap is to make the world a better place. For any new building to make a positive and meaningful contribution to the physical and human world, architects must not only know what they can build, but what has been built, and what architecture's positive and negative impact has been in the past. This course will introduce the history of architecture from antiquity to the turn of the 20th century through (1) ten selected buildings, one covered each week, and (2) a methodology emphasizing research and critical inquiry. Borrowing from the "problem-based learning" approach that is central to studio education, this class will present "question-driven history." Students will learn how to find, use, and critique architectural history resources by attempting to answer six fundamental questions for each of the studied buildings.

Concurrent: ARCH 531**ARCH 502: Analysis of Architectural Precedents: Modernism**

3 Credits

Analysis of architectural precedents of modernism from its multiple, disputed points of origin through the late twentieth century. What is "modern" architecture? What conditions gave rise to the various movements that have come to dominate design since the industrial revolution? What sort of design did these theoretical works and movements produce, and how did it contribute to architecture's development? An understanding of modernism and its legacy is crucial to a thorough understanding of the architectural culture of the 21st century. By examining buildings from early modernism to today, this course will introduce the theory of modern architecture from its multiple, disputed points of origin through the late twentieth century. Our operative term will be modernisms, in the plural. "Modernism" is a convenient and important label, but its suggestion of unity can camouflage the complexity of a phenomenon that spans decades, cultures, continents, and ideas.

Prerequisite: ARCH 501; Concurrent: ARCH 532

ARCH 503: Materials and Building Construction I

3 Credits

Examination of fundamental and advanced building materials, systems and construction technologies associated with their architectural use.

Concurrent: ARCH 531, A E 421

ARCH 504: Materials and Building Construction II

3 Credits

Continuing examination of fundamentals and advanced building materials, systems and construction technologies associated with their architectural use. ARCH 504 Materials and Building Construction II (3) This first-year graduate seminar course will continue to present students with information on fundamental and advanced building materials and systems and on construction technologies associated with their architectural use. Students will also consider the advancements in architectural materials and technologies. It is the second part of a two-semester sequence preceded by ARCH 503. Recurrent course themes include 1) architecture as a product of culture (wisdom, abilities, aspirations), 2) architecture as a product of place (materials, tools, topography, climate), the relationship between architectural appearance presented and the mode of construction employed, 3) materials and making as an expression of an idea and 4) the relationship of a building whole to a detail. This course is motivated by these concerns: a firm belief that architects must know and engage the age they are living in, so as to design and represent it with extreme appropriateness. The course explicitly addresses engagement with society/culture and its appropriate representation by asking students to form opinions about the architectural potential of contemporary and emerging technologies. Their opinions are informed by the presentation of architectural materials and associated construction methods as they evolved - contextualized by human history and by their application in the built environment. In this class students are seeing the material and technological means of making architecture continuously altered by shifting human cultural desires and artistic/scientific/industrial developments. They are simultaneously receiving instruction in their application and use. Through assignments, students also work directly with materials at full scale and learn to represent construction systems through the conventions of drawing and modeling.

Prerequisite: ARCH 503; Concurrent: ARCH 532, A E 422

ARCH 510: Contemporary Architecture and Planning Theories

3 Credits

Examination of core architectural and urban theories through a critical analysis of key concepts from antiquity to the present.

Prerequisite: ARCH 502; Concurrent: ARCH 533

ARCH 511: Theoretical Perspectives in Architecture

3 Credits

The impact of rationalism and romanticism on contemporary developments and theoretical postures in architectural design.

ARCH 512: Critical Theory in Architecture

6 Credits

Inquiry into paradigms of critical theory in architecture theory, practice, and teaching. Evaluation of central texts, methods, theories, and outcomes. ARCH 512 Critical Theory in Architecture (6) ARCH 512 is composed of six chronologically arranged units of study that examine the major developments in the evolution of discursive practices that ground architecture theory, teaching, and practice. Modern and post-Modern critical theories in architecture have borrowed from a number of tangent disciplines, such as Phenomenology, Positivism, Existentialism, Narratology, Structuralism, Deconstruction, Grounded Theory (social sciences), Cognitive-Behaviorism, Neo-Kantianism, Psychoanalysis, Reception Theory, etc. Historical methodology, Archaeology, Anthropology Art History, and other disciplines have also had their impact. As a result, critical theory in architecture typically lacks uniform methodologies and stable definitions. In recent years, many disciplines have undergone attempts to consolidate discourse around the influence of language and culture within the historical context of evolving world ideologies and their effect on communication, material culture, and the physical environment. Architecture has responded to this general trend in a number of ways that invite cross-disciplinary comparisons and methodological adaptations. The course will take advantage of featuring visiting scholars whose expertise in diverse areas of study will provide participants with direct contact with the widest possible range of theoretical perspectives. The strategy of the course will be a comparison and critical evaluation of what appear to be the most effective research methods within the pressing concerns of environment, population growth, material resource depletion, and international conflict. The aim will be to establish relevance as well as research competence and effective expression.

Prerequisite: admission into Ph.D. Program in Architecture or permission of instructor

ARCH 512A: Doctoral Research Theory

3 Credits

Inquiry into paradigms of theory in architecture and landscape architecture, as pertain to doctoral level research, practice, and teaching.

ARCH 512B: Doctoral Research Design

3 Credits

Research design and methods, sampling strategies, potential biases, confounding problems, and the limits of inference in architecture and landscape architecture research.

Prerequisite: ARCH 512A

ARCH 519: Research in Architecture and Urban Design

3 Credits

This course prepares M. Arch. students to conduct research leading to their design project by looking at foundational methods in the field. It also trains students to identify significant project topics and engage in individual critical research in order to build the intellectual and scholarly armature sustaining the future design that every student will undertake. The target is to raise critical awareness of the social, cultural, economic, and disciplinary complexities in the context of different spatial practices. The course will engage research in architecture in order to find opportunities to make significant claims contributing to the advancement

of the field. The course will explore different methodologies, whether based in the humanities or the sciences, in order to inform research paradigms in the discipline of architecture in academic institutions. In addition, the course will explore the specifics of formal speculation as a form of knowledge, as well as the relationship between the discipline and its formal, cultural, and economic past, present, and future.

Prerequisite: ARCH 534

ARCH 520: Methods of Inquiry in Architecture and Urban Design

3 Credits

Introduction to the methods of research and inquiry commonly used in architecture and urban design.

ARCH 521: Visual Communications I

2 Credits

Examination of two and three-dimensional graphic communication and modeling techniques for an advanced understanding of visual communication in architecture.

Concurrent: ARCH 531

ARCH 522: Visual Communications II

2 Credits

Continuing examination of two and three-dimensional graphic communication and modeling techniques for an advanced understanding of visual communications in architecture. ARCH 522 Visual Communications II (2) This course introduces students to a wide range of digital drawing, modeling and output techniques and concepts that are essential for architectural design in order to formulate knowledge and expertise, and investigate their potential in architectural design studio. While providing a theoretical standpoint of contemporary methodologies, knowledge gained in this course will allow students to work rigorously and precisely through conceptual exploration, design development and ultimately meaningful representation of their design intentions. Skills developed in ARCH 521 will provide the foundation for work performed in this course. The course will be conducted in the form of weekly lectures to cover theories and methods, and accompanying weekly working sessions, software and hardware demonstrations with individual instruction in the computer lab. Brief lab assignments will be assigned to ensure proliferation and adoption of course material. The coursework may be coordinated with design studio (ARCH 532) assignments providing the students with the opportunity to master their digital skills in a meaningful manner.

Prerequisite: ARCH 521; **Concurrent:** ARCH 532

ARCH 531: Architectural Design I

6 Credits

Studio studying the core methods of the discipline of architectural design and developing skills related to its expression and communication. This course prepares students to understand fundamental architectural elements and concepts, to develop a sensitivity and awareness required for valid interpretations, and to develop a reflective and critical design process with emphasis on one's individual ability to articulate ideas. The major means of accomplishing this is through the design of simple buildings and environments. The semester is divided into two halves: The first half of the semester focuses on fundamental and abstract principles

of architectural design, and the theory associated with design principles. It covers architectural fundamentals such as drawing and making models through a series of abstract exercises, and introduces the principles and methods used at various stages of design analysis and synthesis processes. The second half of the semester makes a transition from abstract principles to fundamental architectural design principles such as function, scale, and structure to concepts of space and form, as they pertain to small scale design projects. The assigned projects explore and develop conceptual strategies for fundamental formal and spatial design, emphasizing the role of ordering principles and of fundamental architectonic elements in the implementation of design intentions.

Prerequisite: ARCH 530; **Concurrent:** ARCH 503, ARCH 521 , A E 421

ARCH 532: Architecture Design II

6 Credits

Studio focusing on the design of small to medium scale architecture that addresses the complexity of a total work.

Prerequisite: ARCH 503 , ARCH 531 , A E 421; **Concurrent:** ARCH 504, ARCH 522 , A E 422

ARCH 533: Architectural Design III

6 Credits

Studio emphasizing the design of multi-functional buildings, and stress the creative synergy among building design, structure, site, and context.

Prerequisite: ARCH 504 , ARCH 532 , A E 422; **Concurrent:** ARCH 510, A E 211

ARCH 534: Architectural Design IV

6 Credits

Studio developing advanced designs for comprehensive buildings responding to human needs in terms of cultural meaning, context, and technical requirements.

ARCH 536: Design-Inquiry

1-12 Credits/Maximum of 12

Integration of research with the designing of architectural and urban settings.

Prerequisite: ARCH 520 and approval of advisor

ARCH 541: Topics in Theory

3 Credits

A series of presentations on the development of contemporary architectural theory.

Prerequisite: ARCH 511

ARCH 542: Topics in Community and Urban Design

3 Credits

Community and urban design as an area of design inquiry and interdisciplinary practice. ARCH 542 ARCH 542. Topics in Community and Urban Design (3)The intention of this course is to introduce students to the fundamental elements of community and urban design practice

within the fields of architecture, landscape architecture, and planning. An investigation into the diverse traditions of design practice- technical, esthetic, and theoretical – will highlight the role that design plays in the urban and community context and also serve as a powerful medium for analyzing the confluence of the social, economic, political, and ecological dimensions that give form to cities and communities. An objective of the course will be to develop a critical perspective in architectural design vis-a-vis the restructuring of urban and community space. Topics to be covered in the course include: history of the discipline, contemporary urban and community issues, methodologies and techniques in community action research and participatory design, and introduction to the case study method of analysis. It is expected that students will actively participate in class discussions, present a case study of a project related to the topics covered in the class, and submit a research paper on the selected case study. ARCH 542 will be offered as a 3-credit course on an annual basis during the spring semester. Students with graduate standing in architecture and landscape architecture will be given priority for enrollment. However, a limited number of other students may enroll pending consent of the instructor.

Prerequisite: graduate standing or consent of instructor

ARCH 543: Topics in Digital Design

3 Credits

Inquiry into digital design paradigms of architecture and related disciplines; exploration design principles and operations supported in digital/virtual design environments.

Prerequisite: graduate standing or consent of instructor

ARCH 550: Ethics in the Built Environment

3 Credits

Ethics In the Built Environment is an applied theory course that uses negotiation strategies to examine issues broadly relating to the creation and use of the built environment, including research practices and professional ethics. The course examines the role of power imbalances as underlying ethical questions, and discusses means of mediating the resulting ethical problems in a sustainable manner. Through readings, discussions, short exercises, and a term paper, students will gain a greater awareness of ethical issues raised through the production and use of the built environment, and will develop tools to assess ethical issues and identify appropriate resolutions. Topics covered in this course include: defining ethical concepts, tools for evaluating ethical issues in the built environment, understanding built power and the role of empowerment, the power of marketing, accuracy in historical research, urban design and planning and the right to the city, gender and the built environment, architectural practices, the ethics of green architecture, the ethics of design computing, as well as research on individual case studies.

ARCH 591: Architectural Research

2-12 Credits/Maximum of 12

Guided research project.

ARCH 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARCH 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

ARCH 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ARCH 601: Ph.D. Dissertation

0 Credits/Maximum of 999

Ph.D. Dissertation Full-Time

ARCH 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University

ARCH 603: Foreign Academic Experience

1-12 Credits/Maximum of 12

Foreign study and/or research constituting progress toward the degree at a foreign university.

ARCH 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

Art (ART)

ART 501: Art Research

2-6 Credits/Maximum of 6

Original study and practice in art relating to material, concept, or technique.

ART 505: Graduate Seminar

2 Credits/Maximum of 8

Seminar covering special topics at the graduate level, emphasizing interdisciplinary discourse including criticism and review of graduate work.

ART 511: Issues in Contemporary Art

1-3 Credits/Maximum of 6

A critical survey of issues in contemporary art.

ART 515: New Media Art I

1-7 Credits/Maximum of 14

Individual problems in new media arts practice leading to development of a body of work representative of the artist.

ART 516: New Media Art II

1-7 Credits/Maximum of 14

Individual problems in new media arts practice leading to development of a body of work representative of the artist.

Prerequisite: ART 515

ART 530: Sculpture I

1-7 Credits/Maximum of 14

Individual problems in sculpture leading to the development of a collection or body of work representative of the artist.

ART 531: Sculpture II

1-7 Credits/Maximum of 14

Individual problems in sculpture leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 530

ART 545: Printmaking I

1-7 Credits/Maximum of 14

Individual problems in printmaking leading to the development of a collection or body of work representative of the artist.

ART 546: Printmaking II

1-7 Credits/Maximum of 14

Individual problems in printmaking leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 545

ART 550: Painting I

1-7 Credits/Maximum of 14

Individual problems in painting leading to the development of a collection or body of work representative of the artist.

ART 551: Painting II

1-7 Credits/Maximum of 14

Individual problems in painting leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 550

ART 570: Graphic Design I

1-7 Credits/Maximum of 14

Individual projects in design with special emphasis on specialized topics of graphic design.

ART 571: Graphic Design II

1-7 Credits/Maximum of 14

Individual problems in design, with special emphasis on professional practice in the area of graphic design.

Prerequisite: ART 570

ART 580: Ceramics I

1-7 Credits/Maximum of 14

Individual problems in ceramics leading to the development of a collection or body of work representative of the artist.

ART 581: Ceramics II

1-7 Credits/Maximum of 14

Individual problems in ceramics leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 580

ART 592: Photography I

1-7 Credits/Maximum of 14

Individual problems in photography leading to the development of a body of specialized work representative of the artist.

Prerequisite: 12 credits of PHOTO405

ART 593: Photography II

1-7 Credits/Maximum of 14

Individual problems in photography leading to the resolution of a collection or body of work representative of the artist.

Prerequisite: ART 592

ART 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ART 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ART 602: Supervised Experience and College Teaching

1-3 Credits/Maximum of 6

Supervised and graded teaching experience.

Art Education (AED)

AED 502: Research in Art Education

3 Credits

Examination of past and present research in art education, an introduction to general methods of research, and critical evaluation of research in art education.

AED 505: Foundations of Art Education

3 Credits

An examination of classic theories in art education and their relevance to current developments.

AED 513: Summer Institute on Contemporary Art

3 Credits

A blended summer course with on-campus and online components and a focus on intersections among contemporary art, curriculum, and pedagogy. AED 513 Summer Institute on Contemporary Art (3) This course is a summer session offering with a focus on intersections between contemporary art and curriculum. A collaborative effort between the Palmer Museum of Art and the Art Education Program, the course employs an innovative instructional approach that combines an intensive one-week intensive on-campus experience followed by correspondence, discussion, and presentation of final student projects using an online course management system during the ensuing five weeks. The course is designed to appeal to practicing K-12 educators, art educators, art education graduate students, and interested students from other disciplines as a forum in which to strengthen their focus on interdisciplinary curriculum theory and design constructed from collaborative interpretations of contemporary works of art and visual culture. As a critically challenging learning experience, this course will prepare students to thrive in a global environment by providing principles of interpretation as the foundation for encounters with beliefs, issues, and practices informed by and evidenced in contemporary works of art and visual culture. Due to the interdisciplinary interpretations and curriculum projects that will result from meaningful engagement with contemporary works of art, the course will promote interdisciplinary teaching and program development. The innovative format: a one-week intensive experience followed by discussion and presentation of final projects supported by an online course management system; challenges conventional approaches to instruction and presentation of evidence of student learning, thereby responding to and requiring new ways to assess and improve student learning outcomes in and through contemporary visual art.

AED 522: Participatory Visual Inquiry in the Public Sphere

3 Credits

Theory and praxis seminar to consider contemporary practices of participatory inquiry and public action with an emphasis on visual methodologies. AED 522 Participatory Visual Inquiry in the Public Sphere (3) Students will analyze practices of participatory inquiry in response to social and cultural issues, situations, and challenges taken up by visual artists and interdisciplinary collectives who intend their work to construct new knowledge and positive change through collective action. Students will discuss and identify societal situations and propose possible responses as sites for participatory inquiry. A key focus of the

course is the exploration of theories and practices of collaborative inquiry in the public sphere with emphasis on visual methodologies. The course revolves around related and overlapping concepts such as participatory democracy, participatory culture, ideas to actions, collaborative inquiry, collaborative design, community-based research, public pedagogy, and action research. The course is intended to function as a discursive space to broaden perceptions about contemporary art and inquiry practices; informal and public pedagogies; the interdisciplinary roles of art and artists in society, community-based projects and inquiry; and ways collaborative artmaking and cultural production can function as forms of research. Course content focuses on community artworks, interdisciplinary creative projects, and other forms of cultural production created for and existing within the public sphere in response to specific issues, challenges, and conditions. Examples of such work include public murals, public performance interventions, environmental responses, community health and change interventions, and social media activism, among others.

AED 523: Transdisciplinary Creativity: Eco-social Justice Art

3 Credits

Transdisciplinary creativity develops new knowledge, metaphors, visualizations, and insights through performative renderings from dialogue, collaboration, exploration, and experimentation. Transdisciplinary creativity is the coming together of two or more disciplines in order to create something more than the individual or the community by recognizing, combining, and utilizing knowledges of all participants. Moreover, transdisciplinary creativity is a social process that develops sense-abilities. Sense-ability is the capacity to attend to the sensory and sensation, as a collective affective awareness of the environment. Students in the course will explore how different methodologies enhance understanding of complex issues such as sustainability, climate change, climate diaspora, environmental racism, and resource depletion. The national and international scope of environmental conversations is forging alliances across disciplines around urgent matters such as climate change. Rather than STEAM being used as an acronym for Science, Technology, Engineering, Arts, and Mathematics, STEAM is explored, in this course, in terms of collectives such as EcoArtTech, in which their work is eco-social justice action to create STEAM. Moreover, STEAM is considered as transdisciplinary creativity for eco-social justice. From a transdisciplinary view of STEAM, works of art are not an appendage or a singular discourse. STEAM is a transdisciplinary approach to environmental issues. STEAM as an action emphasizes ecology, transdisciplinary research, and creativity as a social process.

AED 524: Arts Education Policy and Advocacy

3 Credits

Critical examination of current and emerging arts education policies in the United States in relation to federal, state, and local education and cultural policies. AED 524 Arts Education Policy and Advocacy (3) Students who are going to become leaders in arts education should understand social and political forces that shape the landscape where they work. Although art educators were identifying policy needs and submitting resolutions with policy recommendations to national agencies during the interwar years, arts education policy gained importance during the 1960s with the founding of The National Endowments for the Humanities and Arts. Arts education "as opposed to art, dance, music, or theatre education" is a political construct forged in order to successfully advocate for inclusion of visual and performing arts in

National Educational Goals during the late twentieth century. In this course, students will explore what counts as policy for arts education and how policy discourse is framed; who constitutes stakeholders and policy makers; contexts where policy is advocated and created; and how advocates develop and communicate proposals for needed policies. Working in small groups, students will examine recent issues related to arts education policy, presenting those issues in class.

AED 525: Including Difference

3 Credits

Disability is normal. Ableness is temporary. However, social stigmas, misunderstandings, and notions of "normal" exclude students and adults with disabilities. How have artists with disabilities offered worldviews that decenter normal? To pursue decentering normal, students in the course explore the creative practice of contemporary artists labeled by society as disabled to understand how their viscerally empowered art can function pedagogically to decenter notions of normal. Decentering notions of normal begins with identifying and challenging social systems that-through visual, lingual, and technological cues-communicate which traits are considered normal and which are not. While the analysis of linguistic and visual representations is instructive for articulating identity construction and its relationship to power and privilege, these lines of inquiry within disability studies overlook the realities of embodied difference that are a part of many people who live with disabilities. Notions of a normalized body frame certain patterns of behavior, cognition, affect, and physicality from which bodies are measured as either within or outside of the frame of normalized learning spaces such as schools. The Feminist Disability Studies and Disability Justice readings in the course go beyond labeling difference and invest in articulating and understanding difference as interconnected relationships in which inclusion may be fostered.

AED 536: Curriculum Development in Art Education

3 Credits

Factors affecting art curriculum decisions, analysis, selection, organization, preparation of curriculum. Evaluation and sources of art curriculum improvement and innovation.

Prerequisite: 6 credits of methods

AED 541: Theories of Child Art

3 Credits

Study of current theories of child art; application of recent psychological and anthropological theories to understanding child art.

Prerequisite: A ED 486

AED 570: Artistic Creation and Theories of Knowing

3 Credits

A thematically organized course that makes connections between art-making and art as a way of knowing and inquiry.

AED 588: History of Art Education

3 Credits

Historical development of philosophies in art education in the United States and abroad.

AED 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

AED 594: Research Topics

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

AED 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

AED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

AED 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

AED 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

AED 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

AED 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Teaching of undergraduate art education classes under the supervision of two members of the graduate faculty.

Prerequisite: doctoral candidate status in Art Education and program head permission

AED 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

AED 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

AED 811: New Media and Pedagogy

3 Credits

Exploration of relationships between communication technologies and beliefs about the nature of knowledge and the nature of art. AED 811 New Media and Pedagogy (3) Due, in part, to contemporary processes of globalization and the development of digital technologies and the Web; new issues, possibilities, and opportunities regarding media communities and art pedagogy emerge in the field of art education. This is the focus of this course. Course participants have the opportunity to explore the aesthetic communicative and pedagogical implications of intertextual Webs, hypertext and hypermedia, blogs, wikis, simulations, the body interfaced in virtual reality, threaded dialogue, WebQuests, online games, media communities, adaptive and assistive technologies, and media-rich essays. Learning activities will be in the form of explorations and creation with the links and resources provided, and focused discussions about these explorations and how to teach this content at participants' teaching sites. Following 5 thematic explorations, course participants write a capstone essay to construct a speculative fiction of a teaching scenario based on the content of the course imagined in a future teaching site. The main priorities in Exploration 1 are to imagine possibilities of human-technology interfaces for creating and critiquing art. In Exploration 2, participants select a social networking tool from the course's resources to conduct a collaborative mini-project concerning self-representation online and power relational networks of social, physical, technological, and discursive inscriptions or conditions. Exploration 3, involves using the Internet as a primary medium for art creation and involves developing criteria to critique interactive Net art. The focus of Exploration 4 is free, downloadable authoring programs outside of a commercial economy, which enables the creation of interactive experiences without the need for specialized programming knowledge or database support. Exploration 5 involves participants creating a socially responsive visual culture WebQuest, which is an inquiry-oriented activity in which learners construct knowledge through interacting with, evaluating, and connecting diverse, and sometimes contradictory, resources on the Internet in order to form new insights that they share in a tangible form intended to make a difference in the world. This is one of the required courses for the M.P.S. in Art Education. There is no prescribed sequence and no prerequisites for art education courses in the M.P.S. program.

AED 812: Diversity, Visual Culture, and Pedagogy

3 Credits

Diversity issues in museum and K-12 art education contexts. AED 812 Diversity, Visual Culture, and Pedagogy (3) This course examines diversity, visual culture, and pedagogy in various settings: the artworld, popular media, and cultural settings such as schools and museums. Diversity pertains to gender, sexual identity, social class, ethnicity, ability, age, and other attributes that shape our identities. This course pays special attention to issues of power and privilege in relation to diversity and visual culture. It examines ways that various forms of visual culture, situated in various social contexts, teach us who we are, what is "normal" in our society, and how we might change oppressive social conditions that currently exist. As defined in the course, visual culture includes paintings, sculptures, prints, and other forms of fine art as well as advertisements, news images, scientific images, television programs, and films. It includes toys, comic books, children's art and more. Visual culture includes all manifestations of cultural life that are significant for their visual features. Pedagogy refers not only to formal methods of instruction, such as teaching and learning in classrooms. It also includes informal instruction through the arts, the media, popular forms

of entertainment, and other social practices. Pedagogy includes being positioned by, or addressed in certain ways by various forms of visual culture. It includes the ways we actively interpret, use, and recreate forms of visual culture in our lives. Objectives of the course include understanding diversity as defined in relation to various forms of visual culture; understanding the complex interactions of ethnicity, class, gender, sexual identity, and other aspects of diversity in visual culture; understanding issues of power and privilege in relation to visual culture; and understanding pedagogical issues related to visual culture, including forms of address and interpretation, as well as pedagogical practices such as teaching and learning in classrooms. By the end of the course, participants should be able to critically examine social constructions of race, class, gender, sexual identity, and other aspects of diversity in visual culture through both written and visual analyses. Participants should also be able to develop and implement units of instruction related to visual culture, and reflect on their own and others' teaching practices in schools and museums. This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

AED 813: Public Pedagogy

3 Credits

Inquiry into the public pedagogy of contemporary visual culture for relevancy to museum and K-12 art education contexts. AED 813 Public Pedagogy (3) This course prepares art teachers to become producers of a socially just world by becoming critical public art pedagogues who extend their teaching environment. As defined in the course, critical public pedagogy of art, as an educational and artistic practice, is a critical stance concerning socio-pervasive artifacts, processes, and interfaces that acculturate and assimilate values, beliefs, and sensitivities. Public pedagogy is the use of a public medium and/or space such as the Internet, films, television, magazines, shopping malls, and sports arenas to influence behaviors and beliefs. Public pedagogy enacts societal curricula that are easily consumed because of its ubiquitous nature. Awareness of consumption of public pedagogy is important because of its global reach. Educators need to be versed in how to facilitate investigations of public pedagogy and how to guide students to develop critical public pedagogical practices. From spheres of influence radiating from art to a multidirectional layered matrix of sensibility, this course explores contemporary art that addresses and enacts public pedagogy through (inter)actions of cultural interfaces such as humans, technologies, localities, and politics. Such artworks are performed networks of relations. Contemporary artists' praxis involving intertextuality, palimpsest, remix, code-switching, double-coding, subversion, and hypersignification is explored through video, installation, performance, and other contemporary art forms. Objectives of the course include understanding processes of consumption and production of public pedagogy, and understanding contemporary art practices. By the end of the course, participants should be able to develop and implement units of instruction related to contemporary art and public pedagogy, and reflect on their own and others' teaching practices in schools and museums. This is one of the required courses for the M.P.S. in Art Education. It is offered every other fall semester with a maximum enrollment of 15 students.

AED 814: Informal Learning

3 Credits

Pedagogy and contexts for learning in museums and other cultural institutions. AED 814 Informal Learning (3) The course introduces

participants to theories and practices of informal learning, and to the possible contexts including museums, schools and other cultural institutions in which informal, free choice learning may occur. These provide a framework for participants to use in preparing, implementing, and evaluating a learning project or other intervention in their own institutions or communities. The course includes a strategic and policy analysis of the contexts in which free choice learning projects may occur, a review of the social and economic significance of informal, free choice learning in an information age and global economy, an introduction and critical discussion of constructivist theories of informal learning, a review of specific pedagogical practices that may be effective in implementing informal learning for school-age students, adults, and senior citizens, an introduction to tools for evaluating the effectiveness of these practices, and the development, implementation and assessment of an informal learning project or intervention by each participant using other participants as consultants in the process. This is one of the required courses for the M.P.S. in Art Education. It is offered every other year with a maximum enrollment of 15 students.

AED 815: Action Research in Art Education

3 Credits

Develop a reflective process to improve strategies, practices, and knowledge of the environments within which art education is practiced. A ED 815 Action Research in Art Education (3) This course prepares M.P.S. in Art Education candidates to conduct action research in their teaching context as part of a community of practice by recognizing and sharing existing tacit knowledge about teaching and learning conceptualized in specific social and physical environments. Action research is a reflective and iterative inquiry process with the aim of improving strategies, practices, and knowledge of the environments within which one teaches. Course participants will learn how to conduct research that develops, leads to, implements, and assesses a genuinely well-informed social action in the midst of an emerging teaching and learning landscape. The course uses a blend of Web technology, print, and other media to maximize flexibility without sacrificing professor and student interaction. Communication tools, including bulletin boards and e-mail, are used to foster a collaborative environment, providing participants with the opportunity to learn from one another about the unique schools and cultural institutions each comes from and as well as their varied professional experiences. A ED 815 will be offered via World Campus as an online course will be offered every spring semester. Enrollment will be limited to 15 students.

Art History (ARTH)

ARTH 511: Seminar in Ancient Art

3-12 Credits

Selected topics from the history of Greek and Roman Art.

ARTH 512: Seminar in Medieval Art

3-12 Credits

Original research into problems dealing with the art of the Middle Ages.

ARTH 513: Seminar in Renaissance Art

3-12 Credits

Investigations in the area of Renaissance art, centering around major masters and monuments.

ARTH 514: Seminar in Baroque Art

3-12 Credits

Investigations in the area of baroque art, centering around major masters and monuments.

ARTH 515: Seminar in Modern Art

3-12 Credits

Lectures, readings, reports, and discussions in the field of modern art.

ARTH 551: Historiography of Art History

1-6 Credits

The relationship between the definition of, and approach to, art-historical problems from Vasari to the present.

ARTH 560: Methods of Research in Art History

3 Credits

Preparation of graduate students for professional careers in academia and museum work, involving creation of publishable articles and grant writing. In the academic world, and particularly in the humanities, the publication of articles and books is understood to be a marker of success and, along with teaching skills, the basis on which appointments are made and tenure granted. Essential to this body of production is the execution and placement of one's research undertakings, skills that the "Methods Seminar" is designed to hone. No less valued by those who make appointments and offer promotion are the grants and fellowships that a candidate has won. Indeed, since research in art history involves travel to and residence at museum, library and archive sites- whether these be in North America or abroad-financial support is a necessity for most aspiring professionals and is regarded as evidence of external validation of their investigations. Training in "grant writing" is also covered in the seminar. Even before field work is undertaken, the investigator must be aware of the "state of research," work normally undertaken at one's own university library. In this domain there are better and worse ways of taking notes. The seminar discusses these methods and goes beyond them to consider the optimum means by which such records are organized and assembled prior to the delivery of papers and the production of articles. The nature of an oral presentation and a publishable paper are distinct activities and this difference needs to be learned. The more complex skills involved in the writing of articles, the securing of photographs and concomitant permissions, and the choice of the journal to which the "finished" piece should be submitted are dealt with at even greater length.

ARTH 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ARTH 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

ARTH 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ARTH 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ARTH 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience for teaching assistants in art history.

ARTH 603: Foreign Academic Experience

1-12 Credits/Maximum of 12

Foreign study and/or research approved by the graduate program for students enrolled in a foreign university constituting progress toward the degree.

Artificial Intelligence (A-I)

A-I 570: Deep Learning

3 Credits

Deep Learning has become a prevalent area and accomplished near-human level in image classification, speech recognition, and autonomous driving. This course will cover the foundations on Neural Networks and Deep Learning Networks and give students a practical understanding of the field of Deep Learning. It covers the core concepts of Deep Neural Networks, including the Convolutional Neural Networks for image recognition, Recurrent Neural Networks for sequence generation, and Generative Adversarial Networks for image generation, and more!

Prerequisite: STAT 500 Recommended Prep: Requires basic math-college calculus & linear algebra. Should be able to take multivariable derivatives & understand matrices, vectors operations & notations. Preliminary programming skills in Python are required.

A-I 572: Reinforcement Learning

3 Credits

Reinforcement learning, along with supervised learning and unsupervised learning, is one of the three basic types of machine learning. Applications of reinforcement learning span across medical intervention, robotics, game playing, autonomous driving, financial trading, and marketing, among many others. This course will cover the main theory and approaches of reinforcement learning, along with deep learning and common software libraries and packages.

Recommended Preparation: STAT 500 or equivalent: probabilities, gaussian distributions, mean, standard deviation, etc. Able to take

multivariable derivatives and understand matrices and vectors operations and notations. Preliminary skills in Python.

A-I 574: Natural Language Processing

3 Credits

Natural Language Processing (NLP) is a subfield of Artificial Intelligence. This course covers basic as well as advanced concepts to gain a detailed understanding of NLP tasks such as language modeling, text to speech generation, natural language understanding, and natural language generation. Students will learn the necessary skills to design a range of applications, including sentiment analysis, translating between languages, and answering questions. Throughout the course, the practical implementation of these applications with deep neural networks is also discussed.

A-I 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis, and which fall outside the scope of formal courses.

A-I 801: Foundation of Artificial Intelligence

3 Credits

Artificial Intelligence (AI) is the discipline that attempts to build and understand intelligent entities. Computers with human level intelligence would have a huge impact as intelligent systems with natural language processing, robotics, building networked assistants, speech recognition, and autonomous driving. This course will teach the foundations of AI and give students a practical understanding of the field. This course gives an overview of the core concepts of AI, including the intelligent agents, knowledge and reasoning, reinforcement learning, planning and acting, belief networks, computational learning, Markov decision process, and more!

A-I 804: Ethics of Artificial Intelligence

3 Credits

Artificial Intelligence (AI) is the use of machines to do tasks that seem to require human intelligence and cognitive skills (thinking, natural language, inference, decision making etc.) The Ethics of Artificial Intelligence is the young branch of applied ethics that seeks to study the far-reaching and diverse ethical issues that arise with the widespread and rapid integration of AI technologies into various aspects of our lives. The challenge is that we are in an uncharted ethical territory with regard to AI: we need to radically adjust our existing ethical paradigms or introduce new ones as we experience and acquire a better grasp of the problems involved in AI-human interaction. A large portion of these issues reflect our concerns about the harm that the use and misuse of AI might cause for humanity. Such issues range from threats to individual privacy and freedom to wider social implications regarding economic justice and race and gender equality. However, as AI systems develop and attain higher levels of intelligence, questions about their moral status become more pressing. If these systems are capable of moral agency, then not only do they have responsibilities towards other moral agents like us, but they also have rights that we should respect in our conduct towards them. This course offers an overview of the nature and extent of the ethical issues arising from AI-human interaction as well as the philosophical background (particularly, in ethics and philosophy of mind) required to

develop an informed methodology in approaching these issues, with the help of the flourishing literature on the subject.

Cross-listed with: PHIL 804

A-I 879: Machine Vision

3 Credits

This course will focus on the design of computer-based, machine vision systems using appropriate algorithms and best practices. Students will study various techniques for image representation and structuring, feature extraction and segmentation, information extraction, filtering and analysis.

A-I 894: Capstone Experience

3 Credits

The capstone course in the MPS in Artificial Intelligence program. A practical experience in which students, working in teams, employ contemporary methods, process, and tools in the design and implementation of an AI-enabled system including problem identification, methodology selection, data identification and gathering, implementation, training, and deployment. As the culminating experience in the AI program, students demonstrate their ability to design and implement a full AI-enabled systems using a real-world dataset applying the tools and techniques explored throughout their preceding studies.

A-I 897: Special Topics

1-3 Credits/Maximum of 3

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Asian Studies (ASIA)

ASIA 501: Proseminar in Asian Studies I

1-3 Credits

A seminar for graduate students in the Asian Studies dual-degree PhD programs.

ASIA 502: Proseminar in Asian Studies II

1-3 Credits

Introduction to theories, methods, and disciplines of Asian Studies.

ASIA 530: East Asian Philosophy and Culture

3 Credits

This course provides students with a comprehensive overview of key philosophical issues in the East Asian traditions. It aims to familiarize students with the most prominent critical debates and philosophical concerns, as well as the latest state of the field. Students will read philosophical texts alongside the critical literature in order to deepen knowledge of and evaluate philosophical discourse in East Asia from ancient times to the present. The course exposes students to the general philosophical canon as well as a range of current philosophical scholarship on how East Asian philosophy is being pursued today. Critical analyses and philosophical texts are chosen so as to illuminate each other and highlight key areas concerning ethics, metaphysics and cosmology, political philosophy, and culture. At the end of the course,

students will have gained a sound grasp of East Asian philosophy and its historical dimensions, and they will have developed a critical understanding of the current challenges and directions in the field. No prior knowledge of Classical Chinese is required, as all texts will be read in translation.

Cross-listed with: PHIL 530

ASIA 531: History of the Book in East Asia

3 Credits

This course provides a thorough grounding in the state of the field of book history in China, Korea, Japan, and Vietnam. It will begin with an overview of book history in general and East Asian book history's place within the larger field, followed by an overview of the history of reading and reading practices. Subsequent topics include technologies of book production, from oracle bones to xylography; the social and economic impact of printing; reading practices; the spread of knowledge and techniques across East Asia; and changes to the archive occasioned by born digital materials. Students will read secondary materials in English and use the library's special collections to examine material objects. Students will come away with sufficient knowledge to teach courses in the history of the book or conduct original research. It will be useful to students interested in alternative career paths, such as librarian or curatorial work. Knowledge of an Asian language is not required.

ASIA 532: Critical Studies in Global Korean Literature and Culture

3-6 Credits

This course provides students and overview of key texts and trends in modern Korean literature and culture from a global perspective. It examines the most prominent literary and visual works that articulate the intricacy of modern Korean culture at the intersections of major historical, ideological, and environmental forces and issues in the twentieth century such as colonialism, cultural imperialism, Cold War politics, democratic movement, feminist movement, environmental injustice, etc. Students will also read texts on modern Korean history as well as literary and cultural criticism and theories to improve their analytical ability that will be demonstrated in their writings.

Recommended Preparation: Students are expected to read in the original when they are capable. However, in anticipation of a broad array of language abilities in the classroom, materials will also be made available in English translation.

Cross-listed with: CMLIT 532

ASIA 577: Critical Perspectives on Modern Chinese Literature

3 Credits

This course provides students with an overview of the core texts and main critical paradigms of modern Chinese literary studies. This course provides students with a comprehensive overview of the main critical approaches to modern Chinese literature, by placing these paradigms into historical perspective and linking them with key texts that illuminate the authors' arguments and demonstrate exemplary readings that have proven influential in the field, past and present. The particular focus of the course may vary according to the instructor (e.g. themes, genres, regions etc.), but the course will generally cover critical interventions and debates, helping students to understand the emergence of the field in its present form; they will also scrutinize major trends that are providing new directions for the study of modern Chinese literature. In addition to the critical literature, students will read a range of key literary texts, from

the late Qing to the twenty-first century, that provide insights into the forces (aesthetic and intellectual, as well as social and historical) that have shaped the canon of modern Chinese literature. Critical analyses and literary texts are chosen in a way so as to illuminate each other. At the end of the class, students will have gained a sound grasp of the field and its literary and historical dimensions, and develop a critical understanding of the current challenges and directions of the study of modern Chinese literature. Cross Listings: CMLIT 577 will be added as a cross-listed course.

Cross-listed with: CMLIT 577

ASIA 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ASIA 597A: Digital Humanities

3 Credits

This seminar will function as a workshop and laboratory for sampling, exploring, and experimenting with a variety of computer-based technologies that are currently being applied to (typically) large corpuses for the purposes of algorithmic criticism. Our focus will be hands-on experimentation with software for network analysis (gephi); stylistics (R); topic modeling (mallet), and mapping, with attention paid to foundational ideas of information theory, visualization, spatial humanities, etc. Exploration of further topics and methods according to student interests, preparation, and usefulness for specific research agendas.

Cross-Listed

Astrobiology (ABIOL)

ABIOL 570: Astrobiology Field Experience

2 Credits

Geological field excursions to sites where the early evolution of life and the environment is revealed and to modern analogues. ABIOL 570 Astrobiology Field Experience (2) Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space. This course is intended to expose students to a variety of rock units (paleosols, sedimentary rocks, glacier deposits, ore deposits, and igneous rocks) formed under a variety of environments during the period between 3 billion years and 400 million years ago in order to give them some ideas about the environments of the early Earth. Students will also be exposed to a variety of geochemical, paleontological, and geological methods to investigate these ancient rocks in order to obtain information about the biological and chemical environments of the early Earth. The field excursion will be held for about two weeks during the Summer semester. It will be preceded by a short series of seminar-style meetings late in Spring semester to discuss the objectives of the excursion and to outline the major features of the field sites to be examined. Possible sites for the excursion will be selected from the Precambrian rocks in Ontario - Quebec, Canada, Michigan,

Minnesota, Wisconsin, New York, Virginia, West Virginia, and Maryland and modern microbial ecosystems in the Bahamas and Green Lake (NY). One to three days will be spent at each of the major sites. This is a required course for all students in Dual Title Degree Program in Astrobiology, but is open to any graduate student. This will also be a suitable course for undergraduate students, seniors preferred, with the permission of the instructor. There is no prerequisite. Grading will be based on a term paper submitted within one month after the excursion. The term paper will be based on literature review and field observations on a topic selected by each student.

ABIOL 574: Planetary Habitability

3 Credits

Aspects of star and planet formation, habitable zones, biospheric evolution, life in extreme environments, planet and life detection. ABIOL 574 Planetary Habitability (3) This course introduces graduate students to the foundations of the field of Astrobiology. Astrobiology is a new, multidisciplinary field of science encompassing astronomy, biology, microbiology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of habitable planets, origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space. Students will expand their knowledge base beyond their discipline while considering such issues as the origins of stars and planets, environmental conditions of the prebiotic Earth, the origin of life on Earth, the nature of the universal "tree of life", the establishment of evolutionary patterns and rates, the causes of global glaciations and their use as analogues for life on planets or moons such as Europa, how life survives in extreme environments on Earth, what determines planetary habitability, how planets in other solar systems are detected, and how we might detect life on other planets. This is a required course for all students in Dual-Title Degree Program in Astrobiology, but is open to any qualified undergraduate or graduate student. There is no specific prerequisite. Grading will be based on participation and performance on a midterm and final examination, problem sets, and laboratory exercises.

ABIOL 576: The Search for Extraterrestrial Intelligence

3 Credits

This course offers a broad exploration of the Search for Extraterrestrial Intelligence (SETI) as a subfield of astrobiology. It includes a survey of background astronomy and radio engineering concepts necessary to read and analyze the professional literature on the topic, including foundational works and the state-of-the-art. It takes a broad view of SETI, including communication SETI (i.e. radio and optical searches), artifact SETI (search for non-communicative evidence of engineering), and a critical analysis of the assumptions and potential biases inherent in past and current SETI efforts. It also includes discussion of SETI's place in the popular, political, and scientific landscapes.

RECOMMENDED PREPARATION: Undergraduate degree in an astrobiology discipline, such as physics, astronomy, biology, or geology (and their subdisciplines), including familiarity with research methods. Because little field-specific knowledge is presumed of s
Cross-listed with: ASTRO 576

ABIOL 590: Astrobiology Seminar

3 Credits/Maximum of 6

Astrobiology is a multidisciplinary field of science encompassing astronomy, biology, biochemistry, genomics, chemistry, atmospheric chemistry, geochemistry, paleontology, geology, and many other fields of science and technology. Astrobiology includes the study of the origin of life, the connections between the evolution of life and of environments, the potential for life and life's actual distribution in our solar system and beyond, and future of life on Earth and in space. The main focus of lectures, discussions, and projects will be on new and important research developments within the interdisciplinary field of Astrobiology. Additionally, classic literature relevant to each topic will be covered to provide students with important context and principles.

ABIOL 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Astronomy and Astrophysics (ASTRO)

ASTRO 501: Fundamental Astronomy

3 Credits

Concepts, tools and techniques, and essential background in stellar, Galactic, extragalactic astronomy and cosmology.

ASTRO 502: Fundamental Astrophysics

3 Credits

Fundamental tools and results of modern astrophysical theory. Gravitation; gas dynamics; radiation processes; radiative transfer; atomic structure and transitions.

ASTRO 504: Extragalactic Astronomy

3 Credits

Properties and evolution of galaxies including their stellar, interstellar, black hole and Dark Matter components.

Prerequisite: ASTRO501 , ASTRO502**ASTRO 513: Observational Techniques in Astronomy**

3 Credits

Theoretical and practical aspects of modern multiwavelength observational astrophysics including detector physics, imaging techniques, spectroscopic techniques, and data analysis principles.

Prerequisite: ASTRO501 , ASTRO502**ASTRO 515: Astrostatistics**

3 Credits

Modern astronomical research – the study of planets, stars, galaxies and the Universe – and the linking of observational data to astrophysical theory encounter a wide array of challenges falling under the rubric

of statistical inference. Cosmology, for example, addresses spatial clustering of galaxies, nonlinear regression of Big Bang astrophysical models, supervised regression of galaxy photometric redshifts, multiple hypothesis tests for faint source detection in images, multivariate classification, and time series analysis of billion-object multi-epoch surveys. Big Data arising from large-scale astronomical surveys and Bayesian modeling of astrophysical models are propelling astrostatistics into greater importance than in the past. Yet the curriculum for young astronomers typically includes no courses in statistical methodology. This course is designed to fill this gap. The course progresses through three stages. First, basic principles in statistical inference are presented and discussed including elements of probability theory, point and interval estimation, and probability distributions. The techniques of least squares, maximum likelihood, and Bayesian inference are outlined here and exercised later in the course. Second, central fields of applied statistics are investigated including nonparametric statistics and density estimation, regression (including nonlinear models from astrophysical theory), and multivariate analysis (including unsupervised clustering and supervised classification). Specific statistical methods are linked to specific astronomical problems at each step. Third, the instructor and students choose topics for study, such as time series analysis, spatial point processes, censoring and truncation, Bayesian computation, and scientific visualization. Common characteristics of astronomical data that are not treated in standard statistical presentations are discussed in detail, including heteroscedastic measurement errors, irregularly-spaced time series, and nonlinear astrophysical models. A crucial element of the course is practical training in the implementation of these statistical methods using sophisticated public-domain software environments. Software tutorials in class and text help educate the student to a level where data and science analysis can proceed at a mature level.

ASTRO 527: Computational Physics and Astrophysics

3 Credits

This course provides an advanced overview of applications of numerical methods and computer programming to physics and astrophysics. Numerical calculations provide a powerful tool for understanding physical phenomena, complementing laboratory experiment and analytical mathematics. The main objectives of the course are: to survey the computational methods used for modeling physical and astrophysical systems; to apply the computational methods to solve real world problems in physics and astrophysics; to assess the reliability of numerical results using convergence tests and error estimates; and to use scientific visualization as a tool for computer programming development and for physical understanding of numerical results. Strong programming skill in any of the common programming languages such as C, C++, or Python, is highly recommended.

Recommended Preparations: Strong programming skills are highly recommended.

Cross-listed with: PHYS 527

ASTRO 528: High-Performance Scientific Computing for Astrophysics

3 Credits/Maximum of 999

Training in software development for performing astrophysical simulations and analyzing astronomical data, including attention to reproducibility, parallelization, and computing architectures.

CONCURRENT COURSE: ASTRO 501

ASTRO 530: Stellar Atmospheres

3 Credits

The structure, physics and observational manifestations of atmospheres of stars.

Prerequisite: ASTRO501 , ASTRO502

ASTRO 534: Stellar Structure and Evolution

3 Credits

Physics of stellar interiors, stellar structure, and evolutionary changes of stars from pre-main sequence through final states.

Prerequisite: ASTRO501 , ASTRO502

ASTRO 542: Interstellar Medium and Star Formation

3 Credits

Theory and observation of the interstellar medium of our Galaxy and the process of star and planet formation.

ASTRO 545: Cosmology

3 Credits

Modern cosmology of the early universe, including inflation, the cosmic microwave background, nucleosynthesis, dark matter and energy. ASTRO (PHYS) 545 Cosmology (3)Cosmology is the scientific study of the universe as a whole: its physical contents, principal physical processes, and evolution through time. Modern cosmology, which began in the early 20th century, is undergoing a renaissance as a precision science as powerful ground- and space-based telescopes allow us to observe the formation of the first stars, galaxies and galaxy clusters; the echoes of the inflationary epoch as they are impressed upon the cosmic microwave background; and evidence for and clues to the nature of the mysterious dark energy, which is driving the accelerating expansion of the universe. This course will introduce students to the key observations and the theoretical framework through which we understand the physical cosmology of the early universe.

Cross-listed with: PHYS 545

ASTRO 550: High Energy Astrophysics

3 Credits

Theory and observations of X-rays, gamma-rays and other high energy radiation from Galactic and extragalactic sources.

ASTRO 570: Particle Astrophysics

3 Credits

Particle astrophysics is a discipline at the interface between physics and astronomy, which has undergone tremendous growth in the 21st century, with the commissioning and exciting results from very large facilities detecting the highest energy cosmic rays, neutrinos, gravitational waves, and gamma-rays. There is a rapid and ongoing expansion of the understanding of these radiations, their physics and their sources, which include supernovae, gamma-ray bursts, and active galactic nuclei, and there are major new facilities aimed at characterizing particle properties of dark matter and its cosmological effects. Students will be given an overview of the basics of particle astrophysics and to the latest data and

its interpretation, stressing issues currently discussed by the community, with particular attention on major projects in which Penn State faculty are involved. The course is designed for graduate students in physics and astronomy and astrophysics, being also appropriate for students in nuclear engineering or related disciplines.

Prerequisites: ASTRO 502; PHYS 400; PHYS 406 PHYS 557

Cross-listed with: PHYS 570

Cross-listed with: ABIOL 576

ASTRO 577: Exoplanets

3 Credits

Recommended Preparations: Some assignments will require programming in the student's programming language of choice. Since the early 1990s, thousands of exoplanets have been discovered orbiting other stars beyond our solar system. The properties of these planets have challenged our understanding of how planetary systems form and evolve. This course will cover theories of exoplanets' formation and evolution, the discovery and characterization of exoplanets via exoplanet signals, and the physical properties of exoplanets, including prospects for habitability.

ASTRO 585: Topics in Astronomy and Astrophysics

3 Credits

Advanced study of issues in planetary, stellar, galactic, extragalactic and theoretical astronomy and astrophysics. ASTRO 585 Topics in Astronomy and Astrophysics (3)This 3-credit topics course will be offered as part of the regular sequence of graduate offerings, and can be used to fulfill the graduate degree course requirements on an equal basis with ASTRO 501-580 3 credit courses. The purpose here is to provide a flexible environment for full courses on subjects that are not covered in the courses with fixed curricular content and are important to Penn State faculty, research Centers, and students.

Prerequisite: ASTRO501 , ASTRO502

ASTRO 588: Seminar in Astronomical Research Development and Responsible Conduct

1 Credits

The course includes a variety of topics related to ethics and professional development in Astronomy and Astrophysics. The course builds from

the mandatory training students receive from Scholarship and Research Integrity. The content is geared toward providing students with "survival skills" that are not encountered in the typical course curriculum. Topics include research paper writing, proposal writing, postdoctoral job applications, career options in research/education and outreach/observatory support/data science/policy, professional networking, effective dissemination of research, funding landscape in the profession, etc.

ASTRO 589: Seminar in Current Astronomical Research

1 Credits

Contemporary issues in instrumental, observational and theoretical astronomy and astrophysics. ASTRO 589 Seminar in Current Astronomical Research (1) This seminar will be offered as part of the regular sequence of graduate offerings, and is also used to fulfill the graduate degree course requirements for 1-credit seminars. Their purpose is to treat focused issues of current research interest. Examples are: Physics of Gamma-ray Bursts, Design of Precision Spectrographs, Quasar Surveys, Protoplanetary Disks. This course is taught by Department faculty, researchers and visitors.

Prerequisite: ASTRO501 , ASTRO502

ASTRO 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ASTRO 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ASTRO 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject which may be topical or of special interest.

ASTRO 801: Planets, Stars, Galaxies, and the Universe

3 Credits

Overview of the structure, formation, and evolution of planets, stars, galaxies, and the universe. Topic: Observations by modern ground-based and space-based observatories have fueled significant changes in our understanding of the Universe. The Solar System contains only 8 planets but has many thousands of Kuiper Belt Objects, including Pluto. Large area sky surveys have taken inventory of the stars in the Milky Way Galaxy and galaxies in the Universe and determined that only 4% of the mass of the universe is found in luminous objects. Besides the mysterious "dark matter," we now know that the energy budget of the universe is dominated by "dark energy," which is causing the expansion of the Universe to accelerate. ASTRO 801: Planets, Stars, Galaxies, and the Universe will provide science educators with a strong foundation in astronomy, allowing them to critically evaluate the evidence for the most recent advances in our understanding of the Solar System, our Galaxy, and the Universe. Astronomers use observations of the light from distant sources to discover the nature of these objects and their environment. ASTRO 801 will lead students to an understanding of light and the instruments for its detection. They will see how careful analysis of these observational data and theoretical models are used to solve the mysteries of the Universe. ASTRO 801 will combine digital video, audio, simulation models, and the wealth of astronomical imagery from NASA's Hubble, Chandra, and Spitzer Great Observatories. Students will use highly detailed planetarium software and simulated observing experiences to directly explore the night sky to make the same observations that research astronomers perform in their work. ASTRO 801 students will be granted licenses to use the courseware developed for this course in their own secondary classrooms.

ASTRO 897A: ****SPECIAL TOPICS****

2 Credits

ASTRO 897B: ****SPECIAL TOPICS****

2 Credits

Athletic Training (ATHTR)

ATHTR 500: Theory and Application of Evidence-Based Practice

3 Credits

This course provides a foundational overview of evidence-based practice (EBP) in the health sciences, which includes an overview of the seven steps of the EBP process. Conceptual models that demystify the process of translating research into clinical practice will be presented; furthermore, common misconceptions of EBP will be explored. Students will be exposed to organizational cultures that foster a spirit of inquiry, and contemporary attitudes to identifying sources of evidence to be considered in answering a focused clinical (or researchable) question.

An emphasis will be placed on developing core competencies in the gathering, and scrutiny of information to draw conclusions that are based on robust, inclusive, and meaningful evidence. Additional focus will consist of cultivating skill with implementing EBP in a manner that best fits the context of care/intervention, aligns with targeted goals, addresses priority problems as well as guides a systematic, and evaluative approach to collaborative practice change. Determinants of an EBP environment, and factors that lend to its sustainability or demise will also be discussed. Leveraging population health initiatives as a mechanism to move from silos to synergy will be highlighted given evidence to suggest an interdisciplinary paradigm to problem-solving yields improved health care processes, and patient/client-centered outcomes.

Concurrents: ATHTR 804 and ATHTR 805 and PHS 809
Cross-listed with: KINES 500

ATHTR 501: Science and Ethics of Human Performance Optimization

3 Credits

This course provides an overview of various biobehavioral factors that underpin the enhancement of human capabilities, including, but not limited to, kinesthesia, physical fitness, and motor coordination in diverse physically active populations. Using the clinician-scientist model, students are exposed to content that augments their skills in the discovery, appraisal, and dissemination of knowledge to benefit the species. Learning activities are structured to promote theory-practice nexus in the health sciences, and the advantages for doing so will be outlined. Gaining novice to advanced beginner competence with tests and measures employed in contemporary human performance science is emphasized. This will include becoming familiar with an array of related technological apparatuses, their utility, and viability in research, and practice settings. The intersections of human performance science, ethics, and regulation are also stressed to guide conscientious and legal practice. Competency in these domains facilitates appropriate application of contemporary theory and scientific findings in patient/client management to yield efficacious performance restoration and optimization of variables such as, but not limited to, postural control, rate of force development, and aerobic endurance. A key takeaway from this course will be the importance of integrating theory, research, and experiential practice to stimulate transformative and innovative environments.

Prerequisites: ATHTR 500 Concurrent: ATHTR 813, ATHTR 814

ATHTR 800: Foundations of Clinical Practice

4 Credits

This course provides a dedicated overview of athletic training using the most current Board of Certification Practice Analysis and Standards of Professional Practice as a framework for learning. Students will be exposed to regulatory determinants that govern athletic training as well as the cultural, ethical, psychosocial, and economical considerations that shape competent and compassionate health care. Factors related to maintaining contemporary expertise, meaningful professional development, and career advancement are also discussed. Emphasis is placed on fostering skill in information fluency/literacy to identify and appropriately use resources to guide safety and efficacy of services rendered. Content is structured to expand the student's knowledge base in health promotion and injury/illness prevention strategies as well as

sharpen skills linked to basic evaluation and diagnosis, therapeutic interventions, and restoring or optimizing human performance.

Concurrent: ATHTR 801

ATHTR 801: Principles of Acute Care and Emergency Response

4 Credits

This course provides an opportunity for students to become proficient in the knowledge and skills related to contemporary prehospital emergency medical care provided by athletic trainers. Students will develop skills to evaluate, manage, and make referral decisions for a spectrum of injuries and conditions in patients across a lifespan as part of a comprehensive medical system. Students will develop critical thinking and clinical decision-making techniques in provision of patient care.

Concurrents: ATHTR 800

ATHTR 802: Anatomical Basis of Musculoskeletal Injury

4 Credits

This course uses a regional approach to study the gross anatomical structures of the human body. Emphasis is placed on the musculoskeletal system and its associated neurovascular elements. Synovial joint structure and supporting soft tissue systems will be covered in detail. The thoracic, abdominal, and pelvic cavities will also be explored. Aspects of structure and function as they relate to physical training performance and clinical correlates will be highlighted throughout the course. Experiences with dissection of human cadaveric specimens highlight spatial associations among structures and anatomical variation.

Concurrents: ATHTR 803

ATHTR 803: Fundamentals of Musculoskeletal Evaluation

4 Credits

This will be the first in a series of evaluation-based courses for the Master of Athletic Training degree program, and will cover key concepts of the evaluative process. Material covered in this course will be reinforced in more detail throughout the curricular progression. Content will focus on the World Health Organization's International Classification of Functioning, Disability, and Health (ICF) as a basis for delivery, and communication of patient care. This will be the framework for integrating evaluation findings, and developing a plan of care including referral to the appropriate provider when indicated. This course will establish ethical standards of the profession that are congruent with clinical practice, which will be consistent throughout the curriculum. While the course will center on developing foundational musculoskeletal evaluation techniques, emphasis will also be placed on the management of patients with acute conditions that are life threatening or otherwise emergent. Students will learn to perform an evaluation that formulates a diagnosis, and plan of care for patients with health conditions commonly seen in athletic training practice. This evaluation includes the following: obtaining a medical history from the patient or other individual; identifying comorbidities and patients with complex medical conditions; selecting an appropriate outcomes measurement tool; observing function (including gait, posture and tissue appearance); performing strength and range of motion testing for the upper and lower quarters and the spine, and being able to select appropriate tests for individual scenarios; determining end-feel, and somatic responses associated with special tests that selectively examine the integrity of capsuloligamentous, and

musculotendinous structures; performing a neurologic screening exam including dermatomes, myotomes, deep tendon reflexes and cranial nerve testing; understanding contemporary pain theory and how to assess pain in a patient scenario; analyzing functional tasks specific to the individual, sport/activity and body part or injury. This course will also include an overview of the tissue healing cascade following injury as well as inflammatory response, swelling and dysfunction in the context of the ICF model.

ATHTR 804: Evaluation and Treatment of the Lower Extremities

4 Credits

This course will focus on the etiology, evaluation and rehabilitation of injuries to the lower extremities typically encountered by physically active individuals. Injuries to the lower extremities from the hip to the foot will be covered. Evaluation techniques along with manual therapy and exercise interventions will be explored. Appropriate use of devices, braces and taping as they apply to rehabilitation will be discussed. Both isolated and integrated function of lower extremity joints and related tissues will be emphasized.

Prerequisites: ATHTR 800 and ATHTR 801 and ATHTR 802 and ATHTR 803
Concurrents: ATHTR 500, and PHS 809, and ATHTR 805

ATHTR 805: Experiential Learning I

2 Credits

This represents the initial opportunity for athletic training students to engage in the application of theory and foundational athletic training, knowledge, and skills through hands-on patient/client care experiences for 10-to-15 hours per week (150-to-225 total hours for the semester). This clinical experience increases student awareness for the role of the athletic trainer as an allied health care professional. Students become familiar with the daily operating procedures of an athletic training facility while being exposed to the culture of the profession. Students at this level are able to apply clinical skills under the supervision of preceptors. These clinical techniques consist of neuromusculoskeletal injury prevention/screening strategies, prophylactic taping/wrapping practices, and fundamentals of injury examination, acute care, and emergency response. Application of therapeutic agents is limited to those categorized as infrared (e.g. cryotherapy and superficial thermotherapy). Rehabilitation techniques applied are limited in scope to basic interventions that consist of administering range of motion and progressive resistance exercises, as well as elementary neuromuscular control techniques as prescribed by supervising preceptors. Exposure to documentation and record-keeping is also characteristic of this experience. Patient/client populations for this level are student-athletes participating in collegiate or secondary school sports.

Prerequisite: ATHTR 800, ATHTR 801, ATHTR 802, ATHTR 803;
Concurrent: PHS 809, ATHTR 804, ATHTR 500

ATHTR 806: Evaluation and Treatment of the Upper Extremities

4 Credits

This course will focus on the etiology, evaluation and rehabilitation of injuries to the upper extremities typically encountered by physically active individuals. Injuries to the upper extremities from the shoulder to the hand will be covered. Examination techniques along with manual therapy and exercise interventions will be explored. Appropriate use of devices, braces and taping as they apply to rehabilitation will be

discussed. Both isolated and integrated function of upper extremity joints and related tissues will be emphasized.

Prerequisites: ATHTR 804
Concurrents: ATHTR 807, and ATHTR 808, and ATHTR 809

ATHTR 807: Clinical Interventions and Implementation: General Treatment Strategies

4 Credits

This course will provide athletic training students with the knowledge and skills necessary to effectively function as a versatile primary care service provider. This is accomplished by exposing students to an array of diagnostic and management strategies used across a broad range of health care services for diverse patient populations. Emphasis is placed on fostering critical thinking ability for guiding proper selection, and efficacious application of interventions with consideration to the unique parameters associated with a patient case and various practice settings. The breadth of knowledge acquired will prepare athletic trainers to function in a spectrum of clinical environments that span from sports medicine to ambulatory care.

Prerequisite: ATHTR 500 and ATHTR 801; **Concurrent:** ATHTR 806, ATHTR 808, ATHTR 809

ATHTR 808: Therapeutic Interventions: Approaches and Techniques

4 Credits

This course provides the theoretical underpinnings that drive clinical applications of therapeutic interventions in health care and human performance restoration practice settings. Bridging the gap between concepts and applications will be a cornerstone of this course as a means to promote knowledge translation that lends to efficacious use in the care of patient/client populations. An evidence-based practice approach is emphasized to account for and effectively balance the influence of scientific data, clinician expertise, and patient/client values in the critical decision-making process, which adheres to ethical standards, and recognizes financial implications. In this structure, students will be presented with problem-based learning activities aimed at developing critical thinking abilities when operating in diverse practice settings. The basis of such activities will serve to nurture the efficient identification of viable solutions, and their prioritization given available resources, and constraints associated with various simulated clinical scenarios. Students will be exposed to a wide array of contemporary interventions with a focus on implementation in the management of acute, persistent, and chronic neuromusculoskeletal pathology as well as human performance restoration for the physically active. Acquisition of knowledge will be complemented with activities that build clinical skills that foster practitioner awareness for proper use, which promotes sound habits in operational procedures.

ATHTR 809: Experiential Learning II

3 Credits

This reflects the second clinical education experience in the professional degree program. Students at this level build on the theory that underpins the psychomotor skills they were exposed to in preceding coursework. This is accomplished through patient/client encounters, and applicable simulation learning activities that range from 15-to-20. This reflects the second clinical education experience in the professional degree program. Students at this level build on the theory that underpins the psychomotor skills they were exposed to in preceding coursework.

This is accomplished through patient/client encounters, and applicable simulation learning activities that range from 15-to-20 hours per week (225-to-300 total hours for the semester). In addition to the supervised application of clinical techniques in real-world practice or simulated settings, students are provided with opportunities to advance their skills in the evaluation and treatment of neuromusculoskeletal injuries to the lower extremity and lumbopelvic spine. In this capacity, students begin to link evidence-based practice principles with the selection of relevant health care and human performance restoration/optimization interventions. Patient/client populations for this level are student-athletes participating in collegiate or secondary school sports. hours per week (225-to-300 total hours for the semester). In addition to the supervised application of clinical techniques in real-world practice or simulated settings, students are provided with opportunities to advance their skills in the evaluation and treatment of neuromusculoskeletal injuries to the lower extremity and lumbopelvic spine. In this capacity, students begin to link evidence-based practice principles with the selection of relevant health care and human performance restoration/optimization interventions. Patient/client populations for this level are student-athletes participating in collegiate or secondary school sports.

Prerequisite: ATHTR 500 and ATHTR 804 and ATHTR 805; Concurrent: ATHTR 806, ATHTR 807, ATHTR 808

ATHTR 810: Evaluation and Treatment of the Spine and Thoracic Cage

4 Credits

This course will focus on the etiology, evaluation and rehabilitation of injuries to the pelvic girdle, spine, thoracic cage and head typically encountered by physically active individuals. Evaluation techniques along with manual therapy and exercise interventions will be explored. Both isolated and integrated function of pelvic girdle, spine and thoracic cage and related tissues will be emphasized.

ATHTR 811: Experiential Learning III

2 Credits

This reflects the third clinical education experience in the professional degree program. Students at this level build on the theory that underpins the psychomotor skills they were exposed to in preceding coursework. This is accomplished through patient/client encounters and applicable simulation learning activities that range from 20-to-30 hours per week (120-to-180 total hours for a six-week summer session). In addition to the supervised application of clinical techniques in real-world practice or simulated settings, students are provided with opportunities to advance their skills in the evaluation and treatment of neuromusculoskeletal injuries to the upper extremity and implementation of interventions for a broad spectrum of conditions encountered in the daily operation of a comprehensive sports health care enterprise. In this capacity, students enhance their proficiency in using evidence-based practice to guide selection of relevant health care and human performance restoration/optimization practices. Patient/client populations for this level are student-athletes participating in collegiate or secondary school sports. This course also provides students with exposure to the primary care of non-orthopaedic conditions and in the supervised application of practices with non-sport populations. Organized inter-professional education activities are designed to expand the scope of student awareness for criticality of interdisciplinary collaboration to prevent errors and improve patient experiences that yield efficient clinical outcomes.

Prerequisite: ATHTR 806 and ATHTR 807 and ATHTR 808 and ATHTR 809; Concurrent: NURS 802 and NURS 802A

ATHTR 812: Elective Clerkship

1-6 Credits/Maximum of 6

This elective course offers students a broad array of potential clerkships that foster growth of professional knowledge, skills, attitude, and habits through direct patient/client care experiences, pedagogical, and/or research training opportunities. The engaged learning experiences that students may participate in are many and diverse. Students are assigned to a faculty member who provides direction in shaping objectives of the clerkship. Faculty will also be responsible for organizing individualized learning activities that contribute to the student achieving their identified goals for the experience. For clerkships that entail patient/client care, students will be assigned to a preceptor who supervises related duties. Students may also pursue pedagogical or research training opportunities to prepare them for a potential career as a clinician-educator or clinician-scientist through this clerkship. The course provides opportunities to augment critical thinking skills via deliberate active learning exercises, and hands-on activities. The role of the elective is to provide experiences that enrich and expand knowledge to help prepare students for choosing and succeeding in the professional practice setting or advanced training program of their choice.

Prerequisite: ATHTR 809

ATHTR 813: Administrative and Professional Aspects of Health Care

3 Credits

This course is designed to provide students with professional knowledge of the administrative aspects of delivering athletic training services in healthcare systems. General topics include theory and application of management strategies, healthcare policies and procedures, law and ethics, and leadership evaluation and assessment.

Concurrents: ATHTR 501, ATHTR 814

ATHTR 814: Experiential Learning IV

6 Credits

This represents the fourth clinical education experience in the professional degree program. Students at this level are challenged to progress their professional knowledge and skills through graduated supervised clerkship activities that allow for autonomous experiences needed to prepare them to make clinical decisions. In order to maximize such opportunities through patient/client interactions, students are exposed to learning exercises that are carefully structured to elevate their competence from novice to advanced beginner. Along with connecting theory to practice across a spectrum of clinical conditions, students are presented with activities that accentuate biomedical and ethical considerations in human performance and optimization interventions. Corresponding links to health care administration and professional responsibility are also emphasized to ensure fluency/literacy in this practice domain.

Prerequisite: ATHTR 810 and NURS 802 and NURS 802A and ATHTR 811; Concurrent: ATHTR 501 and ATHTR 813

ATHTR 815: Seminars in Sports Health Care

3 Credits

This course is designed to provide students with knowledge that lends to their professional development through interactions with an array of personnel who operate in the broad spectrum of sports health care. Content spans domains and tasks linked to the most current edition of the practice analysis established by the Board of Certification for the Athletic Trainer. Examples include, but are not limited to: health conditions and occupational risks in novel groups, telehealth, and mass causality incident response. Potential benefits, limitations, and harms of clinical guidelines will also be explored. The significance of meaningful continuing education, lifelong learning, and developing leadership attributes to preserve contemporary expertise will be emphasized. Scholarship is structured to cultivate appreciation for diverse disciplines that contribute to evolving the art and science of the craft. The course will reinforce the criticality of integrating theory, research, and experiential practice to stimulate transformative and innovative environments in health care and human performance optimization industries.

Concurrent: ATHTR 816 and ATHTR 817**ATHTR 816: Experiential Learning V**

6 Credits

This final experiential learning course facilitates the graduating athletic training student's entry into the profession. Active learning centers on the ever-changing health care delivery system, human performance improvement industry, and the athletic trainer's evolving roles, responsibilities, and scope of practice within them. Legal, ethical, and socio-political considerations of the profession are also explored. Moreover, accountability for integrating sound quantitative evidence, and experience into clinical practice is stressed. Guidance in completing applications for the national board of certification exam and state credentialing to legally practice athletic training is provided.

Prerequisite: ATHTR 814; **Concurrent:** ATHTR 815 and ATHTR 817**ATHTR 817: Creative Knowledge Translation**

3 Credits

This course is designed to serve as a mechanism by which students engage in scholarly work through a series of guided, and self-directed knowledge translation activities that involve the integration of skills acquired throughout the academic plan. Project-based learning is tailored to yield a culminating experience in the professional degree program that prepares students for transition to practice. The outcome of these knowledge translation activities manifests through the completion of an independent project that demonstrates a student's aptitude for generating solutions to real-world challenges or problems in clinical, academic or administrative affairs linked to the profession. Projects may take various creative forms and are developed to be personally meaningful. Examples of projects may include, but are not limited to, a systematic review, meta-analysis, critically-appraised topic, case study or series, and original research. The course also serves to provide interactions that help shape a student's projected career trajectory as it pertains to post-graduate practice settings or pursuing advanced training programs.

Prerequisites: ATHTR 501, ATHTR 813, ATHTR 814 **Concurrent:** ATHTR 815, ATHTR 816**ATHTR 897: Special Topics**

1-9 Credits/Maximum of 9

Formal course given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest.

Biobehavioral Health (BBH)**BBH 501: Biobehavioral Systems in Health and Development: Theory and Processes**

3 Credits

Examination of theories and basic processes for understanding individuals as dynamic biobehavioral complex systems functioning through continual inter- actions. BB H 501BB H 501 Biobehavioral Systems in Health and Development: Theory and Processes (3)Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. The second course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology is relevant to behavioral development and on what aspect of this area of biology is linked to behavior. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the course. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum in Biobehavioral Health. Evaluation of the theories section will be by written exam, oral presentation, and seminar participation. Evaluation of the cell biology, genetics, and neurobiology components will be by written exam for each component. This initial required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the first of a two-course sequence (BB H 501 and BB H 503). It will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs it could be a part of a Biobehavioral Health minor for other students. This course will be offered every fall semester beginning with the first fall semester after approval and will enroll a maximum of twenty students.Faculty: George Vogler and Byron Jones

Prerequisite: graduate status**BBH 502: Health: Biobehavioral Perspectives**

3 Credits

Introduction to the role of psychology in maintaining health and in treating nonpsychiatric disorders.

Cross-listed with: PSY 502

BBH 503: Biobehavioral Systems in Health and Development: Processes and Integration

3 Credits

Examination and integration of basic processes for understanding individuals as dynamic biobehavioral complex systems functioning through continual interactions. BB H 503BB H 503 Biobehavioral Systems in Health and Development: Processes and Integration (3)Understanding the etiology of illness and the design of intervention strategies for promoting healthy development, preventing illness, and accomplishing remediation and rehabilitation require a multidisciplinary understanding of the theoretical basis of normal healthy human development and the complex biological processes that form the basis of health and development. This course is the second course in a two-course sequence (BB H 501 and BB H 503) that is designed to provide first-year graduate students with a multidisciplinary understanding of the biobehavioral health perspective. This views humans as complex dynamic systems of integrated component processes that interact with the environment to influence development and health. The first course (BB H 501) presents the theoretical framework of humans as complex dynamic systems, followed by modules on processes of cell biology and genetics as complex systems. This course (BB H 503) continues with modules of the processes of neurobiology, endocrinology, immunology, and pharmacology followed by a section on integrative biology and health. The modules of biological processes are developed from the perspective of how the physiological aspects of the area of biology are relevant to behavioral development and what aspect of this area of biology is linked to behavior. Similar integration with a primary emphasis on behavioral processes is offered in other courses that form the core graduate curriculum. These processes are considered in the context of their role in the comprehensive theoretical models developed in the first section of the two-course sequence. Evaluation of each of the five modules will be by written exam. This required course in the biobehavioral health sequence is designed to provide a multidisciplinary framework of theory and knowledge of biobehavioral processes and their implications for health and illness on which other biobehavioral health courses can build. It is the second of a two-course sequence (BB H 501 and BB H 503). This course will be required by all graduate majors in Biobehavioral Health. It will be available to students in other doctoral programs. It could be a part of a Biobehavioral Health minor for other students. This course will be offered every spring semester beginning with the first spring semester after approval and will enroll a maximum of twenty students. Faculty: George Vogler and Byron Jones

Prerequisite: or concurrent: BB H 501**BBH 504: Behavioral Health Intervention Strategies**

3 Credits

Evaluation of intervention strategies from a biobehavioral health context. Theories of change processes as they pertain to health are analyzed.

Prerequisite: BB H 502 , BB H 503**BBH 505: Behavioral Health Research Strategies**

3 Credits

Research strategies in behavioral health investigations are examined. Designs and data analytic models relevant to biobehavioral research are included.

Prerequisite: coursework in research design and/or introductory statistics**BBH 521: Structural Equation Modeling**

3 Credits

Structural Equation Modeling with LISREL and Amos. Confirmatory factor analysis; regression and path analysis with manifest/latent variables; special applications.

Prerequisite: HD FS519 , HD FS526**BBH 551: World Health Promotion**

3 Credits

Analysis of the various health problems that affect humans throughout the world; emphasis will be placed on personal health issues.

BBH 552: Child Maltreatment: Developmental Processes and Biological Embedding

3 Credits

The purpose of this course is to review the breadth of literature on the biological and developmental impact of child maltreatment including sexual abuse, physical abuse, and neglect on youth victims. Students will learn how to integrate child maltreatment research into a relevant, cohesive framework for understanding child maltreatment's wide-reaching effects. The biological focus of the course will be on the health consequences of child maltreatment as well as the neurological, neuroendocrine, and genetic embedding of child maltreatment. The course will also focus on the developmental antecedents and sequelae of child maltreatment through childhood, adolescence, and the transition to adulthood, including addressing how intergenerational transmission, parenting, interpersonal relationships, and attachment are associated with exposure to child maltreatment.

Cross-listed with: HDFS 552, PSY 552

BBH 553: Child Maltreatment: Policy, Administrative Data Systems, Prevention, and Treatment

3 Credits

The course will provide an overview of the major components of the child welfare system (e.g., child protection, family court, foster care, congregate care) involved in the community response to child maltreatment and promote a critical analysis of key federal policies that guide system activities. Course participants will also become familiar with Federal, state, and community data systems, and with methods to develop integrated data systems and their relevance to evaluating system outcomes and policy effects related to the child welfare system. Next, the course will give an overview of a range of experimental, quasi-experimental, and observational research designs and analytic methods relevant to evaluating the effects of child welfare policies and practices on child and family outcomes related to child maltreatment and system involvement. Finally, class participants will apply course content to develop applied research proposals that leverage administrative data for systems research and examine methods for communicating research findings to impact policy and practice at the community and federal levels. This course will also provide an in-depth examination of the major behavioral interventions, both preventive and treatment, applied with the child maltreatment population. Students will first be given an overview of the philosophy of science and experimental methods used to establish

behavioral interventions for child maltreatment. From there, students will review emerging paradigms within national funding agencies that focus on identifying and targeting mechanisms to optimize intervention effects.

Cross-listed with: HDFS 553, PSY 553

BBH 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BBH 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BBH 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

BBH 600: Thesis Research

1-15 Credits/Maximum of 999

Bioch, Micrb and Molecular Biology (BMMB)

BMMB 502: Critical Scientific Analysis

2 Credits

In this course, students learn how to read and critically evaluate the scientific literature in biochemistry, microbiology, and molecular biology. Students will identify the hypotheses underlying each paper, and examine the experimental approaches and the rationale for the experimental

design, with particular focus on how a rigorous scientific argument is constructed. Students will also practice designing meaningful experiments and evaluating unpublished manuscripts.

BMMB 507: Seminar in Biochemistry, Microbiology, and Molecular Biology

2 Credits/Maximum of 4

No description.

BMMB 509: Ethics in Biomedical Science

1 Credits

Discussion of ethical issues relevant to scientific research in the biomedical sciences.

BMMB 511: Molecular Immunology

2 Credits

The study of molecular and biochemical events that influence immune responses and define current questions in immunology. BMMB 511 / MCIBS 511 / VBSC 511 Molecular Immunology (2) The goals of the course are to integrate the current questions of immunology with other disciplines, in particular cell biology and biochemistry, and to provide training in critical thinking and evaluation of data and experiments. The course will be approximately 2/3 lecture by the instructor and 1/3 student presentations of papers related to the material. In addition, written critical reviews of recently published papers and a short research proposal will be assigned. By focusing on the mechanisms involved in immunity and disease, this course complements several existing courses on immunology, virology, and biochemistry. The prerequisites of MICRB 410 and BMB 400 assure that the students enrolling in the course have a general understanding of immunology and biochemistry. This course is projected as an elective for the Molecular Medicine and Immunobiology focus areas in the MCIBS graduate program and for the Pathobiology and BMMB graduate programs. The course will be offered in the fall semester with an enrollment limit of 20 students

Prerequisite: B M B400 , MICRB410

Cross-listed with: MCIBS 511, VBSC 511

BMMB 521: Advanced Microbiology

3 Credits

This course presents graduate students in the life sciences with foundational concepts in the biology of microorganisms in the form of broad graduate-level lectures by research-active faculty and student presentations of related challenge problems/discussion subjects. The course is designed for graduate students studying microbiology, biochemistry, and other life science disciplines. The aim is to increase the students' knowledge and appreciation of diverse aspects of microbial physiology, ecology, pathogenesis, molecular biology, and genomics; to familiarize students with microbial faculty and their research at Penn State; to help students think critically about microbiological research methods, experimental design, and data interpretation; and to help students through participation and feedback to improve their oral and written communication skills in presenting scientific data to others.

BMMB 525: Analytical Separations

3 Credits

Fundamentals and applications of modern chromatographic separations.

Cross-listed with: CHEM 525

BMMB 531: Biomolecular Structure

2 Credits

Crystal structure determination and analysis of protein and nucleic acid three-dimensional structures. This course is taught in two parts. In the first part, students will learn the fundamentals of X-ray crystallography of bio-molecules. Topics covered include: What X-rays are and how to produce and use them safely, how protein crystals are grown, how X-rays interact with crystals to yield 3-dimensional diffraction data, how to solve a crystal structure and how to refine the structure. Basic mathematics and physics involved in this technique will be discussed. The students will also learn how to analyze a published crystal structure and how a crystallography laboratory works. The second part will focus on understanding how protein and DNA structure relate to the function of these macromolecules. The students will visualize macromolecular structures in class using videos and using interactive molecular graphics software on their own to develop an understanding of three-dimensional structures. Particular topics include: fundamentals of protein structure, enzymes, signal transduction molecules, immune molecules, protein-DNA interactions, and other related topics.

Prerequisite: BMB 401**BMMB 533: Protein Evolution**

2 Credits

Consequences of evolution of protein-coding sequences: structures and functions. BMMB 533 Protein Evolution (2) Most biological functions are carried out by proteins, and evolutionary logic can be used to infer functions. This course will focus on evolution of protein-coding sequences, conformations and functions of proteins. Different species show varying characteristics of structure, metabolism, and regulatory control networks. Most of these differences are the product of the evolution of protein-coding sequences. DNA mutations can change amino acid sequences, protein structures and protein functions; and favorable mutations are selected, in ways that are integrated to form an organism adapted at both macroscopic and molecular levels. The availability of large databanks of protein amino acid sequences, and protein three-dimensional structures, and the annotation of protein function in the entries in these databanks, has allowed investigation of evolutionary changes that impact proteins. One of the goals of the course will be to describe these databanks and the computational tools available to apply them in research in molecular biology. Many students will find these tools useful in their own research projects. The evolutionary divergence of proteins has shown several types of effects. In some cases, related proteins in different species retain similar functions, but show differences in amino acid sequence and structure. The nature of observed changes in sequence and structure will be described and the relationship between sequence changes and structural changes examined in several well-documented examples, including globins, and serine proteases. In some cases, proteins diverge within a single species to form large families of related molecules with specialized functions. For example, the human genome encodes hundreds of odorant receptors. The comparison of related proteins that have adopted novel

functions reveals how cells can expand their functional repertoire. In most cases it is easier to adapt an existing structure to a new function than to create a new protein "from scratch". For example, the proteolytic enzymes of the chymotrypsin family are related to haptoglobin, an iron scavenger that has lost its enzymatic activity. Beyond the description of individual proteins and individual protein families, there is the more general question of how changes in functions of individual proteins are integrated to create a smoothly-running cellular "operating system". The evolution of sequences encoding regulatory proteins to achieve this will be discussed. Methods of bioinformatics to address these questions will be presented, with emphasis on study and comparison of structures with computer graphics.

BMMB 536: Medicinal Chemistry and Chemical Biology

3 Credits

The goal of this course is to provide a foundation in development and application of chemical technologies to the understanding and manipulation of biological systems. Chemical biology is a relatively new field that spans the traditional fields of chemistry and biology by applying chemical technologies to the understanding and manipulation of biological systems. As such, this course should be accessible and provide benefit to students working in both chemical and biological areas. Lectures include higher-level biological chemistry (assuming prior knowledge of biological chemistry at an undergraduate level, such as CHEM 476 or BMB 401) and synthetic chemistry and biology principles along with current literature in the field of chemical biology.

Prerequisite: CHEM 476 or BMB 401

Cross-listed with: CHEM 536

BMMB 538: Spectroscopic Methods in Bioinorganic Chemistry

3 Credits

Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.

Cross-listed with: CHEM 538

BMMB 539: Biochemical Reaction Mechanisms

3 Credits

Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.

Prerequisite: CHEM 476 or BMB 401

Cross-listed with: CHEM 539

BMMB 541: Molecular Biology of Animal Development

3 Credits

The course emphasizes comparative molecular genetic analyses of developmental gene networks using vertebrate and *Drosophila* model systems. BMMB 541 Molecular Biology of Animal Development (3) This is a required course for graduate students in the IBIOS Cell and Developmental Biology Program. Approximately half of the class sessions will consist of lectures and class discussions related to lecture material. The other half will consist of primary literature presentations by the students and class discussion pursuant to these. The course will provide students with a broad overview of essential signaling pathways and gene regulatory networks that coordinate cellular

activities to establish and maintain the complex communities of cells that comprise animal tissues.

BMMB 542: Eukaryotic Cell Biology

3 Credits

This course covers current areas of cell biology research, focusing on processes affecting the cell as a whole. BMMB 542 Eukaryotic Cell Biology (3) This course in eukaryotic cell biology will provide a foundation for those students whose thesis research focuses on cell biology or the cellular aspects of development. The primary focus will be to understand how the cell functions as a unit. Areas to be covered include compartmentalization of the cell and transport between different sub-cellular compartments; the control of cell shape and how cell shape and polarity changes drive cell movement and tissue shape; the life cycle of cells; and the regulation of these processes by extracellular signals. We will also investigate current research techniques and tools that are used to investigate these processes.

BMMB 543: Current Topics in Gene Regulation

3 Credits

This course explores structural, biochemical and genetic approaches in gene regulation. BMMB 543 Current Topics in Gene Regulation (3) This course is intended to bring students up to the leading edge of research in gene regulation. It will explore structural, biochemical and genetic approaches in this field of research, covering processes from nuclear structure to RNA decay. It will also illustrate progress from many different model organisms including: prokaryotes, yeast, Drosophila, and humans. This course will include introductory lectures by faculty and student presentations of recent literature.

Prerequisite: B M B400

BMMB 551: Genomics

3 Credits

This course will deal with the structure and function of genomes including the use of some current web-based tools and resources for studies and research in genomics. The overall objective is to learn current information about the structure and function of genomes, to develop facility in the many web-based tools and resources for further studies and research in genomics, and to appreciate the power and limitations of current resources and knowledge.

Cross-listed with: BGEN 551, MCIBS 551

BMMB 554: Foundations in Data Driven Life Sciences

3 Credits

Expanded overview of current developments and technique in computational biology and genomics. BMMB (MCIBS) 554 Foundations in Data Driven Life Sciences (3) The successful progression of data-driven biomedical research is obscured by a wide-range of logistical problems related to data handling and processing, a widespread disconnect between developers and consumers of biomedical analysis software, and lack of accessible, well-developed curricula and active learning opportunities necessary for the development of key data analysis skills in the next generation of researchers and clinicians. This course aims at filling these gaps. Topics include fundamental concepts that underpin analysis of sequence data, design of complex experiments, research

transparency and reproducibility, as well as result disseminations practices relevant to presentations and publications.

Cross-listed with: IBIOS 554, MCIBS 554

BMMB 566: Algorithms and Data Structures in Bioinformatics

3 Credits

This course covers elegant algorithmic and data structure techniques that underpin modern biological data analysis. Bioinformatics is a growing field with immediate implications for our understanding of biology and treatment of disease. This course covers elegant algorithmic and data structure techniques and their use in bioinformatics. The emphasis is on recurrent ideas that underpin modern biological data analysis, presented in conjunction with their biological applications. The course is suitable both for students interested in doing bioinformatics research and those interested in applications of algorithms to the natural sciences. Some of the algorithms/data-structures that may be covered include exact string matching, suffix trees, suffix arrays, de Bruijn graphs, hidden Markov models, breakpoint graphs, succinct data structures, the Burrows-Wheeler transform, the FM-index, network flow, and bidirected graphs. Some of the biological applications will include sequence alignment and assembly, cancer genomics, phylogeny, gene finding, and variation detection. No prior biological or bioinformatics knowledge is required. A basic understanding of data structures and algorithms (equivalent to CMPSC465) is a prerequisite; however, exceptionally motivated students can contact the instructor to discuss their options. This course is complementary to existing bioinformatics courses offered through other programs on campus. These courses may be taken concurrently but are not prerequisites. Prerequisites: CMPSC465 Cross Listings: BMMB 566 will be added as a cross-listed course.

Prerequisite: CMPSC465

Cross-listed with: CSE 566

BMMB 572: Nucleic Acids Chemistry

3 Credits

Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids. BMMB (CHEM) 572 Nucleic Acids Chemistry (3) The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acids systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.

Prerequisite: CHEM 212 , CHEM 450

Cross-listed with: CHEM 572

BMMB 573: NMR Spectroscopy for Synthetic and Biological Chemistry

3 Credits

Nuclear magnetic resonance approaches for characterizing the structure and dynamics of synthetic compounds, natural products, and biological macromolecules.

Prerequisite: CHEM 452

Cross-listed with: CHEM 573

BMMB 574: Metals in Biology: Structure and Mechanism

3 Credits

The goal of this course is to acquaint students with the many important roles that metal ions play in biological systems (bioinorganic chemistry). We will explore how structural biology, enzymology, spectroscopy, cell biology, and chemical biology methods have been used to understand how metal ions are used in biological molecules. These approaches have enabled discovery of the chemistry of these systems, and an understanding of how that chemistry fits into the broader biological context. We will apply bioinorganic chemistry in solving important challenges in energy, health, and the environment. Course activities include application of basic inorganic chemistry and biochemical principles, discussion of current literature in the biochemical sciences, implementation of biomolecular structure visualization software, and problem solving. At the end of the course, students will be able to critically engage with the bioinorganic literature and propose experimental approaches to unresolved questions in the field.

Prerequisite: CHEM 476 or BMB 401 Recommended Preparations: CHEM 412

Cross-listed with: CHEM 574

BMMB 581: Advances in Biochemistry

3 Credits

The course will develop a detailed molecular view of the building blocks of biological systems and a brief review of the structural and functional properties of these biomolecules. The course also will cover modern methods of biomolecule synthesis, purification, and modification. Subject matter will be approached using case studies highlighting techniques that allow us to gain a chemical understanding of biological processes. Examples include identification of drug binding sites, probing protein-protein interactions, targeting protein degradation, and modulating transcription. Important advances in our understanding of biological systems brought about by these techniques will also be discussed. Discussion of primary literature readings will include benefits/drawbacks of the various techniques, complementarity of methods, and the applicability of various aspects of chemical biology to dissect new problems.

BMMB 582: Advances in Genetics and Genomics

3 Credits

This course will develop a detailed view of genetic information, how it is stored and used by cells, and how it can be manipulated and analyzed to answer research questions. Both experimental and computational methods will be covered, with an emphasis on design and analysis of genetic, genomic, imaging, and dry-lab experiments.

BMMB 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BMMB 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

BMMB 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

BMMB 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BMMB 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BMMB 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Teaching of biochemistry undergraduate laboratory and recitation classes under faculty supervision.

BMMB 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

BMMB 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

BMMB 801: Foundations of Teaching in Biochemistry, Microbiology, and Molecular Biology

1 Credits

An overview of the science of learning and teaching in biochemistry, microbiology, and molecular biology. This course is designed to prepare BMMB graduate students to become teachers and communicators, and specifically to prepare students to teach undergraduate students in labs or lecture courses. Students will explore how people learn, develop evidence-based teaching strategies to promote learning, and acquire confidence to create effective and inclusive classrooms.

BMMB 852: Applied Bioinformatics

2 Credits

This course provides a foundation for students with biology backgrounds in the computational analysis and interpretation of biological data. BMMB 852 Applied Bioinformatics (2) The purpose of this course is to provide students with a foundation in the various applications of high-throughput sequencing including: chip-Seq, RNA-Seq, SNP calling,

metagenomics, de-novo assembly and others. The course material will concentrate on presenting complete data analysis scenarios for each of these domains of applications and will introduce students to a wide variety of existing tools and techniques. By the end of the course work students will understand common bioinformatics data formats and standards, become familiar with the practice of analyzing sequencing data from various instruments and will develop the computationally oriented thinking that is necessary to take on large-scale data analysis projects.

Bioengineering (BIOE)

BIOE 501: Bioengineering Transport Phenomena

3 Credits

Application of the equations of mass, energy, and momentum conservation to physiological phenomena and to the design of artificial organs.

Cross-listed with: CHE 501

BIOE 503: Fluid Mechanics of Bioengineering Systems

3 Credits

Cardiovascular system and blood flow, non-Newtonian fluid description, vessel flows, unsteady flows and wave motion, windkessel theory, transmission line theory.

Prerequisite: BME 409 (equivalent to CHE 330, ME 320, or AERSP 308)

Cross-listed with: CHE 503

BIOE 505: Bioengineering Mechanics

3 Credits

Passive and active mechanical properties of tissues, rheological materials, models of muscle contraction, pulmonary mechanics, forces in muscular-skeletal system.

BIOE 506: Medical Imaging

3 Credits

Medical diagnostic imaging techniques, including generation and detection of ultrasound, x-ray, and nuclear radiation; instrumentation and biological effects.

Prerequisite: PHYS 202

BIOE 507: Technical Foundations in Functional Magnetic Resonance Imaging

3 Credits

Theory and applications of functional magnetic resonance imaging. The advent of new neuroimaging techniques such as functional magnetic resonance imaging (fMRI) has symbolized a new era of neuroscience. A large amount of neuroscience research today involves utilizing fMRI given its high spatial resolution and whole-brain coverage. In order to gain an in-depth understanding of these research findings, it is important to know the principles of fMRI. In this class we will address questions such as: What signal do different fMRI methods measure? How to interpret the results from different fMRI techniques? How to apply these methods to solving real neuroscience problems?

BIOE 508: Biomedical Materials

3 Credits

Properties and methods of producing metallic, ceramic, and polymeric materials used for biomedical applications. BIOE 508 BIOE (MATSC) 508 Biomedical Materials (3) The topical content of this course will be grouped into 4 areas. A general introduction to selected aspects of physiology will be presented. This will provide the background necessary to appreciate the factors which govern the selection of biomedical materials. Specific emphases will be placed on the polymerization of biopolymers (polypeptides and polysaccharides) and the general relationships between conformation and biological function, the biochemistry of blood and blood surface interactions, the formation of teeth and bone and the relationships between microstructure, composition and function, the immune responses to implanted materials, the resorption of bone (osteoporosis), and the development of caries. The perspective placed on these topics will be that of materials science. The selection of ceramics for hard tissue prosthesis will be described. Orthopaedic and dental applications for ceramics will be discussed. Specific ceramic materials to be treated include dental porcelain, alumina- and zirconia-based ceramics, and bioglasses. Various classes of inorganic cements, gypsum, zinc phosphates, zinc carboxylates, silicates, and glass-ionomer cements will also be considered as ceramics. Hydroxyapatite, HAP-based composites and HAP-metal interactions will be discussed in particular. Relationships among physical properties, mechanical properties, and chemical interactions with biological fluids will be described. Dental and orthopaedic applications of metals will be described. The fracture toughness of metals, their electrochemical responses in vivo, and the nature of the interfacial interactions with hard tissues will be treated. Dental amalgams and the noble metals for dental applications will be considered. Metals and alloys, such as Ti, Co-Cr, and stainless steel used in prosthetic applications will be described and their properties and limitations discussed. The phenomenon of stress shielding and the immune responses associated with the accumulation of metallic and polymeric particulate debris in the vicinity of an implant will be discussed in particular. Polymeric materials are important in a broad range of biomedical applications. Among these are soft tissue prostheses, hemostatic agents, dental restoratives, bone replacement materials, and surgical adhesives. In some applications, it is desirable that a polymeric material biodegrade while in others property retention is desirable. Because of the spectrum of applications for polymers, the topics to be covered will be limited with the intent to concentrate on hemocompatible polymers, acrylics used as bone cements, polyethylene used as bearing surfaces in prostheses, and dental resins and bonding materials. Other relevant polymers and their applications will be discussed.

Cross-listed with: MATSE 508

BIOE 509: Mechanobiology

3 Credits

This course explores the molecular bases of cell mechanics and the role of mechanics in cell biology

Prerequisite: BIOE 512 and BIOE 505

BIOE 510: Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology

3 Credits

Introduction to BioMEMS and Bionanotechnology. Topics include: electromechanical and chemical biosensors, microfluidics microscale separations, and surface patterning for cellular engineering. BIOE 510 BIOE 510 Biomedical Applications of Microelectromechanical Systems (BioMEMS) and Bionanotechnology (3) Microelectromechanical systems (MEMS) have been developed for a wide range of applications from automotive to medical devices. Nanoscale devices within MEMS have a particular usefulness in biological applications due to their small volumes, low energy sensing, and minimal force actuators. Increased efficacy of instruments and new areas of application are also emerging from specific and successful biomedical applications of MEMS (bioMEMS). Advanced development of nanotechnology and bioMEMS for biomedical and biotechnological applications requires basic foundations from biophysics, biochemistry, solid state devices, and polymer engineering. The objectives of this course are: to build a basic foundation for understanding of mechanisms on electrical, mechanical, chemical, and optical transducers in the context of biomedical applications; and, to teach critical thinking considering microengineering design and fabrication, material compatibility with biological systems, and cellular interaction at the interface. Finally current MEMS activities will be reviewed with emphasis on the examination of the viability of nanoscale devices and bioMEMS technology in particular biomedical applications.

Prerequisite: E E 441 , BME 201**BIOE 512: Cell and Molecular Bioengineering**

3 Credits

Graduate level cell and molecular biology course for engineers emphasizing molecular mechanisms. BIOE 512 BIOE 512 Cell and Molecular Bioengineering (3) This course investigates the molecules and mechanisms underlying cellular function from an engineering perspective, utilizing physical, chemical and quantitative approaches. Material covered includes the structure and chemistry of biological molecules, enzyme kinetics, DNA replication and repair, gene expression, recombinant DNA technology, subcellular organization, cell motility, signaling and cell division. Applications in medicine, biotechnology, bionanotechnology and tissue engineering are addressed. This is a lecture course graded by means of exams, homework assignments, and a final paper. A general knowledge of physics, chemistry, and some physiology is required; the analytical approach of the course will also require an ability to work with mathematical equations and simple models. It is geared towards engineering students and is also suitable for physics, chemistry, and materials science graduate students. Previous molecular and cell biology knowledge is not required. Three credits, generally offered each fall semester. No formal prerequisites.

BIOE 513: Bioengineering Laboratory Techniques

3 Credits

Laboratory techniques in cell molecular biology, protein biochemistry and cell culture with an emphasis on engineering analysis and quantification. BIOE 513 Bioengineering Laboratory Techniques (3) BIOE 513 is a three-credit laboratory course for engineering graduate students designed to introduce laboratory techniques used in bioengineering/biomedical research. The course objectives are to build a basic foundation for understanding biological assays in the context of biomedical engineering

applications and to introduce the student to the integration of biology with design and fabrication of devices. Consideration is also given to compatibility between biological systems and medical devices, and cellular interactions at the interface between biology and engineering. Emphasis is placed on cell and molecular biology, protein biochemistry, bacterial transformations, and mammalian cell culture with particular attention to engineering analysis and quantification. This course requires a substantial amount of laboratory work outside of designated meeting periods.

Prerequisite: BIOE 512**BIOE 514: Quantitative Microscopy**

3 Credits

Application of advanced microscopy to quantification of cellular and molecular function.

BIOE 515: Cell Mechanics and Biophysics

3 Credits

Advanced topics and recent developments in cellular engineering; applications of engineering science to cell biology.

Prerequisite: BIOE 505**BIOE 517: Biomaterials Surface Science**

3 Credits

Special properties of surfaces as an important causative and mediating agent in the biological response to materials. BIOE 517 BIOE 517. (MATSC 517) Biomaterials Surface Science (3) This course will factor the classical picture of the biological response to materials into spatial and temporal components, identifying the special properties of surfaces as an important causative and mediating agent. Emphasis will be on biophysical mechanisms and the biological response to materials. Contact activation of blood plasma coagulation cascade, bioadhesion, and protein adsorption will be repeatedly used as example biological response to materials surfaces to illustrate concepts and principles. Leading theories attempting to correlate both kinds of intensity of biological responses to surface and interfacial energetics will be compared and contrasted through a process that will quantify important surface thermodynamic properties of materials. The hydrophobic effect and related phenomena, especially as this pertains to water solvent effects in biology, will receive special emphasis. A general background in chemistry and/or biology is required, but prerequisites are purposefully limited, reflecting the interdisciplinary aspects of the subject and to draw students from different specializations.

Cross-listed with: MATSE 507

BIOE 518: Bioprinting

3 Credits

This course covers the principles of bioprinting in tissue engineering and regenerative medicine for use in fabrication of biomedical related products such as implants, tissue scaffolds, engineered tissues, organs and biological systems. Topics include Tissue Engineering, 3D Printing, Layered Manufacturing and Rapid Tooling in Medicine, Design for Bioprinting, The Bioink, Extrusion-based Bioprinting, Droplet-based Bioprinting, Laser-based Bioprinting, Bioprinters and their components,

Application Areas of Bioprinting and New Frontiers in Tissue Engineering such as Organ Printing.

Cross-listed with: ESC 518

BIOE 519: Artificial Organs Design

3 Credits

Basic techniques and principles of a multidiscipline approach to artificial organs design.

BIOE 552: Mechanics of the Musculoskeletal System

3 Credits

Structure and biomechanics of bone, cartilage, and skeletal muscle; dynamics and control of musculoskeletal system models. BIOE 552 BIOE (I E) 552Mechanics of the Musculoskeletal System (3)The course focuses on the upper limbs and its musculoskeletal components, including mechanical properties and models; work-related musculoskeletal injuries, techniques, models, and instruments to measure and quantify the risks for developing such injuries. Specific topics covered in the first third of the course include an introduction to basic biomechanical principles, the anatomical structure of the musculoskeletal system including soft tissue, neuromuscular physiology, and motor control including muscle receptors. The second third covers various muscle models starting from basic mass/spring/dashpot viscoelastic models as in Hill's 3-element model and continuing on to Hatzel's multi-element model, frequency analysis, control theory approaches. More complex models include static and dynamic aspects of tendon-pulley models and multiple muscle-tendon systems. The final third covers basic epidemiology as applied to musculoskeletal disorders and risk factors including instrumentation to measure them and various analysis tools (e.g., the PSU CTD Risk Index) to assess the not only the overall risk for injury but the reliability and validity of such assessments. Time permitting applications to hand tools and office environment with computer work stations are examined. Two exams and a modeling project are given. The course is typically offered Spring Semester.

Prerequisite: Consent of program. Prerequisite or concurrent: BIOL 472
Cross-listed with: IE 552

BIOE 553: Engineering of Human Work

3 Credits

Physics and physiology of humans at work; models of muscle strength, dynamic movements; neural control; physical work capacity; rest allocation.

Prerequisite: BIOL 141 or BIOL 472
Cross-listed with: IE 553

BIOE 576: Bioengineering of the Cardiovascular System

3 Credits

Experimental and analytical studies of network branching patterns, regional blood flow, rheology and mechanics of blood cells and vessels.

Prerequisite: BIOL 472

BIOE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Prerequisite: BME 590

Cross-listed with: BME 590

BIOE 591: Bioengineering Ethics and Professional Development

1 Credits/Maximum of 999

Problem solving methods in ethical decision making, best practices in research communication, and strategies for professional development. This course will cover the main philosophical underpinnings of bioengineering ethics. It will then assist in developing methods for ethical decision making in the main areas of bioengineering professional practice. These areas include data collection, management and presentation, animal and human experimentation, peer review and authorship, and social implications of bioengineering research. The course will then assist in the professional development of students by instruction in tools for effective acquisition of discipline-specific conceptual knowledge, research skill development, communication, management, leadership.

Cross-listed with: BME 591

BIOE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BIOE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BIOE 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

Bioethics (BIOET)

BIOET 501: Perspectives and Methods in Bioethics

3 Credits

This course explores a variety of theories and methods in bioethics and applies them to a selection of current topics.

BIOET 502: Perspectives in Macro-Bioethics

3 Credits

This course explores systemic and structural issues in bioethics, and the theories and methodologies required to address them.

Cross-listed with: PHIL 572

BIOET 504: Research Integrity in Science and Engineering

2 Credits

This course will examine the complex ways ethical issues are a component of research in science and engineering. BIOET 504 Research Integrity in Science and Engineering (2) Research Integrity in Science and Engineering provides a foundation for understanding an expanded conception of research ethics that includes traditional responsible conduct of research (RCR) issues, but encompasses two additional domains in which ethical issues are relevant to the conduct of science, namely, the broader impacts of science and ethical issues that are embedded in scientific practice. Students in this course will develop a robust understanding of ethical responsibility and ethics spotting in their professional work as well as pedagogical training to support their becoming research integrity leaders in their home disciplines. In this course, students will: understand and identify instances of embedded ethics, broader impacts, and research integrity as they apply to work within their profession; develop the ability to apply ethical reasoning skills to examples of each domain of research ethics through case-based analyses; and acquire pedagogical skills in research ethics through developing, delivering, and assessing curricular materials on relevant research ethics topics drawn from their home disciplines. Students will also develop a research ethics teaching portfolio and will be encouraged to work with their departments to identify ways to develop peer mentoring on these important topics.

BIOET 531: Neuroethics: Science, Technology, and Society

3 Credits

This course provides a close examination into the field of neuroethics and the responsible application of advances in neuroscience research and neuroengineering. Neuroethics is a relatively young and interdisciplinary field of inquiry that aims to be a platform for different stakeholders, including neuroscientists, clinicians, lawyers, engineers, policy makers and the general public to discuss the future of neuroscience and the different applications of neurotechnologies. Neuroethics is a field that brings normative, descriptive, theoretical and practical considerations at the table. This course will cover topics such as different perspectives on neuroethics, its scope and role in recent brain initiatives, ethical and societal implications of brain imaging for medical and non-medical purposes, ethical and societal implications of the use of pharmacological and neuromodulation interventions on the brain, uses of neuromodifiers for enhancement purposes, issues around personhood and other emerging topics relevant to neuroethics. Among the ethical issues examined in the course are issues related to mental privacy, safety considerations, responsibility, agency, and social justice.

Recommended Preparation: An understanding of ethics, societal implications of technology, and neuroscience or neurotechnology background. Courses in functional and integrative neuroscience, as well as courses that provide a grounding in bioethics
Cross-listed with: ESC 531, NEURO 531

BIOET 533: Ethical Dimensions of Renewable Energy and Sustainability Systems

3 Credits

BIOET 533 will provide students with an understanding of the ethical dimensions of renewable energy and sustainability systems and with skills to analyze related case studies. Case studies that will be considered are grounded in topics relevant to the sourcing and

generation of energy across political-economic development contexts, including the use of sustainability indicators. Energy related topics include everything from traditional fossil fuels to renewables such as wind, solar, and biofuels. Students study responsible conduct of research (RCR) and professional ethics, in the commercial and academic context of applications in the area of renewable energy and sustainability systems, as well as examine the ethical dimensions of broader public and environmental impacts, and embedded values in research and analysis in this field. The course will provide for ethical analyses of knowledge generation and communication issues such as: selection of research questions; selection of datasets and parameters; determination of system boundaries; procedural considerations in decision making processes; methods of analysis; risk assessments and communication; influence of scientific research on policy outcomes; and, how to critically evaluate the use of scientific evidence and expertise when making and communicating arguments. Some lessons/modules will focus more on ethical issues encountered in practice, while other modules will provide examples that will impact overall ethical literacy and awareness of social and ethical impacts relevant to renewable energy and sustainability systems research and its numerous applications.

BIOET 540: Bioethics, Biopower, Biopolitics

3 Credits/Maximum of 999

This course will examine in a bioethical context a variety of ways relations of power and values intersect. Bioethics, Biopower, and Biopolitics will develop an understanding of bioethics by considering the ways people's lives interconnect and the relations of power that infuse and often control these interconnections. The goal is to expand the use of the term "bioethics" beyond the scope of medical practice and institutions and to bring it to bear on a much wider scope of life. We will consider options for understanding the meaning of "bioethics" by reference to the interplay of values and relations of power that more or less enhance human lives by the practices and policies that form, control, or liberate them.

BIOET 590: Bioethics Colloquium

1-3 Credits/Maximum of 36

Continuing seminars in bioethics that consist of a series of individual presentations by faculty, students, or outside speakers.

BIOET 594: Research Topics

1-12 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

BIOET 595: Internship

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships related to bioethics.

BIOET 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BIOET 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore a topic or topics in bioethics in depth.

BIOET 600: Thesis Research

1-15 Credits/Maximum of 999

Thesis Research in Bioethics.

BIOET 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Students will teach lower-level undergraduate courses in bioethics, including courses on the undergraduate minor in bioethics and medical humanities.

Bioinformatics and Genomics (BGEN)

BGEN 541: Critical Analysis of Bioinformatics and Genomics Research Topics

3 Credits

Critical Analysis of Bioinformatics and Genomics Research Topics reviews the recent developments made in the understanding of basic genomics and bioinformatics research. This approach provides an insight into the topics that are shaping the current and future directions in a field that is rapidly evolving and literally transforming lives. Tutorials provide a comprehensive overview of the new and fundamental developments in genomics research and highlight the way in which genomic concepts are applied to basic biological processes. This course will provide insights into computational, evolutionary, and functional aspects of genomic sciences. Basic concepts that describe how life was organized and evolved and applications that promise huge advances in biomedical and biotechnological fields will be discussed. In addition to helping students develop critical oral and written presentation skills, this course is intended to kindle excitement about genomic research among students and provide an intellectual framework for identifying potentially challenging and interesting questions that may be pursued.

BGEN 551: Genomics

3 Credits

This course will deal with the structure and function of genomes including the use of some current web-based tools and resources for studies and research in genomics. The overall objective is to learn current information about the structure and function of genomes, to develop facility in the many web-based tools and resources for further studies and research in genomics, and to appreciate the power and limitations of current resources and knowledge.

Cross-listed with: BMMB 551, MCIBS 551

BGEN 556: Computation, Bioinformatics, and Statistics Practicum

3 Credits/Maximum of 999

Students will identify, plan and implement actual research projects involving high dimensional, complex "omics" data that are relevant to the biomedical sciences and of direct interest to the students enrolled

and their mentors. Students will form teams and work on these projects throughout the semester, fostering interdisciplinary exchanges, the ability to work collaboratively in teams, and excellence in oral and written communication. Various types of computational tools and statistical techniques will be discussed, utilized and compared, based on students' background and choice of research projects.

Prerequisite: MCIBS 541

BGEN 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

BGEN 595: Internship

1-18 Credits/Maximum of 18

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BGEN 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BGEN 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BGEN 600: Thesis Research

1-15 Credits/Maximum of 999

Thesis Research

BGEN 601: Thesis Dissertation Full-Time

0 Credits/Maximum of 999

Thesis Dissertation Full-Time

BGEN 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

BGEN 611: PhD Dissertation Part-Time

0 Credits/Maximum of 999

PhD Dissertation Part-Time

Biological Chemistry - MD (BCHEM)

BCHEM 510: Carcinogenesis and Chemoprevention

2 Credits

Mechanisms of cancer induction by environmental carcinogens and chemoprevention by natural and synthetic agents. BCHEM 510 BCHEM 510 Carcinogenesis and Chemoprevention (2) The etiology of most human cancer remains obscure even though a vast body of literature describes risk factors for certain cancers and proposes various hypotheses for cancer etiology on the basis of epidemiological and experimental studies. Tobacco smoking is an established cause of several cancers, with lung cancer remaining the first target on the list. International studies have repeatedly confirmed that people (Chinese, Japanese) migrate from their country of origin to the U.S., adopt the pattern of certain cancers within a few generations (e.g., breast and prostate) of the latter country, which is indicative of the presence of chemical carcinogens in the environment and/or changes in lifestyles. Consequently, the search for carcinogens that exist in the human environment challenges both scientists and regulatory agencies. Chronic exposure to traces of chemical carcinogens in the diet, in polluted air, or in tobacco smoke can be important in the etiology of several human cancers in the presence of host factors that favor the multi-step process of carcinogenesis. Bioassays in laboratory animals can provide important information on the role of environmental agents in the induction of particular types of cancer. Biochemical studies can lead to insights into the nature of interactions of these environmental agents with macromolecules such as DNA that are necessary, but not always sufficient for carcinogenesis. The search for optimal diets and for naturally occurring agents in routinely consumed foods that may inhibit cancer development, although challenging, constitutes a valuable and plausible approach to finding ways to control and prevent cancer. The prevention of cancer is the longstanding goal for most cancer researchers. There has been enormous gain in our understanding of carcinogenesis and cancer progression; such knowledge has provided new and promising opportunities to prevent cancer, e.g., to treat pre-cancer or inhibit carcinogenesis (a process often involving 20-30 years in human epithelial cancers), rather than waiting to treat cancer. In the early 1980's, the U.S. National Cancer Institute recognized the promise of chemoprevention research. In summary, this course will provide a better understanding of the potential contribution of environmental carcinogens in the development of certain human cancers and will provide important information on cancer chemoprevention intervention strategies. The course will cover topics that include exposure, metabolic activation, detoxification, and biomonitoring of chemical carcinogens in the human environment, carcinogen-induced DNA damage, mutagenesis and DNA repair, carcinogen-induced cellular and molecular alterations, tumorigenesis and organ specificity in laboratory animals, and factors modulating individual susceptibility to the deleterious effects on chemical carcinogens. Furthermore, this course will provide knowledge on various classes of cancer chemopreventive agents, their efficacy, safety, and mechanisms of action in preclinical studies. Course Objectives: Upon completion of this course, the students will be able to: 1. Understand the potential risk associated with human exposure to chemical carcinogens detected in the environment. 2. Describe the current assays of biomonitoring of human exposure to chemical carcinogens. 3. Learn the process of metabolic activation and detoxification of chemical carcinogens. 4. Understand the stages of the multi-step carcinogenesis process. 5. Identify factors that govern individual susceptibility to the deleterious effects of chemical carcinogens. 6. Understand the concept of cancer chemoprevention. 7.

Identify molecular and cellular targets for chemoprevention intervention at any time during the process of carcinogenesis. Grading: Grading will be determined as follows: 1. Midterm Exam 30% 2. Research Paper* 30% 3. Class Participation 10% 4. Final Exam 30% Total 100%*Guidelines for Research Paper: The topic will be selected following approval of the faculty member in charge. The paper should include the goals (aims) of the research project, literature background, the significance of the research topic, knowledge to be gained, gaps in existing knowledge, and the potential to propose future studies. Faculty Member Proposing: Karam El-Bayoumy

BCHEM 521: Biochemistry: Structure/Function/Regulation of Biological Molecules

3 Credits

The fundamentals of biochemistry in evaluating the forces that govern inter- and intra-molecular interactions are studied. BCHEM 521 Biochemistry: Structure/Function/Regulation of Biological Molecules (3) An overriding theme in biochemistry is that macromolecules, which are polymers of simpler molecules, interact to form structurally large and functionally complex entities that give rise to discrete structures and functions. This course focuses on intermolecular forces between the monomers of macromolecules that govern tertiary structure, as well as interactions between macromolecules that govern higher order structures. The course begins with proteins, covering the structural basis of protein functions and then moves on to simple enzyme kinetics and mechanisms. Next, the students will discover the forces that control the three dimensional structures of nucleic acids. Subsequently, the students will explore simple and complex carbohydrates and topics in glycobiology that include energy storage, framework skeleton, and specific molecular recognition. Lipid biochemistry will be examined next, in topics that include lipid chemistry, complex lipids, membrane biology, and transport systems. Finally, the analysis of higher order structures involving the interactions between protein, nucleic acids, lipids, and carbohydrates will be discussed. The course will describe various analytical, chemical, and biochemical techniques that biochemists use to interrogate biomolecular structure and interactions.

Prerequisite: BMS 501 , BMS 502 , BMS 503

BCHEM 522: Molecular Genetics: Genes to Genomes

3 Credits

This course focuses on concepts of molecular genetics and genomics, and DNA- protein interactions and their functions within macromolecular complexes. BCHEM 522 Molecular Genetics: Genes to Genomes (3) This course focuses on the principles and concepts of molecular genetics and genomics and DNA-protein interactions and their functions within macromolecular complexes. Special emphasis is placed on the aspects of eukaryotic genome organization, chromatin and chromosome structural and epigenetic changes, and DNA-protein interactions that regulate expression of genetic information and change the process of inheritance in normal and disease models and affect genome stability. This course contains three major sections. Section I includes principles of recombinant DNA technologies used in the analysis of DNA sequences and genome structure. Section II covers genetic interactions and macromolecular assembly and provides links between the studies of molecular interactions and equilibrium with in vivo and genetic approaches. Section III covers genome stability, epigenetics, and medical applications involving mis-regulation of the molecular mechanisms involved in these processes. This part builds on material presented in the BMS 503 course of the core curriculum and provides students an in-depth

understanding of the molecular mechanisms of genome alterations and their biomedical significance.

Prerequisite: BMS 501 , BMS 502 , BMS 503

BCHEM 581: Enzymology: Structure, Energetics, and Function-A. Structural Biology

1 Credits

Structural biology: NMR spectroscopy and X-ray crystallography. BCHEM 581 BCHEM 581 Enzymology: Structure, Energetics, and Function-A. Structural Biology (1) The objectives of this course are to provide students with a solid background to critically interpret X-ray crystallographic and NMR experiments. Topics will be covered in the X-ray crystallography lectures will include crystal growth, diffraction, phasing and refinement to determine the structure. Topics in NMR spectroscopy will include basic principles, multidimensional experiments, and assignments of atoms to resonances, structure determination and dynamics of ligand binding to proteins. The students will learn the basic principles of protein structure determination by NMR and X-ray crystallography.

BCHEM 582: Enzymology: Structure, Energetics, and Function-B. Practical Enzymology

1 Credits

Practical aspects to study protein-ligand binding and substrate-enzyme reaction. BCHEM 582 BCHEM 582 Enzymology: Structure, Energetics, and Function-B: Practical Enzymology (1) The objectives of this course are to provide students with a solid background in practical enzymology.

BCHEM 583: Enzymology: Structure, Energetics, and Function-C. Mechanisms of Enzyme Reactions

1 Credits

Molecular basis for enzyme specificity and catalysis. BCHEM 583 BCHEM 583 Enzymology: Structure, Energetics, and Function - C. Mechanisms of Enzyme Reactions (1) The objectives of this course are to provide students with the wherewithal to interpret and design experiments aimed at elucidating the mechanisms of enzyme catalyzed reactions. Selected mechanisms of enzyme catalyzed reactions will be surveyed using primary literature. The rationale for the chemical, kinetic, molecular biological, spectrophotometric, thermodynamic tools that are used to investigate these reactions will be discussed. Topics that will be discussed include (a) principles of enzyme catalysis, (b) electrostatic catalysis (c) acid/base catalysis, (d) phosphates (e) Schiff base formation. Cofactors that will be discussed include pyridyl pyrophosphate, thiamine, biotin, tetrahydrofolate, NAD, FAD, S-adenoxyl methionine, and vitamin K and B12.

BCHEM 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BCHEM 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BCHEM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

BCHEM 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BCHEM 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BCHEM 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Biology (BIOL)

BIOL 503: Critical Elements of Genetics and Molecular and Cellular Biology

4 Credits

Foundational topics and critical analysis in evolution, genetics, molecular and cellular biology and cell differentiation. BIOL (/BMMB/MCIBS/ VB SC) 503 Critical Elements of Genetics and Molecular and Cellular Biology (4) Central elements in genetics, genomics and molecular and cell biology will be covered. The course will focus on foundational principles and concepts that will allow students to understand the behavior of proteins and organelles within cells, and to appreciate how intracellular events influence interactions of cells with one another in multicellular systems and during development. Another major focus will be genome architecture, both in the context of evolution and gene expression. Students will also learn how genetic approaches can be used to understand cell and molecular biology, and will develop critical thinking skills through the analysis of the primary scientific literature. The course will include lecture and discussion sessions.

Cross-listed with: MCIBS 503, VBSC 503

BIOL 514: Topics in Systematics and Evolution

2 Credits

Discussion of pertinent current literature in systematic biology and evolution.

BIOL 519: Ecological and Environmental Problem Solving

4 Credits

Overview of processes involved in solving environmental problems. Provides students with toolkit for understanding ecological and environmental problems. Untitled Document BIOL 519 Ecological and Environmental Problem Solving (4) The course will provide a general overview of the process involved in studying a variety of ecological and environmental problems. It will provide a toolbox of techniques for understanding ecological and environmental problems, and discuss how they can be used to address questions and generate testable predictions. It will examine connections between individuals and populations and communities as well as between theory and data. The focus will be on theoretical and computer modeling approaches, while maintaining a strong link to data and real systems. After an introduction to modeling, students will learn to develop and use simple and stochastic optimization models for individual organisms, as well as applying basic game theory to interactions between individuals. Many of the class meetings will be held in computer laboratories where they will be actively engaged in working on applying these models. They will explore a sequence of population demographic models of increasing complexity, ranging from unlimited unstructured population growth to density-dependent, structured population growth, in non-spatial and spatial contexts, culminating an individual-based models for population dynamics. The students will then apply these models to interacting species, learning about mutualistic, competitive and host-natural enemy interactions. Finally, we will explore theory for communities of species in space and time. Applied problems will be drawn from all areas of conservation, harvesting, pest control and epidemiology. Graduate students will additionally be required to attend a once a week case study, where we will focus on a paper from the recent literature that uses the techniques or theory learned that week in class. Additionally, graduates will develop models of their own, based on their own research, or on some other subject of interest. They will be expected to meet with me twice in a group and individually during office hours throughout the semester, to discuss the development of their projects. They will have to complete a written report on the motivation, model development, and results and implications of their work. This work will take the form of a short manuscript (as if for publication to a representative journal in their field). They will also have to make a verbal presentation to the entire class on their project (15 minutes, as if attending a professional conference). The course will be offered once/year.

Prerequisite: BIOL 220 or an introductory ecology course

BIOL 555: Statistical Analysis of Genomics Data

3 Credits

Statistical Analysis of High Throughput Biology Experiments.

Cross-listed with: MCIBS 555, STAT 555

BIOL 559: Charles Darwin's On the Origin of Species

3 Credits

Each week will be dedicated to one chapter of the first edition (1859) of Charles Darwin's masterpiece On the Origin of Species. Each chapter is divided by Darwin himself in a series of sections (usually about 10 sections per chapter). Each chapter will be commented on through an open discussion which will proceed section by section. The main goal of the open discussion will be to extract from each section the main

argument(s) presented by Darwin. During the open discussion, the instructor will give students an overview of the historical background: ideas and knowledge at the time; each person cited by Darwin will be commented on; Darwin also sometimes refers to other people's findings or ideas without citing their names, and those will be revealed and commented on too. We will critically discuss the data that Darwin mentions, whether they are from his own observations or not. We will also pay special attention to his writing style (vocabulary, repetitions, etc.) which is very precise. Occasionally, changes that Darwin made in the later editions will also be highlighted (using the variorum edition). At the end of this course, students will be able to use a rigorous method to critically study any important work in history of science (by putting any text within its own historical, cultural, and scientific context). The students will understand in depth Darwin's remarkable achievement in On the Origin of Species, which will allow them to take it back to their classrooms with undergraduate students as well as apply it to their own research. Students will be able to make direct connections between Darwin's masterpiece and modern biology because Darwin touched upon many of the questions that we are still struggling with. After this course, students will be able to realize that vocabulary, rhetoric, and writing style do matter, because On the Origin of Species is a masterpiece of scientific communication, and apply that to their own scientific writing.

BIOL 571: Integrative and Cellular Mammalian Physiology I

3 Credits

Mammalian cardiovascular, respiratory, renal, and gastrointestinal systems. This course in Cellular and Integrative Mammalian Physiology covers all major aspects of physiology. A special emphasis will be placed on how cellular aspects of physiology are integrated with organ and systems physiology. It is designed for students that either major in Physiology or are interested in integrating physiology concepts into their education. An in depth presentation of membrane biophysics, muscle dynamics, cardiovascular and circulatory regulation, respiratory and renal function, as well as acid base balance are addressed.

Prerequisite: BIOL 472

Cross-listed with: PHSIO 571

BIOL 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BIOL 591: Molecular Evolutionary Biology Seminar

1 Credits

Continuing seminars in Molecular Evolutionary Biology consisting of individual lectures by faculty, students, or outside speakers.

BIOL 592: Critical Evaluation of Literature in Biology

1 Credits

Weekly readings and critiques of recent papers from primary literature are used to teach independent thinking and effective scientific communication. BIOL 592 BIOL 592 Critical Evaluation of Literature in Biology (1) This course teaches beginning graduate students how to evaluate new findings reported in primary literature in the biological sciences. Each week, a recently published paper is evaluated according to 8 basic criteria as follows: 1. Does the author adequately establish a

context for the issues addressed in the paper? Are the issues addressed in the paper important in the field? Why or why not? 2. What is the hypothesis? Is it clearly stated? Is it operational (i.e. "falsifiable")? 3. Are the methods adequate to test the hypothesis? Why or why not? What are the controls? Are they adequate? 4. Are the data clearly presented? Are the results properly analyzed? Are statistical inferences stated appropriately? Do the data meet the assumptions of the statistical tests? 5. What conclusions are drawn from the results? Do the conclusions follow from the data? Have some conclusions been overlooked? Are there reasonable alternative interpretations of the data? Did the authors consider alternative hypotheses? 6. What could be done to improve the paper? Consider written format as well as the overall experimental design. For example, is the title appropriate? Does the abstract accurately summarize the results and conclusions? Does the paper use recent and appropriate references? 7. What is your overall opinion of the size of contribution that the paper makes to the body of knowledge in its field? Is this work creative? Does it provide new insights or a framework to understand previously disparate data? Defend your position. 8. What would be the next set of tests of the hypothesis or the next hypotheses to test? How should these hypotheses be examined experimentally? To what extent do you think this paper will stimulate further studies? The goal of the course is to provide students with opportunities to sharpen their thinking in regard to what constitutes meaningful scientific experimentation, interpretation of results, and effective presentation of information in text, figures, and tables. Near the end of the course each student prepares a written critique of a paper, and meets individually with the faculty to discuss their critique. The course follows a format very similar to the Ph.D. candidacy exam for Biology, thus providing formal preparation for that exam. Faculty: James Marden

Prerequisite: Departmentally controlled

BIOL 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on and individual basis and which fall outside the scope of formal courses.

BIOL 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

BIOL 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BIOL 598B: **SPECIAL TOPICS**

1-3 Credits

BIOL 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BIOL 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BIOL 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

BIOL 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

BIOL 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

BIOL 893: Experiential Teaching in Biology

2 Credits

The course provides a broad exploration of the science of learning as well as how to effectively develop curricula and pedagogy to support effective learning in undergraduate biology laboratory courses. Additionally, this course will prepare graduate students for future roles as educators. In particular, this course will focus on the cognitive principles of how people learn most effectively as well as provide students the skills involved in developing curricula and pedagogy to support active learning and a learner-centered environment in undergraduate biology laboratory courses. The major topics to be covered include the science of learning, the need for curricular reform in the sciences, how to create a student-centered learning environment, and the ethical and professional foundations of teaching. After successfully completing this course, students will be able to use evidence to discuss the value of learner-centered classrooms in the sciences, identify elements of a learner-centered biology classroom, identify major classroom challenges and methods of approaching them, write effective assessment questions and provide effective feedback to students, lead productive and effective class discussions, and demonstrate understanding of how people learn and apply learner-centered teaching approaches to developing effective lesson plans.

Biomedical Engineering (BME)

BME 504: Numerical Methods for Chemists and Engineers

3 Credits

CHEM 504 is a 3-credit course designed to give graduate students an overview of basic numerical techniques. After completion of the course, the students will be able to perform simple computational tasks. The emphasis will be given to numerical solutions of ordinary and partial differential equations relevant to the chemical and biomedical research, such as reaction kinetics and transport phenomena. This 500-level course will contribute to the student's ability to expand the frontiers of knowledge, to perform independent research, work as a team, and make conference-style presentations.

Recommended Preparations: Working knowledge of calculus and familiarity with Matlab.

Cross-listed with: CHEM 504

BME 540: Biophysical Chemistry

3 Credits

This three-credit course will cover the key theories and experimental methods of contemporary biophysics and biophysical chemistry. The course discusses the structures and dynamics of biomolecules (such as proteins, DNAs, and RNAs), the statistical mechanical models to describe the behaviors of biopolymers and the biophysical methods to analyze the structures of biopolymers in solution, the biophysical theories for protein folding/unfolding and the experimental methods to measure the kinetics of protein folding/unfolding and the protein structural dynamics, the principles of biomolecule structure determination by X-ray crystallography and cryogenic electron microscopy, and fluorescence microscopes, as well as the theories to describe ligand binding to biological macromolecules (such as receptors, protein complexes, aptamers, etc.) and the experimental methods to measure ligand binding. For all the topics covered by this course, emphasis will be laid on both theoretical models and experimental methods will be discussed. Classic and modern biophysical and biochemical techniques ranging from spectroscopy and FRET to optical microscopy, including super-resolution and micromanipulation techniques, will be covered. Applications of these biophysical techniques will also be discussed.

Prerequisite: CHEM 450

Cross-listed with: CHEM 540

BME 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

Prerequisite: BME 590

Cross-listed with: BIOE 590

BME 591: Bioengineering Ethics and Professional Development

1 Credits/Maximum of 999

Problem solving methods in ethical decision making, best practices in research communication, and strategies for professional development. This course will cover the main philosophical underpinnings of bioengineering ethics. It will then assist in developing methods for ethical decision making in the main areas of bioengineering professional practice. These areas include data collection, management and presentation, animal and human experimentation, peer review and authorship, and social implications of bioengineering research. The course will then assist in the professional development of students by instruction in tools for effective acquisition of discipline-specific conceptual knowledge, research skill development, communication, management, leadership.

Cross-listed with: BIOE 591

BME 594: Research Topics

1-3 Credits/Maximum of 6

Supervised student activities on research projects identified on an individual or small-group basis.

BME 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BME 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

Biomedical Sciences - MD (BMS)

BMS 500: Foundations of Biomedical Research

4 Credits/Maximum of 999

This hands-on course teaches students a variety of fundamental skills required to successfully conduct independent biomedical research. The goals of this course include early exposure to important basic biomedical laboratory techniques and developing both written and oral scientific communication skills, with the broader goals of creating a sustainable peer group and fostering rapport with faculty members. The course will be 4 weeks in duration, and consist of hands-on laboratory time, daily literature discussions, a final written report documenting experimental results and data interpretation, and a journal club-style oral presentation. The first week of the course is spent on fundamentals such as searching the literature, using citation indexes, notebooking and basic analytical techniques, as well as exposure to databases manipulating nucleic acid and protein sequences with the goal of enhancing understanding of the experimentation performed in the following 3 weeks of the course. Weeks 2-4 are designed to include an authentic research experience. Rather than having all reagents ready for the students, it is more valuable to perform experiments in "real time." The experimental design consists of the following: 1. Students will purify and identify unknown plasmids by restriction digestion based on plasmid maps created with available software. 2. Students will design and execute a transient transfection with proper controls, and assess the expression of both the plasmids of interest by PCR and their protein products by Western blot analysis. 3. Students will predict which downstream pathways will be altered based on their reading of the primary literature, and assess expression of proteins of interest. Each day will consist of lab assignments and presentations/discussion based on the current scientific literature. This will allow students to develop their own hypotheses that they can then test in a laboratory setting. The course will culminate in an independent report describing the experimental strategies, outcomes, interpretations, and alternative/subsequent hypotheses derived from the lab experience. Students will also give an oral presentation of an article reflecting their own research interests, which will be chosen and prepared in consultation with a faculty advisor.

BMS 501: Regulation of Cellular & Systemic Energy Metabolism

3 Credits

Teaches biochemical and signal transduction concepts while exploring the control of bioenergetic processes. BMS 501 Regulations of Cellular & Systemic Energy Metabolism (3) Energy is fundamental to life. The production, storage and utilization of energy by organisms are highly regulated processes that provide excellent examples of the principals that govern the control of cellular metabolism and hormonal signaling. In addition, future biomedical scientists must be prepared to study diseases associated with aberrant energy metabolism, such as diabetes, obesity, and malnutrition. Regulation of Cellular & Systemic Energy Metabolism is one of three thematic courses that comprise the fall semester. The course explores how energy is obtained, stored and utilized by cells, tissues and organisms. The biochemistry of energy metabolism is studied with a focus on mechanisms by which these pathways are controlled in order to maintain health and energy homeostasis. Principles of hormonal signaling and cellular signal transduction pathways are studied in the context of energy metabolism. In addition, knowledge of these subjects is applied to the study of pathologies involving abnormal energy metabolism, including diabetes, obesity and starvation. Course objectives include developing an understanding of metabolic pathways and the mechanisms by which they are regulated; understanding principals of receptor theory, signal transduction and hormonal control of cellular processes; and gaining an understanding and appreciation of diseases that involve abnormal energy metabolism. The course is taught in approximately four blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and skills learned through successful completion of the course help prepare students for advanced graduate courses and graduate research careers.

BMS 502: Cell and Systems Biology

3 Credits

Explores the cellular and intracellular organization of biology, assembly of cells into tissues, and further integration into biological systems. BMS 502 Cell and Systems Biology (3) This course will cover the cellular basis of physiological processes from a systemic perspective. The major emphasis will focus on the cellular, molecular, and biochemical basis of normal and abnormal (pathological) tissue function. A special emphasis will be placed on common themes applicable to all tissue and the integration of molecular, cellular, tissue and organ systems. Introductory lectures will be followed by discussion of the primary literature that complements the lecture material. The course is designed to give students an appreciation of the cell and molecular mechanism underlying physiological processes as well as cell and molecular biology research techniques.

BMS 503: Flow of Cellular Information

3 Credits

Teaches concepts underlying the inheritance, transmission and translation of genetic information. BMS 503 Flow of Cellular Information (3) Medicine in the 21st century must incorporate an understanding of the genetic information that underlies all biological processes in every cell, tissue, and organism together with an appreciation of how genetic differences impact complex cellular pathways and individual traits or disorders. Further, with the culmination of the human genome project and high-throughput analysis this

information can now be considered in the context of whole genomes and proteomes. This course provides students with a fundamental understanding of the basic processes that convert this genetic DNA information to produce RNA and proteins and the genetic principals that underlie transmission of this information at each cell division and to subsequent generations. This topic is of importance for all biomedical disciplines. The course explores how DNA is inherited, replicated, transcribed, translated, mutated, repaired, and manipulated, and how this information is utilized by cells, tissues and organisms and in the context of genomes and populations. Central dogma (DNA to protein) is studied with a focus on mechanisms by which these processes are controlled. Other topics include non-coding RNAs and protein degradation. Course objectives include understanding the mechanisms of how these processes occur and how they are regulated; developing an appreciation for the genetic and molecular biology approaches that have allowed insight into these processes. The flow of cellular information is one of three thematic courses that comprise the fall semester. The course is taught in approximately three blocks, with review sessions and examinations following each block. Exams are designed to determine mastery of the subject matter and to evaluate the ability to solve problems and logically address research questions. The principles and skills learned through successful completion of the course help prepare students for advanced graduate courses and graduate research careers.

BMS 504: Art of Scientific Communication I

1 Credits

Introduction to scientific analysis, writing, and oral presentation using primary literature sources. BMS 504 Art of Scientific Communication I (1) The overall goal of BMS 504, and the sequential course BMS505 taken in the Spring semester, is to develop the students into scientific communicators who, in written and oral formats, can convey scientific concepts and the experimental support for these concepts. This includes the development of the knowledge base and communication skills required for effective scientific exchange and engagement. BMS 504 meets 90 minutes, once a week for 11 weeks from the first week of class until the Thanksgiving Recess, and focuses on reading and analyzing articles from the primary literature with brief presentations by students. The intent of this schedule is to support the students in developing the skills necessary to analyze the primary literature, begin to present components of scientific articles in a group setting, and complete these goals in a time frame that does not compete with end-of-semester examinations. The first meeting is a presentation by a course director on Effective Powerpoint Presentations. The following 10 meetings allow two weeks to cover each of five topics. Each topic focuses on a high quality article selected from a portfolio created by the instructors of the Fall first-year Core Curriculum for the Biomedical Sciences (BMS) Graduate Program (BMS 501, 502, and 503). Topics vary from year to year. The first week of each topic examines the components of the chosen article (purpose and significance) and is led by one of the course directors. The second week includes short presentations by students on experimental design and data analysis from the articles and is facilitated by a content expert from one of the Core BMS Courses.

Concurrent: BMS 501, BMS 502, BMS 503**BMS 505: Art of Scientific Communication II**

1 Credits

Advanced topics in scientific analysis, writing, and oral presentation using primary literature sources. BMS 505 Art of Scientific Communication II (1) The overall goal of BMS505 is to further the

development of students as scientific communicators that began in BMS 504. This includes enhancement of the knowledge base and communication skills, in written and oral presentations, required for effective scientific exchange and engagement. BMS 505 meets 90 minutes, once a week for 10 weeks from the first week of class until the end of April, and focuses on reading and analyzing articles from primary literature with extended oral and written presentations by students. Topics vary from year to year and focus on research or curricular interests of students enrolled in the course.

Prerequisite: BMS 504

BMS 506A: Biological Basis of Human Health and Disease A

2 Credits

Cellular, molecular, genetic, and biochemical basis of organ function pathology.

Prerequisite: BMS 501 and BMS 502 and BMS 503

BMS 506B: Biological Basis of Human Health and Disease B

2 Credits

Cellular, molecular, genetic, and biochemical basis of organ function pathology.

Prerequisite: BMS 501 and BMS 502 and BMS 503

BMS 512: Data Analysis For The Biomedical Laboratory Scientist, A Practical Approach

2 Credits

Biology is becoming increasingly computational as new technologies are producing massive amounts of data. The quantitative data need to be organized, graphed, and interpreted. This course will teach students the theoretical and practical aspects of experimental design, hypothesis testing, statistical analysis, and linear and non-linear curve fitting. This course will pair lectures describing theory with applications involving problem solving. Students will learn to program so they can analyze complex data sets. The students will increase their understanding of statistics and have the wherewithal to analyze big data sets. The course will end with a final project involving image analysis in which the students will create scripts and functions to analyze the colocalization of fluorescent proteins in cells.

BMS 520: Human Integrative Physiology

3 Credits

This course explores whole organ physiology emphasizing skeletal muscle and exercise physiology, cardiovascular, renal and urinary, respiratory, gastrointestinal, and endocrine. BMS 520 Human Integrative Physiology (3) Human Integrative Physiology considers the function of the mammalian organism with an emphasis on system physiology. This course builds upon the strong foundation of cellular processes, molecular interactions, and genetic regulation provided in BMS 501, 502, 503 and allows students to develop an appreciation of the integration of biological function. The course is organized into multiple sections that focus on different organ systems. Initially, the course reviews principles of excitable cells and discuss sensory transduction, the autonomic nervous system, and motor system physiology. Next, students learn the structure and function of skeletal muscle physiology including muscle contraction, force generation, and movement. The course then focuses on the

structure and regulation of the cardiovascular, renal, and respiratory systems. Subsequent sections cover gastrointestinal and endocrine systems by building upon the cellular and molecular processes covered in BMS 501, 502, and 503. Each section teaches the basic design of the system, explores the physiological principles of function, and examines how each system contributes to homeostasis and pathophysiological disease. Class material is covered through lectures and primary literature.

Prerequisite: BMS 501 , BMS 502 , BMS 503

BMS 550: Fundamentals of Cancer Biology

1 Credits

Tumorigenesis is a multistep process driven by genetic and molecular changes that occur over time. Although cancer is a heterogeneous disease, many human tumors exhibit similar acquired physiological features. This course employs an integrated approach to teach the fundamentals of cancer biology with focus on the role of growth factors, oncogenes, tumor suppressor genes, and signal transduction mechanisms in tumor formation. Building on this foundational knowledge, subsequent sessions address the multistep nature of tumorigenesis as well as the role played by the tumor microenvironment as tumors progress and spread. Current topics on bioinformatics and therapeutic management are covered in the last week of the course.

Prerequisites: BMS 502, BMS 503

BMS 551: Cancer Genetics

1 Credits

Genomic instability is a major hallmark of carcinogenesis. This course will examine how various forms of genome instability promote cellular transformation. The impact of both inherited and somatic mutations will be evaluated. Mechanisms of genomic instability will be explored, to understand how their dysregulation results in cancer. Epigenetic mechanisms of carcinogenesis will also be covered. Finally, novel therapeutic approaches that exploit tumor-specific mutations will be presented. As the part of this course, students will evaluate seminal research papers and the most recent findings in the literature, and learn the relevant experimental approaches employed in the field.

Prerequisites: BMS 502, BMS 503, BMS 550 Recommended Preparations: BMS 550

BMS 552: Tumor Metabolism

1 Credits

Cancer is a disease of dysregulation of cellular growth machinery leading to loss of growth suppressive mechanisms, increased growth promoting signaling, and other key hallmarks supporting the clonal expansion of malignant cells. As the cancer phenotype progresses the tumor requires increasing amounts of metabolic intermediates to continue to grow. This leads to dramatic changes in the use of glucose, fatty acids, nitrogen containing metabolites and sterols by the tumor. These cellular changes have cascading effects on the cells in the local tumor microenvironment as well as other more distant environments such as the bone and skeletal muscle which can lead to organism wide metabolic dysregulation. The objective of this course is to provide an overview of these processes at the cellular, organ, and organism levels with emphasis on the interactions of the metabolic pathways and the potential to intervene in this metabolic dysregulation for the treatment of cancers.

Prerequisite: BMS 550

BMS 553: Cancer Biology Colloquium

1 Credits/Maximum of 2

Students will be exposed to a range of topics in cancer biology from the primary literature to expand their knowledge of current state-of-the-art research in cancer biology, and to enhance their critical thinking skills and ability to critique the primary literature.

BMS 554: Cancer Therapy and Immunology

2 Credits

This course gives students an overview of the fundamental processes leading to cancer development but with a focus on using drugs, immunological approaches, or interventions to combat these processes. Specifically, the course will focus on drugs targeting the various processes that lead to cancer development. The objective is to impart an understanding of the concept of cancer and the use of drugs or immunological approaches, to combat it in the broadest sense. This will be accomplished by: 1. Imparting an understanding of the basics of cancer biology and how drugs or immunology can be used to combat this disease (e.g., be able to interpret data from the cancer literature involving this material). 2. Know the major processes leading to cancer development as well as current and future drugs that will target these processes. 3. Obtain an understanding of the challenges in cancer drug development and discovery of a cure for the disease. 4. Understand the process of drug discovery and development, the challenges and opportunities inherent in it, and its relation to cancer drug development and treatment. 5. Develop a clear overview of the theory and methods that are used in the overall process of drug discovery and development for the treatment of cancer.

BMS 562: Principles of Immunology C: Dysfunction and Manipulation of the Immune System

1 Credits

Investigation of diseases associated with immune system dysfunction and the manipulation of this system to prevent and treat disease.

This course will investigate the basis for human diseases that are associated with deficiencies or dysregulation of the immune system. The content builds on foundational knowledge of the immune system to demonstrate the interplay of immune components during disease processes. Students will be able to recognize the types of immune deficiencies and mechanisms of immune dysregulation that contribute to disease. In addition, students will apply this knowledge toward an understanding of how manipulation of the immune system can be used both to prevent and treat disease.

BMS 564: Concepts in Virology

2 Credits

The objective of the Concepts in Virology course is to describe the lifecycle of representative RNA and DNA viruses and the relationship between the virus and the host at the molecular level. Emphasis is placed on developing an understanding of the experimental systems used to elucidate individual steps in virus lifecycles and interactions with the host cells. Host cell-virus interactions leading to the production of progeny virus and interactions involved in establishing and maintaining long term interactions, such as latency and effects on cell growth, are discussed in detail. While some didactic lectures are provided, reading and discussion

of the primary scientific literature is an integral component of the course. Students will gain a comprehensive view of the interaction between a virus and its host at the molecular level. In addition, students will gain an understanding of the experimental systems used to elucidate steps in the virus lifecycle.

Prerequisite: MICRO 550

BMS 566: Viral Oncogenesis

1 Credits

This course will provide an understanding of the role of viruses in the development of cancer in humans and the molecular mechanisms involved. The course will build on an understanding of normal growth control of cellular proliferation to determine the molecular mechanism through which oncogenic viruses exert their effects on cellular proliferation and survival. Students will gain an understanding of the contribution of an underlying human immunodeficiency virus infection and will be able to apply this knowledge to an understanding of the cooperative effect of HIV and other viruses.

BMS 567: Viral Pathogenesis

1 Credits/Maximum of 999

This course addresses methodologies used to study viral pathogenesis and recent advances in the field. The Viral Pathogenesis course will cover multiple aspects of the study and implications of viral/host interactions at the extracellular or organismal level. The course will give introductions to each topic, and will then examine recent primary literature. The aim of the course is to provide students with foundational knowledge to be able to frame experimental questions, knowledge of recent experimental techniques, and the ability to analyze experimental data and develop firm conclusions from these data. The course will examine both the host response to the virus and the ability of the virus to evade mechanisms deployed by the host to enhance viral replication and subsequent transmission.

BMS 568: Current Topics in Translational Cancer Research

2 Credits

Current Topics in Translational Cancer Research is designed to prepare students to be the next generation of translational cancer researchers. The students are expected to have a basic knowledge of cancer biology and research techniques. The content will include cancer research that is currently being conducted as well as recently completed and will introduce both new technologies as well as new theories on cancer research. The course will offer students an opportunity to acquire skills in developing and implementing hypothesis-based research studies that can lead to clinical therapeutics. The students will learn how to identify potential targets for therapy of cancer at all stages of development, from tumor initiation through progression and metastasis. The development of drugs from design and testing to investigational new drug status and FDA approval for clinical use will be discussed.

Prerequisite: BMS 550

BMS 571: Graduate Clinical Rotation

3 Credits

This course allows graduate students at Hershey and University Park to gain experience in the clinical arena. BMS 571 Graduate Clinical Rotation is designed to allow graduate students at Hershey and at

University Park to gain intensive experience in the clinical arena in the area of their dissertation research. The site of the clinical rotation and specific responsibilities of the student are determined by the clinical mentor that is matched with the student. Clinical mentors will indicate their willingness to sponsor a student and will outline the associated opportunities and responsibilities of the specific clinical rotation. The specific rotation will be selected by the student and the dissertation mentor to complement the student's graduate studies. Opportunities during the clinical rotation: The rotation typically will last 6 - 8 weeks and the student will be in the clinic and/or engaged in clinical activities for about 4h/week. During this rotation, students will have a range of opportunities including: attending Grand Rounds, attending Resident and Department Seminars and lectures, shadowing physicians, attending clinical research meetings, attending relevant case conferences, and, if appropriate, observing surgery. Students also may engage in a practical hands-on analysis of the subject matter (e.g., via an analysis of data, histology, MRI, etc.) and they will be involved in the discussion of relevant cases and of potential treatment strategies. Requirements: Course-specific policies and expectations for all students (i.e., for all students from Hershey and from the University Park Campus).(1)all students must complete an Infectious Disease Summary; an Insurance Waiver and a Confidentiality form. The forms will be located at the CANVAS course site. All 3 forms must be received by Graduate Education Office before the start of the Graduate Clinical Rotation. (2) Orientation Meeting: All students are required to attend a 2 hour mandatory Orientation Meeting where issues will be discussed related to the course requirements, what to expect in the clinical setting, HIPAA regulations, what is and is not appropriate, how and when to interact with patients, how physicians collect data from patients, terminology, hierarchy, and differences in thinking styles between clinicians and scientists. Students will not be allowed to begin their rotation if they fail to attend this mandatory meeting.

Prerequisite: The student must: (a) be at least a 2nd year graduate student, (b) select a thesis relevant clinical rotation, and (c) have been approved by the course director

BMS 581: Molecular and Translational Approaches to Human Disease
3 Credits

This course teaches students the scientific process used to understand the molecular bases of diseases and the development of novel therapies. BMS 581 Molecular and Translational Approaches to Human Disease (3) The course utilizes clinically relevant diseases as specific examples of applying an integrated approach to elucidate a mechanistic understanding of disease pathophysiology and the development of novel therapies. Over the 15-week period of the course the students study five specific diseases or complications of diseases, each over a 3-week period. The diseases used represent areas of high impact on Western society or ones in which specific principles of mechanistic understanding or therapeutic development are clearly illustrated. The diseases also represent strengths of the research at the Penn State Hershey such as cancer, diabetes, cardiovascular disease, and infection and inflammation. The instructors use primary literature to demonstrate the scientific approach used to test specific hypotheses related to disease mechanism. At the end of the 3-week period, the students use team-based learning to develop experimental approaches to study novel aspects of the disease pathology or therapeutic development.

Prerequisite: BMS 501 , BMS 502 , BMS 503

BMS 590: Colloquium

1 Credits/Maximum of 6

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

BMS 591: Biomedical Research Ethics

1 Credits

Education in research ethics for biomedical scientists. Meets U.S. Public Health standards for education in responsible conduct of research.

BMS 595: Internship

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BMS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BMS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BMS 597B: **SPECIAL TOPICS**

3 Credits

BMS 597I: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BMS 600: Thesis Research

1-15 Credits/Maximum of 999

Laboratory work on thesis project.

BMS 601: Thesis Preparation

0 Credits/Maximum of 999

BMS 601 is available to full-time Ph.D.-degree candidates who have passed the comprehensive examination and met the two-semester residence requirement.

BMS 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

Off-campus laboratory work on thesis project.

BMS 801: Writing Grant Proposals for Biomedical Research

1 Credits

This course will give students experience with the preparation of and submission process for grant proposals. BMS 801 Writing Grant Proposals for Biomedical Research (1) This course provides students with a hands-on learning approach to the process of submitting competitive grant proposals. It will inform students of the types of grants that exist, including training fellowships for which they may be eligible. Students will learn of the many different types of organizations, both public and private, that offer biomedical research funding. A majority of the course will focus on the proposal sections pertaining to the research plan emphasizing the purpose of each section along with strategies to create an effective, successful proposal. The proposal sections to be covered in detail are: specific aims, significance, innovation and approach. In-class discussions and team-based learning activities will be used to highlight the teaching objectives for each session. Using these in-class experiences as a guide, students will apply the key aspects of proposal writing by completing a proposal as part of a grant-writing team. The proposal review process will be discussed and a demonstration of the review process will allow students to understand who reviews proposals and how proposals are reviewed as well as to allow them to participate in the review process. In addition to these writing and review experiences, strategies for the oral presentation and defense of a proposal will be covered. By the end of the course, a student will be able to write an effective grant proposal and have the knowledge of how to present and defend that proposal orally, all skills required for a successful career in the biomedical sciences.

BMS 802: Translational Research in Medicine (TRIM)

1 Credits/Maximum of 5

Translational Research in Medicine (BMS 802) is a mentorship course that provides post-comprehensive MD/PhD graduate students with the opportunity to work one-on-one with a clinician scientist mentor that will allow students to build upon and hone their clinical skills (history taking, physical exams). The course will also allow students to explore different sub-specialties and develop their clinical network. The students will also become proficient in writing SOAP notes and in learning how to integrate their basic science knowledge with their clinical exposures. These opportunities will make it possible for students to integrate their clinical experiences with their PhD thesis projects. By the end of this course students will be expected to be able to: 1. Perform a detailed history using agenda-setting, open-ended questions, and Chronology, Onset, Description, Intensity, Exacerbating factors, Remitting factors, Symptoms (CODIERS) which are an important piece of the medical school's Patient Centered Interviewing Technique. 2. Perform a thorough physical exam 3. Apply basic science knowledge to clinical problem solving 4. Write a comprehensive SOAP note (A framework for writing progress reports about a patient) 5. Write a case report based on a patient seen in clinic (optional but highly suggested) This course is specifically designed for post-comprehensive MD/PhD students, to build upon and hone their clinical skills during the non-clinical years of training and to begin to develop a translational research project that will be further explored in the M3 medical course Advanced Translational Medicine.

Biorenewable Systems (BRS)**BRS 500: Research Methods**

3 Credits

Foundation in research philosophies, methodologies, issues and policies; measures of research quality; critical thinking and discourse; research report writing; professional development; research ethics. A B E (BRS) 500 Research Methods (3) A B E/BRS 500 is a course designed to assist students entering and advancing in their research career to: better investigate and practice the art of scientific investigation; openly explore and discuss what it means to be a part of the scientific and research enterprise at a major academic setting; gain skills and experiences in critical evaluation and discourse; learn the process of developing and preparing a research proposal from initial concept to near-final written product; better understand the expectations for responsible and ethical conduct as a scientist/student/individual; and further develop their philosophies and capabilities as future scientists and professionals. During this course students will continually read, think, discuss, write, critique, re-read, re-think, re-write, and communicate with other students, faculty, and professionals. The course will provide a setting to allow them to further develop their personal, professional, academic, and scientific goals and capabilities.

Cross-listed with: ABE 500

BRS 501: Biobased Polymers

3 Credits

The chemistry, structure-property relationships, and industrial applications of biobased polymers from plant and agricultural feedstocks.

BRS 502: Human Behavior and ethics in Management and Technology

3 Credits

Ethical leadership continues to be a key issue in our society and is a topic of growing interest to the public and researchers alike. Our world more than ever needs ethical leadership to address critical sociotechnological problems such as climate change, sustainable energy and materials, quality food and water, population growth, prejudice, and global conflict to name just a few. This course will provide students with an improved mechanistic understanding of basic human behavior foundational to ethical leadership and decision making. Specifically, a series of important psychological studies will be examined which provide insights into human needs, personality, individual and social behavior, and leader-follower dynamics which are needed to identify new approaches for developing and managing leadership. Students will explore the literature themselves and share their findings and insights with the larger group. Students will apply what they learn by proposing new management processes for ensuring ethical leadership and decision making and share those with their peers.

BRS 504: Biorenewable Systems Analysis

3 Credits

This course will introduce students to the major foundational concepts in the field of Sustainability and cover in-depth technoeconomic (TEA) and life cycle analysis (LCA), the two predominant tools utilized to quantitatively evaluate economic, social, and environmental sustainability of products, processes or services. While the course emphasizes

quantitative methods, readings and discussions will also include social and ethical aspects of sustainability, which are critically important and will help to frame analyses with these considerations in mind. Social considerations will include issues of race, equity and justice. TEA is a methodology for the assessment and comparison of the technical and economic feasibility of emerging technologies. LCA is a systematic and holistic approach that enables designers and planners to identify the most impactful stages of a supply chain so that we might strategically intervene to improve the system. Emphasis on the unique challenges of bio-based systems will be highlighted throughout. Students will also develop estimation, data verification skills, how to consider uncertainty in analysis, and learn how materials and energy flows lead to impacts to ecological and human systems. This course will facilitate development of critical thinking skills to holistically consider systems to develop the human, materials and energy transactions that can lead to more renewable and sustainable systems.

BRS 511: Structural BioComposites

3 Credits

Manufacture and practices related to the production of engineered biocomposites processed from lignocellulosic materials.

BRS 550: Applied Bioproducts Marketing

3 Credits

Bioproduct marketing applications for solid and engineered wood products and biorefinery value chain output including environmental services, energy, fuels, and co-products.

BRS 551: Sustainable Business Strategies

2 Credits

Coverage of business strategies that relate to sustainability and environmental issues.

BRS 568: Applied Biomanufacturing Laboratory

3 Credits

In partnership with the Center of Excellence in Industrial Biotechnology, this hands-on course takes place in the state-of-the-art CSL Behring Fermentation Facility. Students gain experience in the principles and methods used to produce bio-based products. Lab activities span upstream to downstream processing with exposure to fermentation processes in bioreactors, cell lysis, filtration, and chromatography.

BRS 590: Colloquium

1-6 Credits/Maximum of 12

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

BRS 595: Internship

1-9 Credits/Maximum of 12

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BRS 596: Individual Studies

1-9 Credits

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BRS 597: Special Topics

1-9 Credits/Maximum of 15

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BRS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BRS 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BRS 602: Supervised Experiences in College Teaching

1-3 Credits/Maximum of 6

Provides an opportunity for supervised and graded teaching experience in undergraduate biorenewable systems courses.

BRS 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

Biostatistics and Epidemiology (BIOST)

BIOST 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

BIOST 595: Internship

1-18 Credits/Maximum of 18

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships.

BIOST 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BIOST 601: Ph.D. Dissertation

0 Credits/Maximum of 999

Ph.D. Dissertation

BIOST 890: Colloquium

1-3 Credits/Maximum of 4

Continuing, professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

Business - CA (BUS)

BUS 500: Negotiation, Communication, Teamwork

2 Credits

Experience-based learning approach to developing effective teams and work organizations; emphasis on developing reflective thinking and interpersonal skill sets. BUS 500BUS 500 Negotiation, Communication, Teamwork (2) This course provides students with an enhanced understanding of their own behavior, the behavior of others, and the capability to deal more effectively with people and groups in organizations. Primary emphasis is placed upon application of experiential learning theory in developing the ability to perform well as a member of a team, and also in facilitating team effectiveness. As adult learners, students are empowered to become active creators of their own learning, and working with the

Prerequisite: admission to the MBA or MSIS program

BUS 502: Business Research Applications

3 Credits

Critical evaluative techniques of business research.

BUS 505: Data Analysis for Business Decisions

3 Credits/Maximum of 999

Selection and application of statistical methods and use of business databases to support managerial decision-making, interpretation and presentation.

BUS 510: Business Analytics and Decision Modeling

3 Credits

Methods for solving problems that include both time evolution and uncertainty. Focus on regression analysis, simulation and advanced data analytics. This course discusses concepts and tools to make informed managerial decisions through interpretation and analysis of data. The aim is to (1) familiarize students with the concepts of data interpretation; (2) provide students with language, insights, and tools used to analyze data and model operations; (3) provide students with the opportunity to use these tools, to understand their various applications, and to interpret analyses done by others. The course will focus on regression analysis, non-linear regression analysis, mathematical and simulation modeling, and advanced data analysis techniques. When students successfully complete this course, they will be able to demonstrate use of analytical tools for modeling and optimizing business decisions and also analyze the results.

Prerequisite: BUS 505

BUS 515: Business Ethics and Corporate Governance

3 Credits/Maximum of 999

Legal aspects of managing for-profit corporations including (i) corporate governance, (ii) ethical decision-making, and (iii) public policy and legislation regarding business decisions. BUS 515-Business Ethics, Governance, and Law; covers a wide range of important topics regarding how firms are governed. The first part of the course grounds students in the inner workings of corporate boards of directors (BODs). Topics in this section include: - The need for governance and BODs; - The types of people that sit on publicly traded BODs; - The role of committees within BODs; - The voting process in corporations; - The types of decisions that BODs are involved in; and - The role of shareholders and activist investors. The course then delves into the setting and execution of ethics policy within firms, often either initiated or approved by the BOD. Students read a number of "Codes of Conduct" from firms that they are familiar with (i.e. Dell, Apple, etc) and then perform research that allows them to see if the firms match their actions with their words. Analysis is done through measuring the negative externalities that flow from certain decisions. Specific topics in the ethics section include: - The larger purpose of corporations in society; - Corporate political activity; - Decision-making and anti-trust violations; and - Bankruptcy filing and a BOD's ethical and fiduciary duty to shareholders. Finally, the course considers general business law that managers must be cognizant of during the decision-making process. Topics include: - Federalism in the U.S.: The difference between state and federal law; - Incorporation and Bylaws; - Criminal vs. Civil Law; and - Consumers and the Law.

BUS 580: Business and Sustainability

3 Credits

An inter-disciplinary and global perspective on the business case for social responsibility, environmental stewardship, and transparency in corporate governance. This course provides an overview of principles and practices from the natural and social sciences, arts, humanities, and professional disciplines that contribute to understanding and responding to increasing concerns over the consequences of world population growth (now in excess of eight billion people), climate change, energy, natural resource use, environmental degradation, and calls for a more fair distribution of limited and diminishing resources. Issues of corporate sustainability and social responsibility are examined particularly as they pertain to the development and application of business strategy and practices that build social equity, and restore environmental quality while maintaining long-term profitability and enhanced competitive advantage. While the concept of sustainability has existed for some time, it is relatively recently that managers have started to explore its applications to organizations and managerial behavior beyond the basic ideas of corporate social responsibility and recycling. This course moves beyond these basic ideas to place sustainability in its historical and conceptual context by examining the history and definitions of sustainability in organizational management, the role of current drivers and stakeholders, and the advantages and disadvantages of various frameworks and methods for integrating and managing sustainability within organizations, and in their environments. Selected examples of contemporary research and organizational cases will be analyzed to gain a sense of effective and ineffective approaches to sustainability, as well as addressing issues of standards, measurement, and transparent reporting.

Prerequisite: BUSEC 502 and MNGMT 511

BUS 588: Strategic Management

3 Credits

Analyzing external and internal environments of firms to develop sustainable competitive advantages. Strategic Management is the MBA capstone course designed for students to integrate analytical skills learned in functional courses with core principles of strategy formulation, implementation, and performance review. Students will analyze internal and external factors and make recommendations for how firms can create sustainable competitive advantage in the global market environment.

BUS 589: Strategic Venture Planning and Innovation

2 Credits

Development and presentation of a venture plan including product development; market research; competitive analysis; financing and capitalization; organizational structure. BUS 589 BUS 589 Strategic Venture Planning and Innovation (2) The purpose of BUS 589 is to have the business student apply strategic management theories and practices acquired in BUS 588 to a specific, practical project in order to further the understanding of the process of creating and managing a strategy based on innovation (an entrepreneur strategy). This course is a direct extension of BUS 588 and should be taken immediately following it. The process of innovation is analyzed in detail together with the influences on it. The effects of various contexts on entrepreneurial strategy will be considered. Finally, issues related to the implementation and management of a strategy based on innovation will be discussed. Students are required to develop a comprehensive new venture plan for an actual business organization to demonstrate knowledge of organizational design from a strategic perspective. Students will have to apply management, marketing, finance, information systems, and accounting knowledge in the new venture proposal. They must also demonstrate their knowledge of the influence of external (environmental) contexts on strategy formulation and implementation through the use of appropriate analytic frameworks. Finally, they must demonstrate a grasp of what constitutes competitive advantage within the strategic context that they have chosen for their project.

Prerequisite: BUS 588

BUS 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

BUS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

BUS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

BUS 890: Colloquium

1-3 Credits/Maximum of 9

Continuing, professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

BUS 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Business Administration (BA)

BA 511: Seminar on Statistical Analysis

3 Credits

This course provides a breadth of statistical skills necessary for advanced data analysis. Students will learn how to employ data analytic processes that address challenges associated with experiments, surveys, time-series, panels, and/or multilevel models. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interest.

BA 512: Quantitative Analysis for Managerial Decision Making

2-3 Credits

This course is an introduction to the mathematical methods and tools of managerial decision making under uncertainty. While the main topics of the course are probability, statistics, decision analysis, simulation, and regression which are mathematical by nature, emphasis is placed on improving an intuitive understanding of the underlying issues in these topics. Rather than simply memorizing mathematical formulas, the student is encouraged to gain a better understanding of why certain concepts are used, and to learn what type of information is relevant to evaluate different situations of uncertainty. Students are expected to apply and discuss how the quantitative analysis they develop aides in business decision making. Students are expected to gain familiarity with various state of the art software packages for this analysis.

BA 513: Advanced Microeconomic Analysis for Business

3 Credits

This course discusses topics in advanced microeconomic analysis with an emphasis on applications to applied research areas in business and other related disciplines. Topics include (but are not limited to) general equilibrium, choice under uncertainty, game theory, mechanism design, and behavioral economics. An area of particular focus is how incomplete and asymmetric information impacts competitive and strategic behavior by individuals and firms in a variety of applied settings. The materials emphasize theoretical models prevalent in microeconomic research, and students are expected to develop a familiarity with the use of mathematical modeling in economics. Whenever possible applications

to related applied disciplines such as those in finance, supply chain management, accounting, and agricultural economics will be highlighted and discussed. Experimental methods will be used at times to motivate and discuss various economic principles.

BA 523: IT Strategy

2 Credits

An introduction to information technologies critical to business organizations.

BA 528: Business Simulation

1-3 Credits

A team-based course during which students will manage a simulated firm. B A 528 Business Simulation (1-3)Using the business simulation, teams of 4-5 students will compete against other teams in a particular industry. The team members will have to make all the decisions about how to run the firm, including overall strategy, product design, detailed marketing plans, factory operations, and financing.

BA 533: Economics for Managers

2-3 Credits

This course provides students with an overview of the foundations of microeconomic analysis. The primary objective is to develop their ability to apply fundamental microeconomic concepts from price theory and game theory to a wide range of managerial decisions, as well as public policy issues.

BA 545: Business, Government and International Economics

2 Credits

Understand how macroeconomic events and policies affect the global economy and business decisions. B A 545 Business, Government and International Economics (2)Changes in interest rates, swings in the business cycle, new international trade agreements: All are macroeconomic events, and all can dramatically impact business. Accordingly the class is a synthesis of institutional, theoretical and historical perspectives.

BA 559: Qualitative Analysis in Business

3 Credits

This course provides the foundational skills necessary for conducting qualitative research in an applied business context. Students will explore some of the following topics: ethnography, observation, interviewing, grounded theory, discourse analysis, case method, narrative analysis, and action research. Through this process, students will be introduced to the epistemological foundations of qualitative research, learn different methods of data collection, introduce different techniques for coding and analyzing qualitative data, and provide guidance on creating rigorous qualitative research.

BA 560: Applied Business Research

3 Credits

This course grounds students in the process of developing translational research broadly within the business domain. Students will learn how to identify applied challenges, develop research questions to address these

challenges, design applied studies, and frame their work using rhetoric that connects with the applied community.

BA 571: Strategic Management

1-3 Credits

Analysis and application of concepts and techniques aimed at successfully developing and implementing competitive strategy in a complex business environment. B A 571 B A 571 Strategic Management for Converging Economies (3)This course introduces students to the field of strategic management and the skills and tools used by general managers to make strategic decisions. Students learn to use frameworks and perspectives for analyzing industries, competitors, and companies with an overall objective of positioning the firm to attain and sustain competitive advantage. Students learn how to identify the industry and firm-level determinants of profitability and then relate those factors to the development of competitive strategy within the context of responsible business practice. Students also learn how to evaluate strategies to understand how and why companies are successful or not. Finally, students will learn how senior managers use integrative approaches for solving strategic problems.

BA 575: Capstone Business Case

4 Credits

A team-based project course that requires students to analyze an actual business problem from a firm or nonprofit organization. B A 575 Capstone Business Case (4)The Capstone Business Case course is designed to allow second-year MBA students the chance to integrate the knowledge they have gained to date in the program. True business problems are not narrow, functional area problems; rather they require teams of people to come together to jointly solve a problem that extends across many areas. For example, to assess the commercial viability for a new product requires contributions from economics, marketing, supply chain, finance, strategy, and corporate innovation. The more opportunities students have to work on real cross-functional problems, the better prepared they will be to solve them once they are actually on the job. In addition, working on a team and having to present the results gives students the ability to practice communication, teamwork, and leadership skills that are vital to success on the job.

BA 580: Doctorate of Business Administration Culminating Research Project

6 Credits/Maximum of 18

This course provides Doctorate of Business Administration students with the opportunity to identify a practice problem or clinical question and investigate the literature related to this selected area of interest. Students will develop and implement a comprehensive project to address the problem. Students will also disseminate the results in both a scholarly presentation and manuscript for publication.

Prerequisites: BA 560

BA 591: Applied Communications

1 Credits

Develop oral and written communication strategies to succeed in professional and academic contexts. B A 591 B A 591 Professional Development for Business Academics (1)This course is designed to equip doctoral students in business with skills and knowledge that will assist

them in successfully completing their doctoral studies and moving on to a successful career as a business academic. These skills fall into three broad categories: 1) communication skills, 2) research skills, and 3) interpersonal skills (which include ethical behavior). The course is designed to cover many crucial skills and career issues that may be overlooked during a doctoral student's normal course of study.

Prerequisite: admission to the doctoral program in Business Administration

BA 595: Internship

1-12 Credits/Maximum of 12

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

BA 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

BA 596A: ****SPECIAL TOPICS****

1-6 Credits

BA 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

BA 599: Foreign Study--Business Administration

1-12 Credits/Maximum of 12

Full-time graduate-level foreign study at an overseas institution with whom linkages have been established.

Prerequisite: acceptance in established exchange program International Cultures (IL)

BA 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

BA 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

BA 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

BA 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

BA 800: Marketing Management

2-3 Credits

This course provides an examination of the competitive landscape faced by marketing managers and the techniques used to provide data-driven insights to improve firm decision making. Students will learn how to assess the marketing environment which include the 5 Cs (Customer, Company, Collaborator, Competition, and Context) and how the 5 Cs impact marketing decision making. Students will learn how to utilize the marketing environment to establish a data-driven marketing strategy, i.e., segmentation, targeting, and positioning. As an example, this can include understanding how to conduct cluster analysis for segmentation, discriminant analysis for targeting, and perceptual and preference mapping for positioning. Students will learn how to make data-driven tactical marketing decisions, i.e., product, price, place, and promotion. As an example, this can include understanding how to conduct conjoint analysis for new product developing, base price analysis (BPA) for pricing, and marketing mix models for promotion decisions. Finally, students will learn how to link their data-driven marketing decision to important business outcomes, e.g., market share, return on marketing investment (ROMI), and profitability. Marketers will find the course provides them skills to immediately utilize data in their marketing decisions. Non-marketers will build skills related to understanding how data can be utilized for general business decision making. This course provides basic foundations of theories and tools used in subsequent elective courses in marketing.

BA 801: Management

2 Credits

This course is concerned with understanding and managing the behavior of people in organizations. The course will provide exposure to many of the concepts and skills that will help students become a more effective manager and organizational leader. This course includes tools that help students diagnose, understand, and develop solutions to management problems. The course will draw upon both the academic and practitioner literature to understand many facets of organizations and of the thoughts, feelings, and actions of people who work in them. It will focus on: 1) developing students' conceptual understanding of issues involved in managing people; 2) providing opportunities for direct or vicarious learning of managerial skills that have been identified by practicing managers as being most important to their performance; 3) giving students insight into their own attitudes, beliefs, and management philosophy; 4) creating a forum for discussing management issues with colleagues.

BA 802: Team Process and Performance

1-3 Credits

This course provides students with basic knowledge about predictable team dynamics and how to constructively deal with issues that arise in the first year M.B.A. teams. The course focuses on observation, diagnosis, and intervention skills for developing effective teams. Topics include diagnosing group dynamics, giving and receiving feedback to teammates, cross-cultural communication, and conflict management techniques. The course provides a real-time practicum for diagnosing team issues and addressing team problems and conflicts. Students apply team process concepts and techniques as they work to complete team projects in their other core M.B.A. classes. Students leave the course

with an understanding of how to successfully lead a team and how to diagnose and correct dysfunctional team behaviors.

BA 803: BUSINESS ETHICS

1 Credits/Maximum of 999

A study of ethical conduct in organizations and how cultural differences and personal conduct impact business decisions. This course focuses on developing the ability to understand ethical conduct in business organizations. Understanding how to think about and manage personal ethical conduct is a key learning objective along with a review of how an organization fosters a culture that supports ethical behavior. Students will also learn how cultural differences impact business decisions in a global environment.

BA 804: Ethical Leadership

2-3 Credits

The objective of the ethical leadership course is to raise awareness of the key role played as a manager and leader in creating and maintaining responsible business conduct in work groups and organizations. The course is also intended to enhance the student's ability to deal with the complexities of ethical decision making in today's dynamic business environment by clarifying and applying personal values.

BA 805: Negotiation Theory and Skills

1-3 Credits

The ability to effectively negotiate is an essential skill for managers. Negotiations not only occur with customers or clients, but also between bosses and subordinates, among teammates and across departments. Being able to craft a successful deal, especially in difficult circumstances, requires knowledge of yourself, as well as the substantive material that you are negotiating. Effective negotiators know their own limitations as well as their strengths. They also listen well and have good analytical skills. And, they can craft agreements that garner gains for themselves as well as for other if such gains are possible. Successful negotiating is also closely allied with successful teamwork since both processes require listening, persuasion, influence skills, and creativity. This course will give students an overview of the difference between traditional (distributive) bargaining and interest-based (or integrative) negotiations. Students will learn the rudiments of interest-based negotiating and practice it in several negotiation simulations. They will learn how to identify their own and others' interests, to create and claim value and to craft constructive agreements for all parties. The course will concentrate on two person and small group negotiations as well as to deal with difficult opponents.

BA 809: Strategic Business Architecture

3 Credits

BA 809 focuses on the development and application of business architecture as a holistic discipline that produces a common understanding of the organization that is used to align strategic objectives and tactical initiatives. Business architecture bridges the gap between a company's strategy and its successful execution. A business architecture approach that delivers business value to the enterprise produces several things: - An articulation of the strategic requirements of the enterprise - Models of the future state which illustrate what the enterprise should look like across multiple business viewpoints in support of the business strategy - A road map of the change initiatives required to reach that future state - The requirements,

principles, standards, and guidelines that will steer the implementation of change initiatives The primary purpose of describing the business architecture of an enterprise is to improve the effectiveness or efficiency of the business itself. This includes innovations in the structure of an organization, the centralization or federation of business processes, the quality and timeliness of business information, and ensuring that money spent at the project level is in support of the strategic objectives of the larger enterprise. The course also develops additional capabilities for communicating, explaining, and justifying decisions relating to business architecture.

BA 810: Supply Chain and Operations Management

1-3 Credits

This course is designed to provide students with an overview of the role of operations in the organization, the kinds of decisions operations and supply chain managers make, and the impact of these decisions on the strategic and tactical position of the firm. Supply chain management is a particular focus in the course. The interaction of production, distribution and information resources plays a critical role in developing and sustaining a firm's competitive advantage.

BA 811: Financial Accounting

2-3 Credits

Business enterprises convey information to their present and potential investors and creditors through financial reports. This course focuses on these financial reports, the data they contain, how users should read and interpret financial statements, and how users can incorporate this information into their investment decision making. It also examines how managers attempt to window dress these financial statements and how the numbers might affect managerial behavior.

BA 815: Business Statistics for Contemporary Decision Making

2-3 Credits

This course provides an overview of statistical concepts and methods including descriptive statistics, probability, statistical inference, hypothesis testing, ANOVA, Correlation analysis, Contingency Tables, and Simple, Multiple, and Logistic Regression. The approach to course material will be both numerical and applied in order to provide a conceptual understanding of statistics. Applications of these methods will be applied to problems in various business settings such as Marketing, Finance, Accounting and Supply Chain.

BA 817: Communication Skills for Management

1-4 Credits/Maximum of 4

One of the most important skills M.B.A.s develop in business school is the ability to demonstrate the value of their experiences. This course provides students with targeted opportunities to develop this skill as they clearly, forcefully, and professionally represent ideas, opinions, and solutions. Students will participate in various oral, written, and graphic projects during the course. After completing this class, students will have proficiency in representing their skills, expertise, and views to business partners (clients, colleagues, employers, and shareholders). This course is spread over two semesters (2 semesters, 4 M.B.A. modules). Residential M.B.A. students must complete all 4 credits (1 credit each in mods 1,2,3,4 for a total of 4 credits). The material builds on each prior module and applies communications skills to various applications.

BA 821: Foundation in Managerial Accounting

2 Credits

Foundations in Management Accounting has two broad aims. First, it is designed to help students grasp the technical aspects of accounting for activities and processes within and between firms. Therefore, students will study methods of a) cost classification & estimation; b) cost measurement & allocation; c) profit planning; and d) evaluation and control of behavior. Second, the course emphasizes the context of managerial accounting. The firm suspends market prices that regulate behavior impersonally. Students will study how economic arrangements are organized in such non-market settings. Unlike financial accounting, the field of management accounting integrates notions from diverse fields including economics and sociology. Crucially, management accounting is situational and therefore requires and hones students' facility in both quantitative analyses and qualitative judgments.

BA 830: Emerging Technology Trends in Business

1 Credits

This course will empower future business leaders to embrace the concepts and bring the state-of-the-art technologies into their organizations to improve the bottom line of their businesses. This course focuses on emerging technologies that are characterized by novelty, relatively fast growth, prominent impact, and uncertainty. They are the tools that can disrupt industries. The appropriate application of emerging technologies can become the foundation of an organizational transformation journey that leads to improved organizational competitiveness. Conversely, the inappropriate application of any technology can lead to business setbacks and failures.

BA 831: Foundations in Finance

2-3 Credits

This course will provide students an understanding of the major financial decisions faced by modern corporations. These activities include investing, financing, mitigating risks, and returning capital to shareholders. Investing activities include acquisitions, mergers, and major capital expenditure investments. Students will estimate investment cashflows and determine how the investment affects firm value. Financing activities include valuing and issuing debt and equity securities to fund investments. Students will evaluate overall capital structure to determine optimal financing composition. Risk mitigation activities include designing hedging strategies to hedge commodity price risk. Students will select risk coverage ratios and evaluate specific forward and option contracts. Finally, students will assess how corporations return capital to its shareholders. These activities include stock repurchases and paying dividends. Students will build financial models to assess the risks and returns of the firm's activities. The models will primarily use spreadsheet software. The spreadsheets will be augmented with VBA programs, macros, and simulation add-ins. Current finance theories will be evaluated and applied to real-world decision making using current tools and technology. This course is relevant to both financial and non-financial managers. Non-financial managers will use course insights to assess the financial risks and returns of investments in areas such as marketing and supply chain. This course provides a foundation of theories and tools used in subsequent elective courses in finance.

BA 832: Global Business Environment

1-3 Credits

This course provides students with an introduction to the foundations of macroeconomic analysis. The primary objective is to develop their ability to apply fundamental macroeconomic concepts from GDP, interest rates, fiscal and monetary policy to understand how policies impact macroeconomic conditions and the environment firms face. Foundational topics in microeconomics include GDP, interest rates, inflation rates and exchange rates. We use modeling techniques to evaluate how different agents in the economy interact (consumers, firms, governments, international trade and the federal reserve) and what the impact of those interactions are on the fundamentals of the economy (GDP and interest rates). The course heavily relies on mathematical and numerical modeling in the analysis of the macroeconomy.

BA 835: Global Perspectives

1-3 Credits

This course starts with the reality that the United States is less influential in global trade, finance, economics, and business than it was in previous decades. Consequently, M.B.A. students need to be aware of the business environments of other countries, the influence of these countries in the global political economy, and new competitors emanating from other parts of the world. About two-thirds of the course is focused on understanding macroeconomic concepts, and analyzing the challenges and opportunities posed by some of the most important countries and regions and the companies headquartered there. Approximately one-third of the course examines global themes that affect virtually all companies, regardless of nationality. Companies that respond creatively to the challenges posed by technology, sustainability, demographic change, urbanization, civil society, and related issues are likely to be more successful than those that do not. The course uses an interdisciplinary approach to explore the dynamics of international business, globalization, and country/political risk. After reviewing important features of the international business landscape, we will examine the business environments of the world's major regions and select countries, particularly those where students will be going for Global Immersion, while surveying macroeconomic terms and concepts along the way. The course concludes by examining how transnational themes may affect international business in the coming years.

BA 836: Global Immersion

1-3 Credits

Global Immersion is designed around a visit to another economic region. In the past, MBA students have visited such countries as Belgium, Brazil, Chile, China, Czech Republic, France, Ireland, Turkey, and Singapore. In each country, students visit both local and multinational businesses to understand how a business gets established and run in another country; students also meet with industry and government officials to get their perspectives on the economic policies of the country. Each Immersion is coordinated by a faculty leader who plans the visit so as to appeal to a wide range of student interests.

BA 840: Business Data Management

3 Credits

Business Data Management will enable students to use various database designs to acquire the information needed to make effective business decisions. Successful students will be able to design, create, and

implement a relational database and be able to write SQL statements to obtain information from a database. In addition, students will investigate the next generation approaches for storing, manipulating, and managing web data in unstructured formats. Students will gain an understanding of the advantages and disadvantages among XML, NoSQL, NewSQL, and Relational databases. After successfully completing this course, students will have the knowledge, skills, and abilities to: - structure a database, configure it, perform analysis within it, and report from it - have adequate understanding of SQL to retrieve data from a database using SQL query language - design a database system including an ER Model and a UML class diagram, and implement the design in an enterprise database application - understand NoSQL databases, XML native databases, NewSQL databases, and the advantages and disadvantages of these databases.

RECOMMENDED PREPARATIONS: three credits of data analytics

BA 841: Business Intelligence

3 Credits

Business intelligence encompasses the IT tools for exploring, analyzing, integrating, and reporting business data for fact-based, intelligent decision making. This course primarily investigates methods and tools for exploring and analyzing large amounts of business data, also called "Big Data". Learning methods emphasize active learning in the application of methods and tools to real data and the presentation of the results. Students will be exposed to a variety of methods for analyzing both structured and unstructured data and they will work with business data sets to understand the value that can be extracted from large data sets. They will also learn how to classify and associate data to discover business rules that can be used to support decision making. The course will also cover methods to analyze social media information and tools that can facilitate such analysis and discovery. Students will work with data from real social networks to gain an appreciation of how value can be obtained from such networks. Finally, they will learn about techniques for visualizing, presenting, and communicating information in a useful way, e.g. through dashboards and with other technologies on various platforms. Upon successful completion of this course, students will have:

- acquired the tools and techniques of data cleaning and preparation, data mining, and data visualization
- become competent in analyzing both structured and unstructured data
- developed an understanding of, and an appreciation for, the complexities of mining unstructured data such as text data including documents, web pages, emails, etc.
- developed an understanding of social networks as well as mobile and location-based analytics

COREQUISITE: BA 840 **RECOMMENDED PREPARATIONS:** three credits of data analytics

BA 850: Sustainability Driven Innovation

3 Credits

This course explores sustainability as a business opportunity for developing innovative products and services. It will focus on consumer needs related to sustainability, willingness to pay for these needs, and the innovative processes necessary to create sustainable solutions.

BA 865: Strategic Leadership

1-3 Credits

This course presents a senior executive perspective on the key opportunities and challenges faced by business leaders. Course content

is based on extensive research on the experiences of senior leaders from major organizations around the world. The lessons from these experiences form the backbone of a series of discussions on the changing context for setting strategy and leading organizations in an evolving business environment. Students who complete the course will demonstrate the ability to think strategically about organizational issues and challenges, develop effective strategies for organizational performance and success, and shape organizational cultures that facilitate strategy implementation and organizational change.

BA 880: Leadership Immersion

2 Credits

This course will provide practical and hands-on exposure to leadership training and exercises that can be applied in a diverse range of professional environments and business settings. Students will assess their own leadership strengths and development areas, develop an individual leadership development plan, apply that plan in a Leadership Immersion experience, and complete a reflection paper upon return. The course provides an opportunity to apply and integrate the knowledge and skills students developed throughout the program with strategic management and leadership concepts. Leadership Immersion off-site components take students to one- to two- day leadership development programs such as: the Fire Department of the City of New York (FDNY) Fire Academy; the U.S. Marine Corps Officer Candidate School in Quantico, Virginia; the U.S. Military Academy at West Point; and Gettysburg National Military Park. All of these off-site immersion experiences focus on leadership in situations that require rapid decision-making, communication, and team cohesion in a stressful or uncertain environment.

Prerequisite: BA 801, BA 802

BA 888: Executive Leadership

3 Credits

A central tenet of this course is that leadership matters. It is a primary driver of organizational success and effectiveness. The course examines a wide range of theories on leadership and various executive leadership styles and increases student awareness of current issues in executive leadership. Students will learn how to apply the different leadership theories and styles to practical settings. The course uses practical methodologies such as case analysis, discussion and debate, and self-analysis to help students explore and apply executive leadership skills in upper-level organizational settings in a manner that motivates their peers and lower-level supervisors and employees toward achieving organizational effectiveness. It will explore how different leadership styles affect others and their organizations, and reflect on their own development as leaders and how improve their own leadership skills. Learning outcomes include developing an understanding of different executive leadership theories, understanding the effectiveness of different leadership styles in different settings and organizational contexts, applying theory to practice, and developing personal executive leadership skills.

BA 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Business Administration (BADM)

BADM 510: Cost Management for Decision Making and Control

3 Credits

The study and use of accounting information for cost management, product costing, planning and controlling operations, and managerial decision making.

Prerequisite: B ADM501

BADM 512: Managing Effective Organizations

3 Credits

Understanding the critical and changing role of management in contemporary organizations. BADM 512 Managing Effective Organizations (3) The objective of this course is to provide MBA students with an understanding of the challenges confronting managers of contemporary organizations and a knowledge of the tools and techniques available to help them confront those challenges in dynamic workplace settings. The course will be structured around the POLC framework, a system that emphasizes the four essential functions of management: Planning, Organizing, Leading, and Controlling as an ongoing process of interrelated activities.

Prerequisite: B ADM502

BADM 513: Quantitative Methods for Business

3 Credits

This course is designed to provide a systematic understanding of design, operation, and control of business processes that transform inputs into outputs. B ADM 513 Quantitative Methods for Business (3) This course is designed to provide a systematic understanding of design, operation and control of business processes that transform inputs into outputs. The course encompasses both manufacturing and services. The focus is managerial decision-making with an emphasis on quantitative methods of analysis. Topics include operations planning and strategy, systems design, inventory management, capacity and materials planning, JIT and lean operations, quality control and management, scheduling, and project management. Quantitative methods include linear programming, decision analysis, inventory models, forecasting, simulation and queuing models.

Prerequisite: B ADM501 and B ADM502

BADM 514: Strategic Planning and Business Policy

3 Credits

Formulation of objectives and the implementation of programs to promote long-range success of the organization in a changing environment. BADM 514 Strategic Planning and Business Policy (3) Drawing from concepts in competitive strategy, organizational economics, financial economics, and industrial organization, this course will describe the skills that managers must command to create economic value through firm strategy. These skills include the ability to apply analytical tools to assess industry structure and competitors' strategies, the ability to assess the optimal scope and boundaries of the firm, and the ability to design administrative structures, systems, and processes that facilitate the development and deployment of corporate resources. Even though the course incorporates various theoretical perspectives, it

ultimately is designed to focus on the essential issues and problems of competitive strategy as experienced by managers.

Prerequisite: B ADM510 , B ADM512 , B ADM513 , and B ADM554

BADM 523: International Business

3 Credits

Survey of the theory and practice of international business.

Prerequisite: B ADM501 and B ADM502

BADM 525: Innovation and Change Management

3 Credits

Analysis of innovation sources, effects on industry structure and firm resources, and how firms can manage adoption and implementation process.

Prerequisite: B ADM501 , B ADM502 , B ADM503

BADM 526: Leadership and Ethics

3 Credits

A multiperspective review of leadership theory and research with special emphasis given to the ethical dimensions of leadership. BADM 526 Leadership and Ethics (3) The objectives of this course are to: a) increase moral awareness of ethical issues in organizations, b) consider the interrelationships between organizations and their stakeholders, c) analyze the ethical impacts of managerial decision-making, d) understand how to manage the ethical performance of people and organizations, e) develop an understanding of the ethical dimensions of leadership theory and research, f) explore the relationship between the concepts of leadership effectiveness and ethical leadership. Ethical conduct is an important issue for managers in all functional areas of business organizations. Long-term success in business depends not only on mastery of the immediate technical environment and competitive domain, but also consideration of and attention to the broader social and ethical environments in which all organizations and institutions are embedded. Leaders have an important role to play in managing the financial and ethical performance of individuals and organizations. Even though leadership is one of the most researched topics in management, most reviews of the leadership literature rarely mention the ethical dimensions of leadership. Understanding what ethical leadership is and why it is important can provide a more comprehensive view of what it means to be an effective leader.

Prerequisite: B ADM502

BADM 532: Corporate Finance

3 Credits

Application of modern corporate finance theory to corporate practice.

Prerequisite: B ADM501 and B ADM503

BADM 554: Marketing Strategy

3 Credits

An application of marketing theoretical principles from popular press publications. B ADM 554 B ADM 554 Marketing Strategy (3) This course is an investigation into current popular press publications and their

application of marketing theoretical principles to actual business situations. It includes analytical processes and an emphasis on critical thinking skills useful to upper level marketing managers.

Prerequisite: B ADM502

BADM 555: New Product Development and Management

3 Credits/Maximum of 999

This course will cover the concepts of new product/service development and brand management strategies for competition intensive firms. Identifying opportunities, developing strategies, and designing processes for the creation of new products are key responsibilities for both entrepreneurs and managers in established firms. But developing new products is also fraught with risk: an overwhelming majority fail when introduced to the market. This course is about improving the odds of placing winning bets on new products. This course is especially recommended to students who expect to (i) launch their own businesses, (ii) work as brand or product managers, or (iii) have responsibilities requiring knowledge of product strategies and management of new product initiatives. Consultants who advise clients on product strategies may also benefit from taking the course. Strategies and processes for new product development will be the core of the course. Strategy provides the context for product development — without it, each product development project is a separate and disjointed effort that has a much lower chance of success. This is one major reason why so many new products fail. Strategy for new products requires aligning new product development with market opportunities (for example in emerging markets, or by exploiting new inventions and technologies); selecting business models; and choosing effective marketing and manufacturing strategies. Process includes choosing a sequence of activities that is both rational and effective for converting ideas into compelling new products. These activities include concept development, design, prototyping, demand estimation, costing and pricing, branding, packaging, product testing, and market testing. However, not all products use the same development processes, and it is important to understand when to use which processes. It is expected that students enrolling in BADM 555 will be familiar with fundamental marketing concepts and practices. These are generally addressed in an undergraduate marketing course or equivalent professional training.

BADM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topic or special interest subject which may be offered infrequently.

BADM 828: Negotiations

3 Credits

Negotiating is an essential task of management. Successful managers bargain, negotiate, and resolve disputes with bosses, co-workers, subordinates, suppliers, customers, competitors, and other stakeholders. Effective negotiation can improve an individual's own outcomes as well as those of the other parties involved. Ineffective negotiation not only hurts the negotiator's ability to get "things done" but can also lead to poorly constructed or failed agreements in which everybody loses. The goals of this course are to improve students' negotiating skills. In this course, students will learn the theory and practice of negotiation. Course readings, discussions, and exams are designed to develop the theoretical foundation that is needed to understand the principles of effective (and

ineffective) approaches to negotiations. Students will practice what they have learned by taking part in negotiation exercises and simulations.

BADM 834: Portfolio Management

3 Credits

The course is designed to expand the student's knowledge of the broad field of financial and investment analysis. The student will examine the basic tools of asset valuation and inputs for portfolio management. Security Analysis requires a thorough understanding of financial statement analysis, quantitative techniques, and economics. The major objectives of this course are to gain a working knowledge of the fundamentals of portfolio management - including creating an investment policy statement, asset allocation, optimal portfolio selection, and analyzing equity, debt, and alternative assets. The student will also have the opportunity to apply those principles to the management of their own (virtual) \$100,000 investment portfolio. This course expects students to be familiar with the fundamental finance concepts and practices, either through successful completion of an undergraduate finance course or equivalent professional training.

BADM 841: Principles of Applied Project Management

3 Credits

This course is a problem-based course in the application of project management processes, methods, techniques, and tools needed to manage projects in a modern business environment. The course covers the fundamental project management principles associated with initiating, planning, executing, controlling, and closing projects. Project charters, schedules, resource assignment matrices, and communication, risk, and quality control plans are all tools that can enhance effective project management and which are covered in the course. This course assumes that project management in the modern organization is a complex team-based activity, where application of effective leadership and team management principles are critical and where various types of technologies (including project management software as well as software to support group collaboration) are an inherent part of the project management process. This course also acknowledges that project management involves both the use of resources from within the firm, as well as contracted from outside the organization.

BADM 871: Business Analytics

3 Credits/Maximum of 999

This course provides a broad understanding of business analytics and managerial best practices for leveraging analytics. Advances in computational technologies, coupled with the massive amounts of data available through business activities as well as the surrounding ecosystems, have created an amazing potential for managers to leverage analytics in order to gain organizational and competitive advantages. This course takes a two-fold approach to address Analytics Methodologies. The first section of the course provides a broad understanding of business analytics and the second section demonstrates the managerial best practices for leveraging analytics. The course covers concepts such as analytics problem framing, data understanding and preparation, as well as descriptive and predictive modeling. The course incorporates applications and real-world datasets from marketing and other business disciplines for a hands-on learning experience. Best practices derived from cases are also incorporated into the course structure in order to learn the strategies required to implement and manage analytics initiatives in businesses. Students are

initially introduced to business analytics through a series of examples, use cases, and applications. Next, descriptive analytics through the use of dashboard and business reporting techniques is presented as a means for business performance management. Following this, the overall predictive analytics process is explained with emphasis on framing the analytics problem from an understanding business context. Additionally, fundamental predictive modeling concepts are covered concurrently with the introduction of exemplary modeling techniques. Students then receive an opportunity to apply these techniques through the use of different problem scenarios and real world datasets. Related topics including overfitting and visualizing model performance are covered as well. Students are presented an expected value framework to assist approaching business problems with a decision-analytic perspective. The course also covers managerial aspects of integrating business analytics within the enterprise by linking business strategy to business analytics initiatives. Approaches to initiate, manage, and sustain analytics initiatives to gain a competitive advantage are discussed with cases. At the end of the course, students are expected to have the competencies required to analyze possible opportunities for leveraging analytics across the boundaries of functional business domains, as well as apply key analytic techniques and interpret results for decision-making.

BADM 895: Internship

1-6 Credits/Maximum of 6

Supervised, professionally-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

Business Administration (BUSAD)

BUSAD 523: Prices and Markets

3 Credits

A survey of analytical concepts and techniques essential to an understanding of the business environment.

BUSAD 525: Quantitative Methods in Finance

3 Credits

Study of quantitative methods used in financial and investment analysis and modeling. BUSAD 525 BUSAD 525 Quantitative Methods in Finance (3) BUSAD 525 studies statistical and econometric methods to provide a quantitative foundation in financial and investment analysis. Students will be introduced to the statistical and econometric methods necessary in quantitative financial modeling. Students will acquire practical knowledge, skills and abilities in financial modeling, including sampling, estimation, and hypothesis testing, regression analysis and its application in finance, portfolio analysis methods, and time-series analysis and forecasting. Spreadsheet programs such as the Microsoft Excel program will be used extensively throughout the course.

Prerequisite: BA 831

BUSAD 542: Global Intercultural Management

3 Credits

This course develops students' global cross-cultural competencies and cultural intelligence to enhance ability to manage global organizations and work interculturally.

Prerequisite: MGMT 501 or LEAD 501

BUSAD 545: Negotiation Strategies

3 Credits

This course covers strategies and tactics for understanding conflicts, for negotiating effectively, and for dealing successfully with power in organizations. BUSAD 545 BUSAD 545 Negotiation Strategies (3) Although situations involving international incidents, corporate acquisitions, or national collective bargaining contracts demonstrate the dramatic effects of the need for negotiation, it is something that most people do every day. Negotiation is not a process reserved for skilled diplomats, top salespeople, or leaders of labor unions. The structure and processes of negotiation at the interpersonal level are fundamentally the same as at the corporate or international level. For this reason, knowledge about and skill in negotiating is essential to anyone who works with and through other people to accomplish objectives. It is part of the normal "give and take" of any business situation, such as negotiating salaries, arranging deals with vendors, or allocating resources for a project. Unfortunately the ability to simply recognize conflict and the need for bargaining does not insure successful negotiating situations. Negotiation is a complex human activity, involving a dynamic interpersonal process. The skilled negotiator possesses a number of skills including: the intellectual ability to understand the key facts that shape and characterize different negotiation situations; the skills to diagnose problems and select appropriate strategies and approaches to address them; and the understanding of one's own personality and value system, which affect the perception of a situation and the choice of tactics and strategy. Negotiation is a learnable process. In this course students will learn how to recognize and resolve conflict through bargaining, what the bargaining process involves, and how to plan and carry out a successful negotiation.

Prerequisite: MGMT 501

BUSAD 551: Business, Ethics, and Society

2-3 Credits/Maximum of 3

The course focuses upon the exploration and analysis of the ethical, political, technological, social, legal and regulatory environments of business. BUSAD 551 Business, Ethics, and Society (2-3) Students will explore and analyze the challenging issues that lie at the intersection of business, government, and society through a lens of business ethics. Topics covered include the importance of ethics in the business decision process and the types of ethical issues business practitioners face in the business environment; consequentialist and nonconsequentialist ethics principles and their application to business decision-making; the role of personal and organizational values in business decision-making and the impact that organizational culture has on the ethical dimension of decision making. Students will evaluate and analyze the ethical dimension of decision-making; become familiar with the stakeholder concept and utilize it in the business decision-making process; identify the constraints societal values place upon the firm; examine the role government plays in the marketplace; explore the social and ethical

dilemmas that arise from the globalization of business; and understand and explain the process through which corporations attempt to influence societal and government institutions.

Prerequisite: B A 517 , MGMT 501

BUSAD 578: Managing Business Processes

3 Credits

Develop and evaluate process models, performance metrics, and information flow to facilitate cross-functional business processes for 21st century organizations. BUSAD 578 Managing Business Processes (3) Twenty-first century executives cross-functional business processes rather than managing their organizations as independent functional silos. Consequently, the ability to design and implement process oriented organizations has considerably evolved over the past decades. More importantly, initiatives related to Service Oriented Architectures (SOA) and Business Process Management (BPM) systems are predicated on the existence of well-designed business processes. However, the task of designing processes has become harder due to the disappearance of boundaries both within and across enterprises. Managing Business Processes provides students with an understanding of the key aspects of business processes such as collaboration, information flow, people, and business rules. The main objective is to provide an overview of various techniques and tools for analyzing, improving, and implementing business processes and information system controls. The course will utilize cases, process modeling methodologies, and simulations to strengthen the students' understanding of business processes and their contribution to business performance.

Prerequisite: ACCTG 800 or BA 810

BUSAD 801: Statistical Analysis for Managerial Decision Making

3 Credits

This course is designed to provide the M.B.A. students with an exposure to the most commonly used statistical concepts, methods, techniques, and their applications to business problems. This course covers the basic concepts of business statistics and data analysis integrated in a contemporary spreadsheet environment. The course emphasizes practical applications and business decision making.

BUSAD 802: Cornerstone of Sustainability

3 Credits

In-depth exploration of the social, environmental, and organizational sustainability challenges facing business leaders in the 21st Century. BUSAD 802 Cornerstones of Sustainability (3) BUSAD 802 provides students with an overview of the social, environmental, and organizational sustainability challenges facing 21st Century business leaders. The course seeks to develop students' critical capacities for reflection and action based upon a systems thinking framework. Topics to be explored include the history of the sustainability movement, an overview of pressing environmental and social issues, and alternative perspectives on the local and global economy. The course addresses local and global issues surrounding sustainable management and reviews the major frameworks of sustainability that provide the scientific foundations and economic principles of how sustainability can help organizational leaders to achieve natural competitive advantage. Students will apply theoretical and practitioner frameworks to real world cases.

BUSAD 809: Triple Bottom Line Accounting

3 Credits

In-depth exploration of the issues related to implementing measurement, reward and reporting systems for economic, social, and environmental impacts. BUSAD 809 Triple Bottom Line Accounting (3) BUSAD809 expands the traditional financial and managerial accounting topics to encompass economic, social, and environmental impacts. Students will investigate the strategic linkages between sustainability and the value of the organization, define true costs and become familiar with alternative cost measurement systems, and assess the impact of social risk. Other topics include the design and implementation of management performance evaluation and reward systems that align with social and environmental as well as economic goals, and global reporting standards and best practices.

BUSAD 811: New Ventures Ideation and Feasibility Analysis

3 Credits

BUSAD 811 focuses on the ideation process and determining whether an idea has commercial potential in both an entrepreneurial and intrapreneurial setting. In order to see and evaluate opportunities, students learn about entrepreneur characteristics; develop skills such as marshaling resources (HR, legal, financial, operational, and technical) needed to introduce the product or service into the market place; and developing an entrepreneurial team.

RECOMMENDED PREPARATIONS: 6 credits in business or by permission

BUSAD 819: Developing Creative High Performance Organizations

3 Credits

This course focuses on how to create high performing organizations based on models provided by business, science and the arts. We will examine the key assets that these disciplines bring and show how to apply them to business activities. For example, it has been shown that improvisational models from music are highly relevant to new product development. Course activities will include a discussion of the readings from relevant academic research in the business field. We will discuss the philosophy of aesthetics, analyze cases, and review original works. We will also listen to short lectures by practicing artists, musicians, actors, scientists, and writers. Together, these activities will help students to develop strategies to help their organizations attain higher levels of performance. This course is a graduate elective for MBA students and could also be taken by other students (such as Leadership students) if it meets their degree requirements. The way the course will run: This course will be run as a graduate seminar designed to maximize the learning of the members of the group including the instructor's. We will learn about each of the topics noted above through a variety of means. Our interaction will include general discussions, lectures, case discussions, exercises, small group meetings, and on-line chats. We will have invited speakers for the class representing the arts, music, science and business.

Prerequisite: 6 graduate credits in business

Cross-listed with: LEAD 819

BUSAD 822: New Venture Start-up

3 Credits

Examines the financial and legal issues that are critical in the formation, development, and management of new ventures. The focus of the

course is on the methods of funding and cash flow management for the new enterprise, as well as the underlying legal issues that impact new ventures. This course builds on the foundation of the required finance course to give students an overview of the various legal issues that are critical to new venture development.

RECOMMENDED PREPARATION: 6 credits in business or by permission

BUSAD 824: Finance and Investment for Sustainable Growth

3 Credits

In-depth exploration of the methods of financing available for sustainable growth in developed and emerging markets. BUSAD 824 Finance and Investment for Sustainable Growth (3) BUSAD 824 provides students an in-depth exploration of the theories and the applications that financial professionals can leverage to simultaneously earn a profit and have a positive impact on society. The specific financial sectors students will examine are: Capital Markets (to address environmental issues), Commercial Banking (to create sustainable economic development), Project Finance (to reduce poverty and create infrastructure development), and Investment Management (to understand and employ socially responsible investing).

BUSAD 826: Current Issues in Corporate Finance

3 Credits

This course covers topics in advanced corporate finance and financial modeling, including capital structure, cost of capital, financial forecasting, and valuation. Estimating the firm's current market value and projecting its future performance requires one to build accurate and flexible financial models. The ability to understand and build financial models is one of the most essential skills in the finance field, including commercial banking, corporate financial management, investment management, and investment banking. This course bridges the gap between theory and real-world practice through a step by step hands-on approach in financial modeling.

Prerequisite: BA 831, BUSAD 525, ACCTG 512

BUSAD 827: Fixed Income Securities

3 Credits

This course focuses on the various fixed income securities including bonds (treasury, corporate, municipal), mortgage-backed securities, asset-backed securities, interest rate derivatives, and credit derivatives. It will build upon that knowledge in order to understand fixed income portfolio management, with focus on portfolio construction, managing versus a benchmark, and measuring and managing risks.

Prerequisite: FIN 813

BUSAD 828: Mergers and Acquisitions

3 Credits

The mission of this course is to survey the drivers of success in mergers and acquisitions (M&A) and develop students' skills in the design and evaluation of these transactions. The course will combine a survey of mergers and acquisitions, an investment banking product-training class for associates, and a case study. We will focus on the type of merger most class participants will potentially be involved with - the acquisition of a modest-sized private company by a larger private company, or by a mid-size public company. At the same time, due to the availability of date,

much of the case material relates to larger public-to-public transactions. We will use these cases to illustrate major points applicable across a range of transactions.

Prerequisite: ACCTG 512

BUSAD 829: Data Analysis in Finance

3 Credits

Financial markets produce huge amounts of data, which poses a big challenge for financial institutions. This course provides students with the necessary knowledge and skills to analyze financial data to extract valuable insights in order to facilitate financial decisions. This course focuses on how statistical methods and data mining techniques can be used to analyze real financial data.

Prerequisite: BUSAD 525

BUSAD 830: Biotechnology and Health Industry Overview

3 Credits

The course explores current issues and trends in the biotechnology, pharmaceutical, medical device, and health care industries. The classic cost, quality, and access paradigm is applied from the perspective of multiple stakeholders. Organization of care, financing, policy, regulatory, and ethical problems and issues are emphasized.

BUSAD 834: Ethical Dimensions of Management in the Biotechnology and Health Industry

3 Credits

This course provides an overview of various ethical decision-making frameworks, which are then applied to critically examine issues within the biotechnology and health industries. Ethical decision-making frameworks include utilitarian principles, rights and justice theories, virtue ethics, feminist ethics, and various medical ethics models. Applications to cases involving genetic testing, stem cell research, euthanasia, organ retrieval and transplantation, and pharmaceutical development are among those to be explored. BUSAD 534 BUSAD 534. Ethical Dimensions of Management in the Biotechnology and Health Industry (3) BUSAD 534 introduces the students to various ethical decision-making frameworks, which are then applied to critically examine issues within the biotechnology and health industries. Ethical decision-making frameworks include utilitarian principles, rights and justice theories, virtue ethics, feminist ethics, and various medical ethics models. Applications to cases involving genetic testing, stem cell research, euthanasia, organ retrieval and transplantation, and pharmaceutical development are among those to be explored. Teaching methods include faculty lectures, case study analysis, small group and class discussions, and industry guest speaker presentations. Students will be evaluated on the quality of individual and team writing assignments as well as a team oral presentation. The course will be offered twice annually by the Penn State Great Valley School of Graduate Professional Studies' MBA program and is a required course in the Penn State Great Valley MBA program option biotechnology and health industry management.

PREREQUISITE BUSAD 830

BUSAD 835: Commercialization of Biopharmaceuticals

3 Credits

Review organizational processes, regulatory, and environmental issues in the development and commercialization of biopharmaceuticals in the United States and globally. BUSAD 835 Commercialization of Biopharmaceuticals (3) This course reviews organizational processes, regulatory, and environmental issues in the development and commercialization of biopharmaceutical products in the United States and globally. Business development strategies and tactics that encourage innovation and enable biopharmaceutical organizations to prosper in changing business environments are emphasized. The regulatory environment globally and nationally is reviewed for its impact on biopharmaceutical discovery and commercialization, including the IND (investigational new drug) and NDA (new drug application) process and quality control/assurance. Organizational dynamics including culture, structure, ethical dimensions of management, and special considerations in global marketing are explored. Marketing and brand management, financial forecasting, and structuring sales and marketing are examined for their impact on successful commercialization of biopharmaceutical products.

Prerequisite: BUSAD530**BUSAD 837: Managing Digital Enterprises**

3 Credits

This course addresses the ways digital technologies transform industry, business models, strategies, operations, and management, and create new markets and products. The competitive advantage module builds on how technological and organizational resources interact to create sustainable competitive advantage. The technology infrastructure and architecture module focus on understanding the core tenets of a digital enterprise and how technology decisions affect the different functional areas of the organization. The Implications of data module focuses on the collection, analysis, and use of massive amounts of data driven by digital technologies. The topics covered include big data, search and ad technologies, health, and current/emerging topics. The Transformational Impact module discusses how technology can create new platforms and marketplaces

BUSAD 843: People Analytics

3 Credits

This course develops students' process modeling, data analytics, and decision-making skills regarding the management of people in an organization. Analytics includes data collection, organization, storage, analysis, and all the tools and techniques used to describe current processes, assess and address challenges, and plan for changes. Before managers can make use of people analytics, they must understand and describe human resource processes as well as the relevant databases, information systems, and other information and resources available. Students in this people analytics course will develop an understanding of traditional work processes, HR management requirements, and HR information system architectures in the context of data-driven approaches to decision-making about people in organizations. Students will learn to model HR processes, develop queries, analyze data, and generate reports to make strategic decisions in areas of HR practice such as selection, compensation, performance evaluation, productivity management and enhancement, training and development, and occupational health. Students will also learn to use process and outcome

metrics to evaluate business outcomes and to assess diversity, equity, and inclusion goals as well as other strategic initiatives. Some hands-on work will be required. This will consist of a series of exercises to be used with an employee database. A series of managerial questions will be provided which can be answered utilizing this database. Students will develop approaches towards answering some of these questions and then seek answers in the database. Students will propose their own answers to at least two of these exercise questions. Students will also have the opportunity to model a real-world management challenge and evaluate the analytical techniques that would be used to reach an outcome or decision. Overall, students will cultivate a leadership perspective that values and practices evidence-based decision-making, develop a deeper understanding of how people data associated with HR processes can increase the likelihood of success for organizational change efforts, and enhance their analytical skills by evaluating people data and by interpreting and meaningfully communicating findings.

Recommended Preparation: Successful completion of a graduate-level statistics course or provide evidence of professional credentials to demonstrate basic knowledge of applied statistical tools and methods prior to enrolling in this course.

BUSAD 855: Full Range Leadership Development

3 Credits

Leadership is one of the world's oldest preoccupations. Since the beginning of civilization, prophets, kings, rulers and managers have struggled to find answers to an important question: Why do most leaders or managers elicit merely competent performance from their followers, while a select few inspire extraordinary achievement? Given increased globalization, diversity, restructuring, e-business and innovation in today's business environment, finding answers to this question is important for maintaining organizational competitiveness. The purpose of this course is to provide answers to this question by identifying traits and behaviors associated with outstanding leaders, explaining how they get results, and why their leadership often exceeds all expectable limits. This course is designed to introduce students to a) behaviors associated with outstanding leadership, b) social learning and cognition in organizations as a context to promote outstanding leadership, and c) leadership development as a strategic intervention to enhance individual, group, and organizational motivation and performance. The course will be run as a graduate seminar. We will interact through Web site technology, general group discussions, team projects, lecturettes, case discussions, exercises and videos. Class sessions will focus on issues raised by the readings, cases, and issues relevant to students' organizational experiences. A portion of the class time may be set aside for the coordination of team projects.

Prerequisite: MGMT 501 or LEAD 501

Cross-listed with: LEAD 855

BUSAD 856: Diversity Leadership

3 Credits

In this course students will explore the theory and practice of diversity leadership through experiential exercises, video and didactic presentations, small group and class discussions, and the analysis and application of models, theories, and strategies for managing an increasingly diverse workforce and customer base.

Prerequisite: LEAD 501 or MGMT 501

Cross-listed with: LEAD 856

BUSAD 859: Career Management

3 Credits

This course is based on the expressed need of many adult graduate students to understand themselves and their careers, to develop the skills necessary to manage their careers effectively throughout their lifetimes, and to help subordinates manage their own careers. Many adult learners are at a critical stage in their careers, with significant decisions regarding job search, career change, managing work-family demands, and/or dual-career relationship concerns. This course is designed to help these students understand these and other career challenges. The Career Management course provides students with a conceptual understanding of careers and career decision-making through an examination and discussion of the literature in career management. Additionally, a significant focus is placed on application of the concepts to understand the student's own career, as well as the careers of supervisors, peers, and subordinates through various diversity, equity, and inclusion lens. This course will blend both conceptual analysis and experiential learning activities focused on helping adult learners understand 21st century careers.

Recommended Preparations: Admission to a graduate degree program or a graduate certificate program, or advisor/instructor approval.

BUSAD 876: Ethical Issues in Information Technology

3 Credits

Computers are the technological foundation of the information age. Well over half of workers in the U.S. and around the globe make their living by collecting, storing, and manipulating data. Technology has improved our lives, but has also created some unpleasant situations that raise serious ethical questions. The course explores important ethical issues that are affected by information technology, such as privacy, free speech, computer crime, intellectual property, IT professionalism, and software product liability.

PREREQUISITE BUSAD 537

BUSAD 879: Sustainable Supply Chain Management

3 Credits

In-depth exploration of sustainability of manufacturing and supply chain operations. BUSAD 879 Sustainable Supply Chain Management (3) BUSAD 879 provides students a set of tools and skills to identify, evaluate, and improve the sustainability of manufacturing and supply chain operations. This course enables students to understand the core concepts related to both supply chain and sustainability. After taking this course, students will be able to design sustainable manufacturing, transportation and supply chain operations. The emphasis in this course is on the design and operations of supply chains to minimize their environmental footprint. Students will also learn how to evaluate suppliers' sustainability to assign purchasing contracts to minimize the environmental impact. Other important concepts such as product remanufactureability design and techniques to reduce energy usage and raw materials will also be discussed.

Prerequisite: BA 810

BUSAD 882: Social Entrepreneurship and Community Leadership

3 Credits

This course uses entrepreneurial and leadership skills to craft innovative responses to social needs. Entrepreneurs are particularly good at recognizing opportunities, exploring innovative approaches, mobilizing resources, managing risks, and building viable, sustainable enterprises. Entrepreneurial skills are just as valuable in the social sector as they are in for-profit business. Social Entrepreneurship aims at social impact but does not exclude economic wealth creation. Therefore it is not limited to the non-profit sector. Despite a sustained economic boom in this country, numerous social problems remain and some seem to be getting worse. The course will provide an overview of business leadership and entrepreneurship principles for both profit and non-profit organizations whose products and services are designed to create social value.

Recommended Preparation: Completion of 24 credits in the MLD program for MLD students; Other programs 6 graduate credits or by permission of instructor.

Cross-listed with: LEAD 882

BUSAD 885: Research in Security Valuation

3 Credits

This course focuses on the analysis and valuation of a firm's equity securities in the financial market using a fundamental analysis. Students will learn how to use different valuation techniques for different types of companies (e.g., companies in financial distress/bankruptcy, private companies, start-up companies with no earnings). The course integrates topics discussed in various finance courses to help students to develop their analytical ability to identify strategies that enhance value creation. The philosophical basis for this topical integration is that valuation of a firm's securities requires one to know not only the accounting issues involved in the preparation of financial statements and how to analyze financial statements, but also to understand the impact of monetary policy, the operation and regulation of financial markets on the value of the firm's equity securities. Moreover, because firm value depends on how well the company is managed, a good understanding of its operations in the global markets, its internal control and risk management strategy is also essential. Finally, because valuation is also based on quantitative models, knowledge of quantitative methods is paramount.

Prerequisite: completion of all core courses in the Master of Finance program

BUSAD 888: Applications of Financial Data Analytics

3 Credits

This course is the capstone course for the financial data analytics option of the MFIN program. After students acquire different techniques and knowledge from other courses, including financial data processing, data cleanup, data mining, and other statistical analysis skills, they will apply these concepts in this course to do case analysis related to real-world applications.

Prerequisite: BA 831, ACCTG 512, BUSAD 525, FIN 808, BUSAD 826, FIN 813, BUSAD 829, IE 575, and SWENG 545

Business Analytics (BAN)

BAN 550: Prescriptive Analytics for Business

3 Credits

Development of methods for prescriptive analytics with a focus on business supply side decisions and risk mitigation. BAN 550 Prescriptive Analytics for Business (3) Analytics, defined as the scientific process of using data and quantitative techniques to make better decisions, has permeated virtually all aspects of business. The widespread availability of large amounts of detailed data combined with analytics methods permits an extensive examination of the tradeoffs that inform business decision making, with the ultimate goal of choosing "best" courses of action. BAN 550 explores the use of prescriptive analytics methods in a variety of business contexts. In the early part of the course, the focus is on the tools and methods of prescriptive analytics. As the course progresses the emphasis shifts to the effective integration and implementation of prescriptive analytics in supply-side decision making processes such as supply chain management, service management, operations, logistics and transportation. The applications areas within business will reflect the interests of the instructors and will evolve as new areas of theory and practice develop.

Prerequisite: BAN 840

BAN 830: Descriptive Analytics for Business

3 Credits

BAN 830 explores the use of descriptive analytics concepts, tools, and techniques throughout a wide range of business scenarios and problems. Initially focusing on the application of traditional descriptive analytics techniques to answer the question, "What happened?," the course provides opportunities for students to perform spreadsheet- and programming-based data acquisition, cleaning, manipulation, and visualization using data derived from various business contexts to inform business leaders' decisions. Later, students progress to applying advanced statistical techniques and concepts including descriptive measures, sampling and estimation, and inference in both spreadsheet and programming environments. The course concludes with a bridge to predictive analytics as students apply linear and multiple linear regression to business-related data in search of relationships among input and output variables. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interests.

BAN 831: Business Data Visualization for Decision Making

3 Credits

Given society's ever-expanding ability to collect and store vast amounts of transactional, performance, and financial data, business analysts and leaders need the capability to recognize patterns in and transform raw data into actionable business intelligence. Designed for recent graduates with little to no professional experience, BAN 831 expands upon the data visualization concepts covered in BAN 830 by exploring a variety of advanced data visualization techniques focused on "big data" sets derived from marketing, finance, accounting, supply chain management, and other business-related scenarios. Using the latest data visualization software applications, business students will focus on the development of dashboards and scorecards useful for translating structured and unstructured business performance data into decision-ready knowledge. The course will prepare business analysts by exploring techniques for

visualizing data from sales transactions, social media, marketing surveys, financial records, and other sources in support of fact-based decision making. An emphasis will be placed on the nuances specific to decision making in various business areas. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interest.

BAN 832: Programming Skills for Business Analytics

3 Credits

Designed specifically for recent graduates with 0-5 years of practical experience, BAN 832 gives business students the foundational programming skills they need to leverage the power of leading edge general purpose programming languages to acquire, clean, manipulate, query, visualize, and analyze large data sets typical of a variety of business environments. With a focus on developing solutions to business data problems, students will become conversant with a variety of software applications in the context of financial, marketing, supply chain management, and other data-rich business scenarios. Coursework includes individual assignments intended to develop dexterity with foundational programming skills, followed by case-based problems that challenge students' creativity and programming mastery in search of solutions to complex business problems. This course aims to put recent graduates on the same level as more experienced analysts with regard to applying programming skills and implementing widely used algorithms to solve business analytics challenges. Previous programming experience is helpful but not required, and students will have the opportunity to augment their learning with additional online tutorials. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interest.

BAN 840: Predictive Analytics for Business

3 Credits

BAN 840 explores the use of predictive analytics tools and techniques throughout a wide range of business scenarios and problems. Initially focusing on the application of traditional predictive analytics techniques to answer the question, "What will happen in the future?," the course provides opportunities for students to apply regression and forecasting techniques to data from various business contexts to inform business leaders' decision. Later, students explore various software applications and techniques for acquiring, preparing, and analyzing "big data", recognizing and taking advantage of the exponential growth in the amount of structured and unstructured data generated by and available to businesses. The course next examines cutting-edge techniques gaining increased attention among analytics experts, including data mining, text analytics, and social media analytics. Finally, students will be given an overview of the future of predictive analytics, developing an awareness of artificial intelligence and machine learning concepts, such as neural networks, to help them advance their organizations' business analytics capabilities. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interests.

Prerequisite: BAN 830

BAN 841: Data Mining for Business

3 Credits

Intended for recent graduates with little to no professional experience, BAN 841 develops business students' understanding of and ability to

apply a variety of data mining tools and techniques for use in detecting and exploiting patterns and relationships in large structured and unstructured data sets derived from a variety of business scenarios. Students will explore the use of cluster analysis, classification, association, and cause-and-effect modeling techniques to explore and reduce data, classify new data elements, identify natural associations among variables, create rules for target marketing or buying recommendations, and describe relationships among data that motivate business performance. Specific techniques may include k-nearest neighbor, discriminant analysis, and association rule mining. Students will learn how to bridge descriptive and predictive analytics across a variety of business scenarios. Coursework includes individual assignments intended to develop confidence with basic data mining techniques, followed by case-based problems that challenge students' creativity and data mining mastery in search of patterns and data relationships leading to useful business insights. While underlying theory will be discussed, the course will prepare business analysts by focusing specifically on data mining applications in marketing, finance, supply chain management, and other business areas, with an emphasis on the unique aspects of decision making in a business environment. Software packages, concepts, and business applications will vary and evolve to keep pace with technology, theory, and instructor interest.

BAN 888: Implementing Analytics for Business

3 Credits

Sets business analytics in real-world context. Explores project life cycle from business problem framing to model lifecycle management. BAN 888 Implementing Analytics for Business (3) The capstone course for the Business Analytics option in the Data Analytics MPS degree program, this course sets analytics problem solving in a real-world context, including communication to non-statistically trained executives. Key topical areas are derived from the common activities of the business analyst and include business problem framing, analytics problem framing, data sourcing, cleaning and integration, analysis methodology selection, model building, model deployment and model lifecycle management including benefit assessment. Topics align with the body of knowledge in the Institute for Operations Research and the Management Sciences (INFORMS) Certified Analytics Professional Study Guide. Students explore each topic in a real world context, by developing solutions to cases in a team setting. Each team selects a case and works through all elements of the analytics body of knowledge, with group presentations on problem framing, analytics model selection and development, and model lifecycle management in a business setting.

Prerequisite: BAN 530 and BAN 550

Business Economics (BUSEC)

BUSEC 502: Economics for Managers

3 Credits/Maximum of 999

Demand & supply; price and output determination in different markets; determination of income, employment, interest rates, and inflation; stabilization policy. The course consists of two main segments: Microeconomics and Macroeconomics. The course begins with basic economic principles of price and output determination in markets. Students will get an understanding of cost structures of firms in the short and long run, and how firms choose to operate. With this foundation, students will proceed to examine market structure, which is the nature of competition among firms, ranging from perfect competition (many non-

dominant suppliers) to monopoly (one dominant market supplier). While studying firms in different market structures, most of the focus will be on business firms which have some market power: monopolistic competition and oligopolies (a small number of inter-dependent suppliers). Strategic behaviors of firms and different oligopoly models will be studied in detail. Business firms operate within an economic environment that provides opportunities, constraints, and threats. The second part of the course focuses on the economic environment over time, generally described as the business cycle. The course will begin considering business cycles by looking first at main indicators such as growth of real GDP (Gross Domestic Product), unemployment rates, and inflation rates. Students will employ simple models of the business cycle to explain recessions, inflation, and other environmental conditions. Financial markets are important in determining economic conditions. Students will learn about the role of financial markets in determining availability and costs of funds. Economic policy is the effort of government to change the economic environment. An important part of the course is the study of these policies. Fiscal policy consists of the use of taxation and government spending to shape the environment. Monetary policy is the effort to influence credit conditions and interest rates for the purpose of achieving a specific environmental change. Domestic economic conditions are increasingly shaped by global conditions. Therefore, a part of the course will be devoted to analysis of foreign exchange rates, interest rates, and monetary policies of other countries. In addition, students will analyze the impacts of barriers to international trade (primarily quotas, tariffs, and foreign exchange controls) and investment.

BUSEC 503: Economic Environment of Business

2 Credits

Analysis of the regulatory and global economic environment within which the firm operates and its implications for business strategy. BUSEC 503 BUSEC 503 Economic Environment of Business (2) Most courses in the School's M.B.A. program focus on managing the individual firm. However, business firms operate within an economic environment that provides opportunities, constraints, and threats. This course enables the firm's decision-makers to assess this environment and to design strategies that are appropriate for conditions in the firm's global, domestic, or regional spheres of operation. The path of changes in the economic environment over time is generally described as the business cycle. The course begins with consideration of business cycle indicators, such as growth of real GDP, unemployment rates and inflation. Students employ simple models of the business cycle to explain recessions, inflation, and other environmental conditions. Class discussions will include consideration of appropriate managerial decisions under each of a variety of these conditions. Financial markets are important in determining economic conditions. Students learn how the interest rate yield curve and other financial market indicators give insight into expectations about credit conditions and economic change. Financial markets also play important roles in determining availability and costs of funds. Economic policy is the effort of government to change the economic environment. An important part of the course is the study of these policies. Fiscal policies consist of the use of taxation and government spending to shape the environment. Monetary policy is the effort to influence credit conditions and interest rates for the purpose of achieving a specific environmental change. Domestic economic conditions are increasing shaped by global conditions. Therefore, a significant part of the course is devoted to analysis of foreign exchange rates, interest rates, and monetary policies of other nations. In addition, students will analyze the impacts of barriers to international trade (primarily quotas and tariffs and foreign exchange controls) and investment. The course concludes with examination of

government regulation and its effect on business. Many regulations are designed to counter-act negative external effects of decisions made by private profit-pursuing firms, especially with regard to pollution of the natural environment. Anti-trust policies, patent and copyright laws. These regulations provide constraints and opportunities for business managers. Students demonstrate achievement through completion of short cases, class discussions, and an examination.

Prerequisite: admission to the MBA program or the MSIS program

Business Law (BLAW)

BLAW 525: Business Law for Innovation and Competition

2 Credits

Nature of intellectual property rights, as well as process for obtaining and enforcing them. BLAW 525 Business Law for Innovation & Competition (2) Primary areas of focus include intellectual property (IP) law (patents, trademarks, copyrights and trade secrets) and antitrust law, as well as basic principles of U.S. law and the legal rules for related industry practices such as licensing. Students will also learn the legal rules designed to encourage competition (and punish anticompetitive behavior). Finally, the course will help students to better appreciate when professional legal counsel is necessary, and how to manage those interactions more cost effectively. Although the course will impart advanced legal concepts, prior coursework in business law is not required.

BLAW 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Cell and Molecular Biology - MD (CMBIO)

CMBIO 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMBIO 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Prerequisite: ANAT 505

CMBIO 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CMBIO 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

Chemical Engineering (CHE)

CHE 501: Bioengineering Transport Phenomena

3 Credits

Application of the equations of mass, energy, and momentum conservation to physiological phenomena and to the design of artificial organs.

Cross-listed with: BIOE 501

CHE 503: Fluid Mechanics of Bioengineering Systems

3 Credits

Cardiovascular system and blood flow, non-Newtonian fluid description, vessel flows, unsteady flows and wave motion, windkessel theory, transmission line theory.

Prerequisite: BME 409 (equivalent to CH E 330, M E 320, or AERSP 308)
Cross-listed with: BIOE 503

CHE 505: Atomistic Scale Simulations for Engineer

3 Credits

This course aims to provide an overview of atomistic-scale methods - in particular, ab-initio based methods like Density Functional Theory and empirical force field methods - to an engineering audience. Due to the increasing availability of computers, atomistic-scale simulation methods are becoming increasingly relevant to engineers, as they can provide key thermodynamic and material properties necessary for the design and analysis of engineering material performance. The main aim of the course is to encourage students to integrate atomistic-scale concepts in their current research. As such, there is a strong emphasis on hands-on experience with various software codes, including commercial codes and academic codes. The students learn the basic concepts of quantum mechanics, statistical thermodynamics, crystallography, physics and chemistry as they relate to ab initio and empirical force field methods and their integration in energy minimization, molecular dynamics and Monte Carlo methods. These concepts are discussed on a conceptual level, enabling students to understand their application range and validity. Furthermore, we dedicate a significant amount of class time to engineer-relevant applications of these force engines and methods.

Cross-listed with: ME 505

CHE 510: Surface Characterization of Materials

3 Credits

Physical and chemical principles of characterization techniques widely used in materials science, chemistry and engineering. CH E (MATSE) 510 Surface Characterization of Materials (3) Surface and interface characterization is an important subject in nanotechnology, heterogeneous catalysis, semiconductor processing, advanced functional materials, biomaterials, corrosion, environmental science, and tribology. This course will study the physical and chemical principles of representative characterization techniques widely used in these research

areas. Topics covered in this course include surface chemistry and physics fundamentals, x-ray and electron-based spectroscopy, vibration spectroscopy, ellipsometry, microscopy with physical probes, and multivariate data analysis. Physical principles and practical applications will be studied through theoretical calculations, data analysis, and literature reviews.

Cross-listed with: MATSE 510

CHE 512: Optimization and Biological Networks

3 Credits

Mathematical optimization, formulation and solution techniques for linear, nonlinear, and mixed-integer problems; optimization-based tools for reconstruction, analysis, and redesign of biological networks. CHE 512 Optimization and Biological Networks (3) This course focuses on the principles and applications of mathematical optimization in biological systems. The first part of the course addresses optimization theory, solution algorithms, and implementation software. Topics include nonlinear optimization, linear programming, mixed-integer linear and nonlinear optimization, and bi-level optimization. Emphasis will be placed on understanding the logic of the methodology, underlying key assumptions, comparative merits and shortcomings, and applications for solving engineering problems. Valuable hands-on experience will be provided on coding optimization models using GAMS (General Algebraic Modeling System) and specialized optimization solvers. The latter part of the course concentrates on applying the tools necessary to address the challenges arising in biological networks. Specifically, the use of optimization in reconstructing and analyzing genome-scale models of metabolism, protein library design strategies, regulatory network elucidation, and synthetic circuits design as well as optimal modifications in metabolic networks for various bioengineering tasks will be studied.

CHE 515: Density Functional Theory and Practice

3 Credits

This course gives students an overview of the theory and practice of calculations performed with Density Functional Theory (DFT). DFT is a powerful tool to calculate the structural and electronic properties of collections of atoms. The course emphasizes the practical aspects of the calculations and the theory will be only described as necessary to understand and perform correct calculations. The target audience of the course is students of Physics, Chemistry, Materials Science, Chemical or Mechanical Engineering, and other science/engineering disciplines that need to learn to perform calculations based on DFT with a minimum of exposure to the theoretical details underlying this technique.

Cross-listed with: PHYS 515

CHE 520: Polymer Science and Engineering

3 Credits

This course provides fundamental understanding of basic principles in polymer science and connects these to current research topics at Penn State as well as novel findings in soft material science at other institutions. Interdisciplinary in content, the curriculum spans from polymer synthesis (chemistry), to physical properties (physics), to characterization, to engineering (chemical engineering), to application of polymer materials (materials science). Two areas of focus will lie on (i) the environmental impact of commodity plastics and (ii) conductive polymers and their every-day use in display technology and energy harvesting. While polymers are versatile and broadly applicable, there lie

significant dangers in their use for us as a society. For example, while the drive for flexible displays and solar cells is increasing, there is no clear pathway for efficient recycling of the resulting electronic polymeric materials. To this end, this course will engage students in discussions about industrial processing of polymers and the importance to find new pathways for their recycling.

Cross-listed with: CHEM 520, MATSE 520

CHE 524: Chemical Engineering, Application of Thermodynamics

3 Credits

Elements of thermochemistry and thermodynamics of greatest importance in chemical engineering.

CHE 528: Colloidal Forces and Thermodynamics

3 Credits

Unified treatment of formation, growth and stability of colloids based on principles of intermolecular and colloidal forces and thermodynamics.

Prerequisite: CHEM 450, CHE 320 or an equivalent background in chemical thermodynamics

CHE 535: Chemical Reaction Engineering

3 Credits

Optimal design of batch and continuous chemical reactors and reactor batteries; effect of mixing on reactor operation.

CHE 536: Heterogeneous Catalysis

3 Credits

Thermodynamics and kinetics of adsorption and reactions on solid surfaces, heat and mass transfer effects, theory and correlations in catalysis.

Prerequisite: CHEM 450, CHEM 452

CHE 544: General Transport Phenomena

3 Credits

Formulation and solution of transport problems involving momentum, heat, and mass transfer, with chemical engineering applications.

Prerequisite: CHE 330, CHE 350, CHE 410

CHE 546: Transport Phenomena II

3 Credits

Heat and mass transfer, steady and unsteady state, coupling, molecular diffusion, moving boundaries, transfer coefficients, chemical engineering applications.

CHE 555: Engineering Soft Materials

3 Credits

Soft materials are materials that can be easily deformed by thermal stresses or thermal fluctuations at about room temperature. In this course, the foundations of soft matter will be explained using numerous real-life examples. A comprehensive overview on different types of soft matter, such as polymers, colloids, gels, liquid crystals, amphiphiles,

proteins, and/or cells will be provided, and the focus will be placed on engineering this burgeoning class of materials to address current challenges in the food-water-healthcare-energy nexus. During the semester, students will be guided to learn about various classes of soft materials and discover their emerging applications to address some of the quintessential challenges of the 21st century.

Recommended Preparation: Basic knowledge of thermodynamics, physical chemistry, and mathematics will be helpful.

CHE 576: Environmental Transport Processes

3 Credits

Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers. C E 576C E 576 Environmental Transport Processes (3) Environmental Transport Processes covers the fundamental of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (i.e., rivers, lakes, and groundwaters). Faculty: Bruce E. Logan

Prerequisite: C E 475

Cross-listed with: CE 576

CHE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CHE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CHE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CHE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CHE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CHE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Opportunity for supervised and graded teaching experience for graduate students in chemical engineering.

Prerequisite: At least one year of graduate study in chemical engineering.

CHE 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

CHE 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Chemistry (CHEM)

CHEM 500: Seminar in Chemistry

1 Credits/Maximum of 99

No description. CHEM 500 CHEM 500 Seminar in Chemistry (1) CHEM 500 is a course in which 1st and 2nd year Chemistry graduate students write about and present a seminar on current chemical research. During their first year of graduate study students are asked to write 6 or more brief reports summarizing and critiquing designated seminars in one of the department's five regular seminar series. These reports are graded for both their scientific content and writing quality. During their second year of graduate study students are asked to write a more lengthy report and give an oral presentation on a topic of current interest in chemistry, but one not closely related to research being done at Penn State. The written and oral portions of this exercise are also graded. Faculty: Andrew Ewing and Mark Maroncelli

CHEM 504: Numerical Methods for Chemists and Engineers

3 Credits

CHEM 504 is a 3-credit course designed to give graduate students an overview of basic numerical techniques. After completion of the course, the students will be able to perform simple computational tasks. The emphasis will be given to numerical solutions of ordinary and partial differential equations relevant to the chemical and biomedical research, such as reaction kinetics and transport phenomena. This 500-level course will contribute to the student's ability to expand the frontiers of knowledge, to perform independent research, work as a team, and make conference-style presentations.

Recommended Preparations: Working knowledge of calculus and familiarity with Matlab.

Cross-listed with: BME 504

CHEM 511: Chemical Nanoscience

3 Credits

Chemical aspects of matter at the nanoscale. CHEM 511 Chemical Nanoscience (3) This course covers chemical aspects of nanoscience. Topics to be covered include how nanoscale matter differs from bulk material; strategies for synthesis, characterization, purification, and chemical functionalization of nanostructures; forces involved in

nanoparticle stabilization and assembly. Emphasis will be placed on wet chemical methods of nanostructure syntheses rather than traditional top-down nanofabrication. Properties of the resulting nanomaterials of interest for uses including biology and medicine, environmental remediation, electronics, optics, catalysis and solar energy conversion will be discussed. The course will emphasize both the primary scientific literature and review articles, and assumes prior knowledge of organic and physical chemistry.

Prerequisite: CHEM 452 and either CHEM 450 or CHEM 466

CHEM 516: Inorganic Chemistry

3 Credits

Overview of systematic inorganic chemistry including main group, transition metal, lanthanide, and actinide chemistry. CHEM 516 Inorganic Chemistry (3) The purpose of this course is to provide a graduate level foundation in the field of inorganic chemistry and its relationship to other areas of science and technology. The emphasis will be on atomic and molecular structure, synthesis methods, and structure-property relationships in a way that will prepare students for studies in more specialized areas such as environmental chemistry, catalysis, materials science, and the biological fields. Opportunities will be provided to integrate the learning experience with the organization of information through writing assignments and class discussions.

CHEM 517: Organometallic Chemistry

3 Credits

Organometallic compounds and their use in catalysis and organic synthesis. CHEM 517 Organometallic Chemistry (3) CHEM 517 provides a graduate-level foundation to a broad range of topics in organotransition metal chemistry with a particular emphasis on catalytic applications in polymer chemistry and organic synthesis. The course assumes a B.S. level understanding of inorganic and organic chemistry. Topics to be covered include the following: basic principles of bonding and structure, elementary reaction mechanisms, and catalytic applications including olefin insertion reactions, cycloisomerization reactions, carbenoid chemistry including olefin metathesis, carbonylations, reactivity of metal allyl complexes, cross coupling and related C&C bond formations, oxidations, reductions and alkylations. Upon successful completion of this course, students can expect to: 1) understand basic concepts in bonding and molecular structure of organometallic compounds, 2) be able to connect electronic and molecular structure with chemical reactivity, 3) describe organometallic reactivity in a mechanistically rigorous fashion, 4) be familiar with common catalytic paradigms that rely on organometallic catalysts, 5) be equipped to critically evaluate the modern primary literature in this field.

CHEM 518: Symmetry and Spectroscopy in Inorganic Chemistry

3 Credits/Maximum of 99

Group theoretical methods and spectroscopies of importance in modern inorganic chemistry. CHEM 518 Symmetry and Spectroscopy in Inorganic Chemistry (3 per semester) CHEM 518 provides a graduate-level foundation in molecular group theory and its use in understanding the molecular orbital structure of organic and inorganic molecules. EPR, NMR, rotational, vibrational, and electronic spectra of molecules are considered with an eye towards using symmetry to simplify analysis. Other spectroscopies of interest to the modern inorganic chemist, such as XPS, PES, and x-ray crystallography are also discussed.

Prerequisite: CHEM 452

CHEM 519: Materials Chemistry

3 Credits

The goal of this course is to provide students with an understanding of the ways in which fundamental chemical principles are utilized in the field of materials science. The approach is to illustrate the crucial importance of synthesis and structure-property chemical relationships in the development of new materials and their utilization in devices. Topics include glasses, oxides and non-ceramics, polymers, metals, semiconductors, superconductors, hybrid materials, and nanomaterials together with the broad range of energy-related, electronic, biomedical, and optical devices on which modern civilization depends. Most of the different types of materials will be discussed, together with approaches to overcome their limitations.

CHEM 520: Polymer Science and Engineering

3 Credits

This course provides fundamental understanding of basic principles in polymer science and connects these to current research topics at Penn State as well as novel findings in soft material science at other institutions. Interdisciplinary in content, the curriculum spans from polymer synthesis (chemistry), to physical properties (physics), to characterization, to engineering (chemical engineering), to application of polymer materials (materials science). Two areas of focus will lie on (i) the environmental impact of commodity plastics and (ii) conductive polymers and their every-day use in display technology and energy harvesting. While polymers are versatile and broadly applicable, there lie significant dangers in their use for us as a society. For example, while the drive for flexible displays and solar cells is increasing, there is no clear pathway for efficient recycling of the resulting electronic polymeric materials. To this end, this course will engage students in discussions about industrial processing of polymers and the importance to find new pathways for their recycling.

Cross-listed with: CHE 520, MATSE 520

CHEM 524: Electroanalytical Chemistry

3 Credits

Electrochemical principles, techniques, and analytical applications. CHEM 524 Electroanalytical Chemistry (3) CHEM 524 covers the fundamental background and applications of electroanalytical methods. Potentiometric methods are discussed in the context of the basic principles of electrochemical equilibrium. Amperometric methods - chronoamperometry, chronocoulometry, stripping voltammetry, cyclic voltammetry, pulse and hydrodynamic techniques - are also discussed in the context of mathematical models for mass transport and electrode kinetics. Applications including spectroelectrochemistry, photoelectrochemistry, ultramicroelectrodes, corrosion, and scanning electrochemical microscopy are covered. The course involves solving differential equations relevant to electrochemical problems by analytical methods as well as by means of digital simulations, so prior knowledge of a programming language is recommended.

CHEM 525: Analytical Separations

3 Credits

Fundamentals and applications of modern chromatographic separations.

Cross-listed with: BMMB 525

CHEM 526: Spectroscopic Analysis

3 Credits

An overview of modern instrumental techniques including FTIR, optical spectroscopy, mass spectrometry, and electron spectroscopies.

CHEM 535: Physical Organic Chemistry

3 Credits

Reactive intermediates, reaction kinetics and thermodynamics, solvent effects, conformational analysis, reaction mechanisms, noncovalent interactions in synthesis, and stereochemistry.

Prerequisite: CHEM 212

CHEM 536: Medicinal Chemistry and Chemical Biology

3 Credits

The goal of this course is to provide a foundation in development and application of chemical technologies to the understanding and manipulation of biological systems. Chemical biology is a relatively new field that spans the traditional fields of chemistry and biology by applying chemical technologies to the understanding and manipulation of biological systems. As such, this course should be accessible and provide benefit to students working in both chemical and biological areas. Lectures include higher-level biological chemistry (assuming prior knowledge of biological chemistry at an undergraduate level, such as CHEM 476 or BMB 401) and synthetic chemistry and biology principles along with current literature in the field of chemical biology.

Prerequisite: CHEM 476 or B M B401

Cross-listed with: BMMB 536

CHEM 537: Organic Synthesis

3 Credits

Organic synthesis including both classical and modern synthetic methodology as well as applications to construction of complex molecules.

Prerequisite: CHEM 535

CHEM 538: Spectroscopic Methods in Bioinorganic Chemistry

3 Credits

Foundations in spectroscopic methods employed for the determination of the geometric and electronic structure of transition metal clusters in nature.

Cross-listed with: BMMB 538

CHEM 539: Biochemical Reaction Mechanisms

3 Credits

Mechanisms of the most important biochemical reactions, with emphasis on enzyme catalysis.

Prerequisite: CHEM 476 or B M B401

Cross-listed with: BMMB 539

CHEM 540: Biophysical Chemistry

3 Credits

This three-credit course will cover the key theories and experimental methods of contemporary biophysics and biophysical chemistry. The course discusses the structures and dynamics of biomolecules (such as proteins, DNAs, and RNAs), the statistical mechanical models to describe the behaviors of biopolymers and the biophysical methods to analyze the structures of biopolymers in solution, the biophysical theories for protein folding/unfolding and the experimental methods to measure the kinetics of protein folding/unfolding and the protein structural dynamics, the principles of biomolecule structure determination by X-ray crystallography and cryogenic electron microscopy, and fluorescence microscopes, as well as the theories to describe ligand binding to biological macromolecules (such as receptors, protein complexes, aptamers, etc.) and the experimental methods to measure ligand binding. For all the topics covered by this course, emphasis will be laid on both theoretical models and experimental methods will be discussed. Classic and modern biophysical and biochemical techniques ranging from spectroscopy and FRET to optical microscopy, including super-resolution and micromanipulation techniques, will be covered. Applications of these biophysical techniques will also be discussed.

Prerequisite: CHEM 450

Cross-listed with: BME 540

CHEM 543: Polymer Chemistry

3 Credits

This graduate course discusses the new advances in polymer chemistry that leads to new polymeric materials with interesting structures and properties. CHEM (MATSE) 543CHEM (MATSE) 543 Polymer Chemistry (3) This course provides advance level of polymer chemistry and materials taught in MATSE 441 - Polymeric Materials. Students are able to know the versatility that is inherent in polymer chemistry and the new research results and activities, especially controlling polymerization, polymer structures, designing polymers with desirable properties, etc. Students shall also understand the major economic and environmental concerns and solutions in producing commercial-scale polymers. This polymer chemistry course provides important links between chemistry and polymeric materials. The course will focus on recent advances in polymer chemistry that affords new polymer materials with controlled polymer structures, compositions, and properties, as well as economic and "green" processes. This course is designed for graduate students having basic knowledge in organic, inorganic, and organometallic principles. For Chemistry major, this course offers students with the knowledge to apply chemical principles and methods to design and prepare the desirable polymers (no prerequisite for Chemistry graduate students). For Material Science and other majors, this course provides advance level of polymer chemistry and materials taught in MATSE 441 (a prerequisite course). In addition, each student will be required to review (presentation and term-paper) a contemporary subject relative to polymer chemistry, which will help student self-education, and presentation and writing skills. Students will be evaluated by quizzes and examinations, a term-paper and presentation, and class participation.

Prerequisite: MATSE441 or approval of program

Cross-listed with: MATSE 543

CHEM 545: Statistical Thermodynamics

3 Credits

Basic principles of statistical mechanics with application to the calculation of thermodynamic properties of gases and condensed phases.

Prerequisite: CHEM 450 , CHEM 452

CHEM 565: Quantum Chemistry I

3 Credits

A foundation in the principles of quantum mechanics and their applications to chemistry.

Prerequisite: CHEM 452

CHEM 566: Quantum Chemistry II

3 Credits

Additional techniques in quantum mechanics, with applications to problems in molecular structure and light-matter interactions.

Prerequisite: CHEM 565

CHEM 567: Molecular Spectroscopy

3 Credits

Principles and applications of classical and modern spectroscopic methods.

Prerequisite: CHEM 565

CHEM 572: Nucleic Acids Chemistry

3 Credits

Biophysical and biochemical approaches for studying structure-function relationships in nucleic acids. BMMB (CHEM) 572 Nucleic Acids Chemistry (3) The goal of this course is to provide a foundation in biophysical approaches for studying the quantitative and structure-function relationships in nucleic acids systems, including DNA, RNA, and their interactions with proteins, salt, and water. Lectures include basic physical chemistry and statistical mechanics principles along with current literature in the biochemical sciences. At the end of the course, you should be able to meaningfully dissect molecular biological papers at the level of the physical chemistry of these processes. Current topics are introduced through reading and presenting papers from the literature.

Prerequisite: CHEM 212 , CHEM 450

Cross-listed with: BMMB 572

CHEM 573: NMR Spectroscopy for Synthetic and Biological Chemistry

3 Credits

Nuclear magnetic resonance approaches for characterizing the structure and dynamics of synthetic compounds, natural products, and biological macromolecules.

Prerequisite: CHEM 452

Cross-listed with: BMMB 573

CHEM 574: Metals in Biology: Structure and Mechanism

3 Credits

The goal of this course is to acquaint students with the many important roles that metal ions play in biological systems (bioinorganic chemistry). We will explore how structural biology, enzymology, spectroscopy, cell biology, and chemical biology methods have been used to understand how metal ions are used in biological molecules. These approaches have enabled discovery of the chemistry of these systems, and an understanding of how that chemistry fits into the broader biological context. We will apply bioinorganic chemistry in solving important challenges in energy, health, and the environment. Course activities include application of basic inorganic chemistry and biochemical principles, discussion of current literature in the biochemical sciences, implementation of biomolecular structure visualization software, and problem solving. At the end of the course, students will be able to critically engage with the bioinorganic literature and propose experimental approaches to unresolved questions in the field.

Prerequisite: CHEM 476 or BMB 401 Recommended Preparations: CHEM 412

Cross-listed with: BMMB 574

CHEM 589: Studies in Chemistry

1-9 Credits/Maximum of 9

Theoretical research, experimental research, or a critical survey of the literature in an area of chemistry.

CHEM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CHEM 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CHEM 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CHEM 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Teaching of chemistry undergraduate laboratory and recitation classes with senior faculty instruction supervision.

CHEM 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

CHEM 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

CHEM 810: Liquid Chromatography I

1 Credits

The course specifically caters to the needs of the analytical chemical industry and individuals newly hired into entry-level sample management/preparation and quality assurance/quality control positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.

CHEM 811: Liquid Chromatography II

1 Credits

The course specifically caters to the needs of the analytical chemical industry and individuals hired into, or transitioning into, technician level positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.

Prerequisite: CHEM 810**CHEM 812: Liquid Chromatography III**

1 Credits

The course specifically caters to the needs of the analytical chemical industry and individuals hired into, or transitioning into, development-level, or senior-level, chemist positions within companies using liquid chromatographic techniques. The course material is designed to increase student understanding of both the liquid chromatography instrument used in the laboratory and the principles underlying the measurements.

Prerequisite: CHEM 811**Chinese (CHNS)****CHNS 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Civil Engineering (CE)**CE 511: Engineering Soil Characteristics**

3 Credits

Applications of physico-chemical principles in soil engineering; soil composition; factors influencing engineering soil properties.

Prerequisite: C E 335**CE 512: Soil Mechanics II**

2-5 Credits/Maximum of 5

Evaluation of strength parameters and compressibility of soils; elastic analysis of stress and strain; techniques of forecasting foundation settlement; slope stability analysis.

CE 513: Advanced Foundation Engineering

3 Credits

Practical applications of soil mechanics principles to geotechnical engineering problems; dewatering techniques; design of deep foundations and retaining structures.

Prerequisite: C E 335**CE 521: Transportation Networks and Systems Analysis**

3 Credits

Techniques of transportation network, user, stochastic user, and variable demand equilibrium; transportation activity system; computer simulation techniques and forecasting methods.

Prerequisite: 3 credits of computer science**CE 522: Traffic Flow Theory and Simulation**

3 Credits

This course will cover advanced topics related to traffic operations and traffic flow theory. Students will be exposed to a variety of theories, methodologies, and principles that are used to assess traffic operations on surface transportation systems, as well as their applications. The course will be divided into two major subject areas: 1) operations on uninterrupted facilities, such as freeways; and, 2) operations on interrupted facilities, such as urban streets and large urban networks. Topics in the former area include kinematic wave theory, cell and link transmission models, variational theory, moving-bottlenecks, bottleneck identification and incident management. Topics in the latter include signal coordination, macroscopic fundamental diagrams, multimodal conflicts and their impacts. The course also includes an overview of traffic microsimulation software and its applications to both areas.

Concurrents: CE 423**CE 523: Analysis of Transportation Demand**

3 Credits

Theories of travel behavior, least squares and maximum likelihood, estimation methods, continuous dependent variable models, utility maximization, discrete econometric techniques.

Prerequisite: 3 credits of probability and statistics**CE 525: Transportation Operations**

3 Credits

Tools for analyzing transportation operations, including: properties of traffic streams, queuing, traffic dynamics, networks, probability and estimation of traffic properties. C E 525 Transportation Operations (3) This course presents the concepts of traffic and transportation operations necessary for students pursuing an advanced degree in transportation engineering. While the course focuses on surface traffic and related systems, the tools and methods discussed can be used in other sub-disciplines (e.g., public transportation, aviation, and bicycle/pedestrian movement) to analyze operations. Logic and methods are emphasized as opposed to recipes that are specific to certain modes.

Prerequisite: C E 423

CE 526: Highway and Street Design

3 Credits

Technical analysis of the design elements of roadways, alignment, cross-section features, and intersection and interchange design considerations.

Prerequisite: C E 421

CE 527: Roadside Design and Management

3 Credits

Roadside safety and design, safety management, pavement management, lighting, signs, signals, and markings, clear zone, guiderail, impact attenuators.

Prerequisite: C E 421W

CE 528: Transportation Safety Analysis

3 Credits

Issues and methods in transportation safety analysis; factors contributing to crashes; crash causation; modeling accident occurrence; identifying sites for treatment. C E 528C E 528 Transportation Safety Analysis (3) This course introduces students to issues and methods in transportation safety analysis; factors contributing to crashes; methods of analysis for determining crash causation; modeling accident occurrence; identifying crash sites for treatment. Students will be evaluated using periodic homework assignments, a mid-term exam, and a class project. Students are expected to learn fundamental aspects of highway accident occurrence and modeling. They will be introduced to modeling techniques and methods used to assess causality in crashes. The course is offered annually in the fall semester.

Prerequisite: STAT 401

CE 529: Infrastructure Systems Analysis and Decision Making

3 Credits

This course focuses on the physical infrastructure systems that provide essential public services, including transportation, energy, water, communications, etc. These complex, large-scale, expensive systems must be planned for and managed. This course emphasizes different tools (including basic economic theory, mathematical modeling, and optimization techniques) that can be used to study these complex systems, drawing examples from transportation. This includes evaluation of infrastructure investments; better informing the data collection and inspection process; modeling deterioration of infrastructure components such as pavement; and maintenance and repair decision-making at both the single facility and system level.

CE 531: Legal Aspects of Engineering and Construction

3 Credits

Basic legal doctrines, contractual relationships between parties, analysis of construction contract clauses, contract performance, and professional practice problems.

Prerequisite: C E 431W

Cross-listed with: AE 531

CE 536: Topics in Biogeochemistry

2 Credits/Maximum of 999

This seminar addresses chemical interactions between the biosphere and the physical environment over Earth's history and as impacted by humans. This course will provide a broad survey of biogeochemical principles, and offer a community-building experience for students with biogeochemical interests from diverse departments. Students will complete the course with a synthetic knowledge of the key topics in the field of biogeochemistry. Each week we will focus on a topic within the broad field of biogeochemistry such as: origins of the elements, reactions in the atmosphere, soil development, the distribution of redox reactions and microbial metabolic pathways, and the global cycles of carbon, water, nitrogen, phosphorus, sulfur, mercury, and perhaps other elements. For each topic, we will focus on the questions: What is known or can be observed? How is this information used to understand biogeochemical phenomena and process? How are these processes scaled over time and space? What are emerging and important questions in the subspecialties of biogeochemistry?

Cross-listed with: GEOSC 536, SOILS 536

CE 538: Earthquake Resistant Design of Buildings

3 Credits

Introductory engineering seismology, basic principles of structural dynamics, application of earthquake design provisions of model building codes to design of buildings. A E (C E) 538 Earthquake Resistant Design of Buildings (3) The main objective of this course is to familiarize students with basic principles of design of buildings to resist earthquake effects. Since building design is governed by the Building Code, currently, International Building Code that adopts American Society of Civil Engineers (ASCE) document ASCE-7 for load determination, the seismic provisions of ASCE-7 will be used as the basis for design. The course starts by introducing earthquake phenomenon and engineering seismology concepts. The basic principles of structural dynamics are then covered for single degree of freedom systems starting from free vibration to random loading so that students learn how a ground acceleration time-history subjected to the base of a building can be converted to a time varying effective seismic load on the mass. After introduction of response spectrum, introductory material on multi-degree of freedom systems is introduced so that students can determine natural frequencies and mode shapes for multi-story buildings and perform modal superposition analysis to determine displacement and force responses. Next, the principles of earthquake resisting design related to energy dissipation, ductility, over-strength, and redundancy followed by seismic provision of the building code are discussed. The main design principles related to the two main materials for building construction consisting of reinforced concrete and structural steel are next discussed. The focus will be to illustrate how lateral load resisting systems such as shear walls, moment resisting frames, or braced frames made with such materials as appropriate are designed to resist earthquake effects based on respective material code provisions, that is, American Concrete Institute (ACI) for concrete and American Institute of Steel Construction (AISC) for steel. The last part of the course will introduce seismic retrofit, base isolation systems and the concept of performance based design.

Prerequisite: A E 401 , A E 402 , A E 430

Cross-listed with: AE 538

CE 539: Approximate Methods of Structural Analysis

3 Credits

Structural analysis through the application of initial-value methods, Newmark's method, Fourier series, finite difference techniques, and work and energy procedures.

Prerequisite: C E 340

CE 540: Statically Indeterminate Structures

3 Credits

Analysis of statically indeterminate straight/curved beams, grids, 2D/3D frames, arches, cables, and shells using classical and modern techniques. C E 540 C E 540 Statically Indeterminate Structures (3) This course introduces students to various methods for analyzing statically indeterminate structural systems, including: straight and curved beams, grids, 2D and 3D frames, arches, cables, and shells. Both classical hand calculation approaches and more modern computer based approaches that utilize force and displacement based methods are discussed. Additional analysis topics, such as plastic analysis and the examination of beams on elastic foundations are presented. The procedures are introduced to the students so that their ability to analyze statically indeterminate structural systems is enhanced. In addition, practical applications for the methods that are discussed are presented.

CE 541: Structural Analysis

3 Credits

Theory of various finite elements as applied to civil engineering structures. Term paper required.

Prerequisite: C E 447

CE 542: Building Enclosure Science and Design

3 Credits

The building enclosure: nature, importance, loadings; building science: control of heat, moisture, air, hygrothermal analysis; design: walls, windows, roofs, joints. A E 542 A E (C E) 542 Building Enclosure Science and Design (3) The building enclosure, or envelope, is the environmental separator in any building and is, like the superstructure and the service systems, one of the major physical components of the building. The primary objective of this course is to develop an understanding of the nature, importance, functions, and performance of the building envelope in general. The necessary building science—concerning primarily heat, moisture, and air—is covered, and hygrothermal analysis procedures are developed. A generalized categorization system for enclosure elements, i.e., walls (both above- and below-grade), roofs, and other enclosure sub-assemblies is proposed. General design strategies are developed. The design of specific wall systems (both above- and below-grade), roof systems, base floors, windows, and their joints is then addressed in some detail. The integration of structures (composite action, restraints, etc.), service systems (especially energy consumption), and finish (exterior and interior) is considered in some detail. Evaluation is based on an equal combination of assignments (6) and examinations (2). This course complements courses in architecture, civil engineering, architectural engineering, and mechanical engineering.

Cross-listed with: AE 542

CE 543: Prestressed Concrete Behavior and Design

3 Credits

Design and behavior of prestressed concrete structures: materials and systems losses, flexure, shear, bond, deflections, partial prestressing, continuous beams.

Prerequisite: C E 341 , A E 402 , or approved equivalent

CE 544: Design of Reinforced Concrete Structures

3 Credits

Advanced topics in design of reinforced concrete structures. Torsion and shear; beam moment-curvature; two-way slab systems; slender columns; strut- and-tie methodology. C E 544 C E 544 Design of Reinforced Concrete Structures (3) This course explores advanced topics in the design of reinforced concrete structures in conformance with standardized building codes. Topics covered include load combinations, principles of structural modeling, torsion and shear in reinforced concrete members, two-way slab systems, moment-curvature of beams, slender columns, and strut-and-tie models. Students enrolled in this course should have prior knowledge of the design of reinforced concrete beams, one-way slabs, and short columns. Due to the course content, students must be familiar with the American Concrete Institute (ACI) Building Code Requirements for Reinforced Concrete. This course will generally be offered each fall, with an anticipated enrollment of 10. Grades will be based on two examinations, assignments, and a comprehensive final examination.

CE 545: Metal Structure Behavior and Design

3 Credits

Design philosophies and basis; seismic loading; fatigue; bending, column, plate, and beam-column stability; tapered members; torsion; connections; bracing; frame stability. C E 545 C E 545 Metal Structure Behavior and Design (3) This course presents advanced topics in elastic and inelastic structural metal member behavior and the theoretical basis of modern design codes and procedures. Philosophies of design, fatigue, bending stability and tapered members, torsion, stability of plates, stability of columns, stability of beam-columns and bi-axial bending, connections, and frame stability are covered in depth in addition to other topics relating to advanced behavior and design of metal structures. Students interested in this course must be familiar with the American Institute of Steel Construction (AISC) Manual of Steel Construction. This course will generally be offered each fall, with an anticipated enrollment of 12. Grades will be based on homework assignments, a semester project, two examinations, and a comprehensive final examination.

CE 548: Structural Design for Dynamic Loads

3 Credits

Dynamic behavior of structural systems of one and more degrees of freedom; earthquake, blast-resistant analysis, and design of structures.

Prerequisite: E MCH212 , C E 340

CE 549: Bridge Engineering I

3 Credits

Engineering of modern steel and concrete bridge structures; loading; analysis; design.

Prerequisite: C E 448W

CE 550: Engineering Construction Management

3 Credits

Management fundamentals for construction contracting; organization, project planning, scheduling and control, bonding and insurance, labor legislation and regulation, cost and control.

Prerequisite: C E 431

CE 551: Random Processes in Hydrologic Systems

3 Credits

Hydrologic systems analysis, simulation; design using probability, time series and dynamical systems; formulating models, parameter estimation, environmental impact, resource assessment.

Prerequisite: C E 361 ; introductory probability and statistics

CE 555: Groundwater Hydrology: Analysis and Modeling

3 Credits

Introduction to groundwater resource analysis, model formulation, simulation, and design of water resource systems using symbolic and numerical methods.

Prerequisite: MATH 251

CE 556: Environmental Electrochemistry

3 Credits

This goal of this course is to prepare students to perform and interpret research in the field of environmental electrochemistry. Students will learn the fundamental mechanisms of electrochemistry and will apply this knowledge to (1) design theoretical experiments to address research questions relevant to environmental engineering and science and (2) analyze and re-interpret results from recently published peer-reviewed studies in this field. Within the field of environmental engineering and science, electrochemical techniques are commonly used to characterize the reactivities and thermodynamic properties of environmental samples, such as soils, minerals, and natural waters. Electrochemical techniques are also frequently used to solve environmental problems, with applications including the treatment and remediation of polluted water and the generation of renewable electricity from waste sources. This course is designed to enable students to critically read environmental electrochemical literature and to design and develop their own electrochemical experimental systems. To achieve this goal, the course consists of five sections that are roughly equal in length. Section 1 covers the underlying chemistry and thermodynamics relevant to electrode potentials and redox chemistry. Section 2 covers galvanic and electrolytic reactions by covering examples of batteries and fuel cells relevant to environmental engineers. Section 3 addresses the role that kinetics and transport play in electrochemical systems and the mathematical expressions used to cover them. Section 4 covers electrochemical techniques used to study environmental systems and

solve environmental engineering problems, such as pollution remediation and renewable energy production. Section 5 covers electrochemical impedance spectroscopy, a complex electrochemical technique used to determine how an electrochemical system can be best approximated as a circuit. As a whole, these sections develop students with the educational foundation necessary to further study specific topics relevant to their research or interests.

CE 561: Surface Hydrology

3 Credits

Quantification of the processes that govern the movement and storage of water near the land-surface including precipitation, evapotranspiration, and runoff. C E 561 C E 561 Surface Hydrology (3) Water is an important factor in numerous engineering and scientific problems. It can be both a hazard and a resource. Knowledge of the movements and storage of water in the terrestrial, oceanic, and atmospheric environments is fundamental in many such applications. This course provides a graduate level introduction to surface hydrology, which focuses on the quantification of water pathways near the land-surface. It presents basic properties of the terrestrial, oceanic, and atmospheric environments and develops water and energy budget equations for different settings and scales. The course also provides detailed quantitative descriptions of the main processes responsible for the movement of water in the environment including precipitation, evapotranspiration, snowmelt, infiltration, surface runoff, groundwater recharge, subsurface runoff, and streamflow.

CE 563: Systems Optimization Using Evolutionary Algorithms

3 Credits

Comprehensive introduction to genetic and evolutionary computation: genetic algorithms, evolutionary strategies, multi-objective optimization, parallelization approaches, and fitness approximation. C E 563 C E 563 Systems Optimization Using Evolutionary Algorithms (3) A comprehensive introduction to the field of genetic and evolutionary computation. The course emphasizes state-of-the-art methods for designing and implementing evolutionary algorithms for computationally intensive engineering and science problems. Course concepts are demonstrated using case studies drawn from the disciplines of the students enrolled. The course is offered every spring semester.

CE 564: Sediment Transport in Alluvial Streams

3 Credits

River flow, river channel formation, the physical characteristics of rivers, responses of rivers to natural and human-made changes. C E 564 C E 564 Sediment Transport in Alluvial Streams (3) A comprehensive presentation of river processes and engineering must be built upon the foundations of fluvial geomorphology, hydraulics of river flow, and sediment transport. The course is organized into the following five principal parts: Part I. Fluvial Geomorphology Part II. Foundations of Fluvial Process Part III. Regime Rivers and Processes Part IV. Mathematical Modeling of River Channel Changes Part V. River Engineering

Prerequisite: C E 462

CE 566: Uncertainty and Reliability in Civil Engineering

3 Credits

Introduction to probabilistic modeling, simulation, uncertainty analysis, and reliability estimates applied to civil engineering. C E 566C E 566
Uncertainty and Reliability in Civil Engineering (3) The objective of this course is to develop understanding of the uncertainty in Civil Engineering analyses, design, and construction and to introduce reliability-based methods of analysis. The course covers review of probability and statistics, uncertainty analysis, probabilistic models of load and resistance, and the application of reliability analysis to problems in Civil Engineering.

CE 567: River Engineering

3 Credits

Introduction to river mechanics and fluvial geomorphology applied to problems of sediment transport and channel morphology. C E 567C E 567
River Engineering (3) River Engineering will introduce students to the concepts of flow and sediment transport in canals and alluvial rivers. This course covers: river morphology and hydraulic geometry; hydraulics of flow in river channels; measurement of velocity; rating curves; properties of sediment; scour-related problems; stream stability and classification; sediment movement in rivers; channel design; software for erodible channels; stream bank, bridge pier, and bridge abutment protection; environmental considerations; and stream restoration. During the semester, the students will visit local streams for the purpose of making various observations and measurements. Faculty: Peggy A. Johnson

CE 570: Environmental Aquatic Chemistry

3 Credits

Speciation, reactivity, and distribution of contaminants in water, with emphasis in inorganic chemicals.

Prerequisite: C E 475

CE 571: Physical-Chemical Treatment Processes

3 Credits

The theory of physical-chemical processes used in the treatment of potable water and municipal and industrial wastewaters.

Prerequisite: C E 472 , C E 475

CE 572: Biological Treatment Processes

3 Credits

The theory and application of biological processes to treat organic wastes, including wastewater, solid residuals, and toxic priority pollutants.

Prerequisite: or concurrent: C E 475

CE 573: Environmental Organic Chemistry

3 Credits

Theory, measurement, and estimation of the characteristics and environmental transformations of hazardous materials.

Prerequisite: C E 475

CE 574: Reactive Transport Processes in Porous Media

3 Credits

Recommended Preparations: It is recommended that the students have taken courses on principles of water chemistry, biogeochemistry, or water-rock interactions. This course teaches principles and modeling of flow, transport, and reaction processes in the natural and built environment. The course targets students from a range of disciplines where water-mineral-microbe interactions play a key role. This includes, but not limited to, environmental engineering, water resources, geosciences, petroleum and natural gas engineering, agricultural engineering, civil engineering, chemical engineering, and applied mathematics. The course teaches fundamental concepts, mathematical formulation, and quantitative representation, and applications of multi-component reactive transport processes. The learning outcomes are to 1) understand fundamental concepts of biogeochemical reactions, flow, and solute transport; 2) understand reactive transport equations and concepts of numerical solution; 3) develop computational skills using a reactive transport modeling code. The students will grasp reactive transport concepts, as well as skills to set up reactive transport models, interpret data, and predict subsurface physical flow and geochemical and microbiological process coupling.

CE 575: Industrial Waste Management

3 Credits

Surveys and analysis, pollution prevention, regulatory requirements, treatment and disposal of liquid, gaseous and solid residues.

Prerequisite: C E 472

CE 576: Environmental Transport Processes

3 Credits

Fundamentals of chemical transport in engineered environments, such as biofilm reactors, and natural systems including aquifers and rivers. C E 576C E 576
Environmental Transport Processes (3) Environmental Transport Processes covers the fundamental of mass transport of chemicals between air, water, soil, and biota. Material is divided into three subject areas: mass transfer theory, transport processes related to engineered reactors, and transport in the natural environment. The focus of the course is on chemical calculations particular to dilute systems, with emphasis on quantifying chemical transport rates and distributions in natural and engineered environments. Special topics of interest to environmental engineers include biofilm models, bioreactors, chemical partitioning in thin fluid film bioreactors, and fate of anthropogenic chemicals from spills and discharges into the environment (i.e., rivers, lakes, and groundwaters). Faculty: Bruce E. Logan

Prerequisite: C E 475

Cross-listed with: CHE 576

CE 577: Treatment Plant Design

1-6 Credits/Maximum of 6

Design of works for the treatment of water and wastewater for municipalities and industries.

Prerequisite: C E 472 ; 3 credits in hydraulics

CE 578: Groundwater Remediation

3 Credits

Application of fundamental physical/chemical/biological processes in natural and engineered systems for remediation of contaminated soil and groundwater.

Prerequisite: C E 475

CE 579: Environmental Pollution Microbiology

3 Credits

Fundamentals of microorganisms in water and wastewater treatment; indicators of pollution; activities of microorganisms in polluted waters, including biogeochemical cycles.

CE 580: Hydrodynamic Mixing Processes

3 Credits

Physical mixing processes in rivers, estuaries, lakes, and oceans. Analytic methods and computational modeling. C E 580C E 580 Surface Water Quality Models (3) Hydrodynamic Mixing Processes is concerned with the transport and dispersal of tracers in natural water and air environments. It straddles the boundary between traditional civil engineering fluid mechanics (concerned with water quantity) and environmental engineering (concerned with water quality). Emphasis is placed on understanding the physical hydrodynamic processes responsible for tracer dispersal and application to practical problems through use of freely-available numerical models.

CE 581: Civil Infrastructure Asset Management

3 Credits

This course provides students with comprehensive knowledge of civil infrastructure asset management at the systems level - from state-of-the-practice to research frontiers. Particular emphasis is placed on transportation and networked infrastructure across multiple modes, including pavements, bridges, geotechnical structures, roadside appurtenance and signs, waterways, airfields, railways, and pipelines. Applications to other civil infrastructure assets (e.g., dams) are also considered. The life-cycle management of public infrastructure has become increasingly critical in the 21st century. For most countries, the infrastructure to support various modes of transportation - railways, roadways, bikeways, pedestrian facilities, pipelines, waterways, and airfields - is the most valuable publicly owned infrastructure. Transportation infrastructure asset management, or civil infrastructure asset management, is the systematic process of making decisions regarding the construction, maintenance, repair, and replacement of infrastructure components to maximize the functional performance of the system within economic constraints of both agencies and users. In this course, the key components of an effective infrastructure asset management system are examined in the context of contemporary and future challenges—including sustainability, resilience, climate change, autonomous vehicles and smart infrastructure, and equity.

CE 582: Pavement Design and Analysis

3 Credits

Viscoelastic analysis; non-linear analysis; fatigue and permanent deformation; back-calculation of layer moduli; mechanistic-empirical design methods.

CE 583: Bituminous Materials and Mixtures

3 Credits

Composition, physical behavior, production, and performance of bituminous materials and mixtures.

CE 584: Concrete Materials and Properties

3 Credits

Study of concrete properties and associated variables, prediction models, testing, preventative measures, pozzolans, admixtures.

Prerequisite: A E 221 or C E 336

CE 585: Advanced Characterization of Cementitious Materials

3 Credits

This graduate level course will familiarize students with advanced experimental and characterization techniques that are commonly used for studying cement and concrete materials. In addition, students will learn and practice on several advanced topics related to cement chemistry. The methods that are commonly covered include electron microscopy, X-ray diffraction, thermogravimetric analysis, mercury porosimetry, gas adsorption and BET, particle characterization, isothermal calorimetry, and thermodynamic modeling. Students will learn the principles and theories behind each technique as well as the correct methods for sample preparation and data analysis that are unique to cementitious materials. Students will learn and practice these techniques through reading assignments, interactive classroom discussions, laboratory demonstrations, and a term project.

CE 587: Computational Ecohydrology

3 Credits

Ecohydrology is an integrative science that studies mutual interactions between hydrological, biogeochemical, and ecological processes. The lectures of the course will discuss the fundamental processes controlling the flow of water in the biosphere (in land, atmosphere, soil, and plants) and the interactions with ecological processes, implications of ecohydrological feedbacks covering broad range of issues including global environmental change, land use change, global desertification/land degradation, urbanization, soil erosion, and the food-energy-water nexus. The computational lab will provide hands-on experience on ecohydrological analysis with geographic information system software and ecohydrologic model. The course will also introduce students to parallel computing and optimization methods.

Recommended Preparation: Previous coursework in hydrology is expected

Cross-listed with: ABE 587

CE 589: Critical Zone Science Seminar

1-3 Credits/Maximum of 3

This course will explore the foundations, discoveries, and applications linked to the Critical Zone concept through primary literature, class discussions, and original student projects. We will start by spending one week each on the four foundational science domains that are woven together to make Critical Zone science: hydrology, geoscience, soil science, and ecology. Then we will spend several weeks highlighting key discoveries that arise from the interdisciplinary Critical Zone perspective. The end of the class explores whether the Critical Zone science perspective might have useful applications for land and water management. Throughout the class, students take a co-leadership role with the instructors in terms of selecting readings, lecturing, and designing active learning allied with key concepts.

Cross-listed with: GEOSC 589, SOILS 589

CE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CE 591: Environmental Engineering Seminar

1 Credits

Seminar topics selected by faculty and students based on research interests on topics related to environmental engineering and science. C E 591 C E 591 Environmental Engineering Seminar (1) This is a seminar course offered primarily for graduate students in Environmental Engineering, although other graduate students with interests in environmental research take this course. Graduate students may receive only 1 credit of this seminar towards a degree in Environmental Engineering, however, they are encouraged to register and attend every semester during their graduate career. This course is offered for 1 credit for both fall and spring semesters. Students making presentations receive letter grades, while others receive a satisfactory/unsatisfactory grade. Seminar topics are selected by faculty and students based on research interests on topics related to environmental engineering and science. Most of the talks will be by environmental engineering graduate students. However, during the semester there will typically be three outside speakers that will be invited to give talks. Students in this class are expected to meet with these outside speakers in the laboratory to discuss their own research projects. Students in this class give short presentations on their research topics. Each presentation should be about 20 minutes in length, allowing for 10 minutes of questions concerning the technical content of the presentation. The rest of the class is used for general discussion. Students are encouraged to give a seminar even though they have not completed all of their research (i.e. prior to their defense). Feedback from faculty and other students in this informal setting can be used to help improve research ideas and stimulate new ideas and research directions during the course of their research work.

CE 592: Environmental Engineering & Science Topics

1 Credits

Current topics in environmental engineering and science. C E 592 C E 592 Environmental Engineering & Science Topics (1) This is a literature review course for graduate students interested in topics related to

environmental engineering. The subject of this seminar changes each semester. Examples of topics include: membrane bioreactors; biological hydrogen production; metal reduction by soil bacteria; anaerobic respiratory pathways used by bacteria for pollutant degradation. This class is highly participation-oriented. Each week we review a single paper selected by the instructor or by a student in the class. The first two papers are selected by the instructor. Thereafter, students choose the paper. The paper must be selected one week in advance, and sufficient copies will either be brought to class or a pdf file will be provided by email to all participants one week prior to the class. The student choosing the paper will be expected to lead the discussion by: prompting others to provide a summary of the paper or of key items; suggesting areas that require closer inspection; stimulating a critical evaluation of the paper. No background is needed on this topic other than general environmental engineering courses typical of an M.S. program in Environmental Engineering.

CE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CE 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CE 599: Foreign Studies

1-2 Credits/Maximum of 4

Courses offered in foreign countries by individual or group instruction.

CE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in college teaching.

CE 603: Foreign Academic Experience

1-9 Credits/Maximum of 18

Foreign study and/or research constituting progress towards the degree at a foreign university.

CE 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

CE 835: Integrated Project Management for Civil Engineers

3 Credits

This course will present the project management process to students pursuing a graduate degree in Civil Engineering. The course will utilize a project/group-based learning process to teach project management's value, methodology, and application to civil and environmental engineering projects in the student's particular emphasis area (Infrastructure, Transportation Systems, or Water and Environment). Students will learn how to initiate, plan, organize, staff, direct, control, and closeout a project. Key topics to be discussed include: the role of the project manager, civil engineering project procurement/proposal development, importance and skills of communications, project team development and leadership, team conflict resolution, design management, scope management, work breakdown structure (WBS), scheduling/time management, budgeting/cost management, risk management, resource management, crisis management, earned value, project evaluation and control, and project closeout and termination.

Classics and Ancient Mediterranean Studies (CAMS)

CAMS 501: Comparative Greek and Latin Grammar

3 Credits

This course establishes the historical, linguistic and cultural foundations of proto-Indo-European, the reconstructed ancestral language which underlies most of the languages of Europe and some of the languages of western Asia and the Indian subcontinent. In the first part of the course, a uniform reconstructed system for the protolanguage is developed, based on the comparative analysis of the major branches of the Indo-European language family. Once the essential character of the protolanguage has been established, the course concentrates on the evolution of the two classical languages, Greek and Latin, as historical outcomes of the proto-Indo-European ancestral system. Special emphasis is laid on the systematic study of the vocabulary, the sound system and the system of word-formation, and on the similarities and differences which are evident in the two classical languages.

Recommended Preparations: Students should have completed basic Greek and Latin courses; a background in historical linguistics is recommended.

CAMS 503: Seminar on Ancient Mediterranean Languages

3-9 Credits/Maximum of 9

This course features advanced study of a particular ancient Mediterranean language or dialect, group of languages or dialects, or a specific language topic, such as philology, paleography, epigraphy,

or linguistics in the Ancient Mediterranean, including Rome, Greece, Egypt, Syria, Anatolia, Mesopotamia, Iran, Arabia, etc. The choice of primary topic in each iteration of the course is made by the instructor. The following are some examples of topics: "Seminar in Old Egyptian Texts" (or Middle Egyptian, or Late Egyptian texts); "Akkadian Dialects"; "Mishnaic Hebrew"; "Regional Greek Epigraphic Texts"; "Bohairic Coptic"; "Old Persian Inscriptions"; "Vulgar Latin"; "Imperial Aramaic," or others. As such, this course is repeatable by students. The aim of the course is to provide students with critical exposure to aspects of ancient Mediterranean language study as well as a solid grounding in scholarly research methods for ancient language study.

CAMS 520: Advanced Sumerian

3 Credits

Advanced study of Sumerian grammar and cuneiform writing through the reading of Sumerian literary texts.

CAMS 521: Advanced Akkadian

3 Credits

Advanced study of Akkadian grammar and the cuneiform script through the reading of texts in various dialects.

CAMS 522: Comparative Semitics

3 Credits

Overview of the Semitic language family and introduction to its comparative linguistic study.

CAMS 530: Ancient Judaism: Special Topics

3 Credits/Maximum of 3

This course offers rotating topics in the study of ancient Judaism. The choice of primary topic in each iteration of the course is made by the instructor. The course features advanced study of Judaism in a range of historical settings, from its beginnings in biblical Israel to the development of Jewish texts, traditions, and communities in the Hellenistic and Roman periods. By adopting a critical approach, this course offers students an opportunity to conduct and examine research on ancient Judaism in a theoretically informed, cross-disciplinary manner. The course brings methods, material, and insights from Jewish studies to bear on ongoing work in many fields, including history, philosophy, political theory, religious studies, and comparative literature. Course topics may be thematic, revolving around specific themes like diaspora, Jewish identity, Jewish experiences of empire, or questions of gender. They may be organized around specific places or periods, for example: the history of Jerusalem, Jews in Hellenistic Egypt, first-century Palestine, Roman-era Alexandria, or late antique Babylon. They may also include the analysis of Jewish literature or textual traditions within their social, political, religious, and cultural contexts. The aim of the course is to provide students with critical exposure to aspects of ancient Judaism as well as a solid grounding in scholarly research methods.

Cross-listed with: JST 530, RLST 530

CAMS 550: Proseminar

3 Credits

The specific aim of this proseminar is to provide a foundation for scholarly work in the disciplines included within Classics and Ancient

Mediterranean Studies. This proseminar will therefore provide the student an overview of the scope and nature of the ancient evidence (literary, documentary, material [archaeological]), the history and historiography of modern study of that evidence and the ways in which research methodologies and techniques have evolved. In addition, the proseminar will introduce students to the nature of contemporary academic presentation and publishing, thereby to assist them in preparing research papers for scholarly dissemination.

CAMS 560: Research Seminar

3 Credits/Maximum of 9

The specific aim of this seminar is to provide a research experience in one of the disciplines included within Classics and Ancient Mediterranean Studies. This seminar will therefore give students an overview of the scope and nature of the ancient evidence (literary, documentary, material [archaeological]), the history and historiography of modern study of that evidence and the ways in which research methodologies and techniques have evolved in a specific discipline of CAMS.

Prerequisite: CAMS 592

CAMS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Clinical and Translational Sciences (CTS)

CTS 590: Colloquium

1 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

CTS 595A: Clinical Science Internship

3-6 Credits/Maximum of 999

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Students enrolling in this course must 1) be at least a 2nd year graduate student; 2) have completed the online CITI Program course in Human Subjects Research; and 3) have identified an available mentor in a clinical setting.

Prerequisite: CTS 590

CTS 595B: Translational Science Internship

3-6 Credits/Maximum of 6

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. Students

enrolling in this course must 1) be at least a 2nd year graduate student; 2) have completed the online CITI Program course in Human Subjects Research; and 3) have identified an available mentor in an industry setting.

Prerequisite: CTS 590

CTS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CTS 596B: IBD Nutr Clin Rota

3 Credits

IBD Nutr Clin Rota

CTS 596C: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CTS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Communication Arts and Sciences (CAS)

CAS 500: Historical Public Address

3 Credits/Maximum of 9

Special topics in American public address, 1765-1900; emphasis on rhetoric of revolution, reform, and reaction. CAS 500CAS 500 Historical Public Address (3 per semester/maximum of 9) This is a graduate seminar focusing on special topics in the history of American public address, 1765-1900. It is designed to strengthen students' knowledge of the historical foundations of the American rhetorical tradition. Special attention is paid to key texts, debates, and movements shaping the origins and development of American nationhood. Emphasis is placed on the language of revolution, reform, and reaction. Special topics through which this course is to be taught may include: The Rhetoric of the American Revolution, Rhetoric of Abolitionism and Civil Rights, The Rhetoric of the Women's Suffrage Movement, Great Debates in American History, and Rhetoric and the American Presidency, 1789-1900. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 503: Rhetorical Criticism

3 Credits/Maximum of 6

An advanced seminar in the history, theory, methods, and practice of rhetorical criticism. CAS 503 CAS 503 Rhetorical Criticism (3 per semester/maximum of 6) An advanced seminar in the history, theory, methods, and practice of rhetorical criticism. Students should consult

with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

Prerequisite: CAS 411

CAS 504: Contemporary Public Address

3-9 Credits/Maximum of 9

Special topics in recent history of American public address, including speeches, debates, persuasive campaigns, and social movements in America 1900-present. CAS 504 CAS 504 Contemporary Public Address (3 per semester/maximum of 9) This course is a graduate seminar focusing on special topics in the history of American public address since 1900. Through intensive study of great speeches and other rhetorical texts, important national debates and controversies, and significant persuasive campaigns and social movements, it cultivates specialized understanding of the distinctively American tradition of public advocacy and deliberation and illuminates how that tradition has evolved in response to political and social developments and new communication technologies. Special topics reflecting the research interests of current faculty who might be expected to teach the course include: "The Rhetoric of the Progressive Era," "The Rhetoric of the New Deal," "The Manifesto in Contemporary Social Movements," "The Rhetoric of Contemporary Political Campaigns," and "The Rhetorical Presidency." Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 505: Historical Development of Rhetorical Theory

3 Credits/Maximum of 9

Study of one or more periods of rhetorical theory from Greek antiquity to 1900.

Prerequisite: CAS 420

CAS 506: Contemporary Rhetorical Theory

3 Credits/Maximum of 6

A study of rhetorical theory from 1930 to the present, focusing on semantic, political, sociological, symbolic, and philosophical perspectives.

Prerequisite: CAS 411 , CAS 505

CAS 507: Issues in Rhetorical Theory

3 Credits/Maximum of 6

Theoretical, analytical, philosophical, and critical problems in human communication, with application of humanistic and social scientific research framework. CAS 507 CAS 507 Issues in Rhetorical Theory (3 per semester/maximum of 6) The seminar is available to members of the faculty who wish to explore specialized problems of a theoretical, analytical, philosophical, or critical nature in human communication research. Its content varies by instructor. Such subject areas of language and meaning, epistemology, ethics and moral philosophy, metaphysics and ontology, the functions of myth, cognition, child development, and brain function may be considered for the contributions they make to our understanding of rhetorical behavior. Special topics reflecting the research interests of current faculty who might be expected to teach the course include: "Rhetoric, Myth, and Cosmology," "Rhetoric and Ethics," "The Rhetorical Construction of Social Identity," and "Rhetoric and Public Deliberation." Students should consult with the instructor prior

to enrolling to ascertain that the course topic is not the same as in prior enrollments.

Prerequisite: CAS 420

CAS 509: Democratic Deliberation

3 Credits

Modern political systems are as likely to move further away from deliberative ideals as toward them, and such movement can undermine a system's democratic legitimacy. This problem has inspired the development of deliberative democratic theory and research, which provides a powerful critique of contemporary politics. The study of deliberation dates back to ancient Greece, which gave us forms of speech that endure to the present day. Current conceptions stress public deliberation and dialogue's potential to ameliorate social and political problems, including polarization and incivility, and to generate more robust and reflective public policy solutions to complex problems. These ideas fold into grander theories of deliberative democracy, which considers how everything from cultural practices to large-scale institutions feed into the overall system of public discourse in a society. Students will review philosophical and interpretive works, as well as empirical research on deliberation utilizing case studies, surveys, and experiments. This seminar also helps students plan and execute their own contributions to this growing body of scholarship.

CAS 515: Rhetoric and Media

3 Credits/Maximum of 9

Seminar in the application of rhetorical theory and criticism to television, film, and other media. CAS 515 CAS 515 Rhetoric and Media (3 per semester/maximum of 9) Seminar in the application of rhetorical theory and criticism to television, film, and other media. In a recent offering of the seminar, we studied the films of Alfred Hitchcock from the point of view of The Rhetoric of the Thriller: The Films of Alfred Hitchcock as Art, Entertainment, and Social Text. This course offered an intensive examination of the art of Alfred Hitchcock, one of the great film artists of the twentieth century. Each week, the class screened one or more of Hitchcock's classic films. The class then met in small discussion sections for intensive analysis of the films and a series of related readings. Our discussions and readings explored Hitchcock as one of Hollywood's most successful popular entertainers, the "master of suspense"; as one of the great artists of the medium; as a critic of American culture; and as a persona whose reputation is a construction of his own efforts, and the product of reviewers and academic critics. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 530: Political Communication and Media

3 Credits

Study of rhetorical and communicative dimensions of contemporary political communication with particular attention to electronic media. CAS 530CAS 530: Political Communication and Media (3) This seminar explores the rhetoric of electronically mediated political discourse, including broadcast speeches, news coverage of politics and political campaigns, campaign debates, political advertising, talk radio, and political websites. Addressing key problems and issues in democratic theory and practical politics, the seminar explores questions frequently raised by both scholars and political pundits: How has the character of political discourse changed in the age of electronic media? How

have new communicative technologies affected political discourse? Is it possible to have an engaged, informed, and responsible electorate in the age of 30-second spots, ads and journalistic sound bites? What might be done to improve the quality of political discourse and to enhance public deliberation? How might new media technologies be used to combat political alienation and promote civic engagement? The specific focus of the seminar varies by semester. Recent seminars have focused on the rhetoric of presidential campaigns, conceptions of the public and public opinion in the age of mass media and polling, and the political significance of such non-traditional media as motion pictures and websites. Whatever the topic, the focus remains on the impact of mass media on the quality and character of political discourse in America. Students in the seminar will join in a larger scholarly conversation about the impact of new media technologies on democratic politics. Students in CAS 530 will read scholarly works on mass media and politics from a variety of disciplines, as well as more popular writings that have developed influential critiques of contemporary political communication or have advocated reforms in the laws and regulations governing mass media. Given the subject matter, the seminar is necessarily interdisciplinary in approach, and students will be encouraged to take interdisciplinary approaches to their own research and writing for the seminar.

CAS 550: Social Influence

3 Credits/Maximum of 6

Theory and devices of persuasion; analysis of persuasive discourse. CAS 550 CAS 550 Social Influence (3 per semester/maximum of 6) This is a graduate-level seminar designed to provide students with social scientific theoretical principles for explanation, prediction, and practice in social influence contexts and situations. CAS 550 emphasizes the positive and negative outcomes likely to be associated with specific messages designed to influence others in social and societal settings. It emphasizes the importance of audience analysis and goal selection in guiding message design, and source and channel selection to communicate in ways that are intended to form, change, or reinforce and maintain others' beliefs, attitudes, values, and behaviors. It affords significant opportunities to address the gaps between theory and measurement in social scientific research pursuits. These attempts may employ a highly active cognitive approach or a more passive strategy. Both approaches are examined in this course. The course content and setting reflects the above aims. The course begins by defining social influence, provides an overview of its history, and introduces the major theories associated with social influence formation, change, and reinforcement objectives. The course devotes significant time to the evaluation of existing social influence attempts, including review of the channel(s) and source(s) used to deliver particular messages. Students will also practice known strategies for designing influence messages. These activities will take place within the framework of knowledge generated by research findings associated with the influence theories examined in the class. Evaluation will include participation in class, exams that include application in the form of a social influence case study, and a research proposal associated with the application of social influence theories to message design and evaluation. The course complements graduate students' interests in pursuing academic, business, health, management, public relations, advertising, sales, and other career ambitions where communication is associated with the desire to influence others. The course will increase students' critical thinking and informed decision-making skills associated with others' efforts to influence them. It also frames discussion about the ethics of

and ethical decision-making associated with persuasion. CAS 550 will be offered every other year with 15 seats per offering.

Prerequisite: 6 credits in Communication Arts and Sciences

CAS 551: Persuasive Communication

3 Credits

CAS 551 (Persuasive Communication) is a graduate level survey of classic and contemporary thinking on persuasive communication. The overarching goal of the course is to impart an understanding of the major issues and concerns in one of the oldest and most extensive literatures in social science. Students should leave the course with a broad understanding of the content and contours of the field as well as a set of strong empirical generalizations. Because of the enormous role that persuasion plays in shaping contemporary society as well as the day-to-day lives of individuals, an understanding of it is essential for scholars, consumers, and citizens.

CAS 553: Disaster Communication

3 Credits

This seminar provides students with a comprehensive understanding of the multifaceted nature of disaster communication across phases of a disaster.

CAS 554: Small Group Communication

3 Credits/Maximum of 6

Communication variables in small groups. Experimental research and innovations in communication in vocational, therapeutic, and educational groups. CAS 554 CAS 554 Small Group Communication (3 per semester/maximum of 6) Group communication is a specialized area of study that has ties to the related areas of interpersonal and organizational communication. These ties reflect the fact that groups typically are part of some larger organizational structure and that it is the interaction among the members of groups that drive their performance. The major objectives of the course, which is presently offered once every two academic years, are to provide students with (1) an in-depth examination of what social scientific research has revealed about the functions of communication among the members of groups in various interpersonal and organizational contexts and (2) the opportunity to engage in an even deeper examination of a specific issue relating to a specific function of communication in one of the types of groups included, that is, decision-making and problem-solving groups, familial groups, educational groups, work groups, and support groups, by means of an original research project. The first three weeks of the course acquaint students with the general domain of group communication as a specialized area of study, as well as the dominant theoretical and methodological approaches in evidence. In the fourth and fifth weeks, students come to understand how communication in groups functions generally to socialize the members and thereby shape their respective cultures, as well as influence the ways in which they characteristically fulfill the purposes for which they have been created. During the remaining ten weeks of the course, the accent is on particular types of group contexts and the unique ways in which communication is manifested in each. Finally, each student identifies and executes an original research project, the results of which he or she shares with other members of the class in the form of a scholarly paper which, if warranted, he or she subsequently modifies for presentation at a professional conference and possibly publication. Determination of overall mastery of the course content derives from

a student's performance on a comprehensive final examination held during the regularly scheduled final examination period. The grade for the research project and the final examination combined provide basis for the recorded grade for the course. The course requires no special facilities other than a classroom. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

CAS 555: Interpersonal Communication

3 Credits/Maximum of 6

Investigation of the communicative management of ongoing relationships; examination of how communication both creates and responds to exigencies of friendship. CAS 555 CAS 555 Interpersonal Communication (3 per semester/maximum of 6) This course is intended for graduate students who want an in-depth understanding of interpersonal communication across contexts. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes. Structurally, the course begins with a review of definitional and philosophical issues underlying research and theory in interpersonal communication, then covers the major frameworks and theories that make up knowledge in the area. In addition, some of the primary issues debated in the literature will be discussed. Evaluation methods will include presentations and research paper(s), but may also include exams and participation. Students should consult with the instructor prior to enrolling to ascertain that the course topic is not the same as in prior enrollments.

Prerequisite: CAS 403

CAS 556: Relational Communication

3 Credits

Examines theories and research focused on understanding communication in intimate (or potentially intimate) relationships. CAS 556CAS 556 Relational Communication (3) This course is intended for students who want an in-depth understanding of interpersonal communication in intimate and potentially intimate relationships. It is a graduate-level course, so the expectations for the level of discussion are high and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes in relational contexts. The focus will be on cognitive and social theories of relational encounters, including friendships, romantic relationships, and family relationships. Structurally, the course begins with a review of different philosophical issues underlying research and theory in the field of relational communication. Then, students will shift their attention to the major social scientific perspectives on human relationships. Next, major theories would be discussed and the course would be completed with a more focused discussion of central issues related to relational communication. Evaluation methods will include, research paper(s) and presentations, but may also include exams, short papers, journals, quizzes, and creative activities.

Prerequisite: CAS 403

CAS 557: Health Communication

3 Credits

Provides experience in making decisions about planning, implementing, and evaluating communication in community-based health campaigns to achieve health promotion/education. CAS 557 CAS 557 Health Communication (3) This is a graduate seminar designed to provide students with a comprehensive overview of health communication in community-based health campaigns. Health messages are a pervasive feature of contemporary American life. The study of health communication for community-based campaigns overviews strategies for informing, motivating, and selling ideas and behaviors based on health and health care. Students will select a target community and topic to use as a focal point for applying course readings. Students will prepare an evaluation plan for assessing policymakers' involvement in your health topic. This should include projection of the need for policymakers' involvement, using as many archival materials as possible to conduct a formative evaluation of the need and a plan to obtain the additional information needed to identify the gaps between current and projected levels of involvement. Students will also assess previous efforts to involve lay and expert communities in health promotion efforts associated with their topic, and summarize findings, preparing an organizational membership roster for both Expert Advisory Board and Community Steering Committee, and providing a mission statement to be used in recruitment. Provide a draft of a commitment contract to be signed by board and committee members. Students will also examine previous efforts to involve educational institutions, and lay and expert providers in promotion efforts, summarizing findings and developing a vision of how these audiences should be and could be involved. Previous efforts to involve businesses, retailers, and family in promotion efforts will also be assessed, with development of a vision of how these audiences should be and could be involved included. The health communication seminar complements students' interests in pursuing academic, political, counseling, pastoral, business, health, management, public relations, advertising, sales, and other career ambitions where community-based campaigns comprise an important focus.

Prerequisite: CAS 453

CAS 558: Family Communication

3 Credits

Examines theories and research focused on understanding communication in family contexts. CAS 558CAS 558 Family Communication (3) This course is intended for students who want an in-depth understanding of communication in family relationships. It is a graduate-level course, so the expectations for the level of discussion are high and the instructor will assume that students have a serious interest in studying research and theory focused on understanding communication processes in family contexts. The focus will be on communication theories of family relationships, including parent-child relationships across the life span, sibling relationships, and marital relationships. Students are encouraged to apply this knowledge to their own lives. Students should leave the course with a much more thorough understanding of factors that affect communication within family interaction. Structurally, the course begins with a review of different philosophical issues underlying research and theory in the field of family communication. Then, students will shift their attention to the foundational issues/principles underlying communication in family contexts. Once the course successfully increases student awareness of these foundational principles, the course moves to a focus on

interactions within family settings. As part of this move, the course will address communication in parent-child, intergenerational, marital, and sibling relationships, and will include general topics such as affection and intimacy, conflict, power and control, and strengthening and repairing relationships. Throughout, the course will discuss communication processes within the larger cultural, interpersonal, and communication contexts in which family relationships are situated. Evaluation methods will primarily include exams, paper(s), research projects, and critical thinking reaction papers.

Prerequisite: CAS 405

CAS 559: Lifespan Communication

3 Credits

How various communication processes such as language skills, interpersonal relationship definition and management, social support change cross the lifespan. CAS 559CAS 559 Lifespan Communication (3) Lifespan Communication is a graduate seminar that emphasizes how communication processes (e.g., language skills, interpersonal conflict management, socialization and support, etc.) are developed, maintained and changed across the lifespan. The seminar concentrates upon numerous communicative processes from infancy through childhood, adolescence into middle age, and beyond middle age into later life. Numerous theoretical perspectives that incorporate lifespan principles will guide this seminar. The most recent research that investigates communication across the lifespan will be read and critiqued. This course is grounded in the assumption that multiple disciplines have investigated and continue to investigate human interaction at all points in the lifespan. Therefore, sociological, psychological and anthropological research will complement the research in the discipline of communication that will be discussed in the seminar.

Prerequisite: CAS 403 or equivalent

CAS 560: Communication Theory

3 Credits

This course introduces graduate students to the philosophical underpinnings of communication research and develops skills in theory construction. CAS 560CAS 560 Communication Theory (3) The first Department of Communication was established in the 1950s, and most departments of communication are less than 30 years old. This course is intended for graduate students who want an in-depth understanding of the philosophical issues underlying research and theory in human communication. It is a graduate-level course that emphasizes theory development in the area of human communication behavior. The readings covered are extensive, contributing to an expectation for abstract and integrative thought and discussion. Students should have a serious interest in studying theory construction and related philosophical underpinnings. Structurally, the course begins with a review of definitional issues underlying research and theory in human communication, moves to a focused discussion of various epistemological and ontological positions in the social sciences and humanities, then shifts to issues of theory construction and development. In addition, some of the primary issues debated in the related literatures will be discussed. Evaluation methods will include presentations and paper(s), but may also include exams and participation. As a result, students will examine where knowledge about communication comes from while defining social science, metatheory, theory, and levels of theorizing; acquire familiarity with the breadth, scope, and range of communication theory as a domain of study; comprehend major issues confronting researchers

and theoreticians in communication; and acquire a vocabulary suitable for understanding the discussion that takes place in the field's journals and at communication conferences. The course is planned as a foundational course for all graduate students entering the graduate program with interests in non-rhetorical methods of inquiry, and it is strongly recommended for all students entering the graduate program with interests in non-rhetorical methods of inquiry. This course will be offered once a year with 15 seats per offering.

Prerequisite: CAS 403

CAS 561: Quantitative Research Methods

3 Credits

Introduces graduate students to principles, issues, and design considerations underlying social scientific methodology; material is applied to communication research. CAS 561 CAS 561 Quantitative Research Methods (3) This course is intended for graduate students who want an understanding of the quantitative methodology and research design. It is a graduate-level course, so the reading is heavy, the expectations for the level of discussion are high, and the instructor will assume that students have a serious interest in becoming critical consumers of quantitative research methods. Structurally, the course begins with a review of definitional issues, moves to a thorough discussion of sampling, reliability, and validity in research designs, then shifts to an understanding of quasi-experimental and experimental designs. In addition, some of the primary issues debated in the literature on quantitative methodologies will be discussed. Evaluation methods will include presentations and paper(s), but may also include exams and participation. The course is planned as a foundational course for all graduate students entering the graduate program with interests in non-rhetorical methods of inquiry, and it is strongly recommended for all students entering the graduate program with interests in non-rhetorical methods of inquiry. This course will be offered once a year with 15 seats per offering.

Prerequisite: CAS 403

CAS 563: Pairs & Pairings: Quantitative Methods for Interdependent Data

3 Credits

Foundational course exploring methods for addressing interdependent data: dyadic analysis and social network analysis. CAS 563 Pairs & Pairings: Quantitative Methods for Interdependent Data (3) This graduate seminar is a foundational course exposing students to two quantitative perspectives that are increasingly encountered in the communication research: dyadic analysis and social network analysis. Dyadic analysis and social network analysis attempt to analyze non-independent data, and test concepts such as interpersonal influence, position, role, or social distance and segregation. By the end of the semester students should have an understanding of these perspectives, be able to conduct basic dyadic and social network analyses competently, and be ready to anticipate various boundaries, caveats, and necessary conditions. The ultimate objective of this seminar is to produce informed users and consumers of quantitative research using quantitative methods for handling interdependent data.

Prerequisite: CAS 561

CAS 564: Measurement in Communication Science

3 Credits

This course is concerned with the theory and technology of measuring variables relevant to the study of communication. In a phrase, the course is about construct validity. It consists of three major sections. The first focuses on how to devise and evaluate a conceptual definition, then create a corresponding operational definition. This section lays the groundwork for the subsequent sections that present data-analytic procedures for evaluating the correspondence between concept and operation. Part two of the course addresses measures in which the symbols reflective of the phenomenon are ordered. Specific topics include consistency indices of reliability, exploratory factor analysis, and confirmatory factor analysis. Part three emphasizes measurement of phenomena for which the symbols are not ordered, that is, the measurement of categories. It covers the creation and evaluation of coding schemes as they are used in verbal protocols, content analysis, and social interaction analysis as well as agreement indices of reliability. The overarching goal of the course is to impart some of the conceptual and practical skills necessary for conducting social scientific research.

CAS 565: INTERPERSONAL COMMUNICATION & WELL-BEING

3 Credits

This course is a graduate-level examination of research linking interpersonal communication to outcomes associated with personal well-being. This course is grounded in a biopsychosocial understanding of health, which recognizes that physical and mental health is shaped by social experiences, including interpersonal communication. The course begins by reviewing various indices of well-being, mind-body linkages, and evidence that interpersonal communication produces outcomes relevant to well-being. Next, we explore the literature linking well-being to social support in its various forms, spanning the health benefits of social network involvement to the impact of specific comforting messages. We turn then to the deleterious impact of caustic relationship states and communication episodes representing facets of interpersonal conflict. Throughout the semester, attention will be given to the theoretical issues and methodological challenges that confront researchers working on these topics, and a review of those issues serves as the capstone session for the semester.

CAS 567: Health Campaigns: Design and Evaluation

3 Credits

Theory and methods of message design, audience analysis, evaluation, and ethics in health communication research. CAS 567 Health Campaigns: Design and Evaluation (3) This graduate course explores theories of health communication and approaches to designing and evaluating effective communication campaigns that attempt to address real-world health issues. The real-world health issues may vary from pandemic conditions involving global coordination to specific ones appearing within a smaller, cohesive network in a particular neighborhood. Students will consider theory-driven campaigns targeting audiences who represent a variety of languages as well as co-cultural orientations and identities, in domestic and international settings. Students will learn theories and methods related to audience analysis, campaign design, and program evaluation. This course will cover issues of inference, ethics, and sources of bias in health campaign design and evaluation.

CAS 581: Discourse Analysis

3 Credits

Overview of theories and approaches to the analysis of spoken and/or written discourse. APLNG 581 APLNG (CAS) 581 Discourse Analysis (3) This course is designed to provide an overview of the various theories of and approaches to the analysis of spoken and written discourse, e.g., speech act theory, conversation analysis, pragmatics, contextual analysis, functional/cognitive grammar, grammar and interaction. These and other approaches are intended to serve as analytic tools and frameworks for students to ultimately design and carry out their own research projects within the course of the semester. Research projects may focus on any aspect of language use, such as language and grammar, language and interaction, language and culture, language socialization, language and cognition; projects may center on some phenomenon of English or may involve other languages, as long as the student is capable of conducting an in-depth analysis of the particular phenomenon under investigation in that language.

Cross-listed with: APLNG 581

CAS 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers. CAS 590CAS 590 Colloquium (1-3) The CAS Colloquium provides a forum for the presentation of graduate student and faculty research, as well as for discussion of professional issues, such as preparing a curriculum vitae or teaching portfolio, publishing scholarly work, applying for grants, and interviewing for academic positions. All first-year graduate students register for the colloquium, and graduate students at all stages of their career are strongly encouraged to attend.

CAS 594: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small group basis.

Prerequisite: prior approval of proposed assignment by instructor

CAS 595: Internship

1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction.

Prerequisite: prior approval of proposed assignment by instructor

CAS 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CAS 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CAS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CAS 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CAS 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Students enrolled will, under supervision, teach SPCOM 100—introduction to speech communication: formal speaking, group discussion, analysis and evaluation of messages.

CAS 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

CAS 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Communication Sciences and Disorders (CSD)

CSD 500: Research Methods in Communication Sciences and Disorders

3 Credits

Methodology necessary for understanding and conducting research in communication disorders.

Prerequisite: 15 credits in communication sciences and disorders

CSD 520: Physiologic and Acoustic Issues in Speech Science

3 Credits

Seminar in the physiologic and acoustic aspect of normal and disordered speech production. CSD 520CSD 520 Physiologic and Acoustic Issues in Speech Science (3) CSD 520, Physiologic and Acoustic Issues in Speech Science (PHSIO-ACS SPCH SCI), is a 3-credit course offered every Fall semester. The course is required of all CSD graduate students working towards a masters degree in Communication Sciences and Disorders. The educational objectives of the course are to provide information on acoustical and some physiological aspects of normal speech production, along with some applications to disordered speech production, particularly neurogenic speech disorders, stuttering, and voice disorders. The goal of the course is to provide the graduate student with experience using the most common methods of speech analysis in the research laboratory and the clinic. Because of the frequent use of audio recording equipment in the field, the emphasis is on acoustical analyses for measurement of vowel and consonant properties. Considerable emphasis is placed on coarticulation. Assessment is based on student projects including vocal fundamental frequency analysis, electroglottographic analysis, acoustic analysis of articulation, analysis

of vowels of typical speakers as well as vowels of speakers who stutter, and acoustical analysis of consonants.

Prerequisite: 12 credits in communication sciences and disorders

CSD 540: Phonological Disabilities

3 Credits

Speech-sound production disorders in children and adults; methods of examination, diagnosis, and treatment. CSD 540CSD 540 Phonological Disabilities (3) CSD 540, Phonological Disability (PHONOL DISABILITY), is a 3-credit graduate course typically offered every spring semester. The course is required of all graduate students pursuing a masters degree in Communication Sciences and Disorders. The course has two prerequisites, CDS 442, Introduction to Disorders of Articulation and Phonology and CSD 495A, special topics in phonetics. The objectives of the course are to develop an attitude of critical thinking in the areas of phonological disorders. Class discussions, tests, and projects promote synthesis of ideas. In addition, the course integrates research and practice and a portion of class meetings is spent relating research findings to clinical practice in the treatment of phonological disorders. Original articles focusing on treatment of phonological disorders are required reading. Class sessions and independent and group projects emphasize the assessment and analysis of speech produced by children with disordered phonological systems and assist students to utilize clinically efficient speech sample collection and transcription procedures that optimize the reliability, validity, and potential informativeness of obtained data. Activities involving treatment planning are utilized to assist graduate clinicians in designing efficacious treatment, predicting outcomes, and determining effectiveness of intervention. Student performance is evaluated through tests, take-home projects, critique writing, and inclass projects and quizzes.

Prerequisite: CSD 442

CSD 541: The Voice and Its Disorders

3 Credits

Physical, physiological, and psychological bases of voice production; causes, nature, and symptoms of its disorders; current clinical methods in voice improvement. CSD 541CSD 541 The Voice and Its Disorders (3) This course presents information on vocal function for speech and the disorders that are common to the human vocal folds. During the first section of the course, the physical, physiological, and psychological bases of voice production are discussed along with the causes, nature, and symptoms of voice disorders. Voice disorders are difficult to understand without adequate demonstrations; therefore, the class uses videotapes and voice samples to help foster understanding of the course material. The first portion of the course also includes a review of the anatomy and physiology of the voice and vocal acoustics and extensive coverage of various laryngeal pathologies. Second, voice evaluation and diagnosis are examined including VisiPitch training, electroglottography, endoscopy and stroboscopy. Third, specific clinical management techniques are examined including treatment for vocal abuse and laryngeal muscle tension reduction. Alaryngeal voice disorders are examined including pre- and post-operative counseling and tracheoesophageal speech and voice prosthetics. Finally, neurological disorders of the voice and resonance disorders are examined.

Prerequisite: CSD 444

CSD 542: Fluency Disorders

2 Credits

The purpose of this course is to analyze modern theories of causes of disorders of rhythm in speech; methods of examination, diagnosis, and treatment in fluency disorders; and, the supporting evidence-based practice research. Topics covered include facts about stuttering and its core behaviors, the etiology of stuttering, the development of stuttering. Furthermore, students learn to evaluate stuttering behaviors and to work as part of an interdisciplinary team. Students will learn to evaluate and treat preschool children, school-age children and adults who stutter. In addition, other types of fluency disorders are covered.

Prerequisite: CSD 442 , CSD 495A

CSD 543: Craniofacial Anomalies: Cleft Lip and Cleft Palate

1 Credits

This course enhances graduate students' understanding of the following topics: 1) velopharyngeal mechanism and function for speech production in individuals with and without cleft palate and craniofacial anomalies; 2) basic embryological development related to the lip and palate fusion process; 3) common genetic syndromes that involve cleft palate; 4) in-depth understanding of resonance disorders; and 5) assessment and treatment of resonance disorders.

CSD 545: Neuromotor Disorders of Speech

3 Credits

Etiology and symptomatology of dysarthric and apraxic speech: diagnosis, treatment, and the team rehabilitative program approach to these disorders. CSD 545CSD 545 Neuromotor Disorders of Speech (3) In this course, students gain basic knowledge of neurological bases for speech-motor control. Students learn to identify and describe diseases/conditions that result in acquired and developmental motor speech disorders. Students learn to identify and describe the dysarthrias in clinical populations across the age span. Emphasis is placed on the development and implementation of appropriate intervention plans to remediate and/or compensate for motor speech disorders. Students complete three examinations during class and write a paper that synthesizes current research on a topic in motor speech disorders.

Prerequisite: CSD 444

CSD 546: Language Disorders in Adults

3 Credits

Nature, etiology, diagnosis, and management of language disorders in adults. CSD 546CSD 546 Language Disorders in Adults (3) This course provides information about the disorders of language that result from impairments to the central nervous system. Basic neurology, the aging process, and the nature and cause of aphasia-producing conditions are covered along with issues related to the assessment and management of adults with aphasia. Stroke-related aphasia in adults is the emphasis of this course, but it also briefly covers other common language and cognitive neuropathologies of traumatic brain injury, Alzheimer's Disease, and right-hemisphere brain damage.

Prerequisite: 9 credits in communication sciences and disorders or related fields such as psychology, linguistics, or human development.

CSD 547: Language Disorders in Children

3 Credits

This course provides students with a strong foundation in the nature of language disorders, the current issues in and theories of language disorders, assessment and intervention, and key language assessment and intervention approaches. Major topics include assessments and interventions with infants, toddlers, preschoolers, school-age children, adolescents, children from diverse cultures, and children with communication disorders as the result of autism spectrum disorder, cerebral palsy, and intellectual disability. As a result of the foundation laid in this course, students will be able to critically evaluate and apply the current literature and forthcoming research to their clinical practice.

Prerequisite: CSD 300

CSD 548: Dysphagia

3 Credits

Understanding the process of the swallowing mechanism and the management and treatment of swallowing disorders. CSD 548 Dysphagia (3) This course is designed to provide graduate students with basic knowledge of the swallowing process/mechanism. A brief overview of normal swallowing from birth to the aging adult will be presented. The course will focus on assessment, management, and treatment of individuals who present with a swallowing disorder. Students will become familiar with both non-instrumental assessments of swallowing, and will interpret videofluoroscopic swallowing studies (VFSS). Students will also develop treatment plans for case study patients with dysphagia, Multicultural issues related to swallowing will be discussed.

Prerequisite: CSD 444 or equivalent

CSD 549: Speech-Language Pathologists in the Schools

3 Credits

Topics concerning service delivery in the school setting; legislation related to service delivery, special education enrollment, collaboration, caseload management, special populations. CSD 549 CSD 549 Speech-Language Pathologists in the Schools (3) This course covers multiple aspects related to becoming a competent speech-language pathologist in the public school system. Topics include: legislation related to school-based service delivery; the hierarchy of special education enrollment; considerations for special populations; caseload management and logistical aspects of work in the public school system., Case examples, class discussion, and group activities will be used to illustrate various aspects of this work setting.

CSD 550: Seminar in Communication Sciences and Disorders

1-6 Credits/Maximum of 6

Advanced study of special problems and new developments in communication sciences and disorders. CSD 550CSD 550 Seminar in Communication Disorders (1-6) This seminar is designed to address special topics of interest to doctoral students in the Communication Sciences and Disorders. Topics covered vary from semester to semester and include the art and science of grant writing; various research approaches such as qualitative research methods or single-subject experimental research methods, etc.; issues related to teaching at the university level, speech perception, neuroscience, cognitive science, and cochlear implants.

CSD 551: Assessment and Intervention in Augmentative and Alternative Communication

3 Credits

Research results in augmentative and alternative communication (AAC); implications for assessment, prescription of AAC systems, and intervention planning in AAC. CSD 551 CSD 551 Assessment and Intervention in Augmentative and Alternative Communication (3) In this course students examine current applications of augmentative and alternative communication (AAC) including unaided and aided AAC systems. Students critically evaluate the strengths and limitations of these systems, identify the skills required to use these systems, and describe individuals who may benefit from AAC. Many topics of importance to AAC are studied including key legislation related to people with disabilities, consumer-responsive services and strategies to effectively implement services that are consumer-responsive. Clinical management is emphasized and students determine appropriate AAC assessment goals, procedures, and tools to identify the communication needs of individuals who require AAC, assess their skills and determine opportunity barriers. Students customize AAC systems to meet the needs of individuals who require AAC, determine partner strategies to enhance communicative interaction with individuals who use AAC and use empirically-validated instructional procedures to teach these strategies to partners. Students evaluate the efficacy of AAC interventions and determine consumer satisfaction. To accomplish these goals, students complete laboratory assignments and written case assignments in AAC assessment, vocabulary selection, and intervention planning and implementation.

CSD 595E: Audiology Practicum

1-5 Credits/Maximum of 5

CSD 595E CSD 595E Audiology Practicum (1-5) This course provides speech-language pathology graduate students with a detailed and pragmatic understanding of hearing testing, normal and abnormal auditory systems, and common practices used to evaluate hearing ability. Students will gain experience in pure-tone audiometry, tympanometry, speech audiometry, central auditory processing disorders, and otoacoustic emissions. Students participate in hearing aid fittings, programming and repairs. Students learn to interpret the results of audiological evaluations and make appropriate recommendations based on results of audiological evaluations.

CSD 595G: Speech Diagnostics Practicum

1-3 Credits/Maximum of 3

CSD 595G CSD 595G Speech Diagnostics Practicum (1-3) In this practicum course, advanced speech-language pathology graduate students gain experience in interviewing clients, parents and spouses. They learn to counsel clients and their families regarding communication disorders. With supervision, students complete diagnostic evaluations for a broad range of communication disorders and synthesize data. Report writing is also emphasized.

CSD 595J: Audiology Third Site

1-2 Credits/Maximum of 2

Internship course.

CSD 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSD 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CSD 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CSD 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CSD 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

No description.

Prerequisite: 40 graduate credits in CMDIS

CSD 603: Foreign Academic Experience

1-12 Credits/Maximum of 12

For students who are enrolled in a foreign university, or foreign study and/or research and constituting progress towards the degree.

CSD 610: Thesis Research Off-Campus

1-9 Credits/Maximum of 999

No description.

CSD 850: Endoscopy Lab

1 Credits

This lab-based course will provide students the unique experience of manipulating rigid and flexible endoscopes for assessment of the velopharynx, larynx and swallow anatomy and physiology. There will be hands on practice in a small group setting with direct instruction from experts in the field of laryngology. Students will have opportunity to learn and refine skills for interpretation of stroboscopy and flexible endoscopic evaluation of swallowing (FEES).

CSD 851: Head and Neck Cancer Management

2 Credits

This course covers the unique challenges of evaluating and treating speech, voice, and swallowing disorders resulting from treatment for head and neck cancer. A basic understanding of the causes of and surgical/chemoradiation treatments for various types of head and neck cancers will be obtained. Emphasis will be placed on communication and

swallowing evaluations and rehabilitation following cancer treatments. A team approach to patient care will be stressed.

CSD 852: Lab in Augmentative and Alternative Communication Technology

3 Credits

This course provides in-depth, applied consideration of Augmentative and Alternative Communication and Assistive Technology. It builds knowledge and skills in the areas of system design and the interplay between person and technology; maximizing participation through understanding of barriers and supports at multiple levels; and training and supporting all stakeholders. Students will engage in (a) hands on learning of assistive and AAC technologies that support communication and participation across all environments; (b) discussions of research related to use of assistive and AAC technology to enhance communication and curriculum outcomes for individuals with disabilities; and (c) problem-based learning through case studies in order to apply their knowledge and skills

CSD 853: Professional Development for Speech-Language Pathologists and Audiologists

1 Credits

Medical terminology is a course for students preparing for the Communication Sciences and Disorders profession with the target of giving exposure to medical terminology, documentation, types of insurance consistent with this field, and interactions with other medical disciplines. A variety of medical settings will be discussed. The code of ethics and scope of practice within a medical setting as determined by the American Speech and Hearing Association (ASHA) will be included.

CSD 854: Tracheostomy and Ventilator Lab

1 Credits

This lab-based course covers the unique challenges of evaluating and treating speech, voice, and swallowing impairments demonstrated by patients requiring tracheostomy tube placement with and without mechanical ventilation. Hands-on education will include task training with various tracheostomy tubes, oneway speaking valves, and ventilators/ventilator settings; as well as interprofessional case studies using high-fidelity mannequins and simulated patient modalities/technologies.

CSD 895A: Speech/Language Clinical Practicum

1-3 Credits/Maximum of 15

This course covers clinical diagnostics and intervention practices across the lifespan with individuals with a variety of communication disabilities. Students will have the opportunity to develop their clinical knowledge and skills by accruing practicum hours. The number of clinical hours assigned each semester depends on the number of credits being taken as well as the number and types of hours that need to be accrued to meet certification requirements. The graduate student will attend one weekly meeting with each supervisor with whom a client is assigned. Additionally, this course includes a weekly class lecture, providing instruction in and application of diagnostic and therapy procedures. Topics covered include interviewing clients, parents, and spouses, counseling clients and their families, clinical teaching, and activities to enhance teaching and learning. Students also learn appropriate

methods of report writing, data collection, writing clinical objectives, and intervention plans.

CSD 895C: Speech/Language Therapy Externship

7-15 Credits/Maximum of 15

This course is a full-time externship experience in the assessment and treatment of communication disorders and is completed at an off-campus site. Graduate students in Communication Sciences and Disorders participate in an active learning clinical practicum with working professionals to enhance their academic and clinical competencies and skills. Students will accrue required clinical practice hours in an off-campus clinical and/or educational setting including hospitals, rehabilitation centers, nursing homes, early intervention programs, and public schools including pre-school programs.

Prerequisite: 45 credits in communication sciences and disorders and accrual of >200 clinical hours

CSD 895G: Speech Diagnostics Practicum

1-3 Credits/Maximum of 3

CSD 595G/CSD 595G Speech Diagnostics Practicum (1-3) In this practicum course, advanced speech-language pathology graduate students gain experience in interviewing clients, parents and spouses. They learn to counsel clients and their families regarding communication disorders. With supervision, students complete diagnostic evaluations for a broad range of communication disorders and synthesize data. Report writing is also emphasized.

CSD 895I: Speech Pathology Mini-Placement

1-9 Credits/Maximum of 9

Graduate students in Communication Sciences and Disorders participate in an active learning clinical practicum with working professionals to enhance their academic and clinical competencies and skills. Students will accrue these required clinical practice hours by completing this mini-placement in an off-campus clinical and/or educational setting including hospitals, rehabilitation centers, nursing homes, early intervention programs, and public schools including pre-school programs.

Communications (COMM)

COMM 501: Proseminar in Mass Communications

3 Credits/Maximum of 3

Overview of paradigms in mass communications research

Prerequisite: admission to doctoral program

COMM 502: Pedagogy in Communications

3 Credits

The purpose of this seminar is to train doctoral students to teach in the communications discipline at the college/university level. COMM 502 Pedagogy in Communications (3) This seminar is proposed as a dimension of the emphases on TA training and teacher preparation for doctoral students in Mass Communications in the College of Communications. The course is one aspect of the College's Graduate Teaching Academy. The seminar provides a foundation in pedagogical research, theory and classroom practice for mass communications

doctoral students. The Graduate Teaching Academy demonstrates our faculty's commitment to the integration of training in research and teaching. The work of the seminar focuses on the unique characteristics of undergraduate and graduate education in the communications discipline. The principles and practices covered in the seminar have applications for teaching communications in a number of venues including the academic, business and government professional settings. The course involves students in collaborative learning, assessment skills, powerful pedagogies, practical workshops and substantive reviews and applications of curricular and pedagogical research in the communications discipline. The Graduate Teaching Academy in the College of Communications involves students in a number of activities that will prepare them for teaching. This seminar is one of those activities. Graduate Teaching Academy participants: 1. Take coursework in communications curriculum and pedagogical development that stresses a teaching scholarship of learning theory and a pedagogy of active and engaged learning practices. 2. Study the scholarship of learning within a disciplinary context in order to understand the system of organized knowledge in the communications discipline within which our teaching takes place. This orientation encourages a critical review of the comparative costs/benefits of a disciplinary - versus interdisciplinary-based communications pedagogy. 3. Eligible doctoral students become Teaching Associates, under faculty supervision, for selected College of Communications courses 4. Teach an undergraduate course in the College as an instructor. 5. Develop a teaching portfolio. 6. Attend College colloquia. 7. Have access to College resources like the Academic Services Center, the Office of Multicultural Affairs, and University resources such as the Center for Excellence in Learning and Teaching at Penn State's Schreyer Institute. 8. Complete the Teaching with Technology certification.

COMM 503: Feminist Media Studies

3 Credits

This course will explore key intellectual traditions, theoretical concepts, research methods, and axiological elements that inform research in feminist media studies. Course readings will be inter/trans/ disciplinary so that students may gain a sense of the field of feminist media studies, its influences, and its possibilities. Readings and assignments may relate media studies with: feminist histories; transnational feminism; feminist political organizing and activism; queer studies; feminist approaches to masculinity, race, ethnicity, labor and production; sexual violence and harassment; relationships between feminist scholarship and other critical studies of culture, audience and reception studies, science and technology studies, rhetoric, political economy, and history.

Cross-listed with: WMNST 503

COMM 504: Seminar in the History of Mass Communication

3 Credits

No description.

COMM 505: International Communication Problems

3 Credits

Legal and communications problems of the international flow of news and opinion; international press codes.

COMM 506: Research Methods in Communications

3 Credits

The scientific method; survey of basic concepts of theoretical and empirical research; variety of methodology; criteria for adequate research. COMM 506 Introduction to Mass Communications Research (3) COMM 506 provides an overview of and foundation in research. Students are exposed to the nature of scientific inquiry, the process of concept explication, operationalization, measurement, and sampling. They also learn how to ask a research question. Research ethics, the logic and mechanics of experimental methods, fundamentals of survey design, and content analysis are also discussed. Students demonstrate the concepts learned in class by completing their own research project. Students also are exposed to statistical logic and practice in the context of their own project.

COMM 507: News Media and Public Opinion

3 Credits

Problems in the function, techniques, and responsibilities of press, radio, and television in forming and interpreting opinion.

COMM 511: Qualitative Research Methods in Mass Communications

3 Credits

This course focuses on the nature of qualitative research methodology for studying mass/mediated communication topics and to relevant research techniques. There is special emphasis on qualitative epistemology, ethnographic approaches, interviews, focus group, textual analysis, and mixed-method approaches.

Prerequisite: COMM 506

COMM 512: Government and Mass Communications

3 Credits

Problems of freedom of information; governmental efforts to control mass communication agencies; government news coverage; public information agencies.

COMM 513: Constitutional Problems of the News Media

3 Credits

Problems involving conflict between guarantees of press freedom in the First and Fourteenth Amendments and rights and privileges of others.

COMM 514: Political Economy of Communications

3 Credits

Structure and functions of United States and global media systems and their relationship to political and economic systems.

COMM 515: MA Proseminar in Mass Communications

3 Credits

An introduction to graduate studies for MA students in Media Studies and Telecommunications Studies.

Prerequisite: First semester enrollment in MEDIA or TELEC M.A. programs

COMM 516: Introduction to Data Analysis in Communications

3 Credits

To understand and be able to use data analysis techniques common to research in communications. COMM 516 Introduction to Data Analysis in Communications (3) This class serves as an introduction to data analysis techniques commonly employed in the field of communications and in related disciplines. The course will employ a commonly-used statistical package to illustrate concepts (e.g., Statistical Package for the Social Sciences, SPSS), and instruction will be provided on how to employ statistical software to conduct a variety of specific analysis techniques. These techniques will include descriptive statistics, analysis of variance, correlation and regression, and exploratory factor analysis. Examples of research from the communications discipline and related fields will be used throughout the semester to illustrate concepts. Emphasis will be placed on decisions involved in the data analyses process, interpretation of data, and effective presentation of results in journal-article format. Evaluation will be based on short take-home assignments, exams, and a final paper.

Prerequisite: COMM 506 or consent of program

COMM 517: Psychological Aspects of Communication Technology

3 Credits

Investigation of psychological aspects of human-computer interaction (HCI) and computer-mediated communication (CMC). COMM 517 Psychological Aspects of Communication (3) This graduate seminar is devoted to the investigation of psychological aspects of human-computer interaction (HCI) and computer-mediated communication (CMC). Theories and empirical research from communication, psychology, and human-computer studies will be used to explore social responses to communication technologies; uses and effects of unique technological features such as interactivity and navigability upon individual users' thoughts, emotions, and behaviors; nature and dynamics of interpersonal and group interaction when mediated by technology; how issues of "source" and "self" are altered by computer-based media; and psychological consequences of internet use, such as addiction and depression. A primary goal of the seminar is to draw out, through readings, discussion and empirical exploration, fundamental theoretical and practical implications of these lines of research for interface design, psychological processing of mediated form and content, human-web site interaction, and internet-based mass, group and interpersonal communication.

Prerequisite: COMM 304 or COMM 506

COMM 518: Media Effects

3 Credits

Advanced study of the effects of media messages and technologies via theories and empirical evidence pertaining to processes of effects.

Prerequisite: COMM 506 or permission of instructor

COMM 519: Data Models in Communications

3 Credits

The purpose of this course is to further students' understanding and application of complex data analytic techniques in communications research and related disciplines. Topics of importance to the discipline will be covered using applied, hands-on, and contextualized approaches.

These topics will focus on the analysis of covariance structures, including extensions of multiple regression, path analysis, measurement structures, and structural equation modeling. Additional issues in alternate semesters may include such topics as hierarchical linear modeling, network analysis, or meta-analysis. This course will stress an applied focus, addressing frequently encountered issues and questions arising in common experimental and correlational contexts. Additionally, students will become familiar with commonly used software employed in the analysis of data. Examples will drawn from and will illustrate frequently employed approaches in such areas as advertising, telecommunications, new technologies, media effects, public relations, political communication, computer-mediated communication, and gaming studies, among other.

Prerequisites: COMM 506, COMM 516

COMM 520: Seminar in Advertising Problems

3 Credits

No description.

COMM 521: Advertising Perspectives

3 Credits

An overview of advertising in industrial societies including institutional issues; socio-demographic issues; public policy issues; and ethical issues.

COMM 522: Social and Cultural Aspects of Advertising

3 Credits

Analysis of advertising from a cultural/literary perspective; emphasis on semiotic and hermeneutic analysis; advertising as social communication.

COMM 530: Research Methods in Strategic Communications

3 Credits

The purpose of this course is to provide students with an understanding of the methods and practices used to conduct effective research in examining practical and theoretical questions in strategic communications. Successful strategic communications campaigns are informed by research conducted before (planning), during (monitoring), and after (evaluation) the implementation of the campaign. Further, research based on theoretical models can help understand and explain the effects of strategic communications on consumers, individuals, and society. This course will be organized so that students will (1) gain exposure to a breadth of methods used by industry and academic researchers; (2) understand the role of theory in informing strategic communications research and its applications; (3) gain depth and experience in several research methods and techniques; and (4) conduct research and obtain research-writing experience, in either academic or professional venues. Students also will learn how to use databases employed by strategic communications researchers to conduct audience/consumer analysis and media research. A range of specific research methods will be discussed, with emphasis placed on trends or contemporary developments in research. In addition to examining the principles, methods, and techniques of strategic communications research, the course will address issues such as when research should or should not be conducted, analyzing data sets, forming meaningful research questions, determining the proper means to answer the

questions, and presenting the results and solutions in a clear and compelling manner.

COMM 531: Strategic Communications: Theory and Implementation

3 Credits

This course provides students with a comprehensive understanding of professional strategic communications via examining key theoretical and conceptual fundamentals of persuasive communication, attitude formation and change, and mass communication, while examining applied implications that affect the strategic communications industry. Students in this course will be: 1) exposed to academic research that analyzes and explains how and why the implementation of strategic communication works, and 2) shown how this information can be tested, extended, and applied to goal-oriented communication campaigns. Through comprehending both the theoretical underpinnings of strategic communications practices and their proper application, students will gain valuable knowledge that applies to both scholarly pursuits – which help to develop theory and knowledge – and professional pursuits, in which theoretical advancements can provide real-world solutions. Strategic communications professionals need to comprehend a wide range of theoretical frameworks to understand how theory and research can inform the implementation of communications plans and decision-making. Students in this course will gain knowledge in traditional and contemporary academic research that examines the mechanisms of persuasive and mass communication in affecting consumers' beliefs, attitudes, and behaviors. Students will examine the interplay of these theories and identify key gaps in the literature and/or untested potential relationships that could help better explain how strategic communications plans work or should work. Based on this insight, students will apply their theoretical knowledge to realistic industry situations and will be able to offer specific suggestions and communication strategies to solve actual problems. Students will learn how the implementation, testing, and extension of relevant theory can guide precise strategic-communications decisions and strategies that lead to specific outcomes among varied target audiences and consumers. The material covered in this course forms the foundation of understanding how the field of strategic communications functions and how this knowledge can be advanced and applied to achieve desired, communication-based results for any entity.

COMM 550: Film Theory and Criticism

3 Credits

Studies in traditional and contemporary film theory and criticism. COMM 550 Film Theory and Criticism (3) COMM 550 seeks to introduce students to a variety of theoretical approaches to the critical analysis of film. The course devotes attention to aesthetic as well as social, cultural, political and economic issues, assuming that they are, in fact, inseparable. It involves viewing films closely, and researching the contexts of their production and reception. It stresses critical thinking, reading, viewing and writing skills. COMM 550 assumes that films can reveal, both directly and indirectly, something about the experiences, identity, and culture of the people who produce and consume them. That is, movies can be analyzed—even psychoanalyzed—to reveal something about the cultural conditions that produced them and attracted audiences to them. The course seeks both to familiarize students with works they probably haven't seen, and to "defamiliarize," through critical and historical analysis, works they very well may have seen. Films are examines as formal constructs, market commodities, and cultural artifacts. Individual instructors may emphasize film authorship,

styles, genres, systems or cycles. They may focus on the context, text or reception of a film, filmmaker, or group of films. The emphasis of COMM 550 is always on the self-conscious, theoretically informed analysis of cinematic texts.

COMM 553: Special Problems in Film and TV

1-3 Credits/Maximum of 99

No description.

COMM 555: Media and Culture

3 Credits

An overview and history of critical theories that aim to explain the relationship between media and culture. COMM 555 Media and Culture (3) This course will provide an overview of the major theorists of mass media whose work offers critical appraisals of the impact of mass media on cultures and the people within those cultures. It will give students an understanding of the major theorists and their conceptions of the relationship between media, communication and culture. Each section is designed to interrogate a particular epistemological or methodological challenge to the social and cultural understanding of mass media, from the seminal thinking of the Frankfurt School - the first thinkers to engage this important field of research - through the theorists of the so-called post-modern turn. Special attention will be paid to examining the ways in which mass media constructs ideological foundations for society's understanding of democracy, identity and everyday life.

COMM 556: Reading Film

3 Credits/Maximum of 12

A practical and historical approach to film theory and analysis. This seminar develops critical visual literacy by examining a range of practices in cinema study, with emphases on the relation of film to literature and the analysis of film meaning. The course asks how to read a film, and considers the multiple ways that films combine framing, movement, editing, narrative, character, and genre toward the production of culture, ideology, identity, desire, poetic imagery, and community. Students will explore a wide range of critical methods, and will view one to two films per week. Readings will range from novels to classic film theory, cultural studies, belles-lettres, film criticism, radical poetics, apparatus theory, media theory, and contemporary philosophy.

Cross-listed with: ENGL 556, VSTUD 556

COMM 557: Internet Cultures

3 Credits

This course will examine topics of relevance to internet as culture, including several online communities - writers of fanfiction, gamers, and trolls are among the possibilities -- as case studies of the larger phenomenon. It will explore methods of studying such topics and communities, with a focus on netnography and thick description, and raise questions about privacy, anonymity, ethics and aesthetics. The class will examine the latest trends in internet cultures and research, including such topics as online misogyny, trolling, citizen journalism, internet folklore, and digital activism.

COMM 580: Seminar in Telecommunications

3 Credits

Study of the historical and contemporary issues and problems in telecommunications.

COMM 582: Ethics and Emerging Communications Technology

3 Credits

Identification and analysis of ethical issues raised by electronic communications technologies.

COMM 584: International Telecommunications and Trade Policy

3 Credits

An interdisciplinary perspective that investigates contemporary debates and ongoing or anticipated conflicts in international telecommunications and trade policy. COMM 584 International Telecommunications and Trade Policy (3) The study of international telecommunications policy requires an interdisciplinary perspective. Students should understand the past and present technological, business, philosophical, geopolitical and legal environment. Success in either the public or private sectors may depend on one's ability to anticipate and react to future trends and upheavals. The course presents, investigates and debates ongoing or anticipated conflicts in international telecommunications and trade policy. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. The course also will examine how various nations have organized and reorganized the telecommunications sector. We will consider such developments as privatization, liberalization, deregulation and globalization. Faculty: Rob Frieden

COMM 585: Media & Telecommunications Industries

3 Credits

Study the structure and performance of media, telecommunications and information industries applying principles and ideas from microeconomics, finance and communications. COMM 585 COMM 585 Media & Telecommunications Industries (3) The objective of this graduate seminar is twofold. First, the course provides exposure to the applications of selected concepts, principles and topics in microeconomics to the analysis of the media, telecommunication and information markets. This course is not intended as a general introduction to microeconomic theory and practice - however, students will have the opportunity to begin their study of selected applications of microeconomic principles at a fundamental level and advance their understanding to a high level of complexity worthy of graduate coursework. The second objective of the course is to connect ideas and principles from microeconomics to a body of communications theories, demonstrating possible complements and conflicts across the two disciplines. Discussion of both theoretical and empirical scholarship is emphasized. This in turn gives students a framework for further research on the structure of information industries and the conduct and performance of communications firms. Course covers international markets but focus is on North America. Topics may include selected industries such as wired and wireless telephony, satellite communications, broadband/cable, broadcasting, film, advertising,

publishing, computing and Internet; industrial organization; competition and competitive advantage, growth and the economic causes of innovation; economics of intellectual property protection; electronic markets, hierarchies and transactions cost economics; the economic justification and effects of regulation; natural monopoly economics; cost modeling, demand forecasting and pricing in regulated monopoly and competitive industries; telecommunications deregulation and privatization.

COMM 587: Internet Law and Policy

3 Credits

Examination of legal, policy and business developments in Internet-mediated communications emphasizing the impact on existing regulatory and economic models. COMM 587 COMM 587 Internet Law and Policy (3) This course will provide a forum for students to investigate and debate ongoing or anticipated conflicts in Internet-mediated telecommunications, information processing and commerce. The resulting confrontations may stem from technological innovation, real or perceived changes in the marketplace, or the imperatives of prevailing regulatory, political or economic philosophies. Conflict resolution often results from persuasive advocacy, coalition building, and accommodation of outsiders with new perspectives or entrepreneurial visions, rather than applying legal precedent or treaty interpretations. Internet mediation has the potential to change how we communicate, educate, inform, entertain, and transact business. Technological and marketplace convergence means that Internet mediation will have a profound impact on many legal, regulatory and economic constructs, i.e., the pre-existing templates we use to describe and understand the communications process and impact on individuals and society. The course also will examine the growing body of cases that have addressed aspects of Internet-mediation in each of the following general categories: ♦ Speech - commercial and political speech, obscenity, forums analysis; ♦ Legal and Regulatory Consequences of Convergence - the juxtaposition of telecommunications and information processing technologies, markets and regulatory regimes; ♦ Governance and regulation of the Internet - whether the need exists for government intervention on such matters as numbering and domain name registration; ♦ Intellectual Property Rights - the impact of Internet-mediation on copyright, trademark and patent laws; ♦ Electronic Commerce - the law and policy of Internet-mediated transactions; privacy and encryption concerns; and ♦ Equity, Competition Policy and Consumer Protection Concerns what, if anything, should governments do to remedy market failures.

COMM 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

COMM 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

COMM 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, non-group instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Full-Time Equivalent Course

COMM 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

COMM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

COMM 597B: **SPECIAL TOPICS**

3 Credits

COMM 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

COMM 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

COMM 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

Teaching or assisting in School of Communication courses by graduate students with previous news-editorial, advertising, and broadcasting experience.

COMM 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

COMM 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

COMM 830: Strategic Communications Industry

3 Credits

Technology is transforming the strategic communications industry. COMM 830 provides students with an overview of the merging of the advertising, public relations, and corporate communications industries. Students will learn how digital technology has transformed paid, earned, and owned media. Students will explore the transformation of audiences

from passive users to active and interactive media-savvy consumers. Special emphasis will include the global and ethical impacts of evolving strategic communication. Students will explore the industry structure as it has evolved from traditional media to the development of the digital media landscape from the internet, Web 2.0, and the post-PC era. The course also provides an overview of strategic communications as it applies to agency, firm, government, corporate, and nonprofit organizations. Students will gain an understanding of the analog and new media landscape and will develop an understanding of the economic and financial indicators that drive the present industry. The course will explore how traditional media practices are impacted by technology as well as the impact of technology on entrepreneurial opportunities for industry practices from broadcast and digital to print, advertising, journalism, and public relations. The course will examine the roles and characteristics of content providers, carriers, and the ever-changing traits and needs of digital media consumers with a focus on emerging technologies on the evolution of interactivity. The course will provide insight into content creation, management, networking, online communities, and content consumption, and the role of evaluation and metrics in understanding the digital landscape. In addition, the course will provide an overview of the social issues facing the digital industry and insights into best practices.

COMM 831: Digital Media Analytics I

3 Credits

This course provides an overview of the methods for collecting, analyzing, and utilizing audience data for digital media. The class will cover the fundamentals of traditional media audience measurement and web metrics, with an emphasis on "first-party" data. Students will learn the methods of data collection, analysis, and use for traditional broadcast media, and the transformation of these practices in the newly digitized and converged multiplatform, multiscreen environment. The course will also cover the basics of data capture for new media and the use of this data for the design of metrics appropriate for various purposes such as monitoring traffic, conversions, and revenue generation. The use of metrics in pricing models for advertising, sales generation, and content distribution will also be covered

Prerequisite: COMM 530, COMM 830**COMM 832: Multimedia Content Development and Delivery**

3 Credits

This course is designed to provide students with a background in the intellectual and practical skills involved with the development, execution, and delivery of strategic messages and content. Students will learn conceptual strategies that lead to the creative process and the resulting message executions that are delivered to targeted audiences on behalf of companies, brands, and organizations through numerous media formats. This course will explore how the role of branded content is evolving in the modern strategic communications landscape and how to apply different types of content generation to new and traditional communications channels. Students will evaluate the pros and cons of numerous modes of content delivery, and will learn the processes and tactics needed to create and implement numerous communication strategies across the major traditional and contemporary media platforms currently used in the industry. Students also will apply the necessary processes and steps to develop an effective multimedia content plan for any client.

Prerequisite: COMM 531 COMM 830

COMM 833: Ethics and Decision Making in Strategic Communications

3 Credits

This course provides a broad exploration of ethical topics in the practices of strategic communications, public relations and advertising. In particular, it investigates transparency, digital ethics, diversity, and mass-communication ethics as they apply to the development and application of communications strategy and content. Students will learn how ethical tenets are examined and incorporated into current theory and research within the fields of general ethical philosophy, public relations, corporate social responsibility, crisis communications, persuasion, and cultural-communication studies. By subsequently applying these principles to industry examples and professional codes of conduct, students will better understand the importance of ethical decision making in the field of strategic communications. Building on insights from the class, students will engage in online discussions and will apply topics learned in the class to identify and analyze contemporary ethical issues and problems affecting the strategic communications industry.

Prerequisite: COMM 830**COMM 834: Strategic Communications Campaigns**

3 Credits

This capstone course requires students to apply the knowledge they have acquired in all the other foundation courses to develop a strategic communications campaign on behalf of a professional client. Students will conduct both primary and secondary research first, and then analyze the competitive environment surrounding the client's service/brand. Based on the research, they will then design the messages, media, and other communication tools as part of a comprehensive communications campaign for the client.

Prerequisite: COMM 530, COMM 531, COMM 830, COMM 831, COMM 832, COMM 833**COMM 835: Social Media Communications**

3 Credits

Social media is profoundly transforming human society in almost every aspect, in particular, communication and business. As social media has become an integral part of human life, it is crucial to understand the underlying mechanisms of social media before making best use of it. A profound knowledge of social media and how to use it productively is not only something "nice to know," but a capability people must have to survive and excel in this new media age. This course focuses on two areas: 1) an in-depth understanding of the social media impact on strategic communications; and 2) how to make best use of social media tools. The impact of social media on cognition, knowledge collaboration, media industry, and strategic communications strategies will be covered. A solid knowledge of social media mechanisms serves as a foundation for making the best use of social media, no matter how current media evolves or what new media platforms emerge in the future.

Prerequisite: COMM 830**COMM 836: Strategic Communications Leadership**

3 Credits

The rise of digital media and the public's demand for transparency in business have elevated the importance of strategic communication. Long gone are the days where communicators were viewed as tacticians

in organizations. Instead, today strategic communicators often hold top positions in companies. This course will provide students with the essential business knowledge they need to navigate as successful communicators. This will include a focus on the business essentials needed such as: terminology, reputation drivers, and leadership roles. It also builds awareness of key stakeholders such as investors, analysts, and communities. Building on these insights, students will be able to conduct communications audits for a company and understand how and why strong communicators are critical to successful companies.

Prerequisite: COMM 830**COMM 837: Reaching Multicultural Populations in Strategic Communications**

3 Credits

There is an increased demand for professional communicators who understand how to reach culturally and ethnically specific market segments using strategic communications strategies. The focus of this course will be on how to effectively and strategically communicate with multicultural populations using mass communication to develop an inclusive environment where diversity is embraced, respected, and valued. The course will explore the economic, political, and social impact of culture and race in our society, socio-economic differences, trends within various multicultural communities and groups, and how traditional and new media communities are reaching these communities. The content of this course will be useful to understand the multicultural market segment. The goal of the course is to understand culture-based communication strategies and market research, multicultural communication research and theories, and apply this understanding to strategic communication decisions.

Prerequisite: COMM 830**COMM 838: Strategic Communications Law**

3 Credits

This course provides a broad exploration of strategic communications law. In particular, it examines how the First Amendment applies to strategic communications, the basic tenets of advertising regulation, privacy issues including the collection and use of personal and geolocation information, intellectual property issues including the use of trademarks and copyrights, and the role of self-regulation in a global communications environment. Students will learn to recognize and anticipate key legal issues that they will face as strategic communications practitioners and how to find answers to relevant legal questions.

Prerequisite: COMM 830**COMM 839: Digital Media Analytics II**

3 Credits

This course will prepare students to demonstrate their competency and ability to navigate the digital media ecosystem and to develop, implement, administer, and evaluate digital marketing campaigns. Toward this end, students will learn to match digital solutions to clients' marketing objectives through critical analysis and understanding of the tools and processes of the industry. Students will differentiate between digital and traditional media by identifying the strengths and weaknesses of each and understanding how digital complements and extends traditional campaigns. Specifically, students will become familiar with

the targeting advantages of digital as related to programmatic buying and re-marketing, as well as behavioral and contextual targeting. Digital advertising formats and platforms will be explored, and students will learn to differentiate between them and to evaluate which formats are best based on client needs and objectives. Digital ad format standards and creative guidelines will be reviewed. Technologies and tools specific to the industry will be summarized, including buy-side and sell-side ad servers, verification systems, and audience segmentation tools. Concepts of statistical analysis will be applied to digital analysis, specifically in the context of A/B testing. Students will apply statistical tests to establish confidence intervals when evaluating alternative marketing approaches and opportunities.

Prerequisite: COMM 530, COMM 830, COMM 831

Communications - CA (COMMS)

COMMS 500: Communications and Cultural Theory

3 Credits

This course is designed to provide students a broad background in communications and cultural theory. COMMS 500 Communications and Cultural Theory (3) This course is an advanced study of various interpretive approaches and methodological tools that are central to the analysis of media artifacts, including newspaper articles, magazines, films, advertising, and television programs. It begins with an overview of various interpretive traditions, including culturalism, psychoanalytic theory, structuralism, ethnic and racial critiques, poststructuralism, postmodernism, feminism, postcolonial studies, and queer theory. It prepares students to critically examine philosophical assumptions regarding the relationship between the nature of knowledge, expression, writing and creative production on one hand, and conceptions of personhood, community, social structures and authority, on the other. Students are required to do significant reading and writing in this course, and to propose and conduct analyses of communication artifacts.

COMMS 503: Research Methods in Communications

3 Credits

This course prepares students to conduct research in communications using both qualitative and quantitative research methods. COMMS 503 Research Methods in Communications (3) This course prepares students to conduct research in communications. It begins with an overview of the different strategies and philosophies of research methodology including scientific method, inference, skepticism, hypothetico-deductive reasoning, critical, humanistic, and naturalistic inquiry. The course focuses on four major types of communications research methodology: experimental, survey, textual analysis and naturalistic inquiry. Students are required to do significant reading and writing in this course, as well as propose and conduct a research project of their own design. This course is a fundamental element of the masters program curriculum in that it prepares students to conduct their thesis projects.

COMMS 519: Communication Technology and Culture in History

3 Credits

An advanced study of various interpretive approaches and methodological tools that are central to the analysis of cultural artifacts. COMMS 519 Communication Technology and Culture in History (3) This course is an advanced study of various theoretical approaches that are central to the analysis of communication technology and

culture in historical context. It begins with an overview of various communication historiographies, including the works of Harold Innis, Walter Ong, Umberto Eco, Elizabeth Eisenstein, James M. Carey, Marshall McLuhan, Lewis Mumford, and others. It engages students in the critical examination of such critical issues as communication and public memory, discourse in historical context and the historical basis of identity. Students are required to do significant reading and writing in this course, and to propose and conduct historical research employing one of the theories discussed in this course.

COMMS 525: Advanced Writer's Seminar

3-9 Credits/Maximum of 9

This course supports the development of advanced writing projects in a range of different genres. COMMS 525 Media Writer's Seminar (3-9 per semester/maximum of 9) This course is an advanced study of narrative styles and research techniques used in various forms of writing, including journalism and creative non-fiction, memoir, opinion pieces, cultural criticism, copy writing, writing for interactive media, and writing for performance media. Offerings in different semesters will focus on different topics in these writing genres. The course prepares students to create original material in a variety of writing genres, and for a variety of media. It is well-suited for the development of creative master's projects, and for extending the student's graduate research into a professional portfolio. The first portion of the course defines the elements of the genre through textual analysis and establishes a theoretical framework. Students will then submit for peer review a project proposal that addresses the appropriateness of the subject to the genre, outlines research methods, defines the intended audience, and provides examples of potential outlets. Students will then submit a first draft for peer review, and finally a finished draft for peer review and evaluation.

COMMS 555: Media Discourse Analysis

3 Credits

This course provides students with advanced theoretical approaches and methodological tools to analyze a variety of media discourses. COMMS 555 Media Discourse Analysis (3) This course provides students with both theoretical approaches and methodological tools to analyze a variety of media discourses. It begins with an overview of linguistic theories, including structuralism, poststructuralism, semiotics, and critical discourse analysis. The course highlights the philosophical relationship between language, culture, identities, politics, and intercultural communications. It also prepares students to examine discourses from multiple angles, such as textually oriented analysis, critical analysis, linguistic analysis, ethnographic analysis, etc. The course then leads into a discussion of several common discursive models in media: ritual, myth, and social drama. It ends with case studies of discourse in films, television, news, advertisement, the Internet, and politics. Students are required to do significant reading and writing in this course, and to propose and conduct a project of discourse analysis of their own design.

COMMS 560: Seminar on Global Culture and Communication

3 Credits

This course explores the globalization of communication and communication technologies within a broad political, economic and cultural context. COMMS 560 Seminar on Global Culture and Communication (3) Developments in technology have led to new levels of interaction and interdependency of human groups and processes

across the boundaries that historically separated them - geography, national identity, state borders, and local community. In such a context, we must re-examine many of our assumptions about space, place, identity, and belonging, and about human social organization and human agency - the potential to purposefully transform ourselves and our surroundings. Globalization calls into question our assumptions about politics, economics, culture, and communication. In this course, students will consider the challenges and opportunities that globalization creates for human community and agency - that is, for the multiple ways in which human activity becomes socially organized and purposeful. They will survey the dominant theories of globalization and regionalization and examine the current trends in regionalization and globalization of politics, culture, communication, economic processes, and regulatory structures. They will focus on the challenges communication globalization poses to past forms of identity, the transformation of traditional understandings of space and place, and the opportunities for new forms of identity, community, and action.

COMMS 568: Media Production Workshop

3-9 Credits/Maximum of 9

This course prepares students for the creation of advanced media projects in traditional and digital media. COMMS 568 Media Production Workshop (3-9 per semester/maximum of 9) This course is a workshop for the creation of advanced media projects in traditional and digital media. Workshop topics will alternate coverage of different media, and will include photography, graphic design, interactive media, video, audio, and other media to reflect the needs of the graduate program. Students will submit proposals that address their project objectives, production plans, and intended audiences. After submitting proposals for peer review and faculty evaluation, students will begin a three-stage process of pre-production, production, and post-production in the creation of their work. This process will require the organization of production elements, the acquisition of media, and the creation of the finished project. This seminar is intended for graduate students who wish to gain experience with new media technologies, pursue creative outlets for their research interests, or develop their professional portfolios. It is an intensive workshop with demanding writing and technology requirements.

COMMS 580: Communications Master's Project

3-6 Credits/Maximum of 6

An original master's paper or creative production with critical paper. COMMS 580 Communications Master's Project (3-6 per semester/maximum of 6) This course may be a scholarly master's paper or it might instead be by a creative production supplemented by a descriptive and analytical paper. The production should display integration in skills and knowledge gained in the program as well as depth within an area of concentration. A committee of Communications faculty, supplemented by outside consultants where appropriate, would be needed to judge the final project.

Prerequisite: COMMS500 ; COMMS503 ; 27 credits towards Master's in Communications

COMMS 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

COMMS 610: Thesis Research

1-15 Credits/Maximum of 999

No description.

Community and Economic Development (CEDEV)

CEDEV 500: Community and Economic Development: Theory and Practice

3 Credits

Understanding theories, concepts, and frameworks of community and economic development and community decision-making models in application to community development practice and issues. CEDEV 500 Principles of Community and Economic Development and Leadership (3) What factors affect the quality of life of American communities? How can citizens and leaders affect change in their community? This course provides an overview of principles of community and economic development and an introduction to approaches to organizing, planning and managing change in communities. Students gain an understanding of principles and strategies of community and economic development in relation to general systems theory, community decision making, and leadership strategies in group and community settings. Students who complete the course should be able to discuss theories and models of development, to apply general systems theory to development issues, and to understand approaches and techniques for community leadership. They will gain an appreciation of conflict and consensus approaches to decision making and change, and understand action strategies for community development and change. This is a required introductory course for all incoming students in the new Community and Economic Development graduate program. The course will also be of interest to graduate students in other programs who have an interest in community and economic development.

CEDEV 505: Leadership Development

3 Credits

Exploration, understanding, and application of leadership roles, strategies, and principles in group and community settings.

Cross-listed with: EDCE 505

CEDEV 509: Population, Land Use, and Municipal Finance

3 Credits

Understanding the interaction of population characteristics, land use, municipal funds, and taxation in a locality and how they impact the operation and management of government jurisdictions. CEDEV 509 Population, Land Use and Municipal Finance (3) How do people approach the task of providing and funding the infrastructure and services in American communities? What effect does different population characteristics and demographic mix have on local governance? Should land use be tied to the changing character of community populations? Where does funding originate for providing municipal goods and services and how do communities manage municipal budgets? This course provides a multidimensional overview of three key aspects of community and economic development. Population - the people. Land Use - the place. Municipal finance - the things they do there. Students will gain an understanding of how to analyze population and demographic issues in communities. They will learn about planning and land use laws,

regulations and issues. They will come to understand the elements and dynamics of municipal finance. The course is designed to integrate the above aspects of community into an overall understanding of key interactions in American communities.

Prerequisite: graduate standing

CEDEV 516: Change in Rural Society

3 Credits

Social change in rural society, emphasizing prediction and control of the change process. Even years. R SOC (CEDEV) 516 Change in Rural Society (3) Rural America has experienced change throughout its history, but the most rapid have occurred in the past three decades. Forces of urbanization, industrialization, technological change and globalization of the economy drive change in rural America, and the effects of these forces differ across the United States. Some rural areas benefit from the changes that occur while others are devastated. Some rural people and places are able to adapt and view change as an opportunity, while others are unable to respond to the forces that threaten them. Individuals, families and communities have changed in response to these broad forces. This becomes manifest in new patterns of inequality, family life, educational attainment, migration, age and racial patterns, health and well-being, and local service availability. Questions examined in this course include: What are the theories that explain or describe the social change that has been affecting rural people and places? What industrial restructuring and economic change has occurred in rural areas, how has it affected rural areas, and what drives this restructuring? What other social change has taken place, and can we determine potential sources of that change? What are the options available to rural people and communities as they adapt to forces of change, and how much can they influence their own futures? Underlying each of these questions is the issue of whether the well-being of rural people, families, and communities has improved or is threatened by these changes, and which rural areas are most likely to benefit and which are threatened. Students will leave the class with a broad understanding of the forces affecting rural America, and how and why those forces influence some people and places differently. Grades are assigned in this class based on a term paper on a topic related to rural social change, reaction papers written about each set of reading assignments, serving as discussion leader, and class participation.

Cross-listed with: RSOC 516

CEDEV 517: International Rural Social Change

3 Credits

Implications of planned change for international rural societies, considering basic structural constraints, known institutional linkages, and potential synergetic consequences. R SOC (CEDEV) 517 International Rural Social Change (3) Three-quarters of the world's population live in developing countries where problems of hunger, malnutrition, underemployment, high morbidity and mortality, overurbanization, and inadequate housing, (to name just a few) often are severe. This seminar covers the sociology of economic change in developing countries. Through an extensive list of readings, a series of topical videos, and in-depth class discussions, seminar participants should come away with a firm grounding in the ways development has been defined, the social and economic problems facing developing countries today, the basic ways in which economic development has been approached theoretically and empirically, the implications for developing countries of being embedded in a larger world economy, the influence of multinational corporations, the

policies that developing countries have followed in fostering economic growth, the nature of foreign aid, the causes and consequences of Third World debt, the nature of the informal economy, rural development and land reform, world hunger and the Green Revolution, and other topics.

Cross-listed with: RSOC 517

CEDEV 533: Rural Development Research Methods and Topics

3 Credits

Advanced theories and methods for rural economic development research.

Prerequisite: ECON 521

Cross-listed with: AEREC 533

CEDEV 550: Principles and Practices of Planning

3 Credits

This course is an overview of the field of planning. It examines the history of planning and the theories behind it, and the corresponding roles that planners can play in their communities. It establishes the legal framework for planning as a profession, and examines landmark legal cases involving planning and its tools. It provides answers for such questions as: Why do communities plan? How has planning developed as a profession? What is the political context of Planning? What is the role of a planner within their community and government structure? How does planning relate to other disciplines? It also examines the different types and levels of planning, the process of planning, what data needs to be collected, how a comprehensive plan is made and implemented, and who planners must interact with in the course of doing their job. Finally, the course reviews contemporary issues in planning. Throughout, the course attempts to emphasize both the positive and negative impacts of planning.

CEDEV 560: Regional Development: Principles, Policy, and Practice

3 Credits

Regional growth and development, focusing on challenges to theory, policy, and practice, emphasizing change in metropolitan, micropolitan, and rural areas. CEDEV 560 Regional Development: Principles, Policy, and Practice (3) Effective regional development requires that history, theory, and policy are reflected in practice. Globalization impacts the development of regions and places in the United States and around the world. In this context, the development of regions impacts and is impacted by the pace and level of development elsewhere. Regional development addresses issues of how growth and disparity are spatially distributed and differentiated, and what causes these patterns to occur. The challenge is twofold. The first challenge is defining exactly what a region is and identifying who ultimately decides the policies and practices that determine its fate. The second is determining who benefits and who bears the costs of particular local and regional development approaches. The purpose of this course is to introduce students to concepts and frameworks of regional development. The first part of the course focuses on definitions and theories of regional growth and development, and begins to uncover ambiguities in pre-existing definitions and theories of regional development associated with topics such as growth and development theory, the new geography, cluster economics, and sustainability. It then delves into various policy approaches and issues including regional, environmental, and rural issues. The course culminates with a discussion of putting regional theory and policy into practice through case studies. Issues and topics

addressed in this course include identifying a region and defining 'place'; understanding the relationship between economic efficiency and sustainability; sustainable development and place-based development; the use of policy and its framing to allow regions and places to build on their assets. Additionally, the course will address how regions become interdependent and how relationships can be optimized in this context, and determining the best way and available sources to garner capital to fund development projects. Students will learn how to identify the assets of a region and the impact of interregional collaboration. The course will provide students with the opportunity to analyze the politics of regional development and the important considerations in regional development planning and practice.

Prerequisite: CEDEV430 and CEDEV500

CEDEV 567: Resilient Communities and Environments

3 Credits

Understanding connections between communities and surrounding ecosystems; exploration of management techniques for building adaptive, resilient, and sustainable communities and environments. CEDEV 567 Resilient Communities and Environments (3) This course provides students with a foundation in concepts which can be used to explore the interconnections of communities and environments, particularly as they apply to community and economic development. The focus of this course is applying concepts from resilience thinking to sustainable community and economic development. In this course, students will explore how communities, whether rural or urban, are linked to their environment, and how this, in turn, can affect the success of community development projects. The class explores the social, political, economic, and ecological barriers guiding these relationships. Topics covered in this context include environmental law and regulation; environmental and land use planning; risk and risk management; the rhetoric of sustainability; natural resource dependency; and interconnections between social and environmental justice. The last portion of the course discusses possible management techniques for building adaptive, resilient, and sustainable communities.

Prerequisite: CEDEV509 and CEDEV452

CEDEV 575: Methods and Techniques for Community and Economic Development

3 Credits

Understanding and applying methods and hands-on experience with techniques used in community and economic development. Lab. CEDEV 575 Methods and Techniques for Community and Economic Development (3) How do I find out what is happening in my community? The economy? The environment? What methods and techniques should I use? I need a toolbox for change! This is a hands-on course designed to provide students with an understanding of community and economic development methods and techniques, and experience in applying them to a variety of problems that they might expect to encounter in the field. The course is based on modules developed and offered by faculty in the Community and Economic Development graduate program. The specific content varies from year to year depending on the needs of each cohort of students. Typical topics include several methods and techniques from each of the following three areas: General Community Assessment Techniques, including identifying power structures, industry structure and employment, natural resources and amenities, human and social capital, local government and services, and land use patterns. Specialized Techniques for Community and Economic Development,

including retail trade area analysis, use of GIS, program evaluation, IMPLAN, Input/Output modeling, location quotient, shift-share analysis, survey design and implementation, and the use of social and economic indicators. Leadership and Process Skills, including visioning, goal setting, and strategic planning; grant writing; small group dynamics; conflict management, negotiation, principled bargaining, and deliberation; public speaking and working with the mass media; coalition building, project management; and use of the Internet, design and implementation of Web pages. This is a required course for all students in the MS in Community and Economic Development.

Prerequisite: graduate standing and approval of the instructor

CEDEV 576: Applications and Practices for Community and Economic Development

1-6 Credits/Maximum of 6

Consideration of community and economic development applications in communities and practices of public and private organizations and agencies.

Prerequisite: graduate standing and approval of the instructor

CEDEV 580: Community and Economic Development Research Application and Practice

3 Credits

Course outlines the steps for students to apply CEDEV theories and methods to a topic in writing their Master's paper.

CEDEV 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

CEDEV 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CEDEV 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

Community Psychology (CMPSY)

CMPSY 500: Theories and Issues in Community Psychology

3 Credits

Contemporary issues in community psychology will be discussed within the framework of its development from clinical and social psychology.

CMPSY 510: Change Processes

3 Credits

Social change as it takes place within institutions and communities.

CMPSY 511: Social Impacts on Psychological Functioning

3 Credits

Psychological functioning, as it is affected by social contexts.

Prerequisite: CMPSY500 , permission of program**CMPSY 519: Research Methods I**

3 Credits

In-depth examination of research methods utilized by community psychologists and social change activists; course followed by CMPSY 520. CMPSY 519 CMPSY 519 Research Methods I (3) This course, along with CMPSY 520-Research Methods II, will examine the key research methods available to community psychologists and social change activists. The course will emphasize a hands-on experience for students so that they can understand all the components of conducting program assessments. All students will develop pilot projects under the guidance of the instructor that will give the students experience in developing action research/program evaluation questions, completing research literature reviews, developing specific methodologies appropriate to their action research/program evaluation questions, data base design, data analysis, and report writing. There will be a balance between action research, program evaluation, quantitative and qualitative approaches. A final report and presentation of the findings of the pilot project are required. This course is the research methods course required of all community psychology and social change graduate students. This course assumes a basic understanding of introductory statistics and the use of statistical software will be undertaken in the course. The course is the introductory research methods course and will be offered in a sequence with CMPSY 520-Research Methods II. Both CMPSY 519 and CMPSY 520 must be taken in order to complete the Community Psychology and Social Change research methods requirement for graduation. This course is for 3 credits. Faculty: Richard Fiene and Robert Colman

Prerequisite: a C or better in an introductory statistics course within the past two years or a passing grade on the Community Psychology competency examination in introductory statistics; status as graduate student in CMPSY program

CMPSY 520: Research Methods II

3 Credits

In-depth examination of research methods utilized by community psychologists and social change activists. (Continuation of CMPSY 519). CMPSY 520 CMPSY 520 Techniques in Action Research (3) This course is the second of two research methods courses required of all Community Psychology and Social Change graduate students, emphasizing action research, program evaluation, and both qualitative and quantitative measurement. Faculty: Richard Fiene and Robert Colman

Prerequisite: CMPSY519**CMPSY 521: Roles and Methods in Community Psychology**

3 Credits

Advanced course entailing the development of Master's Projects with both fieldwork and research; each student writes a formal proposal.

Prerequisite: permission of program, for degree candidates only.**CMPSY 522: Practicum**

3-6 Credits/Maximum of 6

Fieldwork implementing planned change.

Prerequisite: CMPSY500 , CMPSY510 , CMPSY511 , CMPSY520 , CMPSY521 , for degree candidates only.**CMPSY 594: Research**

3-6 Credits/Maximum of 6

Supervised research on a master's paper.

Prerequisite: for degree candidates only**CMPSY 596: Individual Studies**

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Comparative and International Education (CIED)

CIED 500: Comparative Education Proseminar I

3 Credits

Methods of comparative education and case studies of governance and administration; first of two part sequence.

CIED 503: Ethnicity, National Identity, and Education

3 Credits

Surveys group-oriented education policies internationally, especially comparing those of Britain, Taiwan, India.

Cross-listed with: EDTHP 507, HIED 503

CIED 504: Perspectives in African Education

3 Credits

Educational systems in selected african countries are examined with respect to colonial history, social, political, and cultural factors.

CIED 508: Globalization and Lifelong Learning

3 Credits

Examination of globalization discourses and their relationships, implications and impacts on lifelong learning processes and contexts. ADTED 508 ADTED (CI ED) 508 Globalization and Lifelong Learning (3) The course is designed to help students to critically examine the nature and impacts of globalization on lifelong learning. The main goal

is to enhance the students' ability to learn and work in a globalizing world and to challenge traditional perspectives about globalization and lifelong learning. As such, the course will adopt a critical perspective on globalization while helping the students to develop a reflective stance on the theory and practice of lifelong learning. A central focus of the course will be to develop a critical analysis that contributes to the building of a more active and socially responsible adult learner. Students will be evaluated using a number of assignments/projects. The major research paper, class presentation, two critiques of theories of lifelong learning, country profile of lifelong and a short reaction paper will count for 90% of the course grade. Class participation will be awarded 10%.

Cross-listed with: ADTED 508

CIED 509: Language, Literacy, Identity, and Culture in a Global Context

3 Credits

Examines the relationship between issues of language, identity and culture for adult learners in an increasingly global context. ADTED 509 ADTED (CI ED) 509 Language, Literacy, Identity, and Culture in a Global Context (3) This core required course provides graduate students in the ADTED Ph.D. program a critical overview of the literature, theories, and scholarship examining the complexities inherent in an increasingly diverse global and post-colonial sphere. Explorations of historical, theoretical, postcolonial perspectives will be the focus, as will the daily portrayals of diverse peoples by the media. Participants in the course will be expected to familiarize themselves with the readings portraying the complexities of ethnicity, indigeneity, race, gender, and social class. Evaluation will focus primarily on writing a scholarly paper, preparing video materials that illustrate the issues, writing their personal educational histories, and participating in class.

Prerequisite: ADTED508

Cross-listed with: ADTED 509

CIED 511: Educational Ethnography: History, Theory, and Methods

3 Credits

This seminar shows students how to use ethnographic methods for education research to inform classroom practice and education policy. The course is centered around the idea that school communities serve as key sites for students of all ages to learn to become members of their culture(s). Course readings include historical to contemporary works of researchers who have shaped educational ethnography. We will also read about education in various settings and discuss anthropological explanations of inequities experienced by minority culture communities or marginalized groups. Students will carry out a mini-ethnographic study based on their area of research interest. The course is especially designed for students to be able to conduct ethnographic studies or make use of ethnographic techniques in future research projects.

Prerequisite: (C I 502; ADTED 550; EDTHP 586;)

Cross-listed with: CI 511

CIED 513: Video Ethnography in Education

3 Credits

Recommended Preparations: A graduate course in educational ethnography This seminar will show students how to use video ethnography in education research. The course is rooted in what is popularly known as the Preschool in Three Cultures method (also known as video-cued multivocal ethnography). We will learn about and watch

films using video-based ethnographic research methods. Students will also carry out mini-video ethnographies in a local classroom.

Prerequisite: C I 502; ADTED 550; EDTHP 586; LDT 574

Cross-listed with: CI 513

CIED 516: Education and Demographic Change

3 Credits

Education is one of the most important factors affecting major demographic shifts and processes worldwide, including the first and second demographic transitions. If, as the old sociological adage goes "demography is destiny," then our destiny is educationally transformed demography. Interdisciplinary research across demography, sociology, neuropsychology, and epidemiology is developing a strong research literature about how the thinking style, behavior, and attitudes of the educated human radically change fundamental dynamics underlying the world's population. The whole way in which we come to our jobs, spouses, and lifestyles; how many children we have and how we raise them; how long we are likely to live, and what will be our eventual demise are all heavily influenced by how much education we have had. The collective force of widespread education and its influence on rising cognitive abilities, scripts for living, and economic well-being are creating a distinctly new type of human population with major benefits and future challenges for a sustainable human population. At the same time, individuals' schooling is also influenced by demographic change. This seminar covers key concepts, theories, and methodological issues related to the intersection of demographical and cultural changes from the education revolution and their impact on subsequent demographic processes.

Cross-listed with: EDTHP 516, SOC 516

CIED 524: Comparative Education Research Using Large-Scale Data

3 Credits

This course is designed to give students an overview of large-scale international assessment databases and to demonstrate how these databases can be utilized to investigate critical issues in education from a comparative perspective. A number of empirical studies using large-scale international assessment databases will be reviewed, and these analyses will be replicated via computer labs. Students will develop a good understanding of large-scale international assessment databases and will learn to apply an appropriate method to address a particular topic of interest. Students will also develop a wide range of research skills necessary to independently conduct comparative research, including but not limited to formulating a research question, conducting a literature review, analyzing empirical data, and interpreting results. Although the focus is mainly on datasets relevant to education and education policy research, the skills taught in the course are broadly transferable to other social sciences including sociology.

Recommended Preparations: Students should have taken either EDTHP 513 and EDTHP 538 or EDTHP 553 as well as EDPSY 505 or SOC 574 before enrolling in this course.

Cross-listed with: EDLDR 524, EDTHP 524, HIED 524

CIED 525: Bakhtin and Education

3 Credits

This seminar gives students an overview of the writings of key members of the "Bakhtin Circle," which included Mikhail Bakhtin, Valentin

Voloshinov, Pavel Medvedev, and others. The core objective of this course is for students to learn about Bakhtinian theory and how to use Bakhtin as a philosophical method in carrying out research studies and analyzing data. In order to do this, we will read the original works of Bakhtin, Voloshinov, Medvedev, and others alongside contemporary educational researchers, theorists, and methodologists who apply Bakhtinian philosophical methods and analyses to the study of education.

Cross-listed with: CI 525

CIED 534: Childhood and Education in Sociological and International Comparative Perspective

3 Credits

The course objective is to use an international comparative lens and sociological perspective to examine the social, cultural, political and economic forces that shape childhood and the role education plays in this process.

Cross-listed with: EDTHP 534, SOC 534

CIED 538: East Asian Education, Leadership, and Reform

3 Credits

The social and organizational characteristics of East Asian schooling, including understandings of authority, power, and leadership, and systemic school reform.

Cross-listed with: EDLDR 538

CIED 540: Youth Participation in Educational Change: Examining Youth Activism, Child Rights, and Youth Voice

3 Credits

Cross-listed with: EDCE 540, EDTHP 540

CIED 541: Contemporary Philosophies of Education

3 Credits

Educational theory and practice in relation to contemporary movements in philosophy. CI ED 541 CI ED (EDTHP) 541 Contemporary Philosophies of Education (3) This graduate seminar explores a range of contemporary philosophies of education viewed from the perspective of different varieties of postmodernism. The study of modern and postmodern western thought is combined with explorations of eastern thought including viewpoints that are emerging today in both the northern and southern hemispheres. While focusing on contemporary educational ideas, it traces their roots in classical and non-modern philosophical sources. This look at the present in terms of the past reveals the paradigm shift presented by contemporary postmodern educational thought. In doing so, considerations for the issues of race, class, gender, ecology, multiculturalism and the regeneration of diverse incommensurable cosmologies, severed or overlooked by some educational philosophers, are explored in their reintegration by contemporary postmodern philosophers of education.

Cross-listed with: EDTHP 541

CIED 542: Issues in Literacy Education

3 Credits/Maximum of 6

Discussion of philosophical, sociological, historical, and curricular issues in literacy education.

Cross-listed with: LLED 542

CIED 543: Comparative and International Trends in Adult Literacy Education

3 Credits

This course critically examines the broad contemporary issues and interdisciplinary trends of literacy education with an international and comparative framework. CI ED (ADTED/AFR) 543 Comparative and International Trends in Adult Literacy Education (3) This course provides a comparative synthesis of what is known about literacy education and adult learning and what it will mean for the 21st century: the context in which literacy takes place; who participates; what they learn and why; the nature of the learning processes; new approaches to adult learning; social media and mobile devices; development theory in adult learning; and other issues relevant to understanding literacy education and adult learning in sociocultural, political, and international contexts. It also examines the newer approaches to adult learning: embodied, spiritual and narrative learning; learning and knowing in non-western perspectives; and cultural theory, poststructural and feminist perspectives. This course investigates questions such as: What does it mean to be literate in the 21st century? Why are teachers experiencing difficulty teaching students skills needed to understand and produce written work? Can schools in the 21st century inundated with digital technologies help students navigate the new literacies? How should adult literacy participants deal with the reality of new media and new literacies? What is the role of non-governmental organizations in this crisis? Overall, this course challenges graduate students to engage other international and non-western frameworks of learning and knowing to think about the purpose of education and learning as well as question the nature of knowledge production itself.

Cross-listed with: ADTED 543, AFR 543

CIED 545: Global Perspectives on Race, Gender, and Lifelong Learning

3 Credits

This course introduces students to some of the major bodies of literature related to race and gender, with a focus on how these intersectional perspectives help to shape our understanding of adult education and lifelong learning. The first part of the course is an overview of several key concepts including global theories of race and gender relevant to diverse societies in distinct geographical locations. The second part of the course explores the intersection of race, gender, and education through the writings of critical feminist scholars. Through this course, students will learn how to analyze race, gender, and class not as independent categories but deeply interconnected spheres of subjective and objective experiences. Students will also learn how theories of race and gender can inform their analyses of adult education policy and practice.

Cross-listed with: ADTED 545

CIED 550: Comparative Education Policy Seminar

3 Credits

Examines the educational policy process world-wide and the influence on schooling of children, youth, and adults in national education systems. CI ED (EDTHP) 550 Comparative Education Policy Seminar (3) In this course students will learn how educational policy is made around the world and what influence this policy has on the schooling of children, youth, and adults in national systems of education. Students will examine recent trends in educational policy that have originated at the international level. Methods of policy research and evaluation will also be examined. The main goal of the course is to give students an understanding of international processes in policy formation and detailed knowledge of current education policy trends worldwide.

Cross-listed with: EDTHP 550

CIED 553: Educational Mobility in Comparative Perspective

3 Credits

Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, and South America. CI ED 553/SOC 553/EDTHP 553/CI ED 553. (SOC 553, EDTHP 553, HI ED 553) Educational Mobility in Comparative Perspective (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Cross-listed with: EDTHP 553, HIED 553, SOC 553

CIED 555: Validity of Assessment Results

3 Credits

Concepts, issues, and methods of validation of educational and psychological assessment including models and approaches to validation, bias, and utility. EDPSY (CI ED) 555 Validity of Assessment Results (3) The goal of this course is to enable the student to acquire a broad perspective on issues and considerations in the process of validating interpretation and uses of tests, scales, assessment procedures, or protocols. Issues of validity are examined from many perspectives including a review of current dominant and alternative validity theories, of known threats to validity, of some advanced specialized statistical techniques; and of test bias, legal issues, psychological/behavioral issues, social/consequential considerations, and philosophical considerations. Additionally, applications are provided through in-depth cross-cultural and historical studies, technical reviews of published commercial tests, and in-depth examinations of controversies.

Prerequisite: EDPSY406 , EDPSY450

Cross-listed with: EDPSY 555

CIED 562: Politics, Language and Pedagogy: Applying Paulo Freire today

3 Credits

Examines the work of Paulo Freire as it applies to community action projects. ADTED 562 / CIED 562 Politics, Languages and Pedagogy: Applying Paulo Freire Today (3) The life and work of Paulo Freire will be the focus of this advanced graduate seminar. Freire was one of the foremost adult educators of our time. Graduate students participating in the course will read and reflect on his vision and how it evolved over time, critiques of Freire, the ways in which his ideas have been applied in diverse geographic and practice settings (e.g., education, community development), and implications for research, policy, and practice. Students will explore how elements related to Freire's work, such as conscientization, transformative action, and pedagogy for liberation, influence pedagogy and community action projects. Readings will include Freire's books, scholarship on Freire, and case studies of Freirean projects, among others.

Cross-listed with: ADTED 562

CIED 564: Social and Cultural Contexts of Learning and Work

3 Credits

Examines the relationship between learning and work with special attention given to how certain forms of learning are legitimized. ADTED 564 Social and Cultural Contexts of Learning and Work (3) This course is designed to provide students with the knowledge and skills required to critically examine the concepts and meanings of learning and work and their relationship to community. The course focuses on formal, nonformal, informal, and incidental learning, with particular emphasis given to how different types of knowledge and different forms of learning are legitimized. The course will allow students to develop and understand the social context in which learning and work operate and how those concepts shape and impact the community. Students will write critiques of readings as well as a major literature review, participate in class discussion, and do a class presentation.

Prerequisite: CI ED500 , ADTED542

Cross-listed with: ADTED 564

CIED 570: Comparative and International Adult Education

3 Credits

Critical and comparative analysis of adult education theory and practice outside North America, including international agency involvement.

Prerequisite: ADTED460

Cross-listed with: ADTED 570

CIED 571: Comparative Higher Education

3 Credits

Comparative methods of studying structural variations in systems of higher education in principal industrialized nations and other selected countries.

Cross-listed with: HIED 571

CIED 581: Social Theory and Lifelong Learning

3 Credits

This course offers an in-depth coverage of social theory, especially as it intersects with research and practice in adult education and lifelong learning. Considering that educational research, educational practice, and the politics of justice in education are informed by specific theoretical frameworks, this course will explore historical and epistemological foundations of theories and engage core modernist theories, postmodern and critical theories, and the theorizing found in Global South discourses.

Cross-listed with: ADTED 581

CIED 582: Reviewing and Editing Education and Policy Journals

3 Credits

Introduction to education policy journals and the review and editing process; discussion of emerging issues within the academic publishing industry.

Cross-listed with: EDLDR 582, EDTHP 582, HIED 582

CIED 587: Curriculum, Culture, and Child Development

3 Credits

Examines human development and cultural factors in planning, designing, and implementing curriculum and instruction in early childhood and childhood education.

Prerequisite: HD FS429

Cross-listed with: ECE 587

CIED 594: Research Topics

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

CIED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CIED 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CIED 845: Intergenerational Programs and Practices

3 Credits

Background, intervention strategies, and issues related to developing intergenerational programs and practices aimed at addressing vital social and community issues.

Cross-listed with: EDCE 845

CIED 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Comparative Literature (CMLIT)

CMLIT 501: Comparative Method in Literary Studies

1-6 Credits/Maximum of 6

Bibliography, research methods, and studies in comparative literature.

CMLIT 502: Comparative Criticism I: Classical to Neoclassical

1-3 Credits/Maximum of 3

Issues in literary criticism from Plato and Aristotle to the mid-eighteenth century.

CMLIT 503: Comparative Criticism II: Romantic to Contemporary

1-3 Credits/Maximum of 3

Principles and theories of literary criticism from eighteenth- and nineteenth- century beginnings to twentieth-century expansion and application.

CMLIT 504: Studies in Literary Genres

3-6 Credits/Maximum of 6

The concept of genre and the evolution of genre theory; application to a specific genre, e.g., the lyric or the novel.

CMLIT 505: Studies in Literary Periods and Movements

3-6 Credits/Maximum of 6

Comparative approaches to cohesive units within literary history, e.g., the Renaissance, the Enlightenment, Romanticism, Surrealism.

CMLIT 506: Studies in Literary Themes and Motifs

3-6 Credits/Maximum of 6

Comparative approaches to recurrent literary themes and motifs; application to a specific example, e.g., literary Utopias or the Faust theme.

CMLIT 507: Comparative Poetics

3 Credits

Theoretical and practical concepts in the comparative, global history of poetry and/or poetics. CMLIT 507 Comparative Poetics (3 per semester/ maximum of 6) This course explores theoretical and practical concepts in the history of poetry and/or poetics. Like all comparative literature courses, it pursues its task through discussions of texts from a wide variety of national or linguistic origins and ranges widely across historical period, medium, and social form, where appropriate. Students will develop a broad array of interpretive skills appropriate to poetry and poetics; they will acquire a knowledge of a wide variety of poetic forms; they will undertake comparative analyses of poems and poetic structures; they will learn how to think about poetics outside poetry.

CMLIT 508: Global Visual Culture

3-6 Credits/Maximum of 6

Comparative study of transnational forms of visual cultural production; e.g. new media, cinema, television, public culture.

CMLIT 509: Comparative Modernisms

3-6 Credits/Maximum of 6

Aesthetic and historical development of Modernism in diverse cultures.

CMLIT 510: Theory and Practice of Translation

3 Credits

Theories of translation and interpretation; importance of translation in literary transmission; application of theoretical concepts to individual translation projects.

Prerequisite: 24 credits in a foreign language

CMLIT 511: Theory and Praxis of Teaching Global Literatures

3 Credits

This course is a professional development seminar that prepares graduate students to contribute professionally to the advancement of teaching global and world literature courses at the college and university level. We will investigate the range of global literatures and consider the term "world literature" in two senses: (a) discerning the theories and meanings inherent in the concept and (b) charting the scope of a world of literature that can fit into one semester within specific institutional expectations. We will discuss the challenges and opportunities inherent in teaching works that are written in a variety of languages, come from a wide range of temporal periods and diverse cultural settings, reflect or provide alternatives to international canons, rely upon varying assumptions and ideologies, and demonstrate different relations to translation, literacy, visuality, orality, and performance. Students will become acquainted with aspects of learning theory and research questions as well as with professional resources such as conferences and journals in this field. We will theorize and explore concrete matters such as teaching within different institutional settings and delivery modes (including online), determining learning objectives and assessment instruments, crafting a syllabus, designing lesson plans, and selecting instructional materials including OER (Open Educational Resources) and other alternatives to expensive textbooks in relation to issues of equity and access. Throughout, we will focus on student learning, on creating an inclusive instructional environment, and on professional ethics as involved in the ways we teach literature. The course is intended to strengthen graduate students' abilities and confidence as teachers now, and their readiness for professional scholarship and for the academic job market later (most faculty jobs in literature are at teaching-focused institutions). We will also consider career diversity: since professional careers other than faculty appointments can often include forms of teaching, aspects of this course may be useful for other career options too.

CMLIT 521: Comparative Seminar in Inter-American Literatures

1-12 Credits/Maximum of 12

Comparative topics presenting literary works of the Americas—North America, South America, and the Caribbean—from early to present times. CMLIT 521 CMLIT 521 Comparative Seminar in Inter-American Literatures

(1-12)This course forms one series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers. Comparative study of Inter-American literatures is an important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, and supplementing proposed seminars in African and Asian literatures, this course and the other two new graduate courses now being proposed will make visible the ways in which the departmental curriculum to covers the diverse geographic areas relevant to comparative literary study. Our department has long taught 100-level and 400-level courses on Inter-American Literature. We believe that we were the first U.S. university to have created such courses some twenty-five years ago. Many of our graduate students possess appropriate languages (such as Spanish, Portuguese, and French) necessary for study in this field. The Americas as two joined continents have produced thousands of writers and a highly diverse literature written in English, Spanish, French, Portuguese, and other languages, including Native American languages. A comparative approach to the study of these literatures provides an appropriately internationalized context for understanding the relations among various literatures of the Americas and for seeing them in the purview of world literature as a whole. In sum, we have long had separate numbers for our undergraduate Inter-American Literature courses and we have previously offered graduate Inter-American courses under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

CMLIT 522: Comparative Seminar in Asian Literatures

1-12 Credits/Maximum of 12

Comparative topics presenting literary works of Asia, from the origins of literature in Asia to the present time. CMLIT 522 CMLIT 522 Comparative Seminar in Asian Literatures (1-12)This course forms one of a series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers. Comparative study of Asian literatures is an important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, this course and the other two new graduate courses now being proposed will make visible the ways in which the departmental curriculum to covers the diverse geographic areas relevant to comparative literary study. Our Department offers

instruction in three Asian languages (Chinese, Japanese, and Korean), has long taught 100- and 400-level courses in Asian literatures (Comp Lit 004 and Comp Lit 404), has linkages with universities in China and Japan, and has attracted a steady stream of graduate students who work in Asian literatures and languages. Interest in the literatures of Asia is strong. As a further indication of our Department's globalization, we are establishing a new undergraduate major in Japanese (this proposal is presently in the Senate). In sum, we have long had separate numbers for our undergraduate Asian language and literature courses and we have previously offered graduate Asian literature courses under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

CMLIT 523: Comparative Seminar in African Literatures

1-12 Credits/Maximum of 12

Comparative topics presenting literary works of Africa, from the origins of literature in Africa to the present time. CMLIT 523 Comparative Seminar in African Literature (1-12) This course forms one of a series of three new-course proposals for seminars in comparative literature with a focus on various parts of the world. While existing seminars focus on comparative studies organized according to concepts such as literary theory, period, theme, or genre, through the proposed new seminars the Department of Comparative Literature seeks to provide visibility for the full complement of courses that reflect the department's global perspective. These proposals also respond to the College's policy to avoid repeated use of the 597 number for similar subject-matter. Thus we are proposing three separate comparative courses on Asian, African, and Inter-American literatures. All represent subject-matter previously taught as CMLIT 597 or other less clearly defined CMLIT numbers. Comparative study of African literatures is an increasingly important part of the curriculum of our Comparative Literature Department. It is a field of study identified as one of our specialties in our recent strategic plans. Joining existing graduate seminars in European literatures, this course and the other two new graduate courses now being proposed (on Asian and Inter-American literatures) will make visible the ways in which the departmental curriculum covers the diverse geographical areas relevant to comparative literary study. Our Department offers language instruction in Swahili and Arabic, has long taught 100-level and 400-level courses on African literature, has developed linkages with several African universities, and has attracted a steady stream of graduate students to work in African literature during the last two decades. Interest in the literatures of Africa is strong. Africa as a continent has produced thousands of writers and a highly diverse body of literature written in English, French, Arabic, Portuguese and over 50 African languages. It is also a rich source of literature recorded from oral traditions maintained in the more than 1,000 languages spoken on the continent. A comparative approach to the study of these literatures provides an appropriately internationalized context for understanding African literatures and for seeing them in the purview of world literature as a whole. In sum, we have long had separate numbers for our undergraduate African languages and literature courses and we have previously offered graduate courses on African literatures under general numbers. In addition to complying with College policy and not continuing to use 597 repeatedly, we wish to make this field more visible within our curriculum by giving it a course number of its own.

CMLIT 524: Comparative Arab/ic Literature and Criticism

3 Credits

This course provides students with a comprehensive overview of modern Arab/ic literature, in dialogue with critical approaches that illuminate these texts within a comparative framework. By examining the critical interventions and debates that have shaped Arabic literature up until our present moment, this course invites students to attend to the manifold ways that this literature engages the major theoretical paradigms of global literary studies. It subsequently de-provincializes these debates beyond the limited purview of ethno-linguistic, philological, or geopolitical divisions of the field. It instead situates this literature as an active agent within world literary debates and criticism, both past and present. In this regard, the course will invite students to critically reframe the (neo)colonial or (neo)orientalist categories of the 'Middle East' and 'Near East'; and to consider other supra- and transnational exchanges staged across Asia, Africa, and the Mediterranean, as well as in the diaspora. In so doing, the course aims to look beyond the exclusive lens of the (post)colonial, or binary models of center/periphery, that dominate discussions of 'third-world' literature. In moving away from the siloing of these traditions within Area Studies, the course considers the repercussions of these debates for narrative, aesthetic, geopolitical, theoretical, and pedagogical concerns across the study of Comparative Literature. Students will read a wide variety of literary texts in English translation, spanning a range of genres (prose, poetry, drama, film). Alongside these works, they will engage with critical and philosophical writings from the Arab/ic context, on topics such as aesthetics and the sublime, affects and embodiment, futurity and dystopia, ecocriticism and the Anthropocene, language, modernity/postmodernism, globalization, trauma, and more. After having taken this class, students will have gained a sound grasp of the field, as well as its literary and historical dimensions. They will also have developed a critical understanding of the current challenges and directions of the study of modern Arab/ic literature.

CMLIT 526: Global Japanese Literature

3 Credits

This course provides students with a comprehensive overview of global Japanese literature, in dialogue with critical approaches that illuminate these texts. The narrative of ethnic, geographic, and linguistic isomorphism & the notion that a Japanese people speaking a Japanese language live in the Japanese islands & is a carefully crafted and relatively modern fiction in Japan. This course examines the gradual, and still contentious, formation of a "Japanese" literary canon from multiple vantage points. The class combines a survey of key texts composed in the Japanese islands and in Japanese diaspora communities, alongside an examination of the critical paradigms that surround the production, reception, and interpretation of these texts.

CMLIT 532: Critical Studies in Global Korean Literature and Culture

3-6 Credits

This course provides students and overview of key texts and trends in modern Korean literature and culture from a global perspective. It examines the most prominent literary and visual works that articulate the intricacy of modern Korean culture at the intersections of major historical, ideological, and environmental forces and issues in the twentieth century such as colonialism, cultural imperialism, Cold War politics, democratic movement, feminist movement, environmental injustice, etc. Students will also read texts on modern Korean history

as well as literary and cultural criticism and theories to improve their analytical ability that will be demonstrated in their writings.

Recommended Preparation: Students are expected to read in the original when they are capable. However, in anticipation of a broad array of language abilities in the classroom, materials will also be made available in English translation.

Cross-listed with: ASIA 532

CMLIT 543: Literary Relations

3-6 Credits/Maximum of 6

Mutual influences among specific literatures and cultures; for example, German-American, French-American, Inter-American, or East-West literary relations.

CMLIT 570: Forces in Contemporary Literature

3-6 Credits/Maximum of 6

Intellectual currents and experimental forms in contemporary world literature.

CMLIT 577: Critical Perspectives on Modern Chinese Literature

3 Credits

This course provides students with an overview of the core texts and main critical paradigms of modern Chinese literary studies. This course provides students with a comprehensive overview of the main critical approaches to modern Chinese literature, by placing these paradigms into historical perspective and linking them with key texts that illuminate the authors' arguments and demonstrate exemplary readings that have proven influential in the field, past and present. The particular focus of the course may vary according to the instructor (e.g. themes, genres, regions etc.), but the course will generally cover critical interventions and debates, helping students to understand the emergence of the field in its present form; they will also scrutinize major trends that are providing new directions for the study of modern Chinese literature. In addition to the critical literature, students will read a range of key literary texts, from the late Qing to the twenty-first century, that provide insights into the forces (aesthetic and intellectual, as well as social and historical) that have shaped the canon of modern Chinese literature. Critical analyses and literary texts are chosen in a way so as to illuminate each other. At the end of the class, students will have gained a sound grasp of the field and its literary and historical dimensions, and develop a critical understanding of the current challenges and directions of the study of modern Chinese literature. Cross Listings: CMLIT 577 will be added as a cross-listed course.

Cross-listed with: ASIA 577

CMLIT 580: Contemporary Literary Theory

3 Credits

Major issues in contemporary literary theory and their significance for criticism, with emphasis on continental European theorists and their influence.

CMLIT 589: Technology in Foreign Language Education: An Overview

3 Credits

Approaches to the uses and research applications of multimedia and other educational technologies applied to the teaching of foreign languages. (also crosslisted with SPAN 589)

Cross-listed with: APLNG 589, FR 589, GER 589, SPAN 589

CMLIT 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMLIT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CMLIT 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CMLIT 601: Ph.D. Dissertation Full Time

0 Credits/Maximum of 999

No description.

CMLIT 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

Supervision of teaching; consideration of instructional aims and objectives, methods of lecturing and leading discussions, evaluation of student work.

CMLIT 603: Foreign Academic Experience

1-12 Credits/Maximum of 12

Foreign study and/or research constituting progress toward the degree at a foreign university.

CMLIT 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

Comparative Medicine - MD (CMED)

CMED 501: Biology and Care of Laboratory Animals

3 Credits

Presentation of the anatomic and physiologic characteristics of the commonly used laboratory animal species and their relation to biomedical research.

CMED 503: Laboratory Animal Genetics

3 Credits

Genetic principles applied to laboratory animals used for investigations of diseases that may be controlled or influenced by genetic factors.

CMED 507: Techniques of Laboratory Animal Experimentation

3 Credits

Techniques of drug administration, infusion, and collection of body fluids and materials; gnotobiology; use of radioisotopes and bioinstrumentation.

CMED 515: Experimental Surgery of Laboratory Animals

3 Credits

Surgical techniques, including nephrectomy and Goldblatt clamp, bladder and gastric pouches, bile duct cannulation, intraventricular operation, cardiac and cerebrovascular catheterization.

CMED 530: Diseases of Laboratory Animals I

3 Credits

Physiological and pathological expressions of both infectious and metabolic- degenerative diseases of rodents, with emphasis on diagnostic and control methods.

CMED 531: Diseases of Laboratory Animals II

3 Credits

Physiological and pathological expressions of both infectious and metabolic- degenerative diseases of nonhuman primates and other species of animals.

CMED 535: Comparative Pathology

3 Credits

Comparative pathologic characteristics of infectious and metabolic diseases of animals and man.

CMED 590A: Colloquium

1-3 Credits/Maximum of 9

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CMED 590B: Contemporary Topics in Laboratory Animal Science Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers. This colloquium is specifically focused on recent literature in the field of Laboratory Animal Medicine.

CMED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CMED 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CMED 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CMED 801: Foundations in Laboratory Animal Welfare Laws, Regulations, and Guidelines I

1 Credits

This course uses a problem-based learning approach to develop the ability to interpret and apply laws and regulations that pertain to the humane care and use of laboratory animals. In particular, students will learn how to critically evaluate an Institutional Animal Care and Use Committee (IACUC) protocol for compliance with laws, regulations, guidelines and position statements that pertain to laboratory animal care and use. Licensed veterinarians enrolled in the Laboratory Animal Medicine Master's degree training program are the target audience

Recommended Preparation: Previous experience in basic science research using animals, and/or familiarity with regulations that govern animal care and use would provide good preparation for this course.

CMED 810: Management of Animal Care and Use Programs in Biomedical Research

1 Credits

This course will provide opportunities for students to apply knowledge and skills needed for administration and management of an animal resources program in biomedical research. Using active learning practices, students will explore topics specific to housing and caring for research animals. Topics include animal facility design, disaster planning, personnel management, waste management, fiscal management, process management concepts (LEAN, Six Sigma, Systems Approaches), and strategic planning.

Computer Science (CMPSC)

CMPSC 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given infrequently to explore, in depth, a comparatively narrow subject that may be topical or of special interest; several different topics may be taught in one year or semester.

Computer Science - CA (COMP)

COMP 505: Theory of Computation

3 Credits

Topics in discrete mathematics, discrete probability, first order logic and models of computation.

Prerequisite: CMPSC463

COMP 511: Design and Analysis of Algorithms

3 Credits

Amortized analysis, graph algorithms, NP-complete problems, approximation algorithms, parallel algorithms.

Prerequisite: CMPSC463

COMP 512: Advanced Operating Systems

3 Credits

A study of the principles and practice of distributed system design, including communication, synchronization, processes, file systems, and memory management.

Prerequisite: CMPSC472

COMP 513: Formal Methods for Software Engineering

3 Credits

Object-oriented software development, formal specification techniques and related CASE tools, software re-use, verification and validation, transformational development.

Prerequisite: CMPSC487W , COMP 511 , or permission of the program

COMP 516: Advanced Programming Languages

3 Credits

Programming paradigms and styles, object-oriented programming, formal semantics, programming language design.

Prerequisite: CMPSC460

COMP 517: Computer Security

3 Credits

Introduction to the area of computer security and current issues associated with computer security.

Prerequisite: MATH 315

COMP 519: Advanced Topics in Database Management Systems

3 Credits

Concurrency control, crash recovery, query processing, semantic data models, advanced file access, distributed database systems, performance, case studies, advanced applications.

Prerequisite: CMPSC430 , MATH 315

COMP 520: Artificial Intelligence

3 Credits

Problem solving, knowledge representation, language understanding, perception, learning, artificial neural networks.

Prerequisite: CMPSC463

COMP 524: Evolutionary Computation

3 Credits

Topics in evolutionary algorithms and genetic algorithms.

Prerequisite: COMP 511 or permission of the program

COMP 545: Computer Architecture

3 Credits

Cache, pipelining, memory design, interconnection networks, multiprocessor systems.

Prerequisite: CMPSC312

COMP 594: Master's Studies

3 Credits/Maximum of 3

Presentation of various research techniques, in-depth study of a specific computer science problem, development of a written paper or project, and an oral defense.

Prerequisite: A minimum of 2 of the 500-level computer science required courses or permission of the program.

COMP 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

COMP 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

COMP 600: Thesis Research

1-15 Credits/Maximum of 999

Research into a specific computer science problem, development of a scholarly written paper, and an oral defense.

Prerequisite: A minimum of 2 of the 500-level computer science required courses or permission of the program.

Computer Science and Engineering (CSE)

CSE 511: Operating Systems Design

3 Credits

Concurrent programming; design of I/O subsystem, memory management, and user interface; kernel design; deadlocks, protection and security; case studies.

Prerequisite: CMPSC473

CSE 513: Distributed Systems

3 Credits

Protocol hierarchies; routing and flow control algorithms; distributed operating systems; communication and synchronization mechanisms; resource allocation problems.

Prerequisite: CSE 411**CSE 514: Computer Networks**

3 Credits

Network subsystems, ARPANET, SNA, DECNET, network protocols (physical databank, network, transport, sessions, presentation, application), routing and congestion control, network optimization. CSE 514 CSE 514 Computer Networks (3) This course discusses the characteristics and low-level protocols of computer networks. It provides basic background, design, and evaluation skills in telecommunication and communication networks. The course will cover International Standards Organization Open System Interconnection (ISO-OSI) reference model, design issues and protocols in the data link layer, network layer and transport layer; architectures and control algorithms of local-area networks, and point-to-point networks; standards in network access protocols; models of network interconnection; and overview of networking and communication software. The course will emphasize on Internet standards such as TCP/IP and many advanced topics in networking. Students should already have some network background before taking this course. Students should also have necessary analytical and programming skills to do networking projects.

Prerequisite: CMPEN362 ; E E 353 or E E 350**CSE 515: Reliable Data Communications**

3 Credits

Discussion of problems and solutions for ensuring reliable and efficient communication over wired and wireless links and data networks.

Prerequisite: Communication Networks; STAT 418

Cross-listed with: EE 565

CSE 516: Mobile Networking

3 Credits

This course explores the fundamental concepts, algorithms, and engineering processes of analyzing mobile telecommunication voice and data networks and provides simple analytical tools for designing and evaluating these networks. The course is divided into three parts. First, the architecture and algorithms for mobility management and service control in cellular networks is presented. Using simple queuing models, students analyze the performance of these networks and examine design trade-offs. The latest generation network (5G, etc.) is used as a case study. Second, the architecture (radio access and core network) and algorithms for mobility management in packet-based mobile telecommunications networks is presented. Finally, protocols, algorithms, and performance consideration for the mobile Internet are presented. This course focuses on the practical applications of these concepts, using real systems to illustrate architecture and protocol trade-offs. The course provides students with a venue in which to pursue research in mobile networking that complements several core areas of the graduate CSE curriculum (e.g., networks, architectures, algorithms, and formal analysis). Following the course in networking, this course

enables students to learn the skills and obtain the background knowledge necessary to generate publishable research in the area of mobile networks. This course will serve as an elective for students interested in mobile networking and telecommunications.

CSE 517: Performance Evaluation

3 Credits

Tools and techniques for PE, Analytical and Simulation models, evaluation of multiprocessors, multicomputer and LANs, scheduling policies, case studies.

CSE 521: Compiler Construction

3 Credits

Design and implementation of compilers.

CSE 522: Program Analysis

3 Credits

This course explores the fundamental concepts, algorithms, and engineering processes of analyzing programs for correctness, security, and performance. It is intended as a course for first-year or second-year graduate students in computational majors such as computer science and computer engineering since it covers how to analyze programs rigorously based on program semantics. First, the course will cover basic static analysis algorithms, from dataflow analysis to complex points-to analysis. This part will also cover logical programming and ask students to implement static-analysis algorithms using logical programming. The next part will give an overview of the theory of static analysis, using the framework of abstract interpretation. The third part will focus on dynamic analysis and its instances such as taint tracking. The final part will discuss one application of static analysis in analyzing binary code for security. Upon successful completion of the course students will be able to demonstrate understanding of and implement the basic program analysis algorithms and be able to customize these algorithms for specific applications.

Prerequisites: CMPSC 461 or CMPSC 464**CSE 523: Programming Languages**

3 Credits

This course explores advanced concepts of programming languages and how the concepts are applied to language-based security. The course first covers programming language theory, including program semantics, Induction, lambda calculus. Then, the course covers language-based techniques, such as type system and program verification, that can provably rule out incorrect/insecure programs. Finally, the course engages the students with hands-on projects to apply the techniques to solve security problems, such as analyzing information flow leakage in programs and automatic code rewriting to avoid side channel attacks. Upon completion of the course, students will demonstrate understanding of advanced programming language concepts and be ready to apply them for specific applications.

CSE 530: Fundamentals of Computer Architecture

3 Credits

Advances in computer architecture, Pipelining, parallelism, and multiprocessing.

Prerequisite: CMPEN431

CSE 531: Parallel Processors and Processing

3 Credits

Parallel processor organization; basic algorithms suitable for such systems; parallel sorting and interconnection networks; applications and discussion of specific processors.

Prerequisite: CSE 530

CSE 532: Multiprocessor Architecture

3 Credits

Fundamental structures of multiprocessors; interprocess communications, system deadlocks and protection, scheduling strategies, and parallel algorithms; example multiprocessor systems.

Prerequisite: CSE 530

CSE 536: Fault Tolerant Systems

3 Credits

Attributes of fault-tolerant systems and their definitions; reliability and availability techniques; maintainability and testing techniques; practice of reliable system design.

Prerequisite: CSE 530

CSE 539: Topics in Computer Architecture

3 Credits

Study of current advanced issues in design, implementation and applications of complex computer systems.

Prerequisite: CSE 530

CSE 541: Database Systems I

3 Credits

Data models and relational database design; database integrity and concurrency control; distributed database design and concurrency control; query optimization.

Prerequisite: CMPSC431W

CSE 543: Computer Security

3 Credits

Specification and design of secure systems; security models, architectural issues, verification and validation, and applications in secure database management systems.

Prerequisite: CMPSC461

CSE 544: System Security

3 Credits

Review current research in computer and operating system security. CSE 544 System Security (3) This course is built around the problem of authorization (access control). After a discussion of threats of systems security, we will examine the fundamental mechanism for access control, the reference monitor. We will define the principle of the reference monitor and review how it is used to implement access control. The second major topic is mandatory access control (MAC). We will examine the implementation of MAC in Linux via the Linux Security Modules (LSM) framework. This part of the class relies heavily on a case study of the SELinux system to illustrate how MAC can be implemented and how security goals can be enforced by using MAC. The third major topic focuses on how network security functions are implemented in the operating system. Such functions include authentication, firewalls, and secure communication via IPsec. The implementations of such functions in the Linux operating system will be the focus of this particular section of the course. The third major topic examines system security architectures for distributed systems. The main foci are mechanisms based on public key systems, such as trust management, integrity measurement, and web-based operating systems. We will investigate research results in these areas and hypothesize where this emerging space may evolve. The fourth major topic focuses on lower level features of operating systems and their impact on security. We will first review virtual machine systems and recent research results that indicate an emergence of virtual machine mechanisms as a practical basis for achieving strong systems security guarantees. We will then explore work on protecting access to data on systems that is resident in traditional (file systems) and unexpected (other temporary) storage locations. The final two sections, Special Topics and Wrap-Up, will cover a number of areas of importance to system security, but not really falling into the traditional system areas. This includes emerging topics such as language-based security, the use of source code analysis for achieving system security goals, host intrusion detection, and emerging areas of recent interest. These topics will change over time as interests and technology develop. We will conclude with a discussion of the major challenges and state of system security, and make predictions about the future of system security.

Prerequisite: CSE 458 , CSE 411 , CSE 543

CSE 545: Network Security

3 Credits

Advanced methods and technologies for network security. CSE 545 Network Security (3) CSE 545 covers the major topics and emerging trends in network security. We begin with a discussion of the basic problems, architectures and devices in current and next generation networks. This will include a discussion of how these topics relate to popular articles and the press. This part of the class relies heavily on case studies to illustrate how security impacts the social and technical aspects of the Internet and computing systems. The second major topic focuses on the use of applied cryptography supporting network protocols. This will provide a deeper view of the basics of cryptographic constructions and consider formal methods for proving their correctness. The realities and limitations of the current use of cryptography will be considered. Students will spend a considerable amount of time developing and analyzing their own security protocols. The third section of this course will focus on the management and vulnerabilities of current network environments. This will begin with a discussion of emerging

authentication systems (federated authentication, graphical passwords, biometrics), and then turn to the security problems of large-scale network management. The class will then review major thrusts in network security: the management and vulnerabilities of wireless systems. The course concludes with a discussion of topical areas in network security. This is the most flexible part of the class, and will reflect the needs and desires of the instructors and students on a semester-to-semester basis.

Prerequisite: CSE 543

CSE 546: Cryptography

3 Credits

Introduction to the theory and techniques of modern cryptography, with emphasis on rigorous analysis and mathematical foundations. CSE 546 Cryptography (3) This course provides an introduction to the theory and techniques of modern cryptography. The course begins by reviewing relevant mathematical tools and moves on to develop definitions and examples of secure protocols for important cryptographic tasks such as symmetric- and private-key encryption, authentication, and digital signatures. Students will be evaluated primarily on weekly problem sets designed to verify and improve their understanding of the materials. Grades will be based on problem sets, a mid-semester examination, a final examination, and class participation/lecture notes. With regard to "lecture notes," students (in teams) must prepare a written summary of one lecture during the course. The goal of this exercise is to practice technical writing and exposition. This course will serve as an elective for graduate students in Computer Science & Engineering and the Post-Baccalaureate Credit Certificate Program in Computer & Network Security (under development).

Prerequisite: CSE 465

CSE 547: Wireless and Mobile Security

3 Credits

While wireless communications and mobile applications have made our daily life much easier, they also bring to us various security and privacy threats that did not exist in the wired networks. This course explores the latest research literature in security and privacy of emergent wireless and mobile systems including sensor networks, smartphones, cellular networks, Internet of Things (IoT), drones, autonomous driving, and wearable devices. Students will learn the theoretical framework, analytical skills and research methodology and tools in the this field, and synthesize their knowledge to formulate security models, design security protocols, apply principled security analysis techniques for network and software flaws, and malware detection, evaluate the security and privacy threats of various mobile systems as well as the challenges and design solutions for addressing them. Research papers on these topics in recent computer-science conferences and journals will be included for reading and discussion.

Prerequisite: CMPSC 443 or CSE 543

CSE 550: Numerical Linear Algebra

3 Credits

Solution of linear systems, sparse matrix techniques, linear least squares, singular value decomposition, numerical computation of eigenvalues and eigenvectors.

Prerequisite: MATH 441 or MATH 456

Cross-listed with: MATH 550

CSE 551: Numerical Solution of Ordinary Differential Equations

3 Credits

Methods for initial value and boundary value problems; convergence and stability analysis, automatic error control, stiff systems, boundary value problems.

Prerequisite: MATH 451 or MATH 456

Cross-listed with: MATH 551

CSE 552: Numerical Solution Of Partial Differential Equations

3 Credits

Finite difference methods for elliptic, parabolic, and hyperbolic differential equations; solutions techniques for discretized systems; finite element methods for elliptic problems.

Prerequisite: MATH 402 or MATH 404 ; MATH 451 or MATH 456

Cross-listed with: MATH 552

CSE 554: Error Correcting Codes for Computers and Communication

3 Credits

Block, cyclic, and convolutional codes. Circuits and algorithms for decoding. Application to reliable communication and fault-tolerant computing.

Prerequisite: Communication Networks

Cross-listed with: EE 564

CSE 555: Numerical Optimization Techniques

3 Credits

Unconstrained and constrained optimization methods, linear and quadratic programming, software issues, ellipsoid and Karmarkar's algorithm, global optimization, parallelism in optimization.

Prerequisite: CMPSC456

Cross-listed with: MATH 555

CSE 556: Finite Element Methods

3 Credits

Sobolev spaces, variational formulations of boundary value problems; piecewise polynomial approximation theory, convergence and stability, special methods and applications.

Prerequisite: MATH 502 , MATH 552

Cross-listed with: MATH 556

CSE 557: Concurrent Matrix Computation

3 Credits

This course discusses matrix computations on architectures that exploit concurrency. It will draw upon recent research in the field.

Prerequisite: CMPSC451 , CMPSC455 , CMPSC450 , MATH 451 , or MATH 455

CSE 559: Wireless and Mobile Sensing in the Age of IoT

3 Credits

This course covers state-of-the-art research on Internet of Things (IoT), with a focus on wireless networking and mobile sensing. Topics of discussion include high precision localization, GPS, smart healthcare, autonomous vehicles and drones, Augmented/Virtual Reality, Battery free communication, 5G basics, Security etc. The course begins with a basic background in linear algebra, signal processing, wireless communications in the context of applications. Thereafter, the topics will be organized into various applications and research from top notch conferences will be presented. In addition, within each application, the appropriate background and common principles underlying Bayesian Filtering, Maximum Likelihood, Sensor design basics etc will be emphasized.

Recommended Preparations: Programming skills are required. Ability to program in any programming language is fine.

Cross-listed with: EE 559

CSE 561: Data Mining Driven Design

3 Credits

The study and application of data mining/machine learning (DM/ML) techniques in multidisciplinary design. CSE 561 / EDSGN 561 / IE 561 / IST 561 Data Mining Driven Design (3) This course examines how theoretical data mining/machine learning (DM/ML) algorithms can be employed to solve large-scale, complex design problems. Knowledge Discovery in Databases (KDD) is the umbrella term used to describe the sequential steps involved in capturing and discovering hidden, previously unknown knowledge in large databases. The course begins with foundational information regarding engineering design and provides an overview of KDD and the emergence of the digital age. Students will investigate data acquisition and storage techniques where they will learn the difference between stated and revealed data as related to design. Students will construct their own databases and learn essential techniques in data base queries (SQL) and management. Data transformation techniques, such as binning and dimensionality reduction, will be examined in the data transformation section of the course. This course has a design-driven focus, which will enable students to solve real-life design challenges spanning diverse domains. Students will work on project-based exercises aimed at proposing novel data mining algorithms, or employing existing algorithms to solve design problems in fields relating to engineering, healthcare, financial markets, military systems, to name a few. Data visualization techniques will also be studied to help communicate complex data mining models in a timely and efficient manner.

Cross-listed with: EDSGN 561, IE 561, IST 561

CSE 562: Probabilistic Algorithms

3 Credits

Design and analysis of probabilistic algorithms, reliability problems, probabilistic complexity classes, lower bounds.

Prerequisite: CSE 565

CSE 564: Complexity of Combinatorial Problems

3 Credits

NP-completeness theory; approximation and heuristic techniques; discrete scheduling; additional complexity classes.

Prerequisite: CSE 565

CSE 565: Algorithm Design and Analysis

3 Credits

An introduction to algorithmic design and analysis.

Prerequisite: CMPSC465; Concurrent: CMPSC464

CSE 566: Algorithms and Data Structures in Bioinformatics

3 Credits

This course covers elegant algorithmic and data structure techniques that underpin modern biological data analysis. Bioinformatics is a growing field with immediate implications for our understanding of biology and treatment of disease. This course covers elegant algorithmic and data structure techniques and their use in bioinformatics. The emphasis is on recurrent ideas that underpin modern biological data analysis, presented in conjunction with their biological applications. The course is suitable both for students interested in doing bioinformatics research and those interested in applications of algorithms to the natural sciences. Some of the algorithms/data-structures that may be covered include exact string matching, suffix trees, suffix arrays, de Bruijn graphs, hidden Markov models, breakpoint graphs, succinct data structures, the Burrows-Wheeler transform, the FM-index, network flow, and bidirected graphs. Some of the biological applications will include sequence alignment and assembly, cancer genomics, phylogeny, gene finding, and variation detection. No prior biological or bioinformatics knowledge is required. A basic understanding of data structures and algorithms (equivalent to CMPSC465) is a prerequisite; however, exceptionally motivated students can contact the instructor to discuss their options. This course is complementary to existing bioinformatics courses offered through other programs on campus. These courses may be taken concurrently but are not prerequisites. Prerequisites: CMPSC465 Cross Listings: BMMB 566 will be added as a cross-listed course.

Prerequisite: CMPSC465

Cross-listed with: BMMB 566

CSE 575: Architecture of Arithmetic Processors

3 Credits

Algorithms and techniques for designing arithmetic processors; conventional algorithms and processor design; high-speed algorithms and resulting architectural structures.

Prerequisite: CMPEN411

CSE 577: VLSI Systems Design

3 Credits

Engineering design of large-scale integrated circuits, systems, and applications; study of advanced design techniques, architectures, and CAD methodologies.

Prerequisite: CMPEN411

CSE 578: VLSI Computer-Aided Design Tools

3 Credits

VLSI circuit design tools: placement, routing, extraction, design rule checking, graphic editors, simulation, verification, minimization, silicon compilation, test pattern generation.

Prerequisite: CMPEN411

CSE 582: Natural Language Processing

3 Credits

The question addressed by the field of natural language processing (NLP), or computational linguistics, is how to get computers to process human language in a useful manner, such as to extract information from text, to generate text from semantic representations, or to support human-machine interaction through language. This overview course presents natural language processing in two ways. From one perspective, it is an applied computational discipline, where the main goal is to turn language data into computable data. This makes it possible to build many applications where human language is processed, and to invent new applications. NLP is also a theoretical discipline that addresses problems in how to identify the units and structures of language, such as how to specify the vocabulary of a language, how to describe the allowable combinations of words, how to represent the meanings of words and phrases, and how to get at the implicit intentions of language users. The class covers both aspects of NLP.

CSE 583: Pattern Recognition and Machine Learning

3 Credits

This course is a comprehensive overview of the fields of pattern recognition and machine learning. The content covers both classification and recursion, model selection, decision theory, information theory, linear and non-linear models, graphical models, kernel methods, mixture models and EM as well as neural networks. It assumes no previous knowledge of pattern recognition or machine learning concepts. Knowledge of multivariate calculus and basic linear algebra is required, and some familiarity with probability would be helpful.

Recommended Preparations: Multivariate calculus, linear algebra, probability

Cross-listed with: EE 552

CSE 584: Machine Learning: Tools and Algorithms

3 Credits

Computational methods for modern machine learning models, including applications to big data and non-differentiable objective functions.

Cross-listed with: STAT 584

CSE 585: Digital Image Processing II

3 Credits

Advanced treatment of image processing techniques; image restoration, image segmentation, texture, and mathematical morphology.

Prerequisite: CMPEN455 or E E 455

Cross-listed with: EE 555

CSE 586: Topics in Computer Vision

3 Credits

Discussion of recent advances and current research trends in computer vision theory, algorithms, and their applications.

Prerequisite: CMPEN454 or E E 454

Cross-listed with: EE 554

CSE 587: Deep Learning for Natural Language Processing

3 Credits

Natural Language Processing (NLP) is a critical part of Artificial Intelligence and Data Science. Over the past few years, deep learning based on neural networks has become the de facto approach for a wide range of NLP tasks. In this course, we will start with foundations of deep learning including multi-layer perceptrons, backpropagation, and specialized types of neural networks for different forms of data. The second part focuses on cutting-edge NLP progress. We will start with fundamental natural language understanding tasks, then cover text generation models, and progress to applications spanning different modalities and languages. We will also discuss methods for explainability, interpretability, bias and fairness, and efficiency.

Prerequisites: CMPSC 448 CSE 582

CSE 588: Large-Scale Machine Learning: Mathematical Foundations and Applications

3 Credits

This course covers various mathematical aspects of big and high-dimensional learning arising in data science and machine learning applications. The focus will be on building a principled understanding of randomized methods via a mixture of empirical evaluations and mathematical modeling. Specifically, we will explore large-scale optimization algorithms for both convex and non-convex optimization, dimension reduction and random projection methods, large-scale numerical linear algebra, sparse recovery and compressed sensing, low-rank matrix recovery, convex geometry and linear inverse problems, empirical processes and generalization bounds, as well as theory and optimization landscape of neural networks, etc. The course material builds upon the basic principles of machine learning, using multivariate calculus, linear algebra, basic probability, and algorithms. Emphasis will be on producing mathematical arguments and rigorous proofs.

Prerequisite: CMPSC 448

CSE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CSE 591: Research Experience in Computer Science and Engineering

1 Credits

Research experience for new doctoral students in computer science and engineering. Research is performed in conjunction with another 500-level CSE course.

Concurrent: enrollment in another 500-level CSE course

CSE 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis.

CSE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CSE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

CSE 598: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

CSE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CSE 601: Ph.d. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CSE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

CSE 610: Thesis Research Off-Campus

1-15 Credits/Maximum of 999

No description.

CSE 820: Software & Hardware Project Management

3 Credits

Students study the theory and practice of hardware and software project management. CSE 820 Software & Hardware Project Management (3) This course provides a broad exploration of the field of software, hardware, and integrated software/hardware project management. In particular, it investigates the fundamentals of risk, scope, time and cost management, quality assurance, scheduling, and human resource functions. It considers the nuances of software, hardware, and integrated hardware/software project management, as distinct

from the management of projects in, say, building construction or manufacturing. Building on these insights, the student will learn how to apply these techniques to a real-world project of his or her choosing. Students will learn to recognize, identify, and apply the functions of project management to the types of projects which they will encounter in industry. This course supports the professional nature of the MEng degree.

Counseling Psychology (CNPSY)

CNPSY 502: Advanced Counseling Theory and Method

3 Credits

Assessment, intervention, and evaluation procedures for counseling problems frequently encountered in school, college, and rehabilitation settings. CN ED 502CN ED (CNPSY) 502 Advanced Counseling Theory and Method (3)This course is concerned with the exploration of ideas that are of theoretical and applied importance to thinking about counseling and psychotherapy. The course is not a skills course, per se, although many of the readings have clear implications for enhancing your therapeutic skills. Nor is the course meant to be a review of theories of personality or counseling typically covered in earlier courses. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED501 course open only to CN ED and CNPSY doctoral students.

Cross-listed with: CNED 502

CNPSY 554: Cross-Cultural Counseling

3 Credits

Examines theory, research, and models of counseling relationships between counselors and clients of different racial and sociocultural backgrounds. CNPSY 554CNPSY (CN ED) 554 Multicultural Counseling (3) This course is an advanced multicultural counseling course designed to help doctoral students: (a) develop mastery of the multicultural counseling literature, (b) promote self-awareness and self-knowledge, (c) facilitate the construction of cultural knowledge to increase awareness and sensitivity to issues affecting multicultural populations, (d) identify intervention strategies applicable to multicultural clients, and (e) promote development of a personal philosophy of multicultural counseling toward becoming a multiculturally competent counselor. The course is open to CN ED and CNPSY doctoral students who have successfully completed CN ED 507, CN ED 595A or CNPSY 595A, or equivalent courses.

Prerequisite: CN ED507 , CN ED595A , or CNPSY595A

Cross-listed with: CNED 554

CNPSY 555: Career Counseling

3 Credits

The examination of historical, legislative, and current models of career counseling and the development of pertinent individual and group techniques. CN ED 555CN ED (CNPSY) 555 Career Counseling (3) This course is an advanced extension of CN ED 505, Foundations of Counseling Infonation or its equivalent. In CN ED 501, students acquire a theoretical understanding of models of career development, decision-making, career education, information systems and information resources. In CN ED/CNPSY 555, students will have an opportunity to related such learning to the place of work in human behavior, models of career counseling, the role-play of such models, the practice of career

appraisal and the broad economic, social, and legislative contexts, including the global economy, stimulating current emphases on career counseling. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED505

Cross-listed with: CNED 555

CNPSY 582: Advanced Group Psychotherapy

3 Credits

Study of group psychotherapy and interventions, with an experiential component. Available only to majors in CN ED and CNPSY.

Cross-listed with: CNED 582

CNPSY 594: Research in Counseling

2-6 Credits/Maximum of 6

The design, implementation, and evaluation of counseling research projects.

CNPSY 595: ****SPECIAL TOPICS****

1-6 Credits/Maximum of 6

Cross-listed with: CNED 595

CNPSY 595D: Supervision of Counselors

1-9 Credits/Maximum of 9

Practical experience in supervising and evaluating work of counselors.

Prerequisite: CN ED595A or CN ED595B ; available only to majors in CN ED and CNPSY

Cross-listed with: CNED 595D

CNPSY 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNPSY 600: Thesis Research

1-15 Credits/Maximum of 999

NO DESCRIPTION.

CNPSY 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CNPSY 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 3

No description available.

CNPSY 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Counselor Education (CNED)

CNED 500: Professional Counseling Orientation and Ethical Practice

3 Credits

This course provides an overview of the counseling profession and ethical practice, including a critical review of the counseling profession. Students learn the role of professional counselors as advocates for equitable access to counseling free of discrimination, systemic racism, ableism, and all forms of oppression. Topics such as professional counselor identity, areas of specialization, licensure and certification, ethical practice, responsibilities of counselors, cultural humility, and professional advocacy in counseling are addressed.

CNED 501: Counseling Theory and Method

3 Credits

Survey of psychodynamic, humanistic, behavioral and cognitive-behavioral approaches to counseling individuals.

CNED 502: Advanced Counseling Theory and Method

3 Credits

Assessment, intervention, and evaluation procedures for counseling problems frequently encountered in school, college, and rehabilitation settings. CN ED 502CN ED (CNPSY) 502 Advanced Counseling Theory and Method (3)This course is concerned with the exploration of ideas that are of theoretical and applied importance to thinking about counseling and psychotherapy. The course is not a skills course, per se, although many of the readings have clear implications for enhancing your therapeutic skills. Nor is the course meant to be a review of theories of personality or counseling typically covered in earlier courses. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED501 course open only to CN ED and CNPSY doctoral students.

Cross-listed with: CNPSY 502

CNED 504: Foundations and Practices of School Counseling

3 Credits

This course in school counseling is a broad survey of the foundations, contextual dimensions, and practices of contemporary school counseling in Pre K-12 schools. Students develop knowledge of the roles of school counselors in addressing the developmental, personal-social, academic, and college-career needs of students in Pre K-12 schools. Students gain an understanding of the practices and interventions necessary for establishing and managing a comprehensive school counseling program. Students learn how current education reform and school contexts shape school counselors' roles. This course will provide the foundational knowledge necessary for additional school counseling courses.

CNE 505: Foundations of Career Development and Counseling Information

3 Credits

Accelerating change in economic, psychological, social, educational influences upon counselees. Utilization of information systems in effecting counselee change.

CNE 506: Individual Counseling Procedures

3 Credits

Training in listening, responding, challenging skills, and action-oriented techniques for individual counseling.

Prerequisite: or concurrent: CN ED501 ; available only to majors in CN ED and CNPSY

CNE 507: Multicultural Counseling: Foundations

3 Credits

Provide foundational information that controverts, complements and extends traditional psychology and counseling theory and practice.

CNE 508: Organization and Administration of Pupil Services

3 Credits

Principles, organization, personnel, functions, integration with school programs, evaluation.

Prerequisite: A G.P.A. of 3.00 or better in 27 credits of previous course work covering any three of the following five areas: economics, sociology, psychology, education, and anatomy and physiology.

CNE 509: Introduction to Rehabilitation Counseling

3 Credits

Provides information about rehabilitation history, legislation, philosophy, and agencies, as well as an overview of a variety of disabling conditions.

CNE 510: Foundations of Clinical Mental Health and Rehabilitation Counseling in Schools and Communities

3 Credits

This course provides an overview of the profession of clinical mental health and rehabilitation counseling. Course topics address professional identity, clinical mental health and rehabilitation settings and services, stigma and discrimination, psychosocial and cultural aspects of disability and mental health, public mental health and rehabilitation policy, and related client advocacy strategies, as well as current trends and issues affecting clinical mental health and rehabilitation counseling practice.

CNE 523: Counseling Children

3 Credits

Provides school and clinic approaches for school counselors and others mental health professionals to help children with developmental problems. CN ED 523 Counseling Children (3) Counseling children includes a range of school and clinic approaches used by school counselors and others to help children. The course combines theory and research findings with practical application of techniques so that students can develop a wide range of knowledge and skills for

integration into their individual counseling model and professional situation. Classroom work will include lecture, discussion, videos, and presentations of techniques that include role-play and case studies. The combination of these activities is designed to create a sound basis of understanding and supervised opportunities to apply techniques in school and agency settings.

CNE 524: Counseling Adolescents

3 Credits

Provides approaches for school counselors and others working with a variety of adolescent obstacles and developmental needs

CNE 525: Applied Testing in Counseling

3 Credits

Using counseling assessments effectively and ethically in applied settings, with an emphasis on test analysis and evaluation of psychometric properties.

Prerequisite: 3 credits of upper-level statistics

CNE 526: Research in Counselor Education

3 Credits

Evaluating counselor education research from scientist-practitioner perspective; emphasis on how to develop and use research with an applied focus.

CNE 530: Family Counseling: Theory and Practice

3 Credits

Conceptualization and application of family counseling frameworks to EC-12 school settings are learned in this course. CN ED 530CN ED 530 Family Counseling: Theory and Practice (3) Family functioning is paramount in the educational, personal/social, and career development of children and adolescents. This course prepares school counselors and other counselors for helping children and adolescents in the context of family. Several theories and models of family counseling are presented, focusing on application of these frameworks to work in EC-12 schools. Through experiential activities connected to the course, counselor-trainees are encouraged to relate experiences in their own families to their functioning as counselors. The course is required for a master's degree in elementary or secondary school counseling. Evaluation includes multiple-choice tests and a self-reflection project. The course objectives follow: Students will: 1 . know the terminology and basic concepts associated with systems thinking and family counseling. 2. adopt a family systems frame of reference and understand the family counseling perspective. 3. know the history and development of family counseling. 4. conceptualize the social constructionist perspective of family counseling and human functioning, including perspectives on substance use and abuse, gender, lifestyle, socioeconomic conditions, sociopolitical conditions, relations among diverse groups, and culture and identity. 5. understand and apply various frameworks of family counseling to the school counseling and school context, including Bowenian theory, attachment theory, experiential/humanistic approaches, structural and strategic approaches, cognitive-behavioral approaches, solution-focused therapy, narrative therapy, and integrative models. 6. grow in their own self-awareness with regard to their families of origin. 7. understand the use of self in counseling and learn and apply this knowledge in experiential activities and personal and professional

functioning. 8. understand the wounded healer concept and attachment theory implications for counselor functioning. 9. comprehend and delineate the relationships among family systems, schools, and community systems. 10. understand racial-ethnic, gender, cultural, socioeconomic, and lifestyle issues in the context of family, school, and community and institutional systems. 11. know how families, schools, and communities interact to influence students' development. 12. understand strategies used to promote effective teamwork among counselors, educational professionals, students, parents, schools, and communities. 13. understand communication, collaboration, and consultation with parents, educational and mental health professionals, guardians, and community members for promoting students educational, career, and personal development. 14. know and understand the structure of parenting styles and outcomes associated with each parenting style. 15. understand research on parenting styles and contrast the traditional view of adolescent development with the contemporary view. 16. apply parenting styles for various prevention and intervention strategies. 17. know research support for various prevention and intervention strategies, understand measurement associated with various theories and models, and understand research traditions and methods associated with various theories and models.

Prerequisite: CN ED501

CNED 531: Grief and Loss Counseling

3 Credits

Course focus is on counseling people with a variety of grief and loss issues.

CNED 532: Diagnosis Counseling

3 Credits

Course examines elements of counseling diagnosis, including identification and assessment of symptoms and behaviors in determining appropriate diagnoses.

CNED 554: Cross-Cultural Counseling

3 Credits

Examines theory, research, and models of counseling relationships between counselors and clients of different racial and sociocultural backgrounds. CNPSY 554/CNPSY (CN ED) 554 Multicultural Counseling (3) This course is an advanced multicultural counseling course designed to help doctoral students: (a) develop mastery of the multicultural counseling literature, (b) promote self-awareness and self-knowledge, (c) facilitate the construction of cultural knowledge to increase awareness and sensitivity to issues affecting multicultural populations, (d) identify intervention strategies applicable to multicultural clients, and (e) promote development of a personal philosophy of multicultural counseling toward becoming a multiculturally competent counselor. The course is open to CN ED and CNPSY doctoral students who have successfully completed CN ED 507, CN ED 595A or CNPSY 595A, or equivalent courses.

Prerequisite: CN ED507, CN ED595A, or CNPSY595A

Cross-listed with: CNPSY 554

CNED 555: Career Counseling

3 Credits

The examination of historical, legislative, and current models of career counseling and the development of pertinent individual and group

techniques. CN ED 555/CN ED (CNPSY) 555 Career Counseling (3)

This course is an advanced extension of CN ED 505, Foundations of Counseling Information or its equivalent. In CN ED 501, students acquire a theoretical understanding of models of career development, decision-making, career education, information systems and information resources. In CN ED/CNPSY 555, students will have an opportunity to related such learning to the place of work in human behavior, models of career counseling, the role-play of such models, the practice of career appraisal and the broad economic, social, and legislative contexts, including the global economy, stimulating current emphases on career counseling. This course is open to CN ED and CNPSY students. The prerequisite is CN ED 501.

Prerequisite: CN ED505

Cross-listed with: CNPSY 555

CNED 560: Medical and Psychosocial Aspects of Disability

3 Credits

This course is a broad survey of health conditions, including chronic illness and mental, physical, and emotional disorders and the resulting psychosocial and psychological impact on the individual. Students will be exposed to and critique the sociocultural impact of systemic inequities in healthcare access, economic opportunities, and social domains as it relates to disability and health. Students will apply disability affirmative principles, practices, and models for conceptualizing clients. For each category of disability conditions reviewed, students will gain an understanding of diagnostic criteria, appropriate treatments and interventions, supports, assistive technology, and appropriate referrals. Students will apply content on health conditions and cultural context to case studies and reflective assignments to demonstrate their mastery of the material.

Prerequisite: 9 credits in counselor education or related area

CNED 570: Lifespan Human Growth and Development in Counseling

3 Credits

Students will learn about lifespan development in counseling. Students increase knowledge and awareness of internal factors of development, such as neurobiology and physiology; and external factors, such as systemic privilege and oppression, disability, and cultural context. Students will apply developmental theories to case conceptualization and treatment planning in counseling. Students will also critically assess theories of human development and the interaction among psychological and social aspects of development for historically marginalized populations.

CNED 580: Foundations: History and Trends in Counselor Education

3 Credits

Overview of the foundations and issues relevant to the counseling profession and counselor education. Course available only to majors in CN ED.

CNED 581: Professional Issues in Counselor Education

3 Credits

Forum for doctoral students to examine and analyze issues relevant for counselor educators. Available only to majors in CN ED.

Prerequisite: CN ED580

CNED 582: Advanced Group Psychotherapy

3 Credits

Study of group psychotherapy and interventions, with an experiential component. Available only to majors in CN ED and CNPSY.

Cross-listed with: CNPSY 582

CNED 589: Seminar on Counseling Supervision

3 Credits

Study research and theoretical models of clinical supervision of counselors. Includes experiential supervision component as preparation for counseling supervision practicum.

CNED 593: Management of College and University Career Centers

3 Credits

The course focuses on the design, management, implementation, and promotion of Career Services in higher education.

Prerequisite: 9 credits in counselor education

CNED 594: **SPECIAL TOPICS**

3 Credits

CNED 594A: Research Topics

3 Credits

The design, implementation, and evaluation of counseling research projects.

CNED 595: **SPECIAL TOPICS**

1-6 Credits/Maximum of 6

Cross-listed with: CNPSY 595

CNED 595A: Counseling Practicum

1-6 Credits/Maximum of 6

Practice in the application of guidance principles and methods to cases counseled under supervision; case conferences; seminar in guidance techniques

Prerequisite: CN ED505 , CN ED506 , CN ED525 ; available only to majors in CN ED and CNPSY

CNED 595D: Supervision of Counselors

1-9 Credits/Maximum of 9

Practical experience in supervising and evaluating work of counselors.

Prerequisite: CN ED595A or CN ED595B ; available only to majors in CN ED and CNPSY

Cross-listed with: CNPSY 595D

CNED 595E: School Counseling Internship and Seminar

3-6 Credits/Maximum of 9

The School Counseling Internship provides a closely supervised field experience in involving the full range of duties involved with professional school counseling in Pre-K-12 schools. Students are expected to utilize every opportunity to become familiar with and participate in the services provided by the schools and related organizations with which they are associated. The expectation is that the Internship student should be providing the same range of services for the school district that the other school counselors provide. In this course, you are expected to engage in various counselor roles at your site, including (a) program development and evaluation; (b) counseling: individual, group, group guidance; (c) program administration and leadership; (c) collaboration, coordination, and consultation: work with parents, teachers, administrators, community members, and other appropriate stakeholders; and (d) assessment, career development, program coordination, and other important and appropriate roles.

CONCURRENT: CNED 504

CNED 595G: Counseling Internship and Integrative Seminar

1-6 Credits/Maximum of 12

CN ED 595G Counseling Internship and Integrative Seminar (3-6 per semester/maximum of 12) This course will provide students with opportunities to apply principles and techniques that facilitate the counseling process by completing a supervised 600-hour counseling internship experience. Students must have successfully passed CN ED 595A (Practicum) and gain permission from the Emphasis Coordinator before they can begin their counseling internship. Students are also required to have professional liability insurance as a prerequisite for the counseling internship.

Prerequisite: CN ED595A

CNED 595I: Counselor Education Doctoral Internship

3-6 Credits/Maximum of 9

Practical experience in professional counseling & higher education teaching under supervision available only to CN ED doctoral students. This course provides Counselor Education doctoral students with opportunities to apply principles and techniques that expand their counseling and higher education teaching experiences by completing an individual and group supervised internship. A minimum number of total hours required by accreditation must be acquired to meet the program required total 6 credit hours. This is a culmination course that provides for professional demonstration of information and skills developed in preceding courses in the doctoral program. Students in the course will meet the following objectives: a. Demonstrate a personal theoretical counseling orientation that is based on a critical review of existing counseling and teaching theories. b. Demonstrate effective application of theory and professional best practices. c. Demonstrate an understanding of counseling case conceptualization and effective interventions across diverse populations and settings. d. Develop and demonstrate a personal philosophy of teaching and learning. e. Demonstrate course design, delivery, and evaluation methods appropriate to course objectives. f. Demonstrate the ability to assess the needs of counselors in training and develop techniques to help students develop into competent counselors.

CNED 595P: Counselor Education Doctoral Counseling Practicum

3 Credits

Practice in the application of counselor education principles and methods to cases counseled under supervision; case conferences. Available only to CN ED doctoral students.

CNED 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CNED 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CNED 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CNED 601: Thesis Preparation

0 Credits/Maximum of 999

No description.

CNED 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Teaching of counselor education laboratory, clinical practice, and recitation classes under senior faculty supervision.

CNED 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

CNED 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

CNED 843: Prevention Strategies and Programming

3 Credits

Addresses prevention program development, implementation, and evaluation, along with theoretical and empirical underpinnings, ethical and multicultural issues related to prevention.

Cross-listed with: SPSY 843

Criminal Justice (CRIMJ)

CRIMJ 500: Advanced Criminological Theory

3 Credits

This course reviews and critiques the major theories of crime causation. CRIMJ 500 CRIMJ 500 Advanced Criminological Theory (3) This course provides students with an understanding of the major theories of crime causation. Students completing this course will (1) articulate the historical development of criminological theories over the last three centuries; (2) critically assess the usefulness of theory to the development of sound crime-related policy; and (3) delineate the strengths and weaknesses of each theory. Since the course serves as a foundation class for the other core requirements, it should be taken by students in their first semester. Students taking this course will be required to lead class discussions, write a significant research paper, and take essay format examinations.

Prerequisite: admission to CRIMJ graduate program or permission of program

CRIMJ 501: Advanced Research Methods for Criminal Justice

3 Credits/Maximum of 999

Advanced research methodology for criminal justice and criminology. The purpose of this course is to assist students in becoming both critical consumers and producers of scientific research. Through an understanding of research methodology, the student should be better prepared to determine the adequacy of findings from studies reported in both technical research reports and in academic journals. Further, students should be able to plan, implement, and assess the outcomes of studies that they might initiate.

CRIMJ 502: Public Policy and the Criminal Justice System

3 Credits

This course studies the concepts and methods of political and legal activity within the criminal justice system and their impact on society. CRIMJ 502 CRIMJ 502 Public Policy and The Criminal Justice System (3) The purpose of this course is to focus on crime policies in terms of effectiveness, efficiency, resource allocation, and societal impact. This course forms a nexus between the legal reasoning of criminal law with the theoretical and research foundations of the discipline. Crime control appears to be centered within the political community often without adequate, fair, or pertinent analysis of policy design or implementation. This course will use legal precedent to discuss the past and apply such a precedent to current issues. Students will examine how political assessments of crime is no guarantee that the resulting policy will deter the behavior. The nexus between research, criminal law, and the expectation of justice often come from disparate views about the goal of the criminal justice system. This course will also examine the goal of justice amid diverse populations. How has racial disparity in sentencing, legal representation, the death penalty, judicial representation, and political careers persisted? Students will also study comparative issues of national and international law. Finally, students will address a policy issue by submitting a policy analysis research proposal followed by a policy analysis paper.

Prerequisite: a baccalaureate in Criminal Justice or Behavioral related Sciences and admission to graduate study

CRIMJ 503: Advanced Statistics in Criminal Justice

3 Credits

Advanced statistics in criminal justice and criminology. The purpose of this course is to teach the student the theory behind a particular statistical technique and its appropriate use. As such, it focuses on: (1) the theory of statistical procedures; and (2) the analysis of computer-generated output. Through classroom discussions, reading assignments, and out-of-class exercises, the student will learn which statistical technique is appropriate with regard to the research hypothesis and the level of measurement of the variables included in the analysis. Further, through data analysis using SPSS, the student will learn how to interpret the output from that analysis.

Concurrent: CRIMJ501

CRIMJ 504: Criminal Justice Organization and Management

3 Credits

The course will be a broad overview of the structure and management of criminal justice organizations. CRIMJ 504 Criminal Justice Organization and Management (3) The purpose of this course is to provide students with the ability to assess substantive policy issues regarding the organization and management of criminal justice agencies, to explain the rudiments of the day-to-day functioning of criminal justice organizations, and, most important, to get students actively engaged in discussing and thinking critically about what they consider to be good organization and management principles and policies. In addition to the text, students will be instructed to consult criminal justice and public administration journals for the most up-to-date ideas and concepts in organizational management. In particular, students should (1) understand the nature of criminal justice organizations; (2) understand the importance of effective communication and motivation of rank-and-file employees; (3) comprehend the necessity of the use of power and decision making; and (4) the necessity of change and research in criminal justice organizations. This course will be offered once every other semester, and it should be a first-semester requirement.

Prerequisite: admission to graduate study and permission of program

CRIMJ 563: Concepts and Practices in Police Administration

3 Credits

Discusses application of police research and management principles to the contemporary policing context. CRIMJ 563 Concepts and Practices in Police Administration (3) This course examines the multitude of factors involved in the delivery of protective services to a diverse community. The evolution of policing from its English, quasi-militaristic heritage will be analyzed in order to gain foundational knowledge for understanding its current problem-solving, community orientation. Method for attaining a community partnership will be explored. Means for attaining accountability within the new organizational philosophy will be identified. Important issues such as use of force, cultural awareness, integrity, and ethics will be extensively reviewed.

Prerequisite: permission of program

CRIMJ 564: Administrative and Legal Aspects of Corrections

3 Credits

This course addresses historical and contemporary correctional policy, accountability, and possible remedial alternatives. CRIMJ 564

Administrative and Legal Aspects of Corrections (3) CRIMJ 564 is the historical, administrative, and legal inquiry into the development of institutional and community criminal punishment. Currently, corrections has nearly a 70% recidivism rate. Corrections is the measure of the cost of doing crime and cultural changes which redefine that cost. CRIMJ 564 will provide a macro-perspective into the mechanics of designing and reforming the process of capital punishment.

Prerequisite: permission of program

CRIMJ 565: Courts in the Criminal Justice System

3 Credits

An analysis of the function and role of the courts and the personnel involved in the American criminal justice system. CRIMJ 565 Courts in the Criminal Justice System (3) The course will deal with the nature and function of the courts and their personnel within the American criminal justice system. In relation to the structure and organization of the courts, the differences in court systems and functions will be examined, as well as proposals for reform of these structures and organization in light of concerns over increasing caseloads, other docket pressures, and a variety of other issues. The course additionally examines the personnel involved in the court processes of the criminal justice system in their function, education and training, selection, role orientations and examines the implications of these factors in how they exercise decision-making power. Proposals for reform of decision-making functions of prosecutors, defense attorneys, and judges will be examined in light of the interrelated functioning of personnel within the courts.

Prerequisite: permission of program

CRIMJ 567: Juvenile Justice: Issues and Practice

3 Credits

The systematic application of the juvenile justice system and issues related to juvenile delinquency and constitutional law. CRIMJ 567 Juvenile Justice: Issues and Practice (3) This course introduces the juvenile justice system and issues associated with processing youth through that system for graduate study. The course first addresses how there came to be a separate system for juveniles in this country and explores the major philosophical foundation for that separate system. Further, the course encourages the student to think about how delinquency is defined and the challenges those definitions have faced. In addition to exploring how youth are processed through the juvenile justice system (from arrest to disposition of the case), the course also provides the student with an exploration into issues associated with minorities and females. Critical issues of importance to juvenile justice administrators will be covered in this course as well since many CRIMJ graduates will go on to serve as administrators in the criminal justice field. Students will be asked to think critically about the future of the juvenile justice system as the system moves beyond the original intent of its framers. This course should provide the student with a better understanding not only of how the juvenile justice works, but also of how the system has dealt with challenges that it has faced since its first inception in 1899. This course will be offered once a year.

Prerequisite: permission of program

CRIMJ 568: Qualitative Methods for Criminal Justice

3 Credits

This course examines the many facets of qualitative research methodology. CRIMJ 568 CRIMJ 568 Qualitative Methods for Criminal Justice (3) The purpose of this course is to train the student how to conduct a good qualitative study. This will be achieved by introducing the students to various methods of data collection used in qualitative research. Specifically, the student will study qualitative methods such as, case study analysis, observer as participant, covert participation, as well as effective interviewing. The student will examine examples of notable qualitative studies to increase their understanding of the various concepts associated with qualitative research.

Prerequisite: Admission to a graduate program or permission of program.

CRIMJ 569: The Death Penalty

3 Credits

This course provides students an overview of a wide range of works within the topic of the death penalty authored by the most renowned experts in the field. Various issues examined include legislative challenges, racial discrimination, wrongful conviction, cost, deterrence, mitigation research, and the role of health and mental health professionals. Through landmark U.S. Supreme Court cases, influential meta-analyses on empirical studies, and legal analyses, this course provides an in-depth look at the theory, research, policy, and practice of this punishment, and discusses the limitations of current empirical approaches and the gap between practice and penological ideals.

Prerequisite: CJPA501 and CJPA502 or permission of the instructor
Cross-listed with: CJPA 569

CRIMJ 570: Forensic Victimology

3 Credits

Forensic victimology provides students with a basic understanding of the field of victimology and its historical developments. Through the use of statistical and theoretical application, students will better understand how to create victim profiles and how these profiles inform violence prevention, practice, and policy. Students will gain a basic understanding of threat assessment at the individual and community level, as well as safety planning strategies that are used to support crime and victimization prevention efforts. Further, forensic victimology provides an overview of the victim's role in the criminal justice system from investigation to intervention.

Cross-listed with: CJPA 570

CRIMJ 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers. CRIMJ 590 CRIMJ 590. Colloquium (1-3) This common course will focus on specific issues within each colloquia. Issues to be covered will be research, resources allocation, legal issues, and impact on crime control. This course will direct students to study the design and implementation of policies to address specific issues. The course will add to the diversity offerings within the Master of Arts in Criminal Justice. This course will be offered in the summer and the

spring with an enrollment of 20. Repeatable credit is possible. It will be offered more if enrollment patterns warrant such an increase.

CRIMJ 594: Research Topics

1-15 Credits/Maximum of 15

Supervised student activities on research projects identified on an individual or small-group basis. CRIMJ 594 CRIMJ 594. Research Topics (1-12) This common course will focus on specific research issues. Issues to be covered will be resources allocation, legal issues, and impact on crime control. Students will study the design and implementation of topical issues as they address specific issues. The course will add to the diversity offerings within the Master of Arts in Criminal Justice. This course will be offered every third semester.

CRIMJ 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required. CRIMJ 595 CRIMJ 595. Internship (1-18) The purpose of this course is to introduce students to the ethics, operations, and standards of working within a criminal justice environment. This course is individualized for each placement and student. It is offered in cooperation with the program, the internship site, and the goals of the student. An overall objective is to familiarize students with the legal and professional standards associated with working with people as colleagues, program participants, or clients. Students will be expected to comprehend the guidelines associated with legal and social service agencies. The internship will enable students to apply these guidelines under novel and unique situations. This course will be offered each semester with an enrollment of ten students. It will be offered more if enrollment patterns warrant such an increase.

Prerequisite: The applicant must have complete CRIMJ500, CRIMJ502, CRIMJ504 plus three other Masters credits. The applicant also must have a GPA of at least 3.25

CRIMJ 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

CRIMJ 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

Criminal Justice Policy and Administration (CJPA)

CJPA 501: Criminal Justice Institutions

3 Credits

This course provides a broad understanding of the social science study of criminal justice institutions and their decision-making processes. Criminal Justice Institutions focuses on the social scientific study of criminal justice institutions and their decision-making processes. The course presents an overview of key issues in theory and research on

each major sector of the criminal justice system: policing, prosecution, criminal defense, courts, and corrections. The course also discusses the societal impact of these criminal justice sectors, and the relationship between research and criminal justice policy.

CJPA 502: Theories of Crime

3 Credits

This course provides a survey of social science theories of criminal behavior at the individual and group levels. Theories of Crime provides an advanced survey of social science theories of criminal behavior at the individual and group levels. The course begins with an examination of the empirical study of crime, with an emphasis on crime data and its sources. The course progresses through biosocial, psychological, and sociological theories. The overarching emphasis of the course is to understand explanations of criminal behavior at the individual level and variations in crime rates at the group level.

CJPA 569: The Death Penalty

3 Credits

This course provides students an overview of a wide range of works within the topic of the death penalty authored by the most renowned experts in the field. Various issues examined include legislative challenges, racial discrimination, wrongful conviction, cost, deterrence, mitigation research, and the role of health and mental health professionals. Through landmark U.S. Supreme Court cases, influential meta-analyses on empirical studies, and legal analyses, this course provides an in-depth look at the theory, research, policy, and practice of this punishment, and discusses the limitations of current empirical approaches and the gap between practice and penological ideals.

Prerequisite: CJPA501 and CJPA502 or permission of the instructor
Cross-listed with: CRIMJ 569

CJPA 570: Forensic Victimology

3 Credits

Forensic victimology provides students with a basic understanding of the field of victimology and its historical developments. Through the use of statistical and theoretical application, students will better understand how to create victim profiles and how these profiles inform violence prevention, practice, and policy. Students will gain a basic understanding of threat assessment at the individual and community level, as well as safety planning strategies that are used to support crime and victimization prevention efforts. Further, forensic victimology provides an overview of the victim's role in the criminal justice system from investigation to intervention.

Cross-listed with: CRIMJ 570

CJPA 803: Applied Research Methods

3 Credits

This course provides a survey of social research methods tailored to the field of criminal justice. This course provides a survey of social science research methods, applied to the study of criminal justice topics and the evaluation of criminal justice policies. The course discusses different sources of crime and justice data, survey research methods, experimental and quasi-experimental approaches, qualitative research approaches, and legal research. The course emphasizes the illustration of types of

research methods with examples from criminal justice research and policy evaluation.

CJPA 808: Capstone Project in Criminal Justice Policy and Administration

3 Credits

This course is a requirement for all students in the M.P.S. in Criminal Justice Policy and Administration. During their final semester, the student will work closely with a faculty adviser (selected to match the student on substantive and/or methodological expertise) on a self-selected criminal justice and policy administration-related capstone project. The student is expected to draw on data and methods encountered during their prior course work. At the end of the semester, the student will be required to make a formal peer presentation to other enrolled students and all their faculty advisers. The student also will be required to submit a final report/paper to their faculty adviser by the end of the semester.

Prerequisite: CJPA 501, CJPA 502, CJPA 803, CJPA 820, CJPA 865, CRIMJ 503

CJPA 820: Criminal Procedure

3 Credits

This course provides a survey of criminal procedure and related constitutional law. Section 1 of the course explores the origins and evolution of criminal procedure, from its ancient roots through colonial times, the due process revolution, and modern law. Section 2 examines sources of modern criminal procedure, including statutory law, Supreme Court opinions, other case law, rules, regulations, and organizations' rules and regulations. Section 3 examines the Fourth Amendment and the evolution of search and seizure laws, including arrests, proper use of force, search warrants, and searches of places and things. This section presents older and more recent psychological conceptions of crime. Section 4 examines the Fifth Amendment, the federal due process clause, and the right to be free from forced self-incrimination; the Confrontation Clause; and the rights and responsibilities of all related criminal justice stakeholders in relation to these issues, including victims and defendants. Section 5 examines the Sixth Amendment, the right to counsel, evidence procurement and development, and criminal trial procedures. Section 6 examines the Eighth Amendment, the relationship between the Eighth and Fourteenth Amendments, pretrial versus post-conviction procedures, sentencing and correctional procedures, and the cruel and unusual punishment clause. Section 7 examines the Fourteenth Amendment, substantive due process clause, the equal protection clause, civil rights litigation, and the role of the writ of habeas corpus in criminal procedure. Section 8 allows students to demonstrate that they have mastered the above through a case study of a criminal case that has occurred within the past twelve months, or is ongoing.

CJPA 830: Global Policing

3 Credits

This course is designed to cover topics related to global policing and police cooperation against global crime activities. Students will study how police organizations from different countries communicate, cooperate, and collaborate with each other in order to respond global crime threats. This course will start with comparing and contrasting police systems in different countries to give an idea about similarities and differences among police organizations around the world. Then, the emergence of global policing will be discussed to understand the historical development of police cooperation in the world. Theoretical

frameworks for global policing will be covered to understand the change in the area of policing from local, state, and national levels to an international level. In this course, students will also analyze current global crime trends and understand the necessity of global policing. Moreover, international treaties and laws as well as international organizations against global crime will be discussed to examine the legal foundation and the structure of global policing. Bilateral and multilateral police cooperation initiatives will be studied to see how police agencies from different countries collaborate with each other. The role of U.S. law enforcement agencies in global policing and their assistance to other countries' police forces will be reviewed to evaluate the effectiveness of U.S. agencies in global police collaboration. This course will also analyze peace operations to understand the role of international organizations as well as the U.S. in providing police assistance in order to restore order and create a sustainable society after a war or a civil unrest in a country. Best practices in police cooperation will also be discussed to give an idea about the effective working of police cooperation in practice and challenges and opportunities in police cooperation will be studied to understand the success and failure factors in police cooperation. This course will conclude with a discussion of the future of global policing to identify forthcoming issues and possibilities in global policing.

CJPA 831: Transnational Crime

3 Credits

This course is about transnational crime activities happening around the world. Crime and criminal activities have become transnational due to globalization and advances in technology. The course will start with analyzing the universe of transnational crime to understand the current trends in transnational crime activities and the role of organized crime groups in these criminal activities. Students will study different types of transnational crimes every week to explore current issues related to crimes occurring beyond national borders. Transnational crimes such as drug trafficking, migrant smuggling, human trafficking, arms trafficking, counterfeiting, cybercrime, environmental crime, and money laundering will be analyzed to understand how transnational criminals commit these crimes, what types of strategies and tactics they use, and how law enforcement agencies try to fight against these crimes at the local, national, and international levels. Global responses and the U.S. response against transnational crimes will also be studied to evaluate the role of international organizations as well as the U.S. in the fight against transnational crime.

CJPA 832: Policing Terrorism

3 Credits

This course aims to understand the role of law enforcement in counterterrorism by analyzing the challenges, issues, and difficulties in policing terrorism. Root causes, strategies, and tactics of modern terrorist organizations are studied to understand the underlying motivations and the modus operandi of terrorist organizations. Law enforcement responses and contemporary policing strategies to fight terrorism are studied to evaluate their effectiveness in counterterrorism. Policing efforts to fight against domestic and international terrorist activities are also discussed to understand the new issues and challenges in policing global terrorism.

CJPA 833: Courts and Sentencing

3 Credits

This course is an examination of theory, research, and policy involving courts and their sentencing decisions. The course aims to translate social science research and theory on courts and sentencing into useful perspectives and knowledge for criminal justice practitioners and policy analysts. The course discusses sentencing decisions and how they are shaped by law and policy, the social organization of local courts, and the decision-making discretion of judges, prosecutors, and defense attorneys. In addition, the course considers the pros and cons of various research strategies for evaluating sentencing policies in an evidence-based way.

CJPA 865: Criminal Justice Ethics in a Diverse Society

3 Credits

This course provides a survey of ethical systems and theories. Section 1 provides an overview of the study of ethics, with definitions and a discussion of the parameters of ethical analysis. Section 2 presents the major ethical systems (utilitarianism, ethical formalism, religion, ethics of care, virtue ethics). Section 3 examines the origins of the concept of justice, distributive justice, corrective justice, substantive justice, procedural justice, immoral laws and the moral person, and restorative justice. Section 4 explains the theories of moral development, biological factors, learning theory, Kohlberg's moral stage theory, teaching ethics, and avoiding cynicism and burnout. Section 5 discusses the role of police in society as a crime fighter or public servant, police power and discretion, and the police subculture. Section 6 examines police discretion and discrimination, discretion in criminal investigations, and discretion and the use of force. Section 7 examines police misconduct and corruption as a worldwide problem, including international measures of corruption, on-duty use of drugs and alcohol, sexual misconduct, and criminal behavior by police. Section 8 examines the role of law, the law and legal behavior, justifications for law, and the various paradigms of law. Section 9 presents issues of discretion and dilemmas for the defense and the prosecution. Section 10 discusses ethical misconduct in the courts and the explanations and methods of response to the misconduct. Section 11 describes the issues involving discretion of correctional officers, treatment staff, and probation and parole officers.

Criminology (CRIM)

CRIM 500: Overview of Graduate Studies in Criminology

1 Credits

An overview of professional activities of scholars of criminology and Penn State's program in this field. CRIM 500 Overview of Graduate Studies in Criminology (1) This course is intended for new students in the Criminology graduate program. Its purpose is to speed their transition to graduate study and to provide a good start for their professional socialization. The course offers an overview of many of the professional activities of scholars of criminology and of Penn State's program in this field. This includes writing, publishing, teaching, and seeking funding. A major goal of the course is to help students see beyond the immediate priority of success at course work to the longer term priorities of success in these other arenas. The course is organized around a series of guest speakers from the program faculty who will discuss a range of activities that are a part of the professional life of research scholars. It also provides a forum for graduate students to get to know the faculty. The tone of the discussion is conversational. Speakers welcome questions

both about the particular topic of the week and about the speaker's professional/research activities.

CRIM 501: Criminal Justice Organizations and Institutions

3 Credits

Organizations and institutions involved in the formulation and implementation of criminal justice policy in complex social and organizational environments. CRIM 501 Criminal Justice Organizations and Institutions (3) Organizations and institutions involved in the formulation and implementation of criminal justice policy in complex social and organizational environments.

CRIM 512: Criminological Theories

3 Credits

Survey of theoretical and substantive issues in deviance and criminology, with emphasis on critical review of theories. SOC (CRIM) 512 Criminological Theories (3) This graduate course in Criminological Theories is designed to provide students with a broad understanding of the major theories that have animated the field of criminology since its inception. The course traces the development of criminological theories from the early 20th century to the present and provides students with a targeted exposure to empirical studies that have tested these theories.

Cross-listed with: SOC 512

CRIM 513: Theory Testing and Manuscript Writing in Criminology

3 Credits

This course critically examines innovative strategies criminological researchers take to test theory, evaluate policy, and contribute to the field. With recent scholarly examples, the course overviews the feasibility and relevance of the various approaches for graduate research, culminating in the opportunity to apply a strategy to individual research and peer review of final course papers.

CRIM 520: Moral Criminology

3 Credits

"Moral Criminology" provides a comprehensive understanding of the role of moral ideas, beliefs, and intuitions in the occurrence of crime and analogous behavior and in the application of punishment. How do we decide if a behavior is morally right or wrong, or if someone deserves praise or punishment? Under what conditions do our moral principles, intuitions, and emotions influence whether we follow or break rules or laws? Under what conditions do they influence our attitudes towards such behavior in others? This course integrates perspectives from criminology, sociology, psychology, and philosophy and prepares students to interpret and conduct research on the relationship between morality and crime. Part One of the course examines a variety of approaches for conceptualizing morality. Part Two reviews existing research on morality and crime. Part Three reviews existing research on morality and punishment.

CRIM 533: Social Contexts of Criminal Sentencing

3 Credits

This course is an in-depth, advanced examination of sociological and criminological theory, research, and methodological issues in the empirical study of the social and organizational environment of

criminal courts and their sentencing decisions. The course discusses sentencing decisions as a function of the complex interplay between formal legal norms, the social organization and culture of local courts, the social environment surrounding courts, the interactions between court participants, and the social psychology of court actors. In addition, the course considers the pros and cons of various empirical research strategies in studying sentencing decisions.

CRIM 559: Communities and Crime

3 Credits

Crime has been shown to differ significantly across neighborhoods of different racial composition and of different socioeconomic characteristics. Specifically, neighborhoods characterized by high poverty and high segregation are more likely to exhibit higher violence, higher homicide rates, and higher disorder. Moreover, growing up in a highly disadvantaged neighborhood predicts whether youth will be involved in delinquency, risky behavior, and violent crime. In this course, students will learn about the major debates and arguments in the field on how such differences can come about and what may be their consequences. Students will learn to recognize, identify, and apply criminological and sociological theories and thinking on the effects of neighborhoods' social structures on crime. In particular, we will focus on classic and contemporary cutting edge thinking on poverty, social isolation, disorder, collective efficacy, institutional (dis)trust, demographic v. cultural heterogeneity, segregation, immigration, and the physical environment. We will address the theories, methods, and policies related to understanding key features of places such as social (dis)organization, social capital, spatial embeddedness, opportunity infrastructure, and cultural capital.

Cross-listed with: SOC 559

CRIM 591: Teaching Sociology/Criminology

1 Credits

Preparation for teaching sociology and/or criminology at the college level. CRIM (SOC) 591 Teaching Sociology/Criminology (1) Preparation for teaching sociology and/or criminology at the college level.

Cross-listed with: SOC 591

CRIM 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

CRIM 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

CRIM 597E: Networks & Crime

3 Credits

A seminar on the study of social networks and crime, including research on interpersonal influence, co-offending, and illicit commerce.

CRIM 597F: CRIME & HEALTH

3 Credits

Topics include overlapping theories in criminology and epidemiology, bio-social explanations of crime/deviance, and collateral health consequences of crime and punishment.

CRIM 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CRIM 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CRIM 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

Curriculum and Instruction (CI)

CI 500: Multiple and Mixed Methods in Curriculum Inquiry

3 Credits

Multiple and mixed methods of inquiry to investigate problems in the practice of curriculum and instruction. C I 500 C I 500 Multiple and Mixed Methods in Curriculum Inquiry (3) This course focuses on practice-embedded curriculum inquiry and surveys an array of approaches and methods that are quantitative, qualitative or both. The course is intended as a gateway seminar to other C&I disciplined inquiry courses (i.e., C&I 501, 502, 503) in which curriculum and instruction students can discuss and participate in learning activities related to the readings and in which guest speakers can inform C&I graduate students about current issues and topics related to systematic inquiry with application to curriculum and instruction.

CI 501: Teaching as Inquiry

3 Credits

Course guides teachers to develop systematic inquires into effective teaching and learning.

CI 502: Qualitative Research in Curriculum and Instruction I

3 Credits

Presentation of theoretical and practical issues related to designing and proposing qualitative research concerning curriculum, teaching and/or learning.

Prerequisite: admission to a doctoral program**CI 503: Qualitative Research in Curriculum and Instruction II**

3 Credits

Considers forms of qualitative data, data analyses, procedures to generate data relationships, interpretation, and presentation of data.

Prerequisite: C I 502**CI 511: Educational Ethnography: History, Theory, and Methods**

3 Credits

This seminar shows students how to use ethnographic methods for education research to inform classroom practice and education policy. The course is centered around the idea that school communities serve as key sites for students of all ages to learn to become members of their culture(s). Course readings include historical to contemporary works of researchers who have shaped educational ethnography. We will also read about education in various settings and discuss anthropological explanations of inequities experienced by minority culture communities or marginalized groups. Students will carry out a mini-ethnographic study based on their area of research interest. The course is especially designed for students to be able to conduct ethnographic studies or make use of ethnographic techniques in future research projects.

Prerequisite: (C I 502; ADTED 550; EDTHP 586;)

Cross-listed with: CIED 511

CI 512: Contemporary Educational Ethnography

3 Credits

Recommended Preparations: Qualitative Research course or permission of instructor. This seminar shows students how to use contemporary ethnographic theories and methods for education research to inform educational practice and policy. The contemporary movement might arguably be situated in the controversies of the 1980s and 90s, exemplified in Clifford and Marcus's book, *Writing Culture*, in which they identified the epistemological and political predicaments and controversies pertaining to "the crisis of representation" in the field of anthropology. CI 512 addresses methodological and theoretical approaches informed through literary, reflexive, postmodern, poststructural, feminist, multisensory, multimodal, multivocal, and postcolonial turns and the ways in which they inform educational ethnography. The course focuses on a comprehensive view of education-schools, cultural and community centers, home life- as sites for all ages to learn to become members of their culture(s). A significant and regularly occurring aspect of the class involves students engaging in contemporary ethnographic practices such as cartographic, photographic/videographic, arts-based, alternative writing, walking/movement, sensory, performative, and multimodal. The course will intersperse readings of ethnography with readings about ethnography, largely within the contemporary sphere. The focus will be on contemporary movements that are likely to affect students as they consider ethnographic approaches for their dissertation topics (e.g. science education, musical training, literacy practice, critical race pedagogy).

CI 513: Video Ethnography in Education

3 Credits

Recommended Preparations: A graduate course in educational ethnography This seminar will show students how to use video ethnography in education research. The course is rooted in what is popularly known as the Preschool in Three Cultures method (also known as video-cued multivocal ethnography). We will learn about and watch films using video-based ethnographic research methods. Students will also carry out mini-video ethnographies in a local classroom.

Prerequisite: C I 502; ADTED 550; EDTHP 586; LDT 574

Cross-listed with: CIED 513

CI 515: Foundations of Educational Research

3 Credits/Maximum of 999

Students read the philosophical foundations of education research, study how philosophies influence methodologies, and analyze current educational problems. This course is designed for students entering doctoral programs in the College of Education. Our students are studying to become education researchers within a highly politicized environment. For example, particular definitions of education research and government policies that favor some types of research practices over others provide opportunities for and set limits upon the work of education researchers. Public controversies likewise contribute to challenges faced by education researchers who find their work affirmed or discounted by particular definitions and policies. In order to explore these controversies and to allow students to begin identifying their own "positionality" with regard to research, this course begins with a reading of the history and philosophies of education research (primarily focusing on the United States). The course goals are: - to identify underlying assumptions of competing forms of social inquiry, each determined to uncover new knowledge; - to bring those assumptions to bear on education research in chosen fields of study; and - to begin to develop one's own positions in order to direct further study and research. Specifically, through instructor facilitation and group discussions, students will come to understand major philosophical perspectives that permeate and drive research methodologies in education: positivism, postpositivism, interpretivism, critical theory, poststructuralism, and pragmatism. These understandings allow students to recognize the methodological assumptions that inform published research studies and to discover how methodologies might inform the research they wish to conduct as students and practitioners. Although the course is not required by any particular doctoral program in the College of Education, it is suggested for students who consider research important to their future careers and who see benefits in exploring the methodological options available.

Cross-listed with: ADTED 515, EDPSY 515, HIED 515

CI 517: Core Readings in Vygotsky's Cultural Historical Psychology

3 Credits

The Sociocultural or Cultural Historical theory of mind originated in the writings of Russian psychologist L.S. Vygotsky during the 1920s and 30s. Over the course of only about ten years, Vygotsky and his circle produced a substantial body of theoretical and empirical work that challenged basic epistemological and ontological premises of psychology and that outlined a new way of understanding human abilities and their development. The framework Vygotsky elaborated has come to be referred to as Cultural Historical psychology, emphasizing the fundamental role of mediation in shaping human psychology, mediation through historically created artifacts available in particular cultures and through forms of social interaction. In the decades since Vygotsky's death, Cultural Historical psychology has been further developed by researchers around the world who have brought Vygotsky's theoretical proposals to bear on questions and problems as diverse as special education, psychological and educational measurement, early childhood education, psycho-therapy, teacher education, linguistics and communication, adult and workforce education, and political and social change. The course is organized around carefully selected, seminal readings, emphasizing primary texts authored by Vygotsky but complemented by secondary sources generally regarded as leading interpretations. Beginning with an examination of Vygotsky's enterprise

to establish a unified, scientific psychology grounded in Marxian dialectics (historical materialism), the course engages with concepts and principles definitive of Cultural Historical psychology that in some cases have become highly influential in a number of disciplines and that in others are only beginning to be understood. These include mediation, Zone of Proximal Development/ZPD (zona blizhaishego razvitiya/ZBR), spontaneous and scientific concepts, teaching/learning-and-development (obuchenie), inner and private speech, units of analysis and meaning (znachenie/smysl), and perezhivanie, among others. In this way, students obtain a deep understanding of the theory, both in the context of Vygotsky's own writings and the specific problems he sought to address but also in its contemporary applications. This understanding, in turn, enables students to critically evaluate uses of Vygotsky's ideas in their particular area of study while also providing the background necessary to employ the theory in their own research. The course is intended for students in all areas of education, human development, and applied linguistics. No previous knowledge of Vygotsky's work is required.

CI 520: Democratic Education

3 Credits

Americans have long considered their public schools to be central in the cultivation of democracy. As such, public school teachers in the United States-at all levels and of all subjects-play a key role in perpetuating democracy. Despite teachers' critical role, formal preparation for this task via professional development of teacher education is questionable at best. Little scholarly attention is paid to what teachers need to know or be able to do pedagogically to help cultivate democratic thinking in students and rarely is the responsibility extended to teachers outside of the social studies field. This course takes seriously the role of democratic practice in education writ large, asking students to consider the purposes, theories, practices, and possibility of democratic education across a variety of contexts: adult education, K-12 education, alternative education, and teacher education. In this course we will consider the purposes of democratic education in the current U.S. context, examine theories of democratic education for democracy, and explore models of democratic education in practice.

CI 521: Crafting the Systematic Literature Review in Education

3 Credits

This course is a graduate level seminar designed for students who would benefit from learning how to conduct a systematic and analytical literature review. This course is appropriate both for graduate students in the early stages of determining a thesis or dissertation topic, and as well as advanced doctoral students who aim to engage in a systematic review of the literature in their chosen field. Class participants will critically analyze model literature reviews; determine criteria for inclusion and exclusion of research studies; systematically gather publications using academic databases; analyze and organize pertinent literature; and write a literature review focused on their topic of interest. The course follows a cognitive apprenticeship model of learning, such that the skills and processes involved in writing a literature review in education research will be taught within the context of the doctoral student participants' own research interests and will be explored and practiced within their professional and program objectives.

CI 525: Bakhtin and Education

3 Credits

This seminar gives students an overview of the writings of key members of the "Bakhtin Circle," which included Mikhail Bakhtin, Valentin Voloshinov, Pavel Medvedev, and others. The core objective of this course is for students to learn about Bakhtinian theory and how to use Bakhtin as a philosophical method in carrying out research studies and analyzing data. In order to do this, we will read the original works of Bakhtin, Voloshinov, Medvedev, and others alongside contemporary educational researchers, theorists, and methodologists who apply Bakhtinian philosophical methods and analyses to the study of education.

Cross-listed with: CIED 525

CI 528: Theories of Identity

3 Credits

Survey of 20th century theories of identity from post-colonial, critical race, psychoanalytic, Marxist, and post-structural feminist and queer perspectives.

CI 529: Foucault in Education

3 Credits

Reading major works in Michel Foucault and applications of his work in the field of Education. CI 529 Foucault in Education (3) The purposes of this course are twofold: 1) to read and discuss in depth the work of Michel Foucault and 2) to consider how Foucault's ideas may inform and be informed by theories and practices in education. Foucault is arguably one of the pre-eminent Western social theorists of the 20th century. Researchers and theorists working from post-structural, critical and socio-cultural perspectives frequently turn to Foucault's concepts of power, discipline, and subjectivity as powerful analytic lenses for analyzing the daily lives and practices of students and teachers in classrooms as well as more generally the field of Education, educational politics and policies, and educational institutions. Additionally, given the tremendous impact of Foucault's work in multiple disciplines throughout the academe, the ability to read and apply the theories of Foucault can facilitate broader reading and discussion across a variety of disciplines. In the class, students will devote approximately 2/3 of the time to reading original works by Foucault and brief commentaries on these works, and 1/3 of the time reading applications of Foucault's work by education researchers and theorists. The primary work load of the class is reading. Reading Foucault is not an easy task. Students can expect careful scaffolding of their learning through classroom discussions, a required on-line discussion forum, and frequent feedback from the instructor. Preparation for and participation in class discussions and in the building of a vibrant learning environment are required components of the class.

CI 530: Identities in Second Language Learning

3 Credits

This course investigates the ongoing collaborative construction and negotiation of race, ethnicity, gender, sexual, and social class identities in second language learning (SLL). It examines how we learn to speak our multiple selves in a new language, for example, how we learn to language race according to our prior background and the cultural practices and understandings of second language contexts. The impact of these social identities and polemics of racism, sexism, xenophobia, colonialism, homophobia, and elitism that arise when we study them are not restricted

to experiences outside the classroom, nor can they be divorced from language curriculum and pedagogy. Examining such issues in SLL can be challenging due to the belief that raising them courts controversy unnecessarily and goes against mindsets that many value, such as colorblindness, because language learning is an area that naturally welcomes and fosters integration and interaction between different groups in multicultural education. Course participants will interrogate the idea of colorblind language learning classrooms and curricula and examine how the realities of language learners' differentiated, inequitable access, treatment, and experiences in multilingual contexts challenge the field's declared values of multiculturalism in education.

CI 541: Place(s) in Education

3 Credits

In an essay about place, the anthropologist Clifford Geertz notes that "something that is a dimension of everyone's existence, the intensity of where we are, passes by anonymously and unremarked. It goes without saying." The purpose of this course is to foreground the concept of place and real places in our daily lives and academic work, particularly with respect to education (including schooling), to make sure that it does not go without saying. What is (a) place? How is it formed, bounded, made meaningful? How is it personal and social? What are its relationships with time and space? What are its relationships with experience, culture, citizenship, margins, diversity, and so many other topics? How does it shape living, especially learning and teaching in schools, and how is it shaped by these things? How do I and we fit in? And, following the feminist educational philosopher Nel Noddings, "should schools teach for an understanding and love of place or should they now offer curricula designed to transcend place?" Through a seminar format focused specifically on educational contexts, we will study place from a range of interdisciplinary perspectives and consider what these landscapes of place mean for teaching, learning, and educational research. Readings will draw from the fields of anthropology, art/s, curriculum, ecology, geography, indigenous thought, literature, philosophy, and sociology, all intersecting with education. Assignments will include citizenship in the community of this course, personal reflection about lived place(s) inside of schools and out, critical analyses of the literature on the intersections of education and place(s), and a final project focused on one aspect of how education and place(s) intersect that is of particular interest to the student. In dialogue, collaboration, the reading of each other's writings, and other activities such as a walking tour of students' most-meaningful places on campus, participants in this course will be and become citizens of the place (and its many physical, digital, and relational places) of the course. Students will exit the course with a broad understanding of the complexity of place(s) in education, including in the work of teachers and researchers.

CI 542: Girls' Cultures and Popular Cultures

3 Credits

This seminar explores educational implications in popular texts created for and by girls across time and cultures. CI (WMNST) 542 Girls' Cultures and Popular Cultures (3) The study of girls and their relationship with popular culture lies within the interdisciplinary field of Girlhood Studies which draws on established areas of Women's Studies, Children's/ Childhood studies, Cultural Studies and Educational Studies. This seminar explores girls cultures in different textual and material forms including books, toys, magazines, and new media. Students will employ feminist cultural theories to compare historical and contemporary girls cultures in relation to educational research and practice. This will

provide a framework to locate girls at the center of research and action in order for graduate students to engage in methodologies that are not simply about girls but "for" "with" and "by" girls. Key topics include the misperception of girls (popular) culture as only a contemporary phenomenon, the role of girls as consumers plus producers of culture, and recurrent issues in girls cultures such as sexualization and hyperfemininity.

Cross-listed with: WMNST 542

CI 550: Overview of Contemporary School Curriculum

3 Credits/Maximum of 999

Current school programs and options and their impact on pupils; problems in introducing new content into the curriculum.

Prerequisite: 12 credits in education and psychology or teaching experience

CI 552: The Methods Course in Teacher Education: Challenges and Opportunities

3 Credits

This course will focus on the 'methods course' in teacher education. A common feature of teacher education programs in almost any setting, methods courses are those courses teacher candidates take that address how to teach. Of course, 'how to teach' is nowhere near as simple as that would sound, and even less simple is how to teach how to teach, in a way that will actually influence how candidates will teach. Students in this course will read research on methods courses, analyze many examples at Penn State and elsewhere, and inquire together about methods course design. Students will explore: · WHY have methods courses at all? Are there things to learn about how to teach that can't be learned through field experience alone? · WHAT shall the content of methods be? Are there such things as 'general methods' or must methods courses always be content-area-specific? What shall students read and come to know in a methods course? · WHO shall teach methods courses, and who shall take them? What happens when practitioners teach methods, as opposed to university faculty? Or when we co-teach? · WHEN shall methods courses occur in the timespan of a teacher preparation program? Must they be concurrent with field experience, or should they precede it? What prerequisite knowledge or experiences matter for the success of a methods course? · WHERE shall methods courses be taught? On site in a school? At the university? Somewhere else? What about online? · HOW shall methods be taught? What course activities actually help teacher candidates learn to teach? What are appropriate uses of readings? Peer teaching? Classroom inquiry? By the end of the course, students will have articulated research-based answers to these questions. In addition, students will be able to apply the available research to existing methods courses in their own current and/or future context(s).

RECOMMENDED PREPARATIONS: This course is recommended for doctoral students whose future plans include teaching in teacher-preparation programs

CI 560: Theories of Childhood

3 Credits

The study of childhood from cultural, historical, psychological and philosophical perspectives. CI 560 Theories of Childhood (3) In this course, participants will explore the highly variable ways that childhood has been constructed and enacted across multiple cultures and

throughout history. Participants will begin by considering how notions of the nature of childhood, for example, children as innocent, as primitive, or as blank slates have functioned across history and in their memories and sense of nostalgia about childhood. Participants will expand their understanding of historic and contemporary childhoods through comparative studies of children. Participants will examine and critique normative theories of child development and will finish with an examination of contemporary child culture, including play and how changes in global culture affect children's lives. The course instructor will provide the readings for the course, as well as background information and organizing topics. The instructor creates and assigns activities and provides or oversees discussion questions to organize student thinking for a productive discussion. It is the instructor's responsibility to create an environment conducive to students' development of an open, vibrant learning community; to establish and oversee course standards; and to assist students to achieve both the course objectives and their own. There are no prerequisites for this course. Given that all participants have had a childhood and some may be parents, the memories and experiences each participant brings may be both a help and a hindrance. That is, insofar as their own childhoods or those of their children cause them to believe that they already know what childhood is, class participants need to recognize the limitations of their memories and experiences. The diversity of childhoods that will be represented across the members of the course is a considerable resource for participants to develop an ever-broader understanding of the cultural and historical nature of childhood.

CI 565: Writing Research Articles in Curriculum and Instruction

3 Credits

Graduate course on revising a written product for publication in a peer-reviewed research journal in curriculum and instruction or related fields. CI 565 Writing Research Articles in Curriculum and Instruction (3) In this course, students will prepare a research article for publication. Beginning with a course paper, conference paper, comps paper, thesis, pilot study, dissertation, or another pre-existing draft, writers will learn to frame, revise, and edit a scholarly article for submission to a journal. To do this, students will spend time addressing the genres and conventions of writing about education research for an academic audience, focusing on particular subfields in curriculum and instruction. Students will read and analyze published research in curriculum and instruction, study principles of rhetoric and style, practice collaboration and peer review, and engage in intensive revision and editing. Students will gain skill in dealing with the emotions of writing, work habits, giving and receiving feedback, and motivation. They will also work through concerns like organization, exposition and elaboration, and argument as well as matters of correctness and grammar. Students will consider the variations in epistemology, genre, and conventions of argument and of style for the wide range of subfields in curriculum and instruction as well as across education subfields. This includes attention to historical and contemporary divergences between fields and ways of bridging those as needed for dissemination research. Major assignments include analyses of target journals and representative articles, experiments in scheduling and writing habits, and weekly challenges in revising. In addition, students will work in intensive writing groups across the length of the term. Each student will receive extensive feedback on a draft in progress toward the goal of having a manuscript suitable for submission by course end.

CI 570: Language Policy for Multilinguals: Language, Culture, Socioemotional, and Psychological Implications

3 Credits

In this course, students will develop a deeper understanding of the historical and contemporary forces that have shaped language education program policies; evaluate how policies have influenced, and continue to influence, teacher education programs and educational and social outcomes of multilingual learners. Topics covered include research on the requisite knowledge educators must have to engage in practices that promote positive outcomes for multilingual learners; a historical overview of language policies and research foci; empirical evidence on the effectiveness of different language instruction education programs; contemporary issues of testing and validity, as well as reclassification and tracking; and contemporary debates (e.g., translanguaging and codeswitching; dual language for whom?).

CI 580: Media Literacy, Language, and Literacy in Schools

3 Credits

Theories of media literacy, issues of non-print technology in language and literacy.

Prerequisite: LL ED480

Cross-listed with: LLED 580

CI 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

CI 595: Internship in Curriculum, Supervision, or Instruction

1-6 Credits/Maximum of 6

Internship in schools or other educational settings under supervision of graduate faculty in student's area of specialization.

Prerequisite: approval by program head and at least 15 graduate-level credits in Education

CI 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including nonthesis research, supervised on an individual basis and which fall outside the scope of formal courses.

CI 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered frequently.

CI 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

CI 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

CI 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Teaching experience in Curriculum and Instruction undergraduate faculty supervision.

Prerequisite: admission to C&I doctoral program and program head permission

CI 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

CI 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

CI 810: Adolescent Development and Learning

3 Credits

This course applies psychological principles of adolescent development and provides a critical examination of factors (gender, socioeconomic status (SES), race, ethnicity, culture, disability, and language) that have an impact on physical, cognitive, social, emotional, behavioral, and moral developmental outcomes. This course will engage learners with the practical and theoretical issues regarding adolescent development and learning in secondary education settings.

CI 811: Science and Mathematics Teaching in Secondary Schools I

3 Credits

CI 811 is the first of two sequenced methods courses for science and mathematics teachers who are pursuing certification to teach in grades 7-12 and are post-baccalaureate. The course emphasizes contemporary theory and practice informing science and mathematics education in public secondary school classroom settings. Students will deepen their understandings of theories of how people learn and apply that knowledge toward developing ambitious mathematics or science teaching practices to serve diverse learners. Students also develop familiarity with and understanding of current state and national content standards that guide mathematics and science education. Students will engage in activities intended to develop their critical consciousness around diversity, equity, inclusion, and belonging. CI 811 focuses on teaching as a relational activity, including asset-based approaches to teaching, as well as developing teaching practices that are equity focused, anti-racist, and transformative for students who are historically marginalized in the U.S. CI 811 is scheduled concurrently with a supervised field experience in a middle or secondary school, where students have the opportunity to apply and evaluate their developing instructional skills. CI 811 and the concurrent field experience are designed specifically to provide strong connections between educational theory and teaching practice.

Corequisite: CI 895 Recommended Preparation: Admission into PSU Teacher-in-Residence Certification Program

CI 812: Science and Mathematics Teaching in Secondary Schools II

3 Credits

CI 812 is the second of two sequenced teaching methods courses for science and mathematics teachers who are enrolled in the PSU Teachers-in-Residence program and are pursuing post-baccalaureate Pennsylvania teacher certification for grades 7-12. It is meant for grades 7-12 teachers who hold emergency PA teaching certification and are currently teaching in a middle or high school in PA. It is a part of an 18-credit program that will lead to permanent Pennsylvania teaching certification for grades 7-12. The course builds on prior coursework including CI 811 and continues to emphasize contemporary educational theory and teaching practice informing science and mathematics education in secondary public school classroom settings. The course extends the equity focused and anti-racist teaching practices from 811 to prepare students to support a diverse population of students, through asset-based approaches to teaching. Having worked on the development of critical consciousness in prior coursework, they will begin more deeply engaging with research-based teaching practices through structured experiences with students in school. They will also build on their lesson design work to organize larger units of instructional practice through analysis and critique of existing materials. Finally, they will develop assessments, both formative and summative, that are informed by understandings of research-based ambitious mathematics and science teaching practices, as well as asset-based equitable pedagogies. As this course is taken concurrently with CI 895 (field experiences), there will be a natural flow of work completed as a part of CI 812 being implemented in the students' home classrooms. CI 812 is designed specifically to provide strong connections between educational theory and teaching practice.

Prerequisite: CI 811 Corequisite: CI 895 Recommended Preparation: Admission into PSU Teacher-in-Residence Certification Program

CI 895: Internship

1-18 Credits/Maximum of 18

Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

CI 896: Individual Studies

1-9 Credits/Maximum of 9

Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Curriculum and Supervision (C-S)

C-S 551: Curriculum Design: Theory and Practice

3 Credits

Course participants explore the fundamentals of curriculum; that is, curriculum cultures, traditions, perspectives, theories, or models that have significantly affected the field of curriculum design. Participants also learn about historical and contemporary issues in the development of national, state, and local academic standards, and how these issues have shaped the design of particular curriculum programs.

Participants engage in curricular analysis of a content-specific program through examination of "what is behind the curriculum" (purpose, goal, perspectives, assumptions), "what is in the curriculum" (the nature of the content, basis for its selection, content and media structures), and "what are the experiences with the curriculum" (how curriculum may be taught, what methods may be used, how the program success may be judged, the "frame-factors") in order to outline the strengths and weaknesses of the program, and how it can be adapted to maximize its benefits and minimize its limitations for a specific institutional or educational context.

Cross-listed with: EDLDR 551

C-S 553: Issues in Curriculum

3 Credits/Maximum of 6

In-depth study of issues and trends in the understanding and practice of curriculum. C & S 553 Issues in Curriculum (3 per semester/maximum of 6) This course provides for in-depth study of issues and trends in the understanding and practices of curriculum. Readings and class activities provide students with the opportunity to examine theoretical implications for the world of practice and life in schools.

Prerequisite: formal acceptance as a doctoral student in the Curriculum and Supervision option area

C-S 555: Development of Teacher Education Programs

3 Credits

Study of the components and design of teacher education programs within the constraints of institutional, professional, and legal contexts. C-S (EDLDR) 555 Development of Teacher Education Programs (3) Enrollees study various models of teacher preparation such as professional development schools and fifth year programs. Participants also discuss various aspects of teacher education such as field experiences teaching and learning ("methods") courses, and content knowledge courses and review research in each of these areas as it relates to the initial continuing education of teachers.

Prerequisite: C I 550 or EDLDR551

C-S 557: Seminar in Curriculum Research

3 Credits

Analysis of particular curriculum studies, methods and paradigms, and the general status of current research in the general curriculum field. C & S 557 Seminar in Curriculum Research (3) This course is a foundational course that supports the diverse inquiries undertaken by doctoral students within the Department of Curriculum & Instruction and throughout the broader university community. Readings and class activities provide students with the opportunity to learn about different research epistemologies and to explore taken-for-granted assumptions about educational research in general and research design and methodology in particular.

Prerequisite: C I 400, C I 550

C-S 560: Principles of Instructional Supervision

3 Credits

Social and institutional settings for instructional supervision; functions, activities, and practices of supervision; supervisory case studies. EDLDR 560 C-S 560 Principles of Instructional Supervision (3) This course

explores themes, trends, and key ideas that influence current supervisory practices. Course content gives specific attention to supervisory practice in relation to teaching practices and to life in schools.

Prerequisite: teaching or school administrative experience; 18 credits in education, at least 5 of which are methods of teaching
Cross-listed with: EDLDR 560

C-S 562: Methods of Classroom Supervision and Coaching

3 Credits

Strategies and techniques for supervision/coaching of instruction intended to enhance teacher reflection, self-direction, and autonomy. C-S 562 Methods of Classroom Supervision and Coaching (3) This course has been designed to equip students with the knowledge, skills, and dispositions necessary to engage in a variety of supervisory processes aimed at teacher growth and renewal as well as enhanced student learning. The outcome of these supervisory activities should be the development of teachers who are more analytical about their practice and its impact on learners, are more adept at solving the complex problems of teaching practice, and are more reflective about their teaching capabilities.

Prerequisite: EDLDR 560, teaching administrative, or other professional education work experience

C-S 563: Designing Staff Development Programs

3 Credits

Designing, implementing, and evaluating effective staff development programs for personnel in educational settings. EDLDR 563 Designing Staff Development Programs (3) This course has been designed to provide students with the opportunity to develop a deep understanding of the process of professional development in education at the theoretical and practical levels as well as the ability to apply this understanding to the design, evaluation, and analysis of professional development activities and programs.

Prerequisite: EDLDR560
Cross-listed with: EDLDR 563

C-S 564: Supervision Theory

3 Credits

Critical analysis of alternative theories of instructional supervision and in-depth examination of trends and issues in supervision. C & S (EDLDR) 564 Supervision Theory (3) This course entails critical analysis of alternative theories of instructional supervision and in-depth examination of trends and issues in supervision. Students critique and contrast existing models of instruction, identify and analyze issues in supervision and conceptualize and articulate their own supervisory model.

Prerequisite: EDLDR560

C-S 565: Research in School-University Partnerships

3 Credits

A school-university partnership (SUP) is as "a living, learning community intended to close conceptual and practical separations that tend to exist between teacher education programs and the nation's schools" (NAPDS, 2021, p. 10). SUPs are well-positioned to convene community members from disparate institutional role identities as partners who learn together

through reflection and inquiry. The challenges inherent in creating learning communities that actually involve all community members has been long acknowledged in SUP work. One approach to supporting the learning of a wider range of SUP partners is to create and sustain an inquiry community that is continually engaged in the cyclical process of practitioner inquiry. C-S 565 provides one such community. In light of systemic racial discrimination and oppression, this course more specifically focuses on the use of inquiry/research in a SUP inquiry community to address issues of social justice, and concentrate on ways schools and universities can partner in the urgent and crucial work of educational equity. In this course, students (target: SUP partners from both PreK-12 schools and the university) will work within a SUP inquiry community to develop theoretical and practical understanding about practitioner inquiry, teacher education across the career-span, and diversity, equity, inclusion, and belonging (DEIB). They will engage in scholarly discussion and research related to these concepts and situated within their own unique contexts: 1. What do we mean by social justice and DEIB? 2. What is practitioner inquiry and how can it be useful to my practice as a teacher, teacher educator, and/or educational researcher addressing issues of social justice? 3. How can schools and universities partner for educational equity?

C-S 576: Research Methods in Teacher Education

3 Credits

A basis in theory, findings from research, research design, and methodologies related to teacher education.

Cross-listed with: EDPSY 576

C-S 590: Colloquium

1-3 Credits/Maximum of 4

Recommended Preparation: This course is ONLY for students admitted to the doctoral program in Curriculum and Instruction specializing in Curriculum and Supervision. Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

C-S 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

C-S 597A: **SPECIAL TOPICS**

1-9 Credits

Data Analytics (DAAN)

DAAN 501: Analytics Research and Problem Framing

3 Credits

Students in this course will explore the elements of the research process within quantitative, qualitative, and mixed methods approaches as it applies to research into data analytics and its use. The ethical principles and challenges of research will be covered including human-subject research guidelines and the Institutional Review Board approval process. Students will use these theoretical underpinnings to begin to critically review literature in the analytics domain, determine how research findings

are useful in forming their understanding of their work, and place their own research within the context of the extant literature.

Prerequisite: STAT 500

DAAN 545: Data Mining

3 Credits

Practical benefits of data mining will be presented; data warehousing, data cubes, and underlying algorithms used by data mining software.

DAAN 600: Thesis Research

1-15 Credits/Maximum of 15

Thesis Research

Prerequisite: DANN 501

DAAN 822: Data Collection and Cleaning

3 Credits

This course focuses on the tools and techniques required for collecting data and preparing them for further analysis. The presence of incorrect and inconsistent data can significantly distort the results of the analysis often negating the potential benefits of information-driven approaches. As a result a variety of research over the last decades has focused on data cleansing: computational procedures to automatically or semi-automatically identify - and, when possible, correct - errors in large data sets. The goal of this course is to explore and discuss different data collection tools and techniques in addition to learning skills for retrieving data from existing databases. To further enforce data quality and reliability this course will cover techniques for error detection and data cleaning on large databases. Students will learn the available tools and techniques for data collection including automated data collection for databases, retrieving data from available databases, data preparation and cleansing techniques, data quality and reliability and finally learn techniques to identify issues in data collection and how to clean the data.

Prerequisite: STAT 500

DAAN 825: Large-Scale Database and Warehouse

3 Credits

This course provides a broad exploration of current and emerging practices for handling large quantities of data using large-scale database systems. Data is being generated at an exponential rate and handling and analyzing such data needs highly customized tools and processes to handle data-intensive tasks. In particular, this course investigates methods to effectively design, develop, and implement the two dominant types of large-scale databases: data warehouses for dimensional data and NoSQL databases for loosely-structured data. Students will learn to design a wide variety of large database solutions, apply extract-transform-load (ETL) strategies, maintain and evolve large-scale databases, explore the fundamentals of NoSQL systems, and understand the properties of different database technologies against atomicity, consistency, isolation, and durability (ACID) properties.

DAAN 826: LARGE SCALE DATABASES FOR REAL-TIME ANALYTICS

3 Credits

This course provides an exploration of current and emerging big data solutions for handling large quantities of data in real-time. In particular,

this course investigates methods to design, develop, and implement several systems used for real-time data analysis and storage such as document databases, column-based databases, queueing systems, and real-time processing systems. Students will learn to design a wide variety of large database solutions, and how to interconnect those systems to create a lambda architecture. Using this platform, students will collect, process, store, and report real-time data.

Prerequisite: DAAN 825

DAAN 846: Network and Predictive Analytics for Socio-Technical Systems

3 Credits

The objective of this course is to provide a foundation in the principles of network and predictive analytics along with hands-on experience with statistical analysis software for studying the interrelatedness of cyber-social and cyber-technical aspects of our society as a whole that have transformed physical communities into virtual communities. Fundamental principles of network and predictive analytics, the importance of studying network structures, and how network structures can facilitate communication, coordination and cooperation will be discussed. Statistical analysis software will be used for analyzing the structure of an organization or a society as whole to detect and capture the dynamic patterns of group membership and structure, and predict threats, attacks, criminal behavior and evolution of criminal networks.

Cross-listed with: INSC 846

DAAN 862: Analytics Programming in Python

3 Credits

This course will explore the development of analytics systems and the application of best practices and established software design principles using the Python programming language and its several toolkits. Students will manipulate, analyze and visualize complex data sets and implement statistical, machine learning, information visualization, text analysis, and social network analysis techniques through popular Python toolkits to gain insight into their data.

DAAN 871: Data Visualization

3 Credits

This course provides a foundation in the principles, concepts, techniques and tools for visualizing large data sets. DAAN 871 Data Visualization (3) The course provides a foundation in the principles, concepts, techniques and tools for visualizing information in large complex data sets. Unlike scientific visualization, which focuses on the presentation of data that has a spatial or physical correspondence, data visualization focuses on mapping complex, abstract information to a physical representation. The development of effective visualization strategies is crucial for not only facilitating an understanding of large complex data sets but also for driving knowledge discovery and the decision making processes in a given domain. In this course, students will learn the key principles involved in data visualization and will explore a wide range of visualization approaches that can be applied for understanding complex data across different data types. Specifically, techniques for visualizing one-dimensional data (e.g., temporal data); two-dimensional data (e.g., geospatial data); multidimensional data (e.g., mapping relational data in n-dimensional space); hierarchies and graphs (e.g., tree structures); networks (e.g., social networks) and text (e.g., mining text and hypertext from Web) will be discussed. Emphasis will be placed on the identification of patterns, trends and differences in visualizations of

data from variety of domains (e.g., science, business, engineering, social media, etc.). In addition, students will gain hands-on experience with a variety of visualization tools including: Gephi, ManyEyes, Excel, Science of Science (Sci2), Pajek, Lattix, R, Cfinder, MapEquation, NodeXL, and/or Gapminder.

DAAN 881: Data-Driven Decision Making

3 Credits

Application & interpretation of analytics for real-life decision making. DAAN 881 Data-Driven Decision Making (3) The theory and application of several quantitative decision-making tools will be studied. The usefulness of these tools will be illustrated using projects and case studies throughout the course. Emphasis will be placed on the application of the tools and techniques and the results they generate. Finding patterns in data and appropriately grouping them are essential in the extraction of information in large datasets. This course will use Principal Component Analyses to transform highly correlated sets of data by means of orthogonal transformation. Cluster analysis will be used to properly group data when working with large datasets. When the outcomes involve categorical variables, Logistic regression techniques will be used to estimate the probabilistic values of the output. The decision space will be divided into smaller regions using Regression tree analyses. When factors are too numerous and highly collinear, Partial Least Square Regression methods will be performed. Public access datasets in the healthcare, transportation and finance industries will be used to demonstrate the applications and the limitations of these techniques.

Prerequisite: STAT 500 and DAAN 501

DAAN 888: Design and Implementation of Analytics Systems

3 Credits

Design and implement data science and analytics systems using contemporary tools and techniques.

Prerequisite: IN SC521 and DAAN 825 and DAAN 881

DAAN 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Data Sciences (DS)

DS 540: Multimedia Analytics

3 Credits

This course covers all aspects of multimedia analytics including the foundations, representations, implementations, and applications of extracting patterns from images, video, audio, and related context information for the purpose of prediction, automated discovery, and decision-making. Specific topics to be covered in the course include an overview of multimedia systems, multimedia data representation and compression, image and video analysis, audio analysis, multimedia information retrieval, and advanced topics in multimedia analytics. Emphasis will be placed on the integrative approach to multimedia analytics, in which the systems can benefit from the synergy of leveraging multiple sensing modalities, including audio, image, video, text, and more. The objective of the course is to provide students with a wide

range of models and applications that are relevant to their research and development in modern multimedia analytics systems.

recommended prep: IST 510

DS 560: Principles of Causal Inference

3 Credits

The course will give students a comprehensive coverage of the theoretical underpinnings, and practice of causal inference from observational and experimental data. Topics to be covered include: pitfalls of standard machine learning algorithms when applied to observational data; causal inference in the absence of randomized control trials; causal effects and counterfactuals; eliciting causal effects from observations; the Causal Bayesian Network framework for causal inference - do-calculus, identifiability of causal effects from observations and experiments; the Potential Outcomes framework for causal inference - matching and propensity score-based methods and their advanced variants for counterfactual inference; the relationship between the Potential Outcomes and causal Bayes Networks; and learning causal models from observations and experiments. The course will give a principled treatment to confounders as well as practical approaches to cope with them. Additional topics to be covered include mediation analysis; advanced machine learning methods for causal effect estimation; causal transportability; selection bias; and meta-analysis. Finally, the course will include a laboratory component to provide students with hands-on experience with applications of causal inference to problems from several domains. Course projects will focus on applications of causal models and causal inference e.g., in science, public policy, and health. Recommended preparation for the course include basic proficiency in programming, elements of probability theory and statistics, discrete mathematics, and machine learning.

Recommended Preparations: IST 510, Probability and statistics, differential calculus, linear algebra, programming proficiency (e.g., in Python), and machine learning

Demography (DEMOG)

DEMOG 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

DEMOG 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

Early Childhood Education (ECE)

ECE 572: Issues and Trends in Early Childhood Education

3 Credits/Maximum of 9

Research, experimental programs, and emerging trends in early childhood education; relationships between educational experiences and later intellectual and emotional development.

Prerequisite: E C E452 , EDPSY400

ECE 587: Curriculum, Culture, and Child Development

3 Credits

Examines human development and cultural factors in planning, designing, and implementing curriculum and instruction in early childhood and childhood education.

Prerequisite: HD FS429

Cross-listed with: CIED 587

ECE 588: Educational Role of the Family

3 Credits

Parent-child-teacher relationships, cognitive socialization, and academic attainments; proximal/distal variables: family structure, history, processes, content, community, culture.

Prerequisite: E C E453 , HD FS418 , or SOC 315

ECE 589: Play and Early Childhood Education

3 Credits

Developmental significance of play, processes, and development; role of the adult in child's play; educational practices.

Prerequisite: HD FS429 or PSYCH415

ECE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ECE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ECE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Earth Sciences (EARTH)

EARTH 501: Contemporary Controversies in the Earth Sciences

3 Credits

Exploration of current areas of research in the Earth Sciences. EARTH 501 Contemporary Controversies in the Earth Sciences (3) Students will be introduced to a variety of topics from different disciplines within the Earth sciences with the aim of piquing their interest in topics of current research beyond the level found in typical secondary school or introductory college textbooks. The current topics will include subjects in which a consensus has recently been reached as well as scientific questions that are so far unanswered. Students will learn the appropriate state of the art scientific content relevant to each topic by performing basic data in order to complete the activities in each lesson. They will finally construct a plan to teach a selected topic to the audience

of their choice. This course provides an entry into the other courses in the Master's Degree Program in Earth Science Education. Students will learn scientific content by completing activities in each of six lessons that will span either the 12-week or 15-week semester. These activities will be in the form of background reading and discussion that outlines a current scientific problem or debate, the collection and manipulation of appropriate data, and the assessment of the results of this work. By doing this, students will simultaneously become familiar with the content as well as the practice of science. Students will also participate in online discussions about how to teach this content to specific secondary school audiences. They will complete a capstone project in which they will construct a teaching plan based on the topic of their choice.

EARTH 520: Plate Tectonics and People: Foundations of Solid Earth Science

3 Credits

Solid Earth geophysics and geological hazards presented within the grand unifying theory of plate tectonics. EARTH 520 Plate Tectonics and People: Foundations of Solid Earth Science (3) This course will cover current areas of research in solid Earth geophysics, especially focusing on the human population's interaction with the solid Earth system. Students will be introduced to a variety of current topics of active research within the field of solid Earth geophysics. They will learn the appropriate state of the art scientific content relevant to each topic by performing basic data analysis (e.g. collection, interpretation and assessment) using publicly available data in order to complete the activities in each lesson. They will finally construct a plan to teach a selected topic to the audience of their choice. Students will learn scientific content by completing activities in each of nine lessons that will span either the 12-week or 15-week semester. These activities will be in the form of background reading that outlines a current scientific problem or debate, the collection and manipulation of appropriate data, and the assessment of the results of this work. By doing this, students will simultaneously become familiar with the content as well as the practice of science. Students will also participate in online discussions about how to teach this content to specific secondary school audiences. They will complete a capstone project in which they will construct a teaching plan based on the topic of their choice.

EARTH 530: Earth Surface Processes in the Critical Zone

3 Credits

Introduction to Earth surface processes including weathering and soils, geomorphology, erosion and sedimentation, hydrogeology, low-temperature geochemistry and Earth systems. EARTH 530 Earth Surface Processes in the Critical Zone (3) Rapid changes in Earth's surface largely in response to human activity have led to the realization that fundamental questions remain to be answered regarding natural functioning of the Critical Zone, the thin veneer at Earth's surface where the atmosphere, lithosphere, hydrosphere and biosphere interact. To understand these processes requires a broad array of scientific expertise spanning: geology, soil science, biology, ecology, geochemistry, geomorphology and hydrology. EARTH 530 will introduce students to the basic information necessary for understanding Earth surface processes in the Critical Zone through an integration of various scientific disciplines. Those who successfully complete EARTH 530 will be able to apply their knowledge of fundamental concepts of Earth surface processes to understanding outstanding fundamental questions in Critical Zone science and how their lives are intimately linked to Critical Zone health. EARTH 530 will combine digital video, audio, simulation models, virtual field trips

to on-line data resources, text, and interactive quizzes that provide instantaneous feedback. The overarching goal of the course is to help secondary science teachers understand Earth surface processes at a level they can communicate to their students. These processes will be presented in a Critical Zone framework - the teachers and subsequent students will leave with a better knowledge of how their daily lives are impacted by natural processes, and conversely how their daily activities impact Earth's surface and the Critical Zone. Students will be required to complete weekly assignments. There are 12 lessons divided into 7 units in EARTH 530. Each unit will contain interactive exercises, links, animations, movies, and novel explanations of the basic scientific principles of Critical Zone science. Students will also be assigned four unit projects throughout the semester (Units 2-6). Projects require students to apply the principles they have learned to various scientific inquiries of Earth surface processes in the Critical Zone. A capstone Semester Project will require students to use the skills and knowledge they develop in the course to produce a learning module that they, in turn, will be able to use to teach course concepts to their own secondary school students.

EARTH 540: Essentials of Oceanography for Educators

3 Credits

Chemical and physical principles of the oceans and their interaction with the biosphere, atmosphere and the solid Earth. EARTH 540 Essentials of Oceanography for Educators (3)EARTH 540 introduces knowledge and broadens understanding of the oceans and their role in climate, coastal processes, and life within the fluid Earth. Students will gain insight into the physical and chemical processes that determine properties of the ocean and govern interactions between the ocean, atmosphere, groundwater, and the fluid/solid Earth. Topics will reinforce fundamental scientific principles such as heat transfer, chemical equilibrium, and conservation of energy. EARTH 540 will combine digital video, audio, simulation models, virtual field trips to on-line data resources, text, and interactive quizzes that provide instantaneous feedback.

EARTH 591: Individual Studies: Research Project

3 Credits

Development of a capstone project, supervised on an individual basis outside the scope of formal courses. EARTH 591 Individual Studies: Research Project (3)EARTH 591 broadens the content knowledge of students in the program, while deepening their understanding of a specific topic of their choosing. Students will gain insight into the essence and process of current scientific research by working with an academic advisor who is a member of the graduate faculty. They will practice transforming the results of their own investigations into modules that can then be taught to others. Students will design, develop, and conduct a project in consultation with an advisor. Appropriate projects are expected to combine basic scientific research and pedagogical techniques. Examples of projects could include (but of course are not limited to): development of a new curriculum appropriate for grades 7-12 based on a specific discipline in the Earth Sciences, such as meteorology; or an independent research project in a specific scientific subfield, such as a recent climate change, the results of which may then be taught to students.

Prerequisite: 24 credits in the Master's Degree program in Earth Science Education

EARTH 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

EARTH 801: Computation and Visualization in the Earth Sciences

3 Credits/Maximum of 999

Students practice data visualization and analysis using computational methods for Earth science data to build content knowledge and interpretation skills. EARTH 801 helps students to develop procedural programming skills in a programming language designed for visual artists and visualization while exploring Earth science topics. In particular, students learn and practice digital graphics capabilities in order to render Earth science concepts that are otherwise difficult to visualize due to complicated space and time scales. Both spatial and object visualization skills are key to success in the Earth sciences; students in this course will build an awareness of these skills and practice them with an eye to being able to teach them to their own secondary school students. In this course, students will interact with large, open, freely-available Earth science data sets by collecting, plotting, analyzing them using a variety of computational methods. Students will therefore be ready to teach their own secondary school students a range of Next Generation Science Standards skills involving data collecting, manipulation, analysis, and plotting. EARTH 801 students will also read and discuss current research regarding the teaching, learning, and evaluation of visualization skills in the Earth sciences, as well as exploring the theory of "multiple external representations" as applied to Earth science concepts and data sets.

Ecology (ECLGY)

ECLGY 510: Classical Ecology

2 Credits

Classical Ecology.

ECLGY 515: Advances in Ecology

3 Credits

Advances in Ecology.

ECLGY 526: Community Ecology

3 Credits

This course will focus on teaching graduate students the fundamental basis and advanced concepts in community ecology used to study and interpret patterns of biological diversity across divergent systems. Concepts and study cases presented in class will vary across different ecosystems and biomes and will include different organismal types (plants, animals, and microorganisms). Four main goals of this course are: (i) promote understanding of ecological processes responsible for the distribution and maintenance of biodiversity; (ii) provide knowledge to better interpret, critically discuss, and analyze current research articles and theories in community ecology; (iii) instruct students to better communicate their research in line with ecological principles and mechanisms; and (iv) allow students to lead discussions on papers related to broader community ecology concepts.

ECLGY 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ECLGY 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ECLGY 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ECLGY 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ECLGY 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in development of instructional materials, organizing and conducting lectures, laboratories, and evaluating students in Ecology- related undergraduate courses.

ECLGY 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

ECLGY 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Economics (ECON)

ECON 500: Introduction to Mathematical Economics

3 Credits

Mathematical Economics: Applications of Mathematical Techniques to Economics.

ECON 501: Econometrics

3 Credits

Econometrics: Applications of Statistical Techniques to Economics

ECON 502: Microeconomic Analysis

3 Credits

Economic behavior under pure and imperfect competition; price and output determination in product markets; prices and employment in factor markets.

ECON 503: Macroeconomic Analysis

3 Credits

National income accounts; determination of income, employment, interest rates, and the price level; stabilization policy.

ECON 507: International Trade

3-6 Credits/Maximum of 6

Theory of international trade and investment; effect of commercial policy on trade and income distribution; multinational corporations and international trade.

ECON 510: Econometrics I

3 Credits

General linear model, multicollinearity, specification error, autocorrelation, heteroskedasticity, restricted least squares, functional form, dummy variables, limited dependent variables.

Prerequisite: ECON 501 or STAT 462 or STAT 501

ECON 512A: Empirical Methods in Economics I

1 Credits

The course will provide a foundation for students in the computational methods used to numerically solve and simulate economic models and program econometric estimators.

Prerequisite: ECON 510

ECON 512B: Empirical Methods in Economics II

2 Credits

The course will provide continued exposure to the computational methods used to numerically solve and simulate economic models and program econometric estimators.

Prerequisite: ECON 512A

ECON 517: Open Economy Macroeconomics and International Finance

3-6 Credits/Maximum of 6

The balance of payments, portfolio allocation, monetary and fiscal policy in an open economy, exchange rate regimes, selected policy issues.

ECON 521: Advanced Microeconomic Theory

3-6 Credits

Theory of consumer behavior; theory of the firm; price determination in product and factor markets; introduction to welfare economics.

ECON 522: Advanced Macroeconomic Theory

3-6 Credits

Measurement of income; theories of consumption, investment, and money holdings; static determination of income and employment; introduction to dynamic analysis.

ECON 530: Master's Scholarly Essay I

3 Credits

This course is a workshop designed to guide students through the process of conducting independent research towards successful completion of the M.A. Scholar Essay project. The course will provide students with broad instruction on research objectives such as formulating a research question, constructing an economic analysis, and writing up results for an academic audience. Emphasis will be placed on breaking the task of completing a research essay into discrete, and manageable tasks.

ECON 531: Master's Scholarly Essay II

3 Credits

This course is a workshop designed to guide students through the process of conducting independent research towards successful completion of the Master's Scholarly Essay. The course will provide students with broad instruction on research objectives such as formulating a research question, constructing an economic analysis, and writing up results for an academic audience. Emphasis will be placed on breaking the task of completing a research essay into discrete, manageable tasks.

Prerequisites:ECON 530

ECON 533: Applied and Quantitative Economics

3 Credits

This course combines the use of econometric software and real economic data sets to study actual empirical questions in economics. Topics covered include instrumental variables, panel data methods, estimation of nonlinear models, discrete choice models, regression discontinuity techniques and nonparametric method for data analysis. Each of the topics will have one or more empirical applications. The economic applications include production function estimation, returns to education, investment models, consumer demand models, and transportation modes.

ECON 534: Game Theory

3 Credits

Foundations of current research in game theory. ECON 534 Game Theory (3) This is an advanced graduate course in game theory and its applications to economics. The course content is mathematical in nature and emphasizes formal statements of key propositions and their proofs. It begins by presenting two alternative ways in which a game may be represented: the extensive (or tree) form and the strategic (or normal) form. The relationship between these two representations is studied and the key idea of a strategy is introduced. Pre-equilibrium notions of dominance, iterated dominance and rationalizability are studied. Nash's fundamental theorem on the existence of equilibrium in finite games is proved. Strategic form based refinements of Nash equilibrium, including perfect, proper and stable equilibria are considered. Extensive form based refinements, including subgame perfection and sequential equilibrium are also considered and compared. Harsanyi's conception of a game of incomplete information is introduced. Other subjects covered include repeated games and the folk theorem, bargaining, common knowledge. Additional topics of current interests may also be covered.

Prerequisite: ECON 521 or permission of program

ECON 543: Industrial Organization and Public Policy

3-6 Credits

The structure of American industry; performance and behavior; public policies toward business.

ECON 555: Research and Knowledge Transfer Methods

3 Credits

The course will provide an overview of existing guidelines published by experienced researchers in various subfields of economics (applied microeconomics, economic development, econometrics, industrial organization, international trade, macroeconomics, and microeconomic theory) on the topics of developing research ideas, writing papers for publication in refereed economic journals and presenting research findings in conferences (shorter presentations) and seminars (longer presentations). Models of successful writing in recent top economic publications will be discussed. Each student will then have an opportunity to apply these guidelines and practice their writing and presentation skills based on their original research. Presentations of research will be discussed with peers and research ideas will be tested within and across subfields of economics, thus preparing students for the demands of academic research exchange and academic publication in economics.

ECON 558: Development of Monetary Theory

3 Credits

Classical and neoclassical quantity theories of money and contemporary criticism; Keynesian monetary theory and its critics.

ECON 559: Current Monetary Theory and Policy

3 Credits

Post-Keynesian reformulation of quantity and Keynesian theories of money; liquidity and general equilibrium approaches; current issues in theory and policy.

ECON 570: Development Economics

3-6 Credits/Maximum of 6

Resources and institutions; quantitative measures; theories of economic growth in developing areas; developmental policies.

ECON 589: Seminar in Econometric Theory

3 Credits

Theories and methods relevant to the application of statistical methods to economics.

Prerequisite: ECON 510

ECON 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ECON 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ECON 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ECON 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ECON 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

ECON 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Ecosystem Management (EMGT)

EMGT 810: Ecosystem Monitoring

3 Credits

This course provides students with an overview of ecosystem monitoring methods and analyses. Students completing the course will have the ability to apply a quantitative approach to the monitoring of ecosystems. Students will learn about monitoring planning, various sampling designs, and specific measurement methods used to accomplish particular monitoring objectives associated with ecosystem management. Students will be able to apply specific sampling, measurement, and data analysis methods for monitoring vegetation, wildlife, water quantity and quality, and soils, and they will have a statistical foundation for evaluating the various types of data that are collected. Specifically, students will be able to calculate reliability measures, trends, and indicators of ecosystem change, and apply hypothesis testing to these measures to determine their statistical significance. Specific sampling designs will be presented, such as simple random sampling, stratified random sampling, systematic sampling, and cluster sampling.

Prerequisite: STAT 500

EMGT 820: Environmental Law and Policy

3 Credits

This course provides a broad exploration of the basic legal principles, regimes, and issues related to environmental protection and natural resource management. Part 1 of the course gives students an overview of how the U.S. legal system works and relevant principles of constitutional and common law. Part 1 also reviews the fundamentals of environmental law and policy. After building this foundation, part 2 of the course focuses primarily on federal statutes, including the National Environmental Policy

Act, the Clean Water Act, the Endangered Species Act, Superfund, and the Clean Air Act. Part 3 uses case studies to illustrate how these laws fit together, and how they also relate to state and international issues. In addition to learning about foundational legal principles, students will learn the core principles of environmental law and regulation, and how they are changing over time. They will also better understand how federal, state, and even international environmental laws and policies fit together through the use of case studies to help illustrate key points.

EMGT 830: Ecosystem Management, Planning, and Economics

3 Credits

Making decisions as an ecosystem manager requires knowledge of economics, planning, and finance. The course provides students with a solid understanding of the key finance, planning, and economic principles needed to manage a variety natural resources and ecosystems. The first part of the course discusses cost benefit analysis from a financial perspective. Cost benefit analysis is fundamental to making decisions in ecosystem management. The module covers topics such as time value of money, discounting, inflation, risk, appraisal, and taxes, and culminates in understanding the criteria to make investment decisions with limited budgets. The second part provides students with an understanding of planning processes and tools for developing management plans for natural resources systems. This part focuses on the unique aspects of managing ecosystems, including biodiversity management and dealing with multiple stakeholders and multiple competing objectives. Students are given an overview of the use of models and decision support systems for aiding in the exploration and evaluation of large numbers of management alternatives within complex social and biological systems. The third part provides an overview of ecosystem economic concepts and principles in a market economy. Importantly, it discusses the common issue of markets not working (failures) especially in natural resources and ecosystems. This last part of the course begins by discussing how the market should work and the critical importance of well-defined property rights. Then market failures such as pollution and other externalities are discussed. In this context it is important to value many of the non-market goods and services, which is the next topic discussed. Innovative valuation methods of ecosystem benefits such as recreation and biodiversity are described. Finally, a series of applications and case studies of various ecosystem resources including carbon pricing, bioenergy, water quality, and food is provided.

EMGT 894: Capstone Experience

1-18 Credits/Maximum of 18

Supervised, professionally oriented student activities that constitute the culminating experience for the program.

Prerequisite: STAT 500, MANGT 510, LEAD 555; OLEAD 409; OLEAD 410; OLEAD 411, OLEAD 464, OLEAD 465; CAS 404, GEOG 482, EMGT 810
CONCURRENT: EMGT 820, EMGT 830

Education (EDUC)

EDUC 560: Classroom Management

3 Credits

Analysis of teaching styles, classroom behavior and interaction, organization and correlation of classroom activities and subject areas. (Requires practical application in an actual teaching situation.)

EDUC 561: Theoretical Foundations of Literacy

3 Credits

The primary goals for this course are to (1) examine the theoretical paradigms that inform the field of literacy education, including philosophical, cognitive, sociocultural, critical literacy, and multimodal/digital literacies and (2) to assist participants in becoming more aware of sociocultural, diversity, gender, and identity in relationship to literacy and schooling. Throughout the course, participants will examine the complexity of literacy to become aware of how to situate one's own literacy practice and experience in multiple contexts. Participants become reacquainted with mainstream theories and explore those of critical theorists who challenge traditional perspectives that have often marginalized race, class, and linguistic variety in learning and in literacy development.

Prerequisite: EDUC 477

EDUC 572: Comparative Education: World Perspectives

3 Credits

An evaluative comparison of American education with Western and non-Western educational systems.

EDUC 582: Spirituality and Culture in Health and Education Professions

3 Credits

This course focuses on the cultural aspects of spirituality and its place in the health and education professions. EDUC (HLHED) 582 Spirituality and Culture in Health and Education Professions (3) This course will focus on the examination of the place of the cultural aspects of spirituality and its place in the education and health professions and its implications for culturally responsive education and/or health care in a multicultural society. In particular the goals of the course are as follows: 1) To clarify the difference between spirituality and religion and to understand how spirituality is currently being examined in the fields of adult education, medical education and the health professions. 2) To examine how culture informs spirituality generally, and more specifically, to examine how culture relates to one's own spiritual development and overall health in the world. 3) To develop a sense of how people construct knowledge through image and symbol, which for many people, maps to their spirituality and culture, as they make new and deeper meaning of their own lives. 4) To begin to consider WHEN and HOW one might appropriately draw on one's own spirituality and that of participants in adult and higher educational practices and health care settings to increase cultural understanding and/or responsiveness to patient needs and when such discussion might seem to impose a spiritual or religious agenda. 5) To examine the connections among spirituality, culture, some complementary and alternative medicine modalities and overall holistic health and education.

Cross-listed with: HLHED 582

EDUC 586: Educational Research Designs

3 Credits

Focuses on methods of research in educational settings to help participants become informed consumers of the educational research literature. EDUC 586 Educational Research Designs (3) This course focuses on methods of research appropriate in educational settings to help participants become informed consumers of the educational

research literature. Throughout the course participants will 1) identify an appropriate research problem and justify the importance for investigation; 2) identify and classify the types of variables used in research; 3) utilize electronic search and communication tools; 4) critically examine various research designs and their practical applications; 5) interpret analysis of data using statistical treatments; 6) describe strengths and weaknesses in research designs; 7) critique research studies; 8) describe PSU requirements for conducting research with human subjects; and 9) develop a writing style consistent with scientific/research work with emphasis on objectivity and utilizing appropriate APA style. The key assessment for the course is a critique of a published research article. Instructors will also include assessments such as: midterm or final examinations, quizzes, class presentations, online activities or discussions, research projects, research proposals, dialogue journals, research problem descriptions, article analyses, or class participation.

Prerequisite: EDUC 539 ; or TRDEV460

EDUC 587: Master's Project

3 Credits

The development of an original master's project (paper, essay, production, practicum) supervised and judged by an appropriate faculty committee.

EDUC 589: Problems in Urban Education

3 Credits

Independent study of selected topics related to urban education.

EDUC 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

EDUC 591: Education Seminar

1-6 Credits/Maximum of 6

The capstone seminar course for the M.Ed. degree requiring an appropriate scholarly term paper. EDUC 591 Education Seminar (6) This performance-based course is intended to serve as a culminating or capstone experience for students enrolled in the Master of Education degree program in Teaching and Curriculum. A constructivist seminar format, augmented by significant readings, will be used to facilitate in-depth discussions of important, timely, and controversial issues in education. Students will be asked to reflect upon all previous course work toward the degree as a foundation for analyzing the past, evaluating the present, and speculating about the likely future of the numerous issues that collectively constitute the education arena. Students will be expected to demonstrate their ability to analyze and synthesize material through the guiding of, and participation in, class discussions of the readings, through satisfactory completion of in-class assignments, and through the completion of a major scholarly paper and a corresponding class presentation that both focus on the same aspect of an educational theme.

Prerequisite: EDUC 506 , EDUC 586 , and completion of 27 credits in the Teaching and Curriculum program or approval of program

EDUC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EDUC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

EDUC 801: Global Trends in Education Culture

3 Credits

This course provides a survey of major trends in the field of comparative and international education in the last half of the 20th century. The course presents problems and issues that are of global concern in the 21st century and provides students with readings and databases that will allow them to make their own comparisons. Students will be given an overview of international organizations and the frameworks in which important contemporary education trends and issues are discussed around the world. Finally, potential future solutions will be explored.

EDUC 802: Educational Research Design

3 Credits

This course provides students with an overview of the skills necessary to design, implement, and assess research studies. Students learn the declarative, conceptual, and procedural knowledge needed for successful preparation for the conduct of research investigations. This introduction includes elements of qualitative, quantitative, and mixed methods research. After course completion, students will have the knowledge and skills necessary to evaluate published research reports, apply research methods to contextualized problems, and initiate conduct of applied research projects.

EDUC 804: Program Evaluation

3 Credits

This course gives students an overview of the fundamentals of reading, evaluating, and conducting evaluations of programs in educational settings. This course will cover theories and methods in program evaluation, ask students to analyze multiple examples of program evaluations in the real-world, and provide students with the opportunity to conceptualize and carry out a program evaluation of their choosing. Through these activities, this course will emphasize both best practices and practical considerations in program evaluation. Students will be asked to engage in the cyclical process of evaluation design, including developing evaluation questions, formulating an assessment plan, gathering quantitative and qualitative data and analyzing results, and formulating recommendations. Students will likewise be asked to critically evaluate each of these program evaluation components when reading and making decisions based on program evaluation reports. As an outcome of this course, students will be able to design a logic model, based on program features, develop an assessment plan, carry out the assessment plan, and compose a program evaluation report, including data-based recommendations for program improvement. In addition to these applied components of evaluation conceptualization and execution, the course will also ask students to adopt a critical lens on program evaluation, including grappling with foundational questions like: what is

the role of the evaluator in relation to a program and the community it serves?, what is the purpose of program evaluation and who benefits?, whose perspectives are incorporated into determining program quality and whose perspectives are excluded?, and who defines program quality?

EDUC 805: Curriculum Foundations

3 Credits

This course provides a comprehensive overview of the philosophical, historical, psychological, and social foundations that affect the school curriculum. The course calls attention to the global and multicultural perspective in education. It involves the study of the implications and applications of these curricular foundations in the form of issues and theoretical trends that shape the field of curriculum. Participation in the course activities allows candidates to identify and analyze their personal values, beliefs, and perspectives, as well as theories and research which shape their own professional practice as educators within diverse educational settings with children. By the end of the course, participants will be able to 1) develop and demonstrate understanding of how major foundations (disciplines) shape the curriculum of schooling, including philosophy, history, politics/policy, social psychology, and cultural studies; 2) consider and critique selected educational issues, both past and present, examining how they are anchored in and influenced by the foundations of curriculum; 3) investigate how social, economic, cultural, and political/policy debates and representations in the public sphere help to shape the foundations of curriculum; 4) engage in critical inquiry regarding the future roles of teachers, students, and other stakeholders in the learning community and society at large, and exercise the faculty of imagination as a means of thinking "outside the box" for educational purposes; 5) demonstrate professional scholarly attitudes, skills, and dispositions, including critical analysis and constructive use of questioning; scholarly use of research; dedication to continuous learning; positive group interaction and participatory collaboration; and reflective envisioning and enacting of curricular reform; 6) examine issues of race/ethnicity, linguistic variation, social class, gender, and sexual orientation and their relationships to the curriculum and schooling; and 7) demonstrate a professional scholarly writing style with a practical focus sharpened by theoretical awareness, using the APA Writing Manual as a style guide.

Prerequisites: EDUC 820

EDUC 806: Curriculum Development and Instructional Design

3 Credits

The course focuses on an examination of theory, issues, problems, organization, and application of instructional design for teachers in planning and developing a curriculum. The course presents examples of effective strategies including concept-based curricula, backward design, interdisciplinary approaches, integrated curricula (curriculum mapping), assessment, and reporting techniques.

Prerequisites: EDUC 805

EDUC 810: Quantitative Data Analysis Workshop

3 Credits

This course is designed for professional master's and doctoral students with a desire to increase their conceptual understanding of basic statistics and their proficiency with analytic techniques. In this hands-on workshop class, students are provided a conceptual review of quantitative statistical analysis. Hands-on activities and practice with

provided datasets allow students to learn techniques and interpretation of conducted analysis. Through this course students become more comfortable with analyzing quantitative datasets. Topics include teacher-directed review, modeled analyses, and guided practice. Participants will practice analyses and interpretation with provided example data sets. Students exit the course with a set of models to reference in their future work. Students may use personal datasets for many assignments.

Recommended Preparation: Students who enroll should be familiar with quantitative research traditions including effective research questions, data collection methods, and analytic approaches.

EDUC 811: Qualitative Data Analysis and Design

3 Credits

This course for professional master's and doctoral students focuses on the development of qualitative methods and analytic skills. Through course readings and the engagement of qualitative research techniques, course participants will situate and assess qualitative research studies within a broader research context, develop the ability to articulate a coherent research design, gain experience in foundational qualitative methods and analysis, be able to discern what questions are appropriate to qualitative research, and synthesize and write up results of data analysis.

Recommended Preparation: Students who enroll should identify different qualitative traditions, how these traditions affect the design, questions, collection methods, and analysis. Students should research questions and articulate a conceptual framework.

EDUC 815: Foundations of Education Research

3 Credits

While researchers working in the natural sciences typically share a common set of assumptions concerning their object of study, appropriate methods for investigating that object, and explanatory principles and concepts, the social and human sciences, including education, do not have this unity. Instead, a range of positions that developed in philosophy, primarily through the Nineteenth and Twentieth Centuries, have led to very different, sometimes incongruous orientations to research involving human phenomena. These include Post-Positivism, Interpretivism, the Critical Tradition, Post-Structuralism, and Pragmatism. Although the beliefs, concerns, and priorities underlying these orientations are not always made explicit by researchers, they each offer specific views concerning how knowledge is produced and how that knowledge can best be put to use in the service of humankind. This course engages with these traditions in order to identify the assumptions and commitments underlying them, to appreciate the research that has emerged from each perspective, and to understand what each has to offer education professionals.

EDUC 820: Learning Theory for the Classroom

3 Credits

This course is an application of learning theories from psychological, sociological, and physiological disciplines to educational settings for children and adolescents. At the conclusion of the course, participants will be able to 1) analyze the educational implications of cognitive, language, personal, and social/emotional development; 2) describe and distinguish among major learning theories from biological, psychological, and sociological disciplines; 3) employ knowledge of learning theories to analyze learning strategies, strengths, and needs; 4) apply learning

theories to optimize learning for all students that complements their cultural background, race, gender, ethnicity, socioeconomic status, or special needs; and 5) analyze through a theoretical lens the impact on student learning of current educational issues and trends.

Prerequisite: admission to program

EDUC 839: Educational Assessment

3 Credits

This course will prepare students with the knowledge and skills necessary to monitor, assess, and report student achievement.

Prerequisites: EDUC 820

EDUC 862: Literacy Assessment and Evaluation

3 Credits

This is a required course in the M.Ed. in Literacy Education graduate degree and reading specialist certification programs. The course is designed to familiarize participants with (1) factors related to learners who exhibit difficulty with literacy learning; (2) appropriate selection of valid, reliable, fair, and appropriate print and digital assessment tools to evaluate literacy achievement; (3) proper techniques for administering, scoring, and interpreting formal and informal literacy assessments; (4) procedures for analyzing findings, summarizing results, and advocating for appropriate literacy practices and recommendations that meet the diverse needs of K-12 learners.

Prerequisite: EDUC 561

EDUC 863: Literacy Methods

3 Credits

This course examines the literacy curriculum and teaching practices in various real world contexts to support the diverse needs of K-12 learners. Graduate students review and apply current literacy research to inform instruction within the context of their individual classrooms. Students also employ a multiliteracies framework in their lessons as they locate digital resources and tools to model critical viewing, representing, and thinking for their K-12 learners. Students enrolled in EDUC 863: Literacy Methods plan, adapt, and implement innovative instructional approaches that will support their professional practice and future role as K-12 literacy educators and reading/literacy specialists.

Prerequisite: EDUC 862

EDUC 864: Literacy Clinic

3 Credits

This capstone course for the Master of Education in Literacy Education with the Reading Specialist certification program is designed to address the major theories and empirical research that addresses the cognitive, linguistic, and sociocultural foundations of literacy development, processes, and components, including word recognition, language comprehension, strategic knowledge, critical literacy, and interdisciplinary connections. To demonstrate mastery of these concepts, students engage in an action research case study project in which they design, develop, and implement within their respective curriculum to meet the needs of K-12 learners who are experiencing difficulties with literacy. Through this case study, students demonstrate and apply pedagogical and professional knowledge, skills, and dispositions. Students select a

variety of appropriate texts, consider multimodalities, determine learners' backgrounds and interests, and administer appropriate assessments to evaluate and monitor progress. Students also have the opportunity to further enhance their ability to collaborate with professional colleagues, interact with families, and demonstrate leadership in literacy education.

Prerequisite: EDUC 863

EDUC 865: Literacy Leadership

3 Credits

EDUC 865 Literacy Leadership is a required course in the Master of Education in Literacy Education and Reading Specialist certification program that is designed to prepare students to assume the role of literacy leader within a school or school district. This role includes the implementation, management, and evaluation of the literacy program. The course allows students to connect theory to the development of effective literacy programs and intervention frameworks, and to understand the interrelated nature of literacy policy, curriculum, assessment, and instruction. Throughout the course, students develop dispositions that allow them to work collaboratively alongside classroom teachers, district officials, and other professionals as they develop curriculum, determine appropriate assessments, conduct professional learning workshops, and evaluate program effectiveness.

Prerequisite: LLED 445, EDUC 863

EDUC 894: Capstone Experience

1-18 Credits/Maximum of 18

EDUC 894 is a practicum research experience for the Doctor of Education program (D.Ed.); as such, the course expects the student to research and critically analyze a topic aligned with the student's career interests. The course covers all phases of the research process from identifying problems of practice, to reviewing literature, identifying study methods and analytical techniques, and scholarly writing of research papers. Students in a D.Ed. degree program must communicate a high level of knowledge of the subject based upon their development of research questions, gathering of sources, and completion of a high-quality scholarly paper that integrates their knowledge. This course provides the student an opportunity to apply knowledge, concepts, and theories to investigate a problem of practice. The overall goals of this research practicum are to provide students with a supervised opportunity to participate in the process of conceptualizing, implementing, and analyzing, and/or writing research studies directed towards problems of practice. Practicum experiences may encompass early, mid, and late phases of research activity.

EDUC 895: Internship

1-6 Credits/Maximum of 6

Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Education Policy & Leadership (EPL)

EPL 501: Proseminar in Education Policy and Leadership

3 Credits

This course familiarizes students to three topics that prepare them for future coursework and doctoral research. Students will gain foundational knowledge about educational systems and contemporary educational issues; leadership theory and practice; and the socialization, milestones, research paradigms, and interdisciplinary perspectives associated with doctoral study in education policy and leadership. This course is designed to meet the University's SARI requirements for first-year graduate students.

EPL 502: Educational Policy and Politics

3 Credits

This course will familiarize students with the role of politics and public policy in K-12 and higher education. The course will examine policy models and frameworks and their application to current policy and leadership issues in education with attention to efforts to improve education and reduce educational inequality.

EPL 503: Equity and Diversity in Education Policy and Leadership

3 Credits

This course will examine policy and programs in education and related institutions through the lens of diversity, equity, inclusion and belonging with the specific goal of building skills in ethical leadership. Students will be challenged to examine prior knowledge and experience about socially constructed concepts of identity that are associated with power and oppression including race, gender, sexuality and dis/ability. Building from individual understandings of bias and privilege, this course immerses students in scholarship focused on structural inequities that are embedded within policy and programs including racism, sexism, classism, homophobia, and ableism. Focus is on an intersectional approach to studying educational structures from PK3 through university in the US as well as internationally.

EPL 504: Research Design in Education Policy and Leadership

3 Credits

This course introduces students to research design in the social sciences as it applies to education policy and leadership. Students will consider the strengths and weaknesses of various research designs that education policy and leadership researchers often use to collect and analyze evidence. They will also gain the skills needed to begin designing and conducting research in this area.

EPL 594: Research Topics

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

EPL 595: Internship

1-18 Credits/Maximum of 18

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

EPL 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EPL 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

EPL 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

EPL 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

EPL 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 9

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

EPL 610: Thesis Research Off-Campus

1-9 Credits/Maximum of 999

No description

EPL 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Education, Development and Community Engagement (EDCE)

EDCE 501: Foundations of Education, Development, and Community Engagement

3 Credits

Historical development, social and philosophical foundations, and current status in relation to the total vocational-technical education program.

EDCE 505: Leadership Development

3 Credits

Exploration, understanding, and application of leadership roles, strategies, and principles in group and community settings.

Cross-listed with: CEDEV 505

EDCE 508: Administration and Supervision of Education, Development, and Community Engagement

3 Credits/Maximum of 3

Basics of vocational funding, supervision, leadership, and management for agricultural education.

EDCE 509: Contemporary Research in Education, Development and Community Engagement

1-6 Credits/Maximum of 6

Analysis of contemporary research issues in agricultural education and extension education through lecture, review of literature, discussion, speakers, and active participation.

EDCE 511: Youth Leadership Development

3 Credits

This course will address youth leadership development theories and emphasize formal and nonformal youth programs in agricultural and life sciences. AEE 511 AEE 511 Youth Leadership Development in the Agricultural and Life Sciences (3) The course will provide learners with an understanding of how adolescents develop and emerge as leaders in their families, schools, organizations, and communities. The overall objective for this course is to provide future and current leaders of youth organizations in the agricultural, natural resource, and/or life sciences the knowledge, skills, and experiences to develop and enhance the leadership skills and behaviors of the youth in their organizations. This will be accomplished through a variety of educational methods and techniques. Exposure to theories of youth leadership development will be shared within the context of adolescent development, group dynamics, and opportunities for growth and self-development. A variety of youth organizations and their respective leadership based programs, curricula, and philosophies will be shared and analyzed. Assignments and evaluative-based activities will focus on investigating and comparing youth organizations, analyzing leadership-based resources, analyzing youth/adolescent development theory, and developing a proposal to secure extramural funding to support youth leadership development.

EDCE 512: Decolonial Methods for Interdisciplinary Research

3 Credits

This course surveys contemporary scholarship in multiple disciplines to provide an overview of decolonial research methods and analytical frameworks. Each week, the readings will engage a different topic related to historical and contemporary ways of thinking about land, personhood, and power. Intended for students who are interested in initiating their own research projects in the future, the course is structured to enable students with little prior knowledge of archives or research methods to plan, begin, document, and revise an original project. Combining the study of theoretical readings with weekly research and reflection, students will develop critical tools for thinking, speaking, and writing about colonialism at the University and in a subject area of their choice.

Theories are enabling, dynamic, and helpful tools for approaching texts, objects, situations, places, narratives. In this course, they will encounter things both familiar and unfamiliar in ways that unsettle not only their expectations but also their presumed relationship to what they know, where they are, and what might happen next.

Recommended Preparations: Students should have taken at least one research methods course.

Cross-listed with: AFR 512

EDCE 515: Engagement Through Outreach Scholarship in Higher Education

3 Credits

To develop an understanding of outreach scholarship as a nonformal educational system and its relationship to relevant social systems. AEE 515 AEE 515. Engagement through Outreach Scholarship in Higher Education (3) Through this course, students will develop an understanding of outreach scholarship as a non-formal educational system and its relationship to relevant domestic and international social systems. Students will explore the historical and legislative history of how higher education evolved. Drawing from both contemporary as well as historical resources, students will understand the "land-grant" philosophy and outreach scholarship in higher education in order to define an engaged university. Using their definitions, students then critique outreach scholarship as it is carried out through specific institutions of higher education, both in the United States and around the world. Alternative institutional missions, organizational policies and procedures as well as organizational structures and financial arrangements will be explored to demonstrate how distinct approaches to outreach scholarship evolve and their perceived value within an institution. Within this framework, students explore today's definition for scholarship and appropriate standards for scholarly performance through outreach. Case studies, interviews, and guest lectures supplement the current and historical literature. Students carry out individual capstone projects in order to allow each of them to synthesize course content in terms of their own professional interests within an engaged university. Given the visibility of outreach scholarship in higher education today and the fluidity of its definition, implementation, and perceived value within institutions, this course reflects contemporary thought in addition to its historical underpinnings.

Prerequisite: 9 credits in education, communication, and/or social sciences

EDCE 520: Scientific Method in the Study of Education, Development and Community Engagement

1-4 Credits/Maximum of 4

Methods of procedure in investigation and experimentation in education, accompanied by a critical examination of studies made in agricultural education.

EDCE 521: Basic Applied Data Analysis in Education, Development and Community Engagement

1-4 Credits/Maximum of 4

Continuation of AEE 520; emphasis upon statistical techniques for students' individual problems.

EDCE 524: Change in Education, Development and Community Engagement

1-3 Credits/Maximum of 3

Analysis of occupational needs of students and employment prospects; organization of courses of study and other activities of teachers.

EDCE 525: Program Design and Delivery

3 Credits

This course is designed to help students develop an advanced understanding of planning, developing, delivering, and evaluating educational programs in both formal and non-formal settings. Specifically, this course focuses on programming for youth, children, and adults, in both domestic and international contexts with a special emphasis on Cooperative Extension System and outreach in the United States. Students will study the history, organization structure, and program areas in Cooperative Extension, as well as design and delivery of programs. Enrollees will explore the principles, methods, models, and practices of designing and delivering educational programs in non-formal settings. Major emphasis will be on program development/planning, implementation, delivery methods, theories of planned behavior, and evaluation.

EDCE 530: Teaching and Learning in Agricultural Science

3-4 Credits/Maximum of 4

Organization, planning and delivery of effective college teaching methods, matching/learning styles, evaluation of instruction and learning.

EDCE 535: Youth Civic Development

3 Credits

This course critically examines processes enabling youth to become members of local communities and "citizens" of nations and global societies.

EDCE 540: Youth Participation in Educational Change: Examining Youth Activism, Child Rights, and Youth Voice

3 Credits

Cross-listed with: CIED 540, EDTHP 540

EDCE 550: Program Development and Evaluation in Youth, Families and Communities

3 Credits

Examination of concepts, theories, models, and procedures relative to program development and evaluation in youth, families and communities.

Prerequisite: AEE 450 ; AEE 520

EDCE 555: Volunteer Program Management

3 Credits

The study and application of concepts and principles of volunteerism and administration relevant to volunteer program management.

EDCE 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

EDCE 595: Internship

1-18 Credits/Maximum of 18

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: prior approval of proposed assignment by instructor

EDCE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including non-thesis research, supervised on an individual basis and which fall outside the scope of formal courses.

EDCE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

EDCE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

EDCE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

EDCE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Involves experience in teaching undergraduate agricultural education courses under the supervision of the faculty.

EDCE 610: Thesis Research Off-Campus

1-15 Credits/Maximum of 999

No description.

EDCE 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

EDCE 840: Applied Youth Development

3 Credits

Background and current issues related to youth development programs in their application to actual youth programs in community settings.

EDCE 845: Intergenerational Programs and Practices

3 Credits

Background, intervention strategies, and issues related to developing intergenerational programs and practices aimed at addressing vital social and community issues.

Cross-listed with: CIED 845

Educational Leadership Program (EDLDR)

EDLDR 520: Sociology of Rural Schools and Communities

3 Credits/Maximum of 999

This course examines the interrelationships between rural communities and their schools. In the United States schools are the backbone of rural communities. Rural schools help to shape the local boundaries of communities and the identity of community members in a variety of both formal and informal ways. Drawing heavily from published empirical research, this course provides a solid theoretical foundation in community sociology in order to investigate the interrelationships between rural communities and rural schools. Orienting questions include: In what ways might we consider "rural" as a meaningful category in understanding both community and education? In what ways do schools shape (or reshape) the structure of communities? How do communities shape (or reshape) the structure of education? What are the challenges that confront the vitality of both rural schools and communities? How have these challenges changed over time, and what are the implications for educators, residents, and public policy makers? The course is strongly interdisciplinary, with material drawing from education, sociology and rural sociology, economics, anthropology, geography and demography.

EDLDR 521: Data Analysis for Education Research

3 Credits

This course bridges theoretical statistics coursework and practical research with real, large-scale data sets. The course emphasizes hands-on data preparation and analysis using statistical software. More specifically, the course will give an overview of national and international data resources that are available for educational researchers, survey the most widely used data analysis techniques in educational research, and use statistical software and large-scale datasets to produce useful results for educational policy research.

Cross-listed with: EDTHP 521, HIED 521

EDLDR 522: Economics of Education

3 Credits

The aim of the course is to help students view the educational system and students' educational decisions through the lens of economics. We will discuss the methods that economists commonly employ to study education and read recent empirical articles that examine the impact of educational policies and practices. At the end of the semester, we will discuss insights from the field of behavioral economics, which builds on the standard economic model to better understand decision making. This course also surveys the empirical literature on the economics of education which is organized into several broad topics, including human

capital and economic return to education, school choice and college access, and education production. Finally, the course covers a variety of econometric methods that are widely used in the economic study of education. These methods include regression models (e.g., ordinary least squares, discrete choice models, Multi-level modeling, panel data models, etc.) and commonly used techniques to deal with self-selection and causal inference (e.g., quasi-experimental methods).

Cross-listed with: EDTHP 522, HIED 522

EDLDR 524: Comparative Education Research Using Large-Scale Data

3 Credits

This course is designed to give students an overview of large-scale international assessment databases and to demonstrate how these databases can be utilized to investigate critical issues in education from a comparative perspective. A number of empirical studies using large-scale international assessment databases will be reviewed, and these analyses will be replicated via computer labs. Students will develop a good understanding of large-scale international assessment databases and will learn to apply an appropriate method to address a particular topic of interest. Students will also develop a wide range of research skills necessary to independently conduct comparative research, including but not limited to formulating a research question, conducting a literature review, analyzing empirical data, and interpreting results. Although the focus is mainly on datasets relevant to education and education policy research, the skills taught in the course are broadly transferable to other social sciences including sociology.

Recommended Preparations: Students should have taken either EDTHP 513 and EDTHP 538 or EDTHP 553 as well as EDPSY 505 or SOC 574 before enrolling in this course.

Cross-listed with: CIED 524, EDTHP 524, HIED 524

EDLDR 528: Educational Politics in the United States

3 Credits

Social and institutional forces which shape the public school system and determine national, state, and local educational policy and politics. EDLDR 528 Educational Politics in the United States (3) "Educational Politics in the United States" focuses on the social and institutional forces that shape the public school system and determine national, state, and local educational policy and politics. The rationale underlying this course is that citizens and educators, particularly those in administrative roles, need to understand the social forces that influence educational policy and politics. Until the late 1960's there was a pervasive myth that school affairs could and should be separated from the world of politics. Few people now believe that schooling can be entirely separated from politics, but many people lack an understanding of the broad, recurrent forces and competing values that ensure that schooling in pluralistic societies will be affected by political factors. This course is intended to provide a sophisticated understanding of this subject, with emphasis on the acquisition of conceptual and analytical skills that will be useful for leaders in education. Student performance is assessed through group and individual activities and projects, students' contributions to class discussions, and exams.

EDLDR 530: Leadership for Inclusive Education

3 Credits

In-depth analysis and discussion of the school leaders's role in creating and sustaining an inclusive learning environment for all.

EDLDR 531: Research on Leadership for Equity and Diversity

3 Credits

This course examines what it means to lead educational organizations in an increasingly diverse society. Specifically, this course will focus on policy, theory and practice as they relate to school leadership, and also equity and diversity as they connect personal experiences with research literature. Students from culturally, linguistically, socially, and economically diverse backgrounds account for an increasing percentage of the school-age population in the United States. This is a seminar aimed at facilitating discussion and exploration around issues related to education, equity, and diversity.

EDLDR 532: Educational Leadership Doctoral Pro-seminar

3 Credits

Preparation for doctoral studies in Educational Leadership. This course is designed as a preparation for Ph.D. studies in Educational Leadership (EDLDR). The primary purposes of this course are: to familiarize first-year Ph.D. students with graduate studies at Penn State; to identify topics, problems, and policies of importance or interest to the field of educational leadership/administration; to introduce students to EDLDR faculty members and their research; and to ensure students are aware of the programmatic requirements for successfully completing the Ph.D. degree in Educational Leadership. This course is also designed to meet the University's Scholarship and Research Integrity requirements (SARI) for all first-year graduate students.

EDLDR 533: The Politics of Local School Districts

3 Credits

Theory and practice of the politics and governance of local school districts; issues and methods in studying political decision making. EDLDR 533 The Politics of Local School Districts (3) "The Politics of Local School Districts" focuses on the theory and practice of politics in local school districts, with attention to the study of political decision-making and influence. The rationale underlying the course is that citizens and educators need to understand the social and political factors affecting school-community relations and the factors affecting the Relihood school-community conflict. Although communities vary greatly, rural, urban, and suburban communities each tend to have some distinctive features that influence the character of school-community relations and politics. At the same time, communities in general vary in the extent to which they possess characteristics that promote or inhibit the incidence and intensity of community conflict. The governance of education in local communities is heavily influenced by such factors. Consequently, educational leaders need to be knowledgeable and perceptive in this area. This course is intended to provide the knowledge and analytical skills needed for effective leadership in local school districts. Student performance is assessed through group and individual activities and projects, students' contributions to class discussions, and exams.

EDLDR 536: Federal Role in Education

3 Credits

This course examines the Federal role in education, emphasizing relationships between the Federal government and states, tribes and schools.

EDLDR 538: East Asian Education, Leadership, and Reform

3 Credits

The social and organizational characteristics of East Asian schooling, including understandings of authority, power, and leadership, and systemic school reform.

Cross-listed with: CIED 538

EDLDR 540: Technology Applications in Educational Leadership

3 Credits

Development and use of information technology applications to analyze common problems faced by educational administrators. EDLDR 540 Technology Applications in Educational Leadership (3) EDLDR 540 teaches the development and use of electronic spreadsheet models to analyze common problems faced by educational administrators. The format of the course is a computer laboratory in which students work through a series of assignments designed to introduce them to the basics of spreadsheets and then to teach a broadening range of modeling and analytical skills using progressively more complex problems. Applications are stressed through the creation of models that emphasize the organization, analysis, and presentation of data concerning such topics as salary schedules, budget preparation and analysis, expenditure control, cost projections, and data development. In conjunction with model building, a variety of analytical techniques are used, such as graphing, frequency distributions, regression, what-if tables, pivot tables, and database applications. The work in the course is individual and students move at their own pace through the assignments. New concepts and techniques are introduced and demonstrated periodically by the instructor and are then used by the students in succeeding assignments. The course accommodates widely differing ranges of abilities possessed by students taking the course. No prior computer experience is necessary. Satisfactory completion of all assignments is required for the passing R grade. The course emphasizes the development of useful information for administrative decision-making. Students should finish the course with a new or renewed confidence in their ability to deal with a problem in which some quantitative analysis is necessary, to be able to organize the available data in a logical and helpful fashion, and to use an electronic spreadsheet to develop a serviceable model to aid in the analysis.

EDLDR 542: Civil Rights and Education

3 Credits

Examination of civil rights policies and educational equity in the U.S. from the perspectives of law, social science, accountability policy. Civil Rights and Education will examine civil rights policies and educational equity in the United States from the perspectives of social science, education policy, and law. The aims of the course are to build students' understanding of the key principles of civil rights policies and the sources of contention in civil rights, and to enhance students' capacity for participating in issues of civil rights and education through project-based work. We will begin by considering what it means to have an opportunity

to learn and how it has been defined. The course will then consider legal and policy developments since the "Brown" decision that have both expanded and constrained the opportunity for certain groups of students. The course is primarily focused on national developments, but does include a focus specifically on educational opportunity in Pennsylvania. The course concludes by considering recent civil rights developments and prospects for the future. Cross Listings: EDLDR 542 will be added as a cross-listed course.

Cross-listed with: EDTHP 542

EDLDR 549: School District Improvement and Systemic Change

3 Credits

This course focuses on understanding and leading systemic district improvement efforts.

Prerequisite: EDLDR559 or EDLDR578

EDLDR 551: Curriculum Design: Theory and Practice

3 Credits

Course participants explore the fundamentals of curriculum; that is, curriculum cultures, traditions, perspectives, theories, or models that have significantly affected the field of curriculum design. Participants also learn about historical and contemporary issues in the development of national, state, and local academic standards, and how these issues have shaped the design of particular curriculum programs. Participants engage in curricular analysis of a content-specific program through examination of "what is behind the curriculum" (purpose, goal, perspectives, assumptions), "what is in the curriculum" (the nature of the content, basis for its selection, content and media structures), and "what are the experiences with the curriculum" (how curriculum may be taught, what methods may be used, how the program success may be judged, the "frame-factors") in order to outline the strengths and weaknesses of the program, and how it can be adapted to maximize its benefits and minimize its limitations for a specific institutional or educational context.

Cross-listed with: C-S 551

EDLDR 559: School Improvement

3 Credits

The course examines how educational leaders at all levels can determine, promote, support, and achieve successful school improvement. EDLDR 559 School Improvement (3) The last 20 years have witnessed unparalleled efforts to improve schools and raise student achievement. These initiatives include but are not limited to: (1) new content standards for mathematics, science, English, and social studies (2) increased requirements for high school graduation, (3) reduced class sizes, especially in the early grades, (4) new high-stakes state testing and assessment programs, and (5) the performance-based accountability requirements set by No Child Left Behind. Yet, despite all this activity and attention, significant changes in student achievement and in basic school practices have been slow at best. While there has been some improvement, success has been largely scant and spotty. The reasons for slow progress are many and complex. However, one that is receiving growing attention is the need for stronger school leaders (including teachers, principals, superintendents, and other educators) who can direct and implement changes in curriculum, instruction, and school organization. There is growing consensus in the research literature that school improvement and school leadership are largely inseparable

- that leadership is a critical element in order for schools to improve. While focusing on leadership without attending to the many other conditions that affect school effectiveness is not productive, it is clear that leadership is an important ingredient in the mix of strategies for improving schools. The course addresses three major questions: (1) What is school improvement? (2) What does it involve? (3) How do we do it? To accomplish this, the course first focuses on several general models developed for school improvement purposes. After this the focus shifts to an examination of the component pieces of school improvement, including leadership, professional development/professional learning communities, and a focus on teaching and learning (including standards, instruction, and assessments). All these are connected the larger discussion of what education leaders need to know and be able to do to strengthen instruction and raise student achievement. If leaders are to nurture better teaching and learning, they will need greater familiarity with promising instructional approaches, new curricular materials, and ways to adapt them to a particular school's circumstances.

EDLDR 560: Principles of Instructional Supervision

3 Credits

Social and institutional settings for instructional supervision; functions, activities, and practices of supervision; supervisory case studies. EDLDR 560 C-S 560 Principles of Instructional Supervision (3) This course explores themes, trends, and key ideas that influence current supervisory practices. Course content gives specific attention to supervisory practice in relation to teaching practices and to life in schools.

Prerequisite: teaching or school administrative experience; 18 credits in education, at least 5 of which are methods of teaching
Cross-listed with: C-S 560

EDLDR 563: Designing Staff Development Programs

3 Credits

Designing, implementing, and evaluating effective staff development programs for personnel in educational settings. EDLDR 563 Designing Staff Development Programs (3) This course has been designed to provide students with the opportunity to develop a deep understanding of the process of professional development in education at the theoretical and practical levels as well as the ability to apply this understanding to the design, evaluation, and analysis of professional development activities and programs.

Prerequisite: EDLDR560
Cross-listed with: C-S 563

EDLDR 567: Organizational Supervision

3 Credits

Principles and practices of supervision in schools related to instructional and support personnel. EDLDR 567 Organizational Supervision (3) "Organizational Supervision" focuses on principles and practices of supervision in schools related to instructional and support personnel. The rationale for this course is that organizational supervision is that aspect of administration that demands that the administrator focus on the instructional and non-instructional program as he/she facilitates the learning process. While the major topic in this course is the role of the administrator in the supervision of the organization, other considerations in this course are how to relate leadership, change, management, and evaluation to organizational supervision. Other topics include the nature of supervision and its place in the schools;

the organizational environment for supervision; leadership behavior and supervisory effectiveness; a contingency approach to supervision; power, authority, and conflict in supervision; teacher motivation and supervisory effectiveness; and supervision and group effectiveness.

Prerequisite: EDLDR480

EDLDR 568: The Principalship

3 Credits/Maximum of 3

Principles and practices of administration of elementary and secondary schools. EDLDR 568 The Principalship (3) The course is intended to help students gain theoretical and practical insight into what it means to be an effective principal. EDLDR 568 is not a "how to" course; that is, it makes no effort to explicitly lay out rules, procedures, "best practices," or techniques associated with being a principal. Rather, the course calls on students to read, think, write about, and discuss: What do we mean by management? By leadership? What's the difference? What social and political factors help shape the principal's organizational role and behavior? How can principals acquire and maintain power and authority? And what is the difference between these two concepts? How do different school social contexts influence principal effectiveness? What do we mean by school culture and climate? How do these relate to effectiveness? How do principals become "instructional leaders?" When should they? How should student performance be evaluated? Teacher performance? What legal issues do principals need to be aware of?

EDLDR 569: Decision Making in Educational Organizations

3 Credits/Maximum of 3

Decision making in organizational and environmental contexts; case studies of administrative problems; application of decision making models. EDLDR 569 Decision Making in Educational Organizations (3) Decision making is one of the central processes in the leadership of educational organizations. The effective decision maker is one who can define a problem, establish criteria for its successful solution, identify and evaluate alternative problem solutions and their consequences, and choose an appropriate plan of action. The course utilizes a case study approach to examine and practice decision making in an educational context. Emphasis is placed on a systematic approach to making decisions, based on theory, research, and best practice knowledge. Various models of decision making are introduced and their usefulness and appropriateness in different types of situations are examined. Working in teams, students analyze increasingly complex cases and prepare both verbal and written presentations, which are tested in general class discussion. Through active learning experiences provided by the case method, students will study significant problems of practice while developing teamwork skills in collaborative work groups.

Prerequisite: EDLDR480 , or teaching, supervisory, or administrative experience or permission of program.

EDLDR 573: Public School Finance

3 Credits/Maximum of 3

Financing of public education, including values underlying system, revenue sources and taxation, school funding formulas, equity, and school finance reform. EDLDR 573 Public School Finance (3) This course analyzes the systems and mechanisms for financing public elementary and secondary schools in the United States. It provides both an overview of basic school finance concepts and issues and an examination of Pennsylvania's system of financing schools. Throughout the course

there is a continuing effort to blend the theoretical foundations of school finance with their practical applications at state and local levels. Microcomputer models are used to explore the applications of concepts to policy and practice.

Prerequisite: EDLDR480 or teaching, administrative or supervisory experience

EDLDR 575: Ethics in Educational Leadership

3 Credits

Course explores the moral and ethical dimensions of the work of educational leaders. EDLDR 575 Ethics in Educational Leadership (3) This course will: 1) examine traditional ethics as well as alternative forms of moral development (critical theory applied to justice and feminist ethics); 2) compare and contrast one's own code of ethics with that of a professional code of ethics; 3) explore approaches to moral and ethical reasoning and to use these approaches to work through ethical dilemmas related to the practice of educational administration; and 4) have students design and present authentic ethical dilemmas providing theoretical background, appropriate questions, solutions, and reflection.

EDLDR 576: The Law and Education

3 Credits

Legal bases for education; rights and responsibilities of school board members, administrators, teachers, students, and parents; due process. EDLDR 576 The Law and Education (3) This course will provide an overview of major issues in school law. The course will focus primarily on case law including U.S. Supreme Court decisions as well as relevant state and federal lower court opinions. State legislation and administrative laws will also be considered. Topics to be covered include church/state issues, teacher and student rights, and law associated with equal educational opportunities for various groups including racial and linguistic minorities, individuals with disabilities, and women. The class will be a combination of lectures and discussions on particular legal topics based on the text and selected handouts. From time to time, the class will break up into small groups to work on in-class school law dilemmas.

Prerequisite: EDLDR480 or teaching or administrative or supervisory experience

EDLDR 577: Law and Ethics in Education

3 Credits

Course focuses on legal and ethical dimensions issues for educational leaders and their impact on best interests of the students. EDLDR 577 Law and Ethics in Education The instructor will present various paradigms of ethical decision making: justice, care, critique, community, and the ethics of the profession as well as historical and philosophical perspectives on the rights of students. Participants will then apply what they have learned to authentic legal cases involving issues such as students' free speech rights, corporal punishment, strip searching, assessment, and the right to an education. Analyses will consider questions such as: Even if an action is legal, is it ethical? and What is the "best interests of the student"?

EDLDR 578: Schools as Organizations

3 Credits

Intraorganizational relationships; administration and the school in its organizational and environmental contexts. EDLDR 578 Schools as Organizations (3) This course is planned to provide students with an orderly introduction into organizational theory and administrative leadership concepts. A primary objective behind the organization and design of this course is to firmly link theory to practice by addressing the question of what does organizational theory and research have to say that is generally important and useful to the educational practitioner/scholar. This objective is addressed through the belief that practitioners must be self-conscious about what they are doing so organizational action becomes enlightened action; that is, action that has to do with understanding and using multiple perspectives of reality. What are needed are purposeful attempts to construct or reconstitute knowledge so that events, situations and problems are confronted or engaged from multiple points of view. Decision-making and problem-solving activities thus become acts of deliberate, conscious thoughtfulness (reflective thinking, if you will) designed to reconstruct holistic knowledge in order to facilitate enlightened action. Specifically, the objectives of the course are to assist students: (1) to acquire a foundational knowledge or organizational and administrative theory; (2) to use multiple organizational theories in understanding school organizations and leadership roles in these organizations; (3) to develop a framework or schema from which to reflectively think about and develop an understanding of school organizations and problems of practice; (4) to develop a concept of leadership within school organization; (5) to develop an understanding of organizational change processes and attending issues of school change; and (6) to become familiar with organizational perspectives on schools and schooling issues and problems.

Prerequisite: EDLDR480 or teaching or administrative or supervisory experience

EDLDR 579: Financial Management for Schools

3 Credits

Financial management concepts and techniques for educators: district and school level budgeting process, hands-on budget preparation workshop, and budget management. EDLDR 579 Financial Management for Schools (3) Public schools are funded almost exclusively from revenues received from local, state, and federal taxes-public funds-and school administrators are accountable for the proper usage and stewardship of these funds. This course examines the fiscal management concepts and techniques needed by educational leaders in order to plan, control, and evaluate their operations effectively. The primary means for managing the fiscal resources of the district is through the annual budget. Administrators and other educators use the budgeting process to plan educational programs for the upcoming year, to allocate the available funds among competing programs, and to control expenditures in order not to exceed allowable limits. The primary purpose of the course is to acquaint students with the central importance of budgeting in management of schools and districts and to show how mastery of budgeting will make them more effective educational leaders. Procedures for identifying the necessary budgetary activities, as well as constraints, are discussed to provide a management context for the process. Emphasis is placed on the critical, and often neglected, step of formulating expenditure and revenue estimates to teach students how budget numbers are created. Budget modification and analysis techniques are reviewed to provide skills for changing and explaining

budget amounts. Monitoring procedures that prevent overexpenditure of budgeted funds are also discussed.

Prerequisite: EDLDR480 or teaching, administrative, or supervisory experience

EDLDR 580: The Use of Theory in Educational Administration

3 Credits

Critical analysis of current theories; problem finding and hypothesis formulation. EDLDR 580 The Use of Theory in Educational Administration (3) This course provides an introduction to problem finding in educational leadership and the development of research problems and hypotheses for conducting systematic inquiries in educational leadership. The focus will first be on the major research paradigms-the structural-functionalist, phenomenological-symbolic interactionist, and critical-constructivist-and on a overview of the kinds of approaches, questions, and problems posed in each. The emphasis will be on developing an understanding and appreciation of the different as well as complementary aspects of each of these research paradigms and the appropriate uses of each for inquiry in support of improved understanding of and practice in education. An integrated agenda of readings, lecture, group discussions and presentations, and completion of a research project will explore and emphasize the relationship and interdependence of all elements of systematic research. Activities are designed to integrate conceptual knowledge and understanding with active and collaborative participation. This course is designed to provide students with an orderly introduction to and apprenticeship in educational research. Specifically, the objectives of this course, inclusive of both semesters, are: (1) to become familiar with the major research paradigms pertinent to inquiry in educational leadership; (2) to understand the basic tenants, philosophical foundations, and epistemological beliefs of the major research paradigms; (3) to develop an understanding of the different elements involved in the educational research process; (4) to read as widely as possible in relevant literature; and, (5) to explore the research development process by identifying and developing a researchable problem statement and supporting conceptual framework

Prerequisite: EDLDR480 , 6 credits in educational leadership

EDLDR 581: Field Research in Educational Leadership

3 Credits

Field study and qualitative methods in research on educational organizations. EDLDR 581 Field Research in Educational Leadership (3) This course provides an introduction to the various research methodologies available for conducting inquiry in educational leadership across the three paradigms - structural-functionalist, phenomenological-symbolic interactionist, and critical-constructivist. Specifically, this course will focus on relationships between research questions, the theoretical/conceptual framework, and research methods but focus specifically on the methods for data collection and analysis. Part of the course will focus developing an understanding and appreciation of the different as well as complementary aspects of qualitative and quantitative research methods and the appropriate uses of each for inquiry in support of improved understanding of and practice in education. However, the majority of the course will center on the development of an understanding of the qualitative research skills needed to conduct field research. An integrated agenda of readings, lecture, group discussions and presentations, and completion of a research project will explore and emphasize the relationship and interdependence of all elements of systematic research. Activities

are designed to integrate conceptual knowledge and understanding with active and collaborative participation. This course is designed to provide students with an orderly introduction to and apprenticeship in educational research. Specifically, the objectives of this course are: (1) to become familiar with specific research designs and methods used in qualitative research; (2) to read as widely as possible in the relevant qualitative research literature; (3) to become familiar with appropriate field-based research skills for data collection; (4) to conduct field-based research investigating a specific problem related to educational practice; (5) to develop the skills necessary for qualitative data analysis; and, (6) to develop the skills needed for writing qualitative research.

Prerequisite: EDLDR480 , 6 credits in educational leadership

EDLDR 582: Reviewing and Editing Education and Policy Journals

3 Credits

Introduction to education policy journals and the review and editing process; discussion of emerging issues within the academic publishing industry.

Cross-listed with: CIED 582, EDTHP 582, HIED 582

EDLDR 584: Evaluation in Educational Organizations

3 Credits

Naturalistic and empirical evaluation methods and procedures for educational organizations. EDLDR 584 Evaluation in Educational Organizations (3) "Evaluation in Educational Organizations" examines methods and procedures for conducting effective evaluations of educational programs. It reviews naturalistic and empirical evaluation methods and procedures for educational organizations. Government demands for educational accountability, and political and social requirements for educational improvement, have increased the need for scientific and systematic evaluation of the effectiveness and efficiency of educational programs. This course provides an introduction to both qualitative and quantitative methods of program evaluation, and examines the strengths and weaknesses of alternative models and approaches for program evaluation.

Prerequisite: a course in educational administration; a course in basic statistics.

EDLDR 585: Research Design: Implications for Decisions in Higher Education

3 Credits

A capstone course on research design and analytical approaches to support decision-making in administration and policy-making. EDLDR 585 / EDTHP 585 / HIED 585 Research Design: Implications for Decisions in Higher Education (3) By the end of this course you should be able to: (1) Define and explain the following concepts/tools of social science research: The scientific method-Theory and its role, Constructs and variables, Hypotheses and relations, Experimental designs, Quasi-experimental designs and Ex post facto designs. Sampling theory and designs-Survey designs and methods, Approaches to data collection, Measurement reliability and validity, Quantitative analytical designs, and Ethical practices. (2) Apply these concepts/tools in designing a study relating to educational research. (3) Effectively critique both the theoretical bases and methods of a journal article or report of research or policy analysis. (4) Prepare a sound research proposal.

Prerequisite: EDPSY400 , EDPSY406 ; or AG 400 , R SOC573
Cross-listed with: EDTHP 585, HIED 585

EDLDR 586: Qualitative Methods in Educational Research

3 Credits

Exploration of the theoretical framework undergirding qualitative research and its attendant practices and techniques. EDLDR (EDTHP, HI ED) 586 Qualitative Methods in Educational Research (3) This course is the introductory course in the EPS qualitative research methods sequence. This is the first course in a three-course sequence departmental sequence intended to take students from basic knowledge of qualitative methods through mastery of advanced topics. This course was designed specifically to 1) orient students to the various types of qualitative methods most widely used in educational policy research and their theoretical underpinnings; 2) provide training in basic qualitative research techniques; 3) introduce students to basic research design; 4) provide systematic practice (and feedback) in evaluating qualitative research that would allow students to become sophisticated consumers of qualitative studies; 5) prepare students for the Level 11 course. The course will begin with a brief review the development of qualitative methods in related fields (anthropology, sociology, linguistics) and quickly move on to an overview of qualitative methods in education. Students must have read the material prior to class in order to take part in in-class exercises and discussions. We will focus on key issues such as validity, interpretation and representation. Students will be asked to read studies, assess the general quality of the work, and provide a critical evaluation. Students will study specific methods of qualitative field research, and most weeks we will practice and discuss a particular research technique (e.g. participant observation, focus group interviews). These practice sessions will be informed by relevant readings. Students will practice developing coding schemas as well as get a quick overview of qualitative data analysis (QDA) packages. Finally, in small groups, students will design a basic qualitative study to be presented as a final product in the course.

Cross-listed with: EDTHP 586, HIED 586

EDLDR 587: Education Policy and Politics

3 Credits

The political economy and bureaucratic politics of educational organizations, with special attention to the policy making, implementation, and evaluation processes.

Cross-listed with: EDTHP 587, HIED 587

EDLDR 588: Qualitative Methods in Educational Research II

3 Credits

Advanced study of methods involved in executing and analyzing qualitative research in education. EDLDR (EDTHP, HI ED) 588 Qualitative Methods in Educational Research II (3) The course will provide practical experience with methods of qualitative data collection, data management, and preliminary data analysis that extends and deepens students' understanding of qualitative research in education. The class, limited to 15 students, will take as the focus with inquiry a common "site" around which projects of individual and group interest will be designed. Sessions will take place in "workshop" blocks during which students will present and critique the work of the project. Readings will be interspersed with the practicing of methods. The final project for the course will be the

compilation of a synthesized data set that could serve as the basis of further analysis.

Prerequisite: EDLDR586

Cross-listed with: EDTHP 588, HIED 588

EDLDR 589: Mixed Methods in Educational and Social Scientific Research

3 Credits

Within the social sciences, interest in and the use of mixed methods has grown dramatically in the last 10-15 years. Whereas it used to be regarded, at best, as something of an impractical oddity and at worst a paradigmatic contradiction in terms, a mixed methods approach to research has increasingly begun to enter the mainstream of methodological acceptability. This course explores various philosophical, epistemological, disciplinary, and design-related debates in relation to the rapidly expanding use of mixed methodologies in educational and social scientific research. It is intended to give students an overview of different mixed methods research approaches, to help students consider the epistemological and paradigmatic implications of mixed method designs, and to encourage students to think about, design, conduct, and/or critique mixed methods research within educational and other social scientific research. In this graduate seminar, students will read and discuss multiple examples of mixed methods studies while simultaneously examining broader critiques of and commentaries on mixed methodological approaches.

Cross-listed with: EDPSY 589

EDLDR 595: Internship

1-18 Credits/Maximum of 18

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Prerequisite: EDLDR480 , teaching experience and a professional certificate

EDLDR 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

EDLDR 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

EDLDR 597C: ****SPECIAL TOPICS****

3 Credits

EDLDR 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

EDLDR 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

EDLDR 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

EDLDR 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

EDLDR 801: Introduction to Teacher Leadership

3 Credits

This course focuses on understanding teacher leadership and its function with the school system. EDLDR 801 Introduction to Teacher Leadership (3) EDLDR 801 Introduction to Teacher Leadership provides an orderly introduction to new conceptions of teacher leadership in schools. The course focuses on three main areas that are foundational to building understandings of teacher leadership. The first of these areas focuses on who teacher leaders are, how they become teacher leaders, and what it is that teacher leaders do. Both formal and informal roles are discussed along with professional and personal qualities that appear to distinguish teacher leaders. Finally, a clear distinction is made between formal administrative leadership, i.e., building principals and their duties, and the role of teacher leaders. The second area uses a systems perspective to focus on the organizational supports and capacities that are necessary for teacher leadership to grow and flourish. At the district level, the focus is on the development of supportive policies and appropriate programs. At the school level, the focus is on developing a culture of continuous learning/continuous improvement in support of teacher leadership. The third area examines not only how one develops teacher leadership but also what is necessary to sustain and nourish it in schools. The focus is on building relationships, distributing power and authority, and aligning professional learning. These three areas culminate in the development of a practice-based conceptual model of teacher leadership.

EDLDR 802: How Schools Work

3 Credits

Course focuses on understanding schools as learning organizations and how teacher leadership works in such organizations. EDLDR 802 How Schools Work (3) The continuing development of the capacities of schools to become learning organizations is a key aspect of creating capable, competent student learners and effective teachers. A learning organization challenges assumptions, authors and reflects upon essential questions, explores innovative approaches, and through collaborative leadership structures applies these learnings to improve instructional and environmental practices for students and teachers. The objective of this course is to examine four critical areas contributing to the understanding of how schools do work and, most importantly, how they can work, as learning organizations. Effective educational leaders must (1) understand the nature of schools as learning organizations; (2) the significant impact of global social, economic, and demographic changes on schooling; (3) the challenges, opportunities, and constraints

of implementing systemic change initiatives; and, (4) the complexities of leadership in such multifaceted organizations as schools.

EDLDR 831: Leadership for Equity and Diversity

3 Credits

Students from culturally, linguistically, socially, and economically diverse backgrounds account for an increasing percentage of the school-age population in the United States. This course serves as an exploration of the school leaders' role in promoting equity and diversity for all members of the school community. Specifically, this course will focus on policy and theory as they inform the development of leadership practice. This course aims to explore issues related to education, equity, and diversity.

EDLDR 841: Data Informed Leadership

3 Credits

This course focuses on the development of skills related to data use that will help inform administrative and leadership decisions in school settings. The purpose of the course is to build the learner's knowledge and skills for understanding and using a variety of different forms of data to promote improvements in student outcomes and increased equity. This class will be most relevant to those working in K-12 school settings, particularly those who are engaged in using different forms of data to improve instruction and/or schools.

EDLDR 842: Coaching for Leadership Capacity and Systems Change

3 Credits

This course develops one's capability to support principals and their teams through coaching to successfully engage in continuous cycles of improvement. Candidates will develop their leadership capacity while collaboratively leading a change effort that ultimately results in success for every student. This is a key competence for principals who will coach other principals.

Prerequisite: EDLDR 841

EDLDR 844: Constructing Educational Case Studies for Peer Professional Development

3 Credits

Students will, under faculty guidance, review events or projects they have conducted in their school and assess its suitability to be developed as a case study. After selecting the case, students will be guided in developing a case study that can be employed in future professional development. Students will write up a case study that articulates the context, vision, theory of action, strategies, evaluation, and resources utilized by the candidate to effect a systemic improvement to their school. Students will critically examine how case studies serve as teaching tools, and reflect on how their lived experience/active practice can be transformed into teaching materials that can develop the administrative skills of future principals.

Prerequisite: EDLDR 841 and EDLDR 842

EDLDR 859: Planned Change for School Improvement

3 Credits

Standards-based reforms of the past have brought about efforts to improve schools and raise student achievement. Initiatives include (but

are not limited to): (1) introduction of standards for learning at all levels of K-12 instruction, including the Common Core Standards introduced in 2011; (2) increased requirements for high school graduation; (3) reduced class sizes, especially in the elementary grades; (4) high-stakes state testing and accountability measures. Yet, despite all this activity and attention, significant changes in student achievement and in basic school practices have been slow to transpire. The reasons for slow progress are many and complex. However, one reason is the need for stronger school leaders (including teachers, principals, superintendents, and other educators) who can direct and implement changes in curriculum, instruction, and school organization. There is consensus in the research literature that school improvement and school leadership are largely inseparable—that leadership is a critical element in order for schools to improve. The course addresses three major questions: (1) What is school improvement? (2) What does it involve? (3) How do we do it? To accomplish this, the course focuses on several general models developed for school improvement purposes. It also explores the component pieces of school improvement, including leadership, professional development/professional learning communities, and a focus on teaching and learning including standards, instruction, and assessments. Taken together, this course explores what education leaders need to know and be able to do to strengthen instruction and raise student achievement. If leaders are to nurture better teaching and learning, they will need greater familiarity with promising instructional approaches, new curricular materials, and ways to adapt them to a particular school's circumstances.

EDLDR 861: Principles of Instructional Leadership

3 Credits

The purpose of this course is to provide aspiring leaders with learning opportunities and activities authentic to school leaders and leadership roles in educational organizations. While the course is suited to meet the needs of educators preparing for principal positions in K-12 schools, it also serves to meet the needs of aspiring leaders in specific content areas, including special education leaders and curriculum leaders often employed across K-12 as teacher leaders or administrators. The course focuses on development of leadership skills and dispositions that inform highly effective practices of instructional leaders in education. Throughout the course, students explore and investigate social and institutional settings for instructional leadership, including supervision of instructional staff and the functions, activities, and practices of an instructional leader. Students will continually work to develop and refine leadership dispositions, specifically those that support instructional improvement and high levels of learning for all students. Throughout the course, students are provided with opportunities to apply activities and learning to their specific interests, at all levels of instruction and content within schools and educational organizations. Students are expected to have teaching and/or school administrator experience, 18 credits in education (at least five of which are methods of teaching), and access to a school setting for course activities and projects.

EDLDR 865: Human Resources Leadership in Education

3 Credits/Maximum of 3

This course will provide an overview of the critical strategic and operational leadership roles in human resources management for future and practicing administrators. Using a systems approach, this course will help leaders to identify the components of effective human resources management while also understanding how these components are interrelated and support strategic planning towards equitable teaching and learning. Additionally, this course will consider local state and

federal policy, as well as legal and ethical responsibilities, dimensions of equity and diversity and a changing work force in: recruitment, selection, induction, retention, evaluation, professional development, collective bargaining and compensation of school personnel.

Prerequisite: 18 credits in education and three years' teaching experience

EDLDR 868: The Principalship for Aspiring School Leaders

3 Credits

The Principalship course provides students with knowledge specific to the role of the principal in K-12 schools. The course is intended to help students gain theoretical and practical insight into what it means to be an effective principal. It explores principal leadership responsibilities, decision-making/problem-solving skills, and management practices across levels of K-12 leadership. The course calls on students to read, think, write about, and discuss multiple topics related to the day-to-day challenges of a building leader.

EDLDR 873: Money and Schools: Perspectives, Finance Policies, and Leadership

3 Credits

How we raise money for schools and how we spend that money reflects our values. This course gives students an overview of the values and policies shaping school finance in the United States, with a special emphasis on the relationship between education funding and equity. Students will also develop their understanding of technical topics in school finance such as how leaders build and maintain a budget. In learning to think critically about funding issues in education, students will consider the relationship between financial management, educational leadership, and organizational change.

EDLDR 876: Law and Education for Educational Leaders

3 Credits

This course will provide an overview of major issues in school law. The course will focus primarily on case law including U.S. Supreme Court decisions as well as relevant state and federal lower court opinions. State legislation and administrative laws will also be considered. Topics to be covered include church/state issues, teacher and student rights, and law associated with equal educational opportunities for various groups including racial and linguistic minorities, individuals with disabilities, and women.

EDLDR 894: **SPECIAL TOPICS**

3 Credits

EDLDR 894 Capstone Inquiry Project (3) EDLDR 894 is the culminating course for the on-line M.Ed. in Educational Leadership with an Option in Teacher Leadership. The course is designed around the presentation of a independent inquiry project that reflects the student's developing understanding of the five leadership strands upon which the program is based. While a good deal of latitude is provided to students in designing their project (usually in conjunction with the First Tier course, CI 501 Teacher Inquiry), course faculty and academic advisors also support and guide the student in project development and continuing work across the program. In addition, several general principles guide and shape the specific project work which continues over the course of the M.Ed. program. In addition to the inquiry project being focused on a problem of practice taken from the student's professional work, the final inquiry

project should also give evidence of the following elements: (1) a focus on improvement of schooling practices and/or student learning; (2) the use of current research and instances of exemplary practices; (3) incorporation of authentic learning experiences anchored in practice; (4) the use of an inquiry-based model of learning and reflection; and (5) collaborative work either among on-line program participants or with participants outside the program. A portfolio of evidence pertaining to (1) individuals' reflections on teacher leadership, (2) other forms of documentation of instances of opportunities for teacher leadership, and (3) the development of the individual inquiry project will be maintained across the student's progression through the program and can be incorporated into the presentation of the inquiry project or into the synthesis and reflection paper.

EDLDR 895: Internship

1-18 Credits/Maximum of 18

Supervised, professionally oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

Educational Psychology (EDPSY)

EDPSY 502: Data Analysis Workshop

3 Credits

This course is designed to increase conceptual understanding of basic statistics and proficiency with analytic techniques. EDPSY 502 Data Analysis Workshop (3) This course is designed for students with a desire to increase their conceptual understanding of basic statistics and their proficiency with analytic techniques using educational data sets. Through this course students will increase their knowledge of research methods and analytic strategies. An emphasis is placed on the connections among research design, research questions, analysis strategy, and interpretation of findings to supplement their statistics coursework. The course will be held in a computer lab so students can access a statistical analysis package. This course draws on students' knowledge and skills from research methods and statistics courses. In this elective workshop-style class, students are provided a conceptual review of quantitative statistical analysis. In each session hands-on activities and practice with provided educational data sets allow students to learn techniques and interpretation of conducted analysis. Through this course students become more comfortable with analyzing quantitative data sets. The data sets used in the course include segments of large scale educational data sets as well as smaller data sets that include relevant variables for education or educational psychology. These data sets are either portions of actual sets, or fictitious sets with variables labeled with relevant constructs. There are no general data sets included in the course. Each session starts with a teacher-directed review, followed by a model analysis, and guided practice. Students then practice analyzing and interpreting with provided example data sets. Students exit the course with a set of models to reference in their future work.

Prerequisite: EDPSY406 and EDPSY475

EDPSY 505: Statistical Applications in Educational Research

3 Credits

Statistical techniques for education research including multiple regression, one-way, two-way, and repeated measures ANOVA. Use computer software for statistical analyses.

Prerequisite: EDPSY406

EDPSY 506: Advanced Techniques for Analyzing Educational Experiments

3 Credits

Analytical and experimental control considerations for designs involving nested and/or crossed subjects. Analysis of variance and multiple comparisons via computers. EDPSY 506 Advanced Techniques for Analyzing Educational Experiments (3) The main purpose of this course is to introduce a variety of experimental designs that are used in education and the social and behavioral sciences. Experimental designs involve plans for choosing experimental units, assigning treatments, and collecting measurements. The goal is to design informative studies and carry out powerful analyses to answer research questions within practical constraints. For each design, appropriate statistical analyses including the mathematical model, underlying assumptions, computational routines, and the statistical tests of hypotheses will be covered. Relative advantages and disadvantages of the different designs will be discussed. The course will provide hands-on opportunities to practice data analysis and result interpretation. In light of likely differences in students' academic backgrounds, the course emphasizes conceptual understanding rather than mathematics of the statistical methods.

Prerequisite: EDPSY505 or PSYCH400

EDPSY 507: Multivariate Procedures in Educational Research

3 Credits

Introduction to matrix algebra, computer programming, multiple regression analysis, multiple and canonical correlation, multiple discriminant analysis, classification procedures, factor analysis. EDPSY 507 Multivariate Procedures in Educational Research (3) This course covers analytical techniques in the analysis of variable relationships. It focuses on regression-based statistical techniques in explaining or predicting outcome variables from other relevant measured variables. Simple and multiple regression analysis of continuous outcome variables and logistic regression analysis of categorical outcome variables will be discussed along with model diagnostics. Other topics considered include applications of discriminant analysis for classification problems, exploratory factor analysis for data reduction and discovering the number of latent dimensions, and if time permits, cluster analysis for identifying patterns of individual responses. The course will provide hands-on opportunities to practice data analysis and result interpretation. The course emphasizes conceptual understanding rather than mathematics of the statistical methods.

Prerequisite: EDPSY505 or PSYCH400

EDPSY 512: Group Processes in the Classroom

3 Credits

Basic concepts and perspectives in the study of group processes; instructional group interaction; analysis of classroom behavior.

EDPSY 513: Individual and Group Differences

3 Credits

Description, causes, and interpretation of individual variation over the life-span, with application to school and institutional practices.

Prerequisite: EDPSY400 or EDPSY450

EDPSY 515: Foundations of Educational Research

3 Credits/Maximum of 999

Students read the philosophical foundations of education research, study how philosophies influence methodologies, and analyze current educational problems. This course is designed for students entering doctoral programs in the College of Education. Our students are studying to become education researchers within a highly politicized environment. For example, particular definitions of education research and government policies that favor some types of research practices over others provide opportunities for and set limits upon the work of education researchers. Public controversies likewise contribute to challenges faced by education researchers who find their work affirmed or discounted by particular definitions and policies. In order to explore these controversies and to allow students to begin identifying their own "positionality" with regard to research, this course begins with a reading of the history and philosophies of education research (primarily focusing on the United States). The course goals are: - to identify underlying assumptions of competing forms of social inquiry, each determined to uncover new knowledge; - to bring those assumptions to bear on education research in chosen fields of study; and - to begin to develop one's own positions in order to direct further study and research. Specifically, through instructor facilitation and group discussions, students will come to understand major philosophical perspectives that permeate and drive research methodologies in education: positivism, postpositivism, interpretivism, critical theory, poststructuralism, and pragmatism. These understandings allow students to recognize the methodological assumptions that inform published research studies and to discover how methodologies might inform the research they wish to conduct as students and practitioners. Although the course is not required by any particular doctoral program in the College of Education, it is suggested for students who consider research important to their future careers and who see benefits in exploring the methodological options available.

Cross-listed with: ADTED 515, CI 515, HIED 515

EDPSY 520: Current Issues in Special Education

3 Credits

Explore current issues and research in the field of special education.

Prerequisite: SPLED525

Cross-listed with: SPLED 520

EDPSY 521: Learning and Cognition: Educational Applications

3 Credits

This course focuses on understanding human learning and thinking through examining learning theories and research related to educational psychology.

Prerequisite: EDPSY421

EDPSY 523: Concept Learning and Problem Solving

3-4 Credits/Maximum of 4

Theoretical-empirical trends in concept learning, problem solving, and creativity related to instructional psychology. EDPSY 523 Concept Learning and Problem Solving (3 to 4 per semester/maximum of 4) This course explores how people acquire knowledge of concepts and the nature of that knowledge. Students will also learn about major models of problem solving and issues related to how people solve problems. The two main topics of the course, concept learning and problem solving, are tied together by exploring how the knowledge that one has influences problem solving and how the experiences of problem solving influence the knowledge that is gained. Students are encouraged to apply the topics of this course to their own areas of study through activities such as selecting relevant research articles, development of a research proposal, and applying research findings to new areas.

Prerequisite: EDPSY421 or EDPSY521

EDPSY 524: Theories of Learning and Instruction

3 Credits

Study of major classical theories of learning and recent developments in learning and instructional theory. EDPSY 524 Theories of Learning and Instruction (3) Exploration of major classical and current theories of learning from behaviorism to situated cognition through the reading of original works, extensive overview chapters, and contemporary empirical research. Course content and readings assume that students have prior knowledge or experience with learning theory.

Prerequisite: EDPSY421 or EDPSY521

EDPSY 525: Cognitive Processes in Learning from Multiple Representations

3 Credits

Multiple external representations (MERs) refer to instructional materials that contain more than one representation for describing or depicting content. Examples are materials that include two or more representations such as verbal text, formulae, diagrams, graphs, animations, and so on. This course will also cover materials that include multiple text documents. Regardless of the specific representational combinations used, acquiring knowledge from these representations requires the learner to both comprehend the individual representations and integrate across them, a demand that students often face, but infrequently achieve. This course will cover the major theoretical frameworks used to understand the cognitive processes required for learning from MERs as well as current research addressing these processes.

EDPSY 526: The Psychology of Reading

3 Credits

Psychological principles underlying the process of reading and comprehending, with application to instruction. EDPSY 526 The Psychology of Reading (3) This course explores the psychological processes of reading including topics such as phonological processing, vocabulary development, and comprehension. Students in this course will complete readings that help them to understand the research foundations for these psychological processes of reading and how these processes can be understood in relation to one another. Throughout the course, students will be encouraged to consider how each topic relates

to broader considerations in the field of reading. For example, the class may explore how knowledge of psychological processes can be applied to address questions of beginning reading instruction, second language learning, and text design. A variety of class formats, such as small group discussions and topic presentations, may be used to support these explorations.

Prerequisite: EDPSY421 or EDPSY521

EDPSY 528: Instructional Psychology

3 Credits

Application to instructional design of current developments in research on human development, information processing, learning strategies, memory structures, instructional processes. EDPSY 528 Instructional Psychology (3) The objective of this course deals with psychological research on mental structures and on the relation of these to learning of basic skills and school subjects exhibiting increasing capability for investigating and implementing emerging principles that meet the complex demands of education and instructional practice. The content and requirements of this course will be shifting continually to keep up with these developments. This course relates various phases of instruction to correlated processes engaged by the learner. The readings will be from the journal literature and/or recent textbooks.

Prerequisite: EDPSY421 or EDPSY521

EDPSY 530: Achievement Motivation

3 Credits

Within a seminar format, this course addresses both theoretical and empirical approaches to motivation and other related affective constructs.

Prerequisite: EDPSY421

EDPSY 550: Design and Construction of Psychological Measures

3 Credits

Lecture-practicum involving planning, construction, administration, and analysis of a psychological test; lectures stress construct validity, item analysis, and predictive validity.

Prerequisite: EDPSY450

EDPSY 554: Theories of Psychological Measurement

3 Credits

Basic true-score and error models; their extensions to test reliability and test validity; problems of item analysis and weighting.

Prerequisite: EDPSY450

EDPSY 555: Validity of Assessment Results

3 Credits

Concepts, issues, and methods of validation of educational and psychological assessment including models and approaches to validation, bias, and utility. EDPSY (CI ED) 555 Validity of Assessment Results (3) The goal of this course is to enable the student to acquire a broad perspective on issues and considerations in the process of validating interpretation and uses of tests, scales, assessment

procedures, or protocols. Issues of validity are examined from many perspectives including a review of current dominant and alternative validity theories, of known threats to validity, of some advanced specialized statistical techniques; and of test bias, legal issues, psychological/behavioral issues, social/consequential considerations, and philosophical considerations. Additionally, applications are provided through in-depth cross-cultural and historical studies, technical reviews of published commercial tests, and in-depth examinations of controversies.

Prerequisite: EDPSY406 , EDPSY450

Cross-listed with: CIED 555

EDPSY 556: Foundations and Applications of Item Response Theory

3 Credits

Unidimensional models for dichotomously scored and polytomously scored items and their applications in instrument/test development.

Prerequisite: EDPSY450 and EDPSY507

EDPSY 557: Hierarchical Linear Modeling in Educational Research

3 Credits

Statistical techniques for the analysis of multilevel data such as in nested designs or hierarchical data. EDPSY 557 Hierarchical Linear Modeling in Education Research (3) Hierarchical Linear Modeling (HLM) models are particularly important when analyzing data for school settings. This course is designed as an applied statistics course specifically geared to analyzing data from educational settings and using data sets from educational research. Data collected in these ecological contexts with nested designs, such as students enrolled in classrooms, classrooms in schools, and schools within school districts, must be analyzed carefully as relations between and among variables could change given a particular level (e.g., student-level, classroom-level) for analysis. The topics of this course highlight the importance of studying random versus fixed effects for data collected in multilevel educational research settings. Two-level HLM models, growth-curve models, three-level HLM models, and Hierarchical Generalized Linear Models with binary and ordinal outcomes are the four primary types of models that will be the focus of the class. Students will also learn how to use HLM software to analyze their data given the four types of models. Other topics covered in this class will include: a) centering of independent variables; b) restricted maximum likelihood estimation; c) effect sizes and power analysis; and d) the relevance of educational theory and psychometric analysis in variable selection, and model specification.

Prerequisite: EDPSY506 and EDPSY507

EDPSY 558: Foundations and Applications of Structural Equation Modeling

3 Credits

Model specification, identification, estimation, evaluation, and modification for measurement models, path models, and full structural models. EDPSY 558 Foundations and Applications of Structural Equation Modeling (3) Structural Equation Modeling (SEM) is considered an advanced multivariate statistical tool. It subsumes general linear models such as ANOVA and regression and can model binary, ordinal, or count data like logistic and Poisson regression. SEM is multi-disciplinary and is most widely used in Social and Behavioral sciences. This course covers foundational issues in Structural Equation Modeling. Path analysis,

confirmatory factor analysis, and full structural models will be discussed in terms of model specification, identification, estimation, evaluation, and modification. Students will learn how to specify models of theoretical interest, recognize identification problems, perform model estimation and modification using an SEM software of choice, and defend the final model selected. Examples of model fitting will be illustrated in class with the LISREL program. However, students are encouraged to explore other SEM programs that best suit their skills and research interests. A class project involving the application of the newly acquired techniques is required.

Prerequisite: EDPSY406 , EDPSY507 , and STAT 505

EDPSY 559: Foundations of Meta-analysis

3 Credits

Foundations of Meta-analysis covers the application of concepts and principles of meta-analysis to the systematic review of the literature on a topic. It covers how to model effect sizes (e.g., Hedge's g , odds ratio, Fisher's z) in between-subjects, within subjects, meta-regression, and correlation-based meta-analyses. Topics include the design, statistical modeling and analysis, and reporting of meta-analytic studies. Upon completion of the course, students should be able to design and conduct meta-analyses, as well as be informed consumers of meta-analytic reports.

Prerequisite: EDPSY 406; EDPSY 505; HDFS 519; PLSC 502; PPOL 503; PSY 507; STAT 415; STAT 500; STAT 501 Recommended Preparation: It is advisable to have some experience reviewing the literature, either through formal coursework or research experience.

EDPSY 560: Contemporary Issues in the Evaluation of Educational Programs

3 Credits

Practical and theoretical issues in the planning, execution, and interpretation of program evaluations.

Prerequisite: EDPSY450 , EDPSY475

EDPSY 575: Seminar in Educational Psychology

1-6 Credits/Maximum of 6

A seminar dealing with specific topics in educational psychology. Open to advanced students in the behavioral sciences.

EDPSY 576: Research Methods in Teacher Education

3 Credits

A basis in theory, findings from research, research design, and methodologies related to teacher education.

Cross-listed with: C-S 576

EDPSY 578: Contemporary Issues in Interdisciplinary Educational Intervention Sciences

2-3 Credits

Proseminar exploring contemporary issues in the design and evaluation of educational interventions from an interdisciplinary perspective.

Cross-listed with: HDFS 578, PSY 578

EDPSY 589: Mixed Methods in Educational and Social Scientific Research

3 Credits

Within the social sciences, interest in and the use of mixed methods has grown dramatically in the last 10-15 years. Whereas it used to be regarded, at best, as something of an impractical oddity and at worst a paradigmatic contradiction in terms, a mixed methods approach to research has increasingly begun to enter the mainstream of methodological acceptability. This course explores various philosophical, epistemological, disciplinary, and design-related debates in relation to the rapidly expanding use of mixed methodologies in educational and social scientific research. It is intended to give students an overview of different mixed methods research approaches, to help students consider the epistemological and paradigmatic implications of mixed method designs, and to encourage students to think about, design, conduct, and/or critique mixed methods research within educational and other social scientific research. In this graduate seminar, students will read and discuss multiple examples of mixed methods studies while simultaneously examining broader critiques of and commentaries on mixed methodological approaches.

Cross-listed with: EDLDR 589

EDPSY 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

EDPSY 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

EDPSY 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

EDPSY 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

EDPSY 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Teaching of Educational Psychology classes under senior faculty supervision.

EDPSY 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

EDPSY 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Educational Technology (EDTEC)

EDTEC 561: Measuring the Impact of Technology on Learning

3 Credits

Prepares teachers to evaluate the effects of technology use. EDTEC 561 Measuring the Impact of Technology on Learning (3) This course which will be offered online through Penn State's "World Campus," is designed to prepare teachers and other educators to use basic quantitative methods to assess the effects of a variety of technology-related innovations in their own classrooms and schools. It begins with a focus on the various types of learning outcomes, then prepares students to develop the effective tests and scoring tools required to assess them. The course then introduces the basic statistical concepts and methods, reviews exemplary technology-related quantitative research, and prepares students to design quantitative research studies to be implemented in their own classrooms and schools.

Prerequisite: EDPSY421 or equivalent and AEE 521 or equivalent

EDTEC 594: Research Topics

1-9 Credits/Maximum of 9

Supervised student activities on research projects identified on an individual or small-group basis.

Prerequisite: EDTEC566 or EDTEC567

EDTEC 595: Internship

1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships.

EDTEC 596: Independent Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, supervised on an individual basis and which fall outside the scope of formal courses.

Educational Theory and Policy (EDTHP)

EDTHP 500: Proseminar in Educational Theory and Policy

3 Credits

An introduction to disciplinary and interdisciplinary studies in educational theory and policy.

EDTHP 507: Ethnicity, National Identity, and Education

3 Credits

Surveys group-oriented education policies internationally, especially comparing those of Britain, Taiwan, India.

Cross-listed with: CIED 503, HIED 503

EDTHP 516: Education and Demographic Change

3 Credits

Education is one of the most important factors affecting major demographic shifts and processes worldwide, including the first and second demographic transitions. If, as the old sociological adage goes "demography is destiny," then our destiny is educationally transformed demography. Interdisciplinary research across demography, sociology, neuropsychology, and epidemiology is developing a strong research literature about how the thinking style, behavior, and attitudes of the educated human radically change fundamental dynamics underlying the world's population. The whole way in which we come to our jobs, spouses, and lifestyles; how many children we have and how we raise them; how long we are likely to live, and what will be our eventual demise are all heavily influenced by how much education we have had. The collective force of widespread education and its influence on rising cognitive abilities, scripts for living, and economic well-being are creating a distinctly new type of human population with major benefits and future challenges for a sustainable human population. At the same time, individuals' schooling is also influenced by demographic change. This seminar covers key concepts, theories, and methodological issues related to the intersection of demographical and cultural changes from the education revolution and their impact on subsequent demographic processes.

Cross-listed with: CIED 516, SOC 516

EDTHP 518: Analysis of U. S. Educational Policy

3 Credits

The interaction between educational theory and social structure, focusing on the role of practicing intellectuals in contemporary institutional settings.

EDTHP 520: Perspectives on Contemporary School Reform

3 Credits

Examination of contemporary U.S. school reform, with a focus on contrasting theoretical perspectives and the application of policy analysis principles. EDTHP 520 Perspectives on Contemporary School Reform (3) This course examines contemporary U.S. school reform, with several purposes, with a focus on contrasting theoretical perspectives and the application of policy analysis principles. It consists of the following objectives: 1. To gain an appreciation of how school reforms develop, including the rationale behind them and how visions of school change become mediated by social and political contexts as they become policy. 2. To analyze what produces continuity and change in schools and classrooms, including why some reforms persist, why some fade, and why some recur. 3. To gain an understanding that the implementation of school reform is a product of the interaction between the larger context (social, economic, political, ideological, and environmental factors), the character of schools as institutions, and the actions of groups and individuals. 4. To gain and strengthen skills in analyzing a policy argument, its assumptions, and use of evidence in order to construct a coherent and compelling policy analysis of a school reform on your own. The course is an advanced seminar with approximately 15 students enrolled. The course will be offered once in every two-year (4 semester) cycle. Course evaluation includes policy analysis exercises, weekly written responses to readings, responsibility for leading the seminar, and a cumulative research paper examining and

analyzing a school reform. Attendance and participation also are part of the course evaluation.

EDTHP 521: Data Analysis for Education Research

3 Credits

This course bridges theoretical statistics coursework and practical research with real, large-scale data sets. The course emphasizes hands-on data preparation and analysis using statistical software. More specifically, the course will give an overview of national and international data resources that are available for educational researchers, survey the most widely used data analysis techniques in educational research, and use statistical software and large-scale datasets to produce useful results for educational policy research.

Cross-listed with: EDLDR 521, HIED 521

EDTHP 522: Economics of Education

3 Credits

The aim of the course is to help students view the educational system and students' educational decisions through the lens of economics. We will discuss the methods that economists commonly employ to study education and read recent empirical articles that examine the impact of educational policies and practices. At the end of the semester, we will discuss insights from the field of behavioral economics, which builds on the standard economic model to better understand decision making. This course also surveys the empirical literature on the economics of education which is organized into several broad topics, including human capital and economic return to education, school choice and college access, and education production. Finally, the course covers a variety of econometric methods that are widely used in the economic study of education. These methods include regression models (e.g., ordinary least squares, discrete choice models, Multi-level modeling, panel data models, etc.) and commonly used techniques to deal with self-selection and causal inference (e.g., quasi-experimental methods).

Cross-listed with: EDLDR 522, HIED 522

EDTHP 523: Interpreting and Analyzing Quantitative Studies in Education Policy

3 Credits

Effective reading of academic articles in educational policy based on quantitative methods.

Prerequisite: EDPSY400 and EDPSY406

EDTHP 524: Comparative Education Research Using Large-Scale Data

3 Credits

This course is designed to give students an overview of large-scale international assessment databases and to demonstrate how these databases can be utilized to investigate critical issues in education from a comparative perspective. A number of empirical studies using large-scale international assessment databases will be reviewed, and these analyses will be replicated via computer labs. Students will develop a good understanding of large-scale international assessment databases and will learn to apply an appropriate method to address a particular topic of interest. Students will also develop a wide range of research skills necessary to independently conduct comparative research, including but not limited to formulating a research question,

conducting a literature review, analyzing empirical data, and interpreting results. Although the focus is mainly on datasets relevant to education and education policy research, the skills taught in the course are broadly transferable to other social sciences including sociology.

Recommended Preparations: Students should have taken either EDTHP 513 and EDTHP 538 or EDTHP 553 as well as EDPSY 505 or SOC 574 before enrolling in this course.

Cross-listed with: CIED 524, EDLDR 524, HIED 524

EDTHP 527: Testing and Educational Equity

3 Credits

This course considers testing, the reasons that policymakers have widely adopted testing, and implications of testing for educational equity. EDTHP 527 Testing and Educational Equity (3) Results from standardized testing reveal that there are large disparities in test scores that parallel racial and ethnic lines in the U.S. For almost two decades, American policymakers have embraced increased testing in K-12 education as a means of reducing these disparities. The objectives of this course are to help you to understand why testing policies have proliferated, to explore how such policies might or might not affect academic achievement, and to think critically with regard to the policies' impact on students from diverse racial and ethnic backgrounds. In essence, the course's central question is this: In what ways might testing policies ameliorate or increase disparities across racial and ethnic groups?

EDTHP 533: Social History and Education Policy

3 Credits

Historical study of social dimensions in the formation of education policy.

EDTHP 534: Childhood and Education in Sociological and International Comparative Perspective

3 Credits

The course objective is to use an international comparative lens and sociological perspective to examine the social, cultural, political and economic forces that shape childhood and the role education plays in this process.

Cross-listed with: CIED 534, SOC 534

EDTHP 536: Studies in Educational Thought

3 Credits

Studies in the historical development of educational theory.

EDTHP 538: Sociology of Education

3 Credits

Provides students with an overview of dominant sociological theoretical perspectives on schools, schooling, and education in modern society. SOC (EDTHP) 538 Sociology of Education (3) This graduate course in the Sociology of Education covers the major sociological theories and empirical research on the role of formal education in society. The object of the course is to have the student become conversant with the main lines of sociological research applied to education and social development at the individual, community, and societal levels. Since sociology of education has had considerable impact on educational policy over the past 50 years, a second goal of the course

is to understand this relationship and avenues for future research and policy analysis from a sociological perspective. This course is a central topic in the general study of social stratification and hence in pursuit of the Ph.D. in the Educational Theory and Policy and the Sociology program. The format of the course is a didactic seminar with extensive written assignments as the usual form of evaluation.

Cross-listed with: SOC 538

EDTHP 540: Youth Participation in Educational Change: Examining Youth Activism, Child Rights, and Youth Voice

3 Credits

Cross-listed with: CIED 540, EDCE 540

EDTHP 541: Contemporary Philosophies of Education

3 Credits

Educational theory and practice in relation to contemporary movements in philosophy. CI ED 541 CI ED (EDTHP) 541 Contemporary Philosophies of Education (3) This graduate seminar explores a range of contemporary philosophies of education viewed from the perspective of different varieties of postmodernism. The study of modern and postmodern western thought is combined with explorations of eastern thought including viewpoints that are emerging today in both the northern and southern hemispheres. While focusing on contemporary educational ideas, it traces their roots in classical and non-modern philosophical sources. This look at the present in terms of the past reveals the paradigm shift presented by contemporary postmodern educational thought. In doing so, considerations for the issues of race, class, gender, ecology, multiculturalism and the regeneration of diverse incommensurable cosmologies, severed or overlooked by some educational philosophers, are explored in their reintegration by contemporary postmodern philosophers of education.

Cross-listed with: CIED 541

EDTHP 542: Civil Rights and Education

3 Credits

Examination of civil rights policies and educational equity in the U.S. from the perspectives of law, social science, accountability policy. Civil Rights and Education will examine civil rights policies and educational equity in the United States from the perspectives of social science, education policy, and law. The aims of the course are to build students' understanding of the key principles of civil rights policies and the sources of contention in civil rights, and to enhance students' capacity for participating in issues of civil rights and education through project-based work. We will begin by considering what it means to have an opportunity to learn and how it has been defined. The course will then consider legal and policy developments since the "Brown" decision that have both expanded and constrained the opportunity for certain groups of students. The course is primarily focused on national developments, but does include a focus specifically on educational opportunity in Pennsylvania. The course concludes by considering recent civil rights developments and prospects for the future. Cross Listings: EDLDR 542 will be added as a cross-listed course.

Cross-listed with: EDLDR 542

EDTHP 550: Comparative Education Policy Seminar

3 Credits

Examines the educational policy process world-wide and the influence on schooling of children, youth, and adults in national education systems. CI ED (EDTHP) 550 Comparative Education Policy Seminar (3) In this course students will learn how educational policy is made around the world and what influence this policy has on the schooling of children, youth, and adults in national systems of education. Students will examine recent trends in educational policy that have originated at the international level. Methods of policy research and evaluation will also be examined. The main goal of the course is to give students an understanding of international processes in policy formation and detailed knowledge of current education policy trends worldwide.

Cross-listed with: CIED 550

EDTHP 553: Educational Mobility in Comparative Perspective

3 Credits

Role of education in social mobility, using quantitative, qualitative, and historical methods; focuses comparatively on Britain, East Asia, and South America. CI ED 553/SOC 553/EDTHP 553/CI ED 553. (SOC 553, EDTHP 553, HI ED 553) Educational Mobility in Comparative Perspective (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Cross-listed with: CIED 553, HIED 553, SOC 553

EDTHP 555: Migration and Children's Education

3 Credits

The research theories and policies useful for understanding the schooling processes and outcomes of immigrants' children. EDTHP 555 Migration and Children's Education (3) This course focuses on the theories and policies pertaining to the educational achievement, attainment, and engagement of immigrants' children. Immigrants' children include foreign-born children (first generation) and native-born children of foreign-born parents (second generation). The course includes a survey of empirical research on the educational differences (the generational gap) between three groups: first-generation, second-generation, and higher generations. The course aims at helping education researchers and school leaders understand the mechanisms through which generational gaps are created and maintained by examining a host of family, community, and particularly school factors. Key school factors include: bilingual policies, tracking, ability grouping, special education placement, and segregation. Although the focus is primarily on children of contemporary legal and undocumented immigrants in the United States, this course also addresses the schooling of children in countries that send immigrants to the United States, as well as immigrants'

children in other receiving countries of the world, such as East Asian and Western European countries.

EDTHP 557: Sociology of Higher Education

3 Credits

Reviews theory and current sociology research on student access, achievement, and governance in postsecondary education, with applications to policy analysis. EDTHP (HI ED, SOC) 557 Sociology of Higher Education (3) Sociologists interested in higher education have attended to the relationships between postsecondary institutions and other institutions, as well as the impact on higher education of general social and demographic processes. Many of the classical ideas in sociological theory, including those of Max Weber and Emile Durkheim, have surfaced in recent debates over the nature of higher education. Sociologists in the U.S. have explored such questions as: the gatekeeping function of higher education; the impact of universities on stratification; and the socializing environment for women and minorities. This seminar introduces some of the classical theorists and contemporary researchers of the sociology of higher education. All seminar participants will be required to write a sample research proposal, based on the readings from the seminar.

Prerequisite: graduate students only, except with permission of instructor; EDTHP/SOC 416 is recommended
Cross-listed with: HIED 557, SOC 557

EDTHP 565: Causal Inference in Educational Policy Research

3 Credits

This course is designed to help students develop a broad familiarity with the kinds of research designs (e.g., cluster randomized trials) and statistical methods (e.g., propensity score matching, instrumental variables, regression discontinuity) that are helpful in drawing causal inferences in educational policy research.

Prerequisite: EDPSY 505 or SOC 574

EDTHP 580: Improving Educational Writing

3 Credits

Focus on components of high quality academic writing for educational research, with a special emphasis on improving the writing process.

EDTHP 582: Reviewing and Editing Education and Policy Journals

3 Credits

Introduction to education policy journals and the review and editing process; discussion of emerging issues within the academic publishing industry.

Cross-listed with: CIED 582, EDLDR 582, HIED 582

EDTHP 585: Research Design: Implications for Decisions in Higher Education

3 Credits

A capstone course on research design and analytical approaches to support decision-making in administration and policy-making. EDLDR 585 / EDTHP 585 / HIED 585 Research Design: Implications for Decisions in Higher Education (3) By the end of this course you should be able to: (1) Define and explain the following concepts/tools of social

science research: The scientific method-Theory and its role, Constructs and variables, Hypotheses and relations, Experimental designs, Quasi-experimental designs and Ex post facto designs. Sampling theory and designs-Survey designs and methods, Approaches to data collection, Measurement reliability and validity, Quantitative analytical designs, and Ethical practices. (2) Apply these concepts/tools in designing a study relating to educational research. (3) Effectively critique both the theoretical bases and methods of a journal article or report of research or policy analysis. (4) Prepare a sound research proposal.

Prerequisite: EDPSY400 , EDPSY406 ; or AG 400 , R SOC573
Cross-listed with: EDLDR 585, HIED 585

EDTHP 586: Qualitative Methods in Educational Research

3 Credits

Exploration of the theoretical framework undergirding qualitative research and its attendant practices and techniques. EDLDR (EDTHP, HI ED) 586 Qualitative Methods in Educational Research (3) This course is the introductory course in the EPS qualitative research methods sequence. This is the first course in a three-course sequence departmental sequence intended to take students from basic knowledge of qualitative methods through mastery of advanced topics. This course was designed specifically to 1) orient students to the various types of qualitative methods most widely used in educational policy research and their theoretical underpinnings; 2) provide training in basic qualitative research techniques; 3) introduce students to basic research design; 4) provide systematic practice (and feedback) in evaluating qualitative research that would allow students to become sophisticated consumers of qualitative studies; 5) prepare students for the Level 11 course. The course will begin with a brief review the development of qualitative methods in related fields (anthropology, sociology, linguistics) and quickly move on to an overview of qualitative methods in education. Students must have read the material prior to class in order to take part in in-class exercises and discussions. We will focus on key issues such as validity, interpretation and representation. Students will be asked to read studies, assess the general quality of the work, and provide a critical evaluation. Students will study specific methods of qualitative field research, and most weeks we will practice and discuss a particular research technique (e.g. participant observation, focus group interviews). These practice sessions will be informed by relevant readings. Students will practice developing coding schemas as well as get a quick overview of qualitative data analysis (QDA) packages. Finally, in small groups, students will design a basic qualitative study to be presented as a final product in the course.

Cross-listed with: EDLDR 586, HIED 586

EDTHP 587: Education Policy and Politics

3 Credits

The political economy and bureaucratic politics of educational organizations, with special attention to the policy making, implementation, and evaluation processes.

Cross-listed with: EDLDR 587, HIED 587

EDTHP 588: Qualitative Methods in Educational Research II

3 Credits

Advanced study of methods involved in executing and analyzing qualitative research in education. EDLDR (EDTHP, HI ED) 588 Qualitative Methods in Educational Research II (3) The course will provide

practical experience with methods of qualitative data collection, data management, and preliminary data analysis that extends and deepens students' understanding of qualitative research in education. The class, limited to 15 students, will take as the focus with inquiry a common "site" around which projects of individual and group interest will be designed. Sessions will take place in "workshop" blocks during which students will present and critique the work of the project. Readings will be interspersed with the practicing of methods. The final project for the course will be the compilation of a synthesized data set that could serve as the basis of further analysis.

Prerequisite: EDLDR586

Cross-listed with: EDLDR 588, HIED 588

EDTHP 595: Internship

1-18 Credits/Maximum of 18

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

EDTHP 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including non-thesis research, supervised on an individual basis and which fall outside the scope of formal courses.

EDTHP 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

EDTHP 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

EDTHP 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

EDTHP 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

This class enables doctoral students to gain experience in college teaching under the supervision of a course instructor.

EDTHP 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

EDTHP 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

EDTHP 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Electrical Engineering (EE)

EE 500: Colloquium

1 Credits

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

EE 510: Linear Integrated Circuits

3 Credits

Design of monolithic, thin-film, and hybrid linear integrated circuits; D.C., video, tuned, r.f., and microwave applications. Emphasis on reliability.

Prerequisite: E E 410 ; E E 441

EE 518: Neuromorphic Computing

3 Credits

This course delves into developments in the field of brain-inspired neuromorphic computing. The course will offer an interdisciplinary perspective across the computing stack combining insights from machine learning, computational neuroscience to materials, devices, circuits and systems. The course will discuss recent research developments in the field by critiquing publications through presentations and will also provide the opportunity to develop a project focused on a particular layer of the computing stack.

Prerequisite: EE 416 or CMPEN 416

EE 520: Electro Optics--Systems and Computing

3 Credits

Synthetic aperture radar, spatial light modulators, optical interconnection, optical computing, neural networks, and medical optics imaging.

Prerequisite: E E 420

EE 521: Fiber Optics and Integrated Optics

3 Credits

Theories and applications of linear and nonlinear optical phenomena in optical fibers and integrated optical devices.

Prerequisite: E E 421

EE 522: Electro-Optics Laboratory

3 Credits

Basic concepts and fundamentals of light diffraction, optical signal processing, and holography.

Prerequisite: E E 420

EE 524: Lasers and Optical Electronics

3 Credits

Study of several advanced nonlinear optical phenomena, laser propagation, optical and optoelectronic devices, principles, and applications.

Prerequisite: E E 424**EE 526: Nonlinear Optical Materials**

3 Credits

Mechanisms of polarization nonlinearity, nonlinear optical processes and analyses, optoelectronic materials and their device application. E E (MATSE) 526 Nonlinear Optical Materials (3) Nonlinear Optical Materials is a course that will generally be offered in spring semesters. It is designed for students who are interested in the materials science-related interdisciplinary electronics/electro-optic engineering areas to provide an essential understanding of the mechanisms of the polarization nonlinearity in electronic materials as well as the principles of operation of these materials in various photonic and optoelectronic applications (e.g., frequency conversion, optical control/communication, and information storage). Analytical methods utilizing the electromagnetic wave theories and tensor operations will be covered in this course to treat anisotropic nonlinear optical materials for their wave-matter interaction processes and to enable device designs. Technological issues in research and development of advanced optoelectronic devices using nonlinear optical materials are discussed with students' participation. Students wishing to take this course should be familiar with optical properties of materials and basic tensor notations.

Prerequisite: E E 420 or MATSE435**EE 531: Engineering Electromagnetics**

3 Credits

This course emphasizes advanced electromagnetic field theory concepts, with application to propagation of electromagnetic waves in material media, wave polarization, reflection and transmission of multiple interfaces, and rectangular and circular cross section waveguides and cavities. In this course, students learn electromagnetic theorems and principles with emphasis on induction equivalent and physical equivalent approximations for solution of electromagnetic scattering problems. At the completion of the course, students will be able to apply integral equations and their moment method solutions for practical electromagnetic radiation and scattering problems. The generalized Green's function method will be introduced, including development of closed form Green's functions in rectangular, cylindrical and spherical geometries.

Prerequisite: E E 430**EE 534: Conformal Antennas**

3 Credits

Introduction to advanced analysis and design techniques as well as applications for conformal antennas mounted on planar and curved surfaces. E E 534 Conformal Antennas (3) E E 534 provides an introduction to the rapidly growing field of conformal antennas. Analysis and design techniques are presented for conformal antennas mounted on planar as well as curved surfaces. Important applications of conformal antennas are also discussed with emphasis on their recent popularity as

wireless PCS, GPS, and body-borne antennas. Microstrip antenna design projects will be assigned, where students will gain valuable experience using one or more commercially available industry-standards modeling codes. E E 534 is the third and most advanced course in a three-course sequence of antenna engineering courses: E E 438 (Antenna Engineering), E E 538 (Antenna Engineering) and E E 534. E E 534 will be taught every other fall semester, with an anticipated enrollment of 20-30 students.

Prerequisite: E E 538**EE 535: Boundary Value Methods of Electromagnetics**

3 Credits

Theory and application of boundary value problems in engineering electromagnetics; topics include microwave and optical waveguides, radiation, and scattering.

Prerequisite: E E 430 or E E 432 or E E 438 or E E 439**EE 537: Numerical and Asymptotic Methods of Electromagnetics**

3 Credits

Finite difference time domain, geometric theory of diffraction and method of moments applied to antennas and scattering.

EE 538: Antenna Engineering

3 Credits

In-depth studies of synthesis methods, aperture sources, broadband antennas, and signal-processing arrays.

Prerequisite: E E 438**EE 541: Manufacturing Methods in Microelectronics**

3 Credits

Methods, tools, and materials used to process advanced silicon integrated circuits.

Prerequisite: E E 441**EE 542: Semiconductor Devices**

3 Credits

Characteristics and limitations of bipolar transistors, diodes, transit time, and bulk-effect devices.

Prerequisite: E E 442**EE 543: Ferroelectric Devices**

3 Credits

Theoretical background of ferroelectric devices, practical materials, device designs, drive/control techniques, and typical applications.

EE 544: Solid-state Mechatronics

3 Credits

This course provides a broad exploration of solid-state mechatronics. Mechatronics deals with solid state devices and systems enabled by piezoelectric effect, electrostatic force, and magnetic and magnetoelectric effect, which are ubiquitous in our society. This course

covers key areas of mechatronics, including device fundamentals, key materials, device designs, typical applications and device examples. Applications and devices include solid state actuators and sensors, energy harvesting systems, filters and resonators in wireless communications, transducers in medical imaging and fault detection, and surface acoustic and other guided wave devices in sensing and communications. This course is suitable to graduate students majoring in electrical engineering, mechanical engineering, engineering science and mechanics, and other related fields, who are interested in learning the theory of solid state actuators, sensors, and transducers and designing them for industrial and biomedical applications.

EE 545: Semiconductor Characterization

3 Credits

Physical principles and experimental methods used to characterize the electrical, optical, structural and chemical properties of semiconductor materials.

Cross-listed with: MATSE 545

EE 546: Field-Effect Devices

3 Credits

The physical background, characteristics, and limitations of surface field-effect and junction field-effect devices and related structures.

Prerequisite: E E 442

EE 547: Dielectric Devices

3 Credits

Applications of insulator physics and devices based on insulator properties.

Prerequisite: E E 442

EE 549: Acoustic Wave Devices

3 Credits

Examines materials commonly used for acoustic wave devices, fundamentals of acoustic waves and resonance modes, and characteristics of these devices. E E 549 Acoustic Wave Devices (3) E E 549 is an elective in the field of electronic and photonic materials. Solid state acoustic wave devices based on piezoelectric, ferroelectric, and microelectromechanical systems (MEMS) have a broad range of applications including chemical and biological sensors, electromechanical sensing and transduction, resonators and wave guides for material characterization and health monitoring, filters in telecommunication systems, and optic communications. The course will cover commonly used materials and phenomena for acoustic wave devices, characteristics of different waves and vibration modes, device configurations, their main characteristics and applications, as well as design considerations. Students will learn the key features and materials commonly used for acoustic wave devices, main acoustic mode and their characteristics, important device configurations, the equivalent circuits for acoustic wave modes and devices, and examples of the device applications. Students will also acquire basic skills in selecting acoustic wave devices for specific applications, in designing and characterizing acoustic wave devices for different applications, and in finding suitable available materials and/or phenomena for the acoustic wave device. This course will count as an elective for electrical engineering students in the

electronics and photonics sub-discipline. Students wishing to take this course should be familiar with electronic circuit design and solid state devices.

Prerequisite: E E 310 and E E 442

EE 550: Foundations of Engineering Systems Analysis

3 Credits

Analytical methods are developed using the vector space approach for solving control and estimation problems; examples from different engineering applications. E E (M E) 550 Foundations of Engineering Systems Analysis (3) This 3-credit course is offered at the first-year graduate level and provides a systems-theoretic background for more advanced graduate courses in the disciplines of engineering and science. The course uses the vector space approach to develop the analytical foundations for solutions of science and engineering problems in diverse application areas such as optimal control, estimation, and signal processing. First, the theoretical foundation of vector spaces, function spaces, and Hilbert spaces are developed. Linear transformations are then introduced, followed by the Reisz-Frechet theorem and Hahn-Banach theorem, with applications to optimization problems. Spectral analysis is then covered. Finally, diverse applications of these various techniques are presented throughout this course to illustrate the wide range of engineering problems that can be solved using the vector space approach.

Prerequisite: MATH 436

Cross-listed with: ME 550

EE 551: Wavelets and Sparse Signal Representations

3 Credits

Recommended Preparations: Linear algebra This course provides the foundation to understand and use wavelets and sparse signal representations. In particular, it develops sparse representations as an evolution of the discrete wavelet transform. Students will recognize, identify, and apply sparse and wavelet representations methodology to specific signal processing projects. Students will be shown multiple real world applications within this area and guided to apply the methodologies combined with their own domain knowledge.

Prerequisite: EE 453

EE 552: Pattern Recognition and Machine Learning

3 Credits

This course is a comprehensive overview of the fields of pattern recognition and machine learning. The content covers both classification and recursion, model selection, decision theory, information theory, linear and non-linear models, graphical models, kernel methods, mixture models and EM as well as neural networks. It assumes no previous knowledge of pattern recognition or machine learning concepts. Knowledge of multivariate calculus and basic linear algebra is required, and some familiarity with probability would be helpful.

Recommended Preparations: Multivariate calculus, linear algebra, probability

Cross-listed with: CSE 583

EE 553: Topics in Digital Signal Processing

3 Credits

Parametric modeling, spectral estimation, efficient transforms and convolution algorithms, multirate processing, and selected applications involving non-linear and time-variant filters.

Prerequisite: E E 453

EE 554: Topics in Computer Vision

3 Credits

Discussion of recent advances and current research trends in computer vision theory, algorithms, and their applications.

Prerequisite: CMPEN454 or E E 454

Cross-listed with: CSE 586

EE 555: Digital Image Processing II

3 Credits

Advanced treatment of image processing techniques; image restoration, image segmentation, texture, and mathematical morphology.

Prerequisite: CMPEN455 or E E 455

Cross-listed with: CSE 585

EE 556: Graphs, Algorithms, and Neural Networks

3 Credits

Examine neural networks by exploiting graph theory for offering alternate solutions to classical problems in signal processing and control.

EE 557: Multidimensional Signal Processing

3 Credits

Multidimensional sampling, weak causality, recursibility, multidimensional transforms, stability, global and local state-space models, multidimensional filters, and multidimensional spectrum estimation.

Prerequisite: E E 453

EE 559: Wireless and Mobile Sensing in the Age of IoT

3 Credits

This course covers state-of-the-art research on Internet of Things (IoT), with a focus on wireless networking and mobile sensing. Topics of discussion include high precision localization, GPS, smart healthcare, autonomous vehicles and drones, Augmented/Virtual Reality, Battery free communication, 5G basics, Security etc. The course begins with a basic background in linear algebra, signal processing, wireless communications in the context of applications. Thereafter, the topics will be organized into various applications and research from top notch conferences will be presented. In addition, within each application, the appropriate background and common principles underlying Bayesian Filtering, Maximum Likelihood, Sensor design basics etc will be emphasized.

Recommended Preparations: Programming skills are required. Ability to program in any programming language is fine.

Cross-listed with: CSE 559

EE 560: Probability, Random Variables, and Stochastic Processes

3 Credits

Review of probability theory and random variables; mathematical description of random signals; linear system response; Wiener, Kalman, and other filtering.

Prerequisite: E E 350 ; STAT 418

EE 561: Information Theory

3 Credits

Mathematical measurement of information; information transfer in discrete systems; redundancy, efficiency, and channel capacity; encoding systems.

Prerequisite: E E 460 ; STAT 418

EE 562: Detection and Estimation Theory

3 Credits

Detection decision theory, Bayes and Neyman-Pearson criteria, optimal receivers, classical estimation theory, signal-noise representations, optimum linear signal parameters estimation.

Prerequisite: E E 560

EE 564: Error Correcting Codes for Computers and Communication

3 Credits

Block, cyclic, and convolutional codes. Circuits and algorithms for decoding. Application to reliable communication and fault-tolerant computing.

Prerequisite: Communication Networks

Cross-listed with: CSE 554

EE 565: Reliable Data Communications

3 Credits

Discussion of problems and solutions for ensuring reliable and efficient communication over wired and wireless links and data networks.

Prerequisite: Communication Networks; STAT 418

Cross-listed with: CSE 515

EE 567: Wireless and Mobile Communications

3 Credits

Development of key wireless networks systems analysis and design tools utilizing telecommunications principles; current and emerging mobile wireless techniques. E E 567 Wireless and Mobile Communications (3) E E 567, Wireless and Mobile Communications, extends basic principles of communications systems and their associated performance into the world of wireless and mobile communications. This course has been designed primarily to provide a good understanding of fundamental problems and counter-measure techniques in digital communications over dispersive wireless mobile channels. It starts with a review of material necessary for advanced study in wireless communications: current wireless mobile systems and standards, frequency reuse and the cellular concept, co-channel interference and noise, receiver sensitivity and link budget calculations, coverage, and spectral efficiency and

capacity. Next, various types of propagation modeling are presented, such as large-scale fading, small-scale fading, and multiple scattering (multi-path) phenomena. Examples of Rayleigh, Rician, and Nakagami fading channels are discussed, and level crossing rates and fade durations are determined. This is followed by methods for developing laboratory fading channel simulators for both single- and multiple-path channel models, including the laboratory simulation of shadowing. Conventional path-loss models in macro-cells such as Okumura-Hata and outdoors micro-cells, COST231-Hata, and Walfish-Ikegami models as well as path loss for indoor micro-cells are then detailed. The next part of the course covers fundamental limits introduced by co-channel interference, as multiple lognormal interferers are introduced. Specifically, Fenton-Wilkinson, Schwartz and Yeh, Farley's methods and a numerical comparison are presented. Outage probability evaluation is detailed. Modulation techniques used in wireless mobile applications and associated performance over fading channels are reviewed next, followed by a detailed investigation of diversity and combining techniques. TDMA and CDMA Cellular systems are presented next. Topics covered here include: Spread spectrum systems including direct sequence, frequency hopping, fading channel applications, RAKE receiver concepts, multi-input-multi-output (MIMO) systems using antenna arrays, space-time coding and BLAST systems. As examples of mobile cellular architectures, TDMA (GSM) and CDMA cellular systems are covered. Finally, in order to initiate hard or soft handoffs, link quality measurement techniques are discussed. Optimal resource allocation in terms of channel assignment techniques are presented and analyzed. Students will be evaluated by means of assignments (25%), a mid-semester examination (35%), and a final examination (40%). The course will be offered every other spring, with an anticipated enrollment of 15-30 students.

Prerequisite: E E 460 ; E E 560

EE 568: Digital Communications I

3 Credits

Linear and nonlinear digital modulation techniques; performance in additive Gaussian noise channel; continuous phase modulation; carrier acquisition and recovery.

Prerequisite: E E 460; Concurrent: E E 560

EE 569: Digital Communications II

3 Credits

Baseband pulse transmission; baseband systems optimization; bandlimited channels performance in ISI; equalization; MLSE and ISI; fading channels; diversity; CDMA.

Prerequisite: E E 560 ; E E 568

EE 573: Constitution of the Ionosphere

3 Credits

Properties of neutral and ionized atmosphere above 60 km; photochemical processes; solar, meteoric perturbations of the ionosphere; large-scale movements in ionization.

EE 574: Propagation Through Random Media

3 Credits

RF/optical wave propagation through turbulent, turbid, and heterogeneous media (atmosphere/ionosphere/sea). Impacts and mitigation discussed for various scenarios.

Prerequisite: E E 430 or E E 439 or E E 477 or PHYS 457

EE 576: Inversion Techniques in Remote Sensing

3 Credits

Introduce skills to address a wide variety of inverse problems such as found in atmospheric sensing, geosciences, and acoustics.

Prerequisite: E E 430 or E E 439 or E E 477 ; STAT 418

EE 578: Radar Systems

3 Credits

This course provides a general understanding of radar systems at the graduate level, building upon material covered in undergraduate courses in electromagnetics, signals and systems, and antenna theory. In particular, it investigates the theory of radar systems and subsystems, and continues with the analysis of the radar equation, target detection in noise, and clutter phenomena. It includes radar techniques to enhance high range resolution of targets such as pulse compression. It also considers radar tracking, synthetic aperture radar, radar polarimetry, target recognition, scattering process, radar signal processing, electronic counter-measure techniques, and laser radar. Building on these concepts, students will understand the usage and applications of various types of radar system designs. Students will understand propagation, multi-path, and clutter phenomena and their effects on radar system performance. Students will recognize, identify, and apply proper radar techniques and apply these techniques to a variety of remote sensing radar applications.

EE 430 and (EE 432; EE 438; EE 439) and (EE 453; EE 460)

EE 579: Microwave Radar Remote Sensing

3 Credits

Scientific and engineering principles of microwave radar remote sensing of land, sea, and the atmosphere.

Prerequisite: E E 430 or E E 438 or E E 439 or E E 473

EE 580: Linear Control Systems

3 Credits

Continuous and discrete-time linear control systems; state variable models; analytical design for deterministic and random inputs; time-varying systems stability.

Prerequisite: E E 380

EE 581: Optimal Control

3 Credits

Variational methods in control system design; classical calculus of variations, dynamic programming, maximum principle; optimal digital control systems; state estimation.

Prerequisite: E E 580

EE 582: Adaptive and Learning Systems

3 Credits

Adaptive and learning control systems; system identification; performance indices; gradient, stochastic approximation, controlled random search methods; introduction to pattern recognition.

Prerequisite: E E 580

EE 584: Robust Control Theory

3 Credits

Fundamentals of Robust Control Theory with emphasis on stability, performance analysis, and design.

Prerequisite: E E 580 or M E 555

Cross-listed with: ME 558

EE 585: Convex Optimization

3 Credits

This course is designed to provide students with necessary skills to recognize or build convex optimization problems coming from diverse application areas and to solve them efficiently. It consists of five parts: 1) convex sets, 2) convex functions, 3) convex optimization, 4) algorithms and 5) real life applications. In the first part, important examples of convex sets will be given and the operations that preserve convexity of sets will be discussed. The second part will focus on convex functions, their basic properties, and the operations that preserve convexity of functions. In the third part, which is built on the first two parts, convex optimization problems will be formally introduced along with important examples ranging from linear and quadratic to semi-definite programming; second, Lagrange duality and optimality conditions will be covered. The fourth part will focus on the algorithms to solve convex problems and on their computational complexity. In the fifth part, various applications will be covered.

Prerequisite: IE 505

Cross-listed with: IE 585

EE 586: Power Systems Dynamics, Stability, and Controls

3 Credits

This course provides a broad exploration of the principles of dynamics, stability, and control of power systems. In particular, it focuses on the angle stability aspect. It will cover dynamic modeling requirements of synchronous generators and dynamic load modeling for stability studies, modeling of generator excitation systems, different types of system stability, modeling and analysis of sub-synchronous oscillations, and some selected special topics relevant to modern power systems. Basic notions of Lyapunov stability will be briefly described. The synchronous generator modeling in rotating d-q-0 frame will be presented along with different degree of simplifications, magnetic saturation models, DC and AC excitation system modeling, and corresponding per unit systems. Integration of such models for stability study of multimachine system will be analyzed. Detailed treatment of small-signal stability analysis for a single-machine-infinite-bus system including the effect of excitation systems and design of power system stabilizers will be presented followed by special techniques to analyze small-signal stability of large-scale multi-machine systems. Numerical integration methods for solving

the initial value problem of governing differential and algebraic equations describing power system dynamics will be described in the context of transient stability simulations followed by direct method of transient stability analysis. Fundamentals of subsynchronous oscillations and methods for corresponding stability analysis will be discussed. Finally, dynamic modeling of wind generation and VSC HVDC transmission system will be very briefly introduced.

Prerequisite: EE 488

EE 587: Nonlinear Control and Stability

3 Credits

Design of nonlinear automatic control systems; phase-plane methods; describing functions; optimum switched systems; Liapunov stability; special topics in stability.

Prerequisite: E E 380

Cross-listed with: ME 559

EE 588: Power System Control and Operation

3 Credits

Steady-state and dynamic model of synchronous machines, excitation systems, unit commitment, control of generation, optimal power flow.

Prerequisite: E E 488

EE 589: Smart Grid Control and Dynamics

3 Credits

This course covers the application of advanced power electronics in power apparatus. The first step is to understand the design of power electronics systems for smart grids. The course starts with an overview of DC/DC converters and covers the controller design for DC/DC converters. Next, voltage source converters and control designs for voltage source converters are covered. Electrical machines are the main components of the smart grid system. Therefore, operation and modeling of AC machines are very important in modern smart grid systems. The additional topics to be covered in this course are: simplified model of an induction machine connected to the grid, modeling and analysis of doubly fed induction generators used in wind farms, modeling and control of permanent magnet synchronous machines, and modeling and analysis of transformers. Next, an overview of mathematical modeling of solar energy systems is provided and different control methodologies are discussed. Next, the state space modeling is covered and the concepts of eigenvalue analysis, Bode plots, and Nyquist stability criterion are implemented to analyze different generation units. Impedance modeling is another technique used to investigate the interactions between renewable energy sources and grids. The basics of impedance modeling technique are covered and case studies are defined to derive the impedance of voltage source converters in smart grids. Dynamic phasor modeling is another technique used to investigate the stability of a dynamic system, especially in unbalanced systems. The main components of dynamic phasor modeling are discussed and an analysis approach is covered to model renewable energy sources in smart grids.

EE 594: Research Projects

1-9 Credits/Maximum of 9

Supervision of individual research projects leading to M.S. or M.Eng. papers. Written and oral reports are required.

EE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects including non-thesis research which are supervised on an individual basis and which fall outside the scope of formal courses.

EE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

EE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

EE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

EE 602: Supervised Experience in College Teaching

3 Credits/Maximum of 6

College Teaching Experience

EE 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

EE 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

EE 897: Special Topics

1-9 Credits/Maximum of 9

Formal course given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Energy and Geo-Environmental Engineering (EGEE)

EGEE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EGEE 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

EGEE 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

EGEE 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

Energy and Mineral Engineering (EME)

EME 501: Design Under Uncertainty in Energy and Mineral Systems

3 Credits

This class is designed to present a broad range of tools for evaluating energy projects, technologies, and systems. Topics will include project evaluation methods (NPV, discounting), tools for decision/design under uncertainty (Monte Carlo simulation, decision trees, lattices, real options), optimization (linear programming, stochastic programming), and economics/markets/regulation (review of microeconomics, market failures, regulation, and market design). Students will focus both on the intuition and appropriate application of the various methods and theories.

EME 504: Foundations in Sustainability Systems

3 Credits

Theoretical background of sustainability issues and studies of sustainability systems.

EME 511: Interfacial Physical-Chemical Systems, Processes, and Measurements

3 Credits

The boundary between two phases, the interface between the phases (referred to as the "interface") has very different properties from that of the bulk phase and such interfaces are important in a variety of energy, chemical, and mineral engineering processes. The interface may control transport between the phases, e.g., liquid-liquid extraction, reaction at the interface, e.g., heterogeneous catalysis, or accumulation of a component from one of the bulk phases, e.g., adsorption. All of these are examples of interfacial phenomena relevant to energy conversion, mineral extraction, and oil recovery processes. Course topics are drawn from physical and interfacial chemistry to address engineering and applied science needs in fuel science, fossil fuel recovery, renewable fuel processing, mineral processing, environmental science, and health. Topics include interfacial forces, phase behavior, adsorption/desorption, reaction kinetics, and solution chemistry. The applications of these subjects in various fields such as reservoir engineering, fuel science, mineral separations, reacting flows, and water systems will also be covered. Analytical surface

characterization techniques and particle sizing methods will also be covered, including selected demonstrations.

EME 521: Mathematical Modeling of Energy and Mineral Systems

3 Credits

This class develops the understanding of methods of modeling used for important physical and chemical phenomena involved in energy and mineral engineering systems. These include both separate and mixed solid (solid mechanics) and fluid (computational fluid mechanics) systems, including reactive components. The emphasis is on finite element methods but also includes other continuum methods (LBM, SPH), integral methods, and discontinuum methods. Students will develop working programming modules of simple-through-complex models of interactive physical systems and research materials on some form of computational methods.

Prerequisite: EGEE 510

EME 522: Computational Methods for Electric Power Systems Analysis

3 Credits

This course covers the formulation of and solution methods for a full range of economic-engineering investment and operations problems for electric power systems. Application problems include economic dispatch, unit commitment, optimal power flow, generation capacity expansion, transmission expansion, and modeling of competitive electricity markets. Solution methods include linear programming, mixed integer programming, decomposition methods for stochastic programming (e.g., Lagrangian Relaxation, Benders Decomposition), and mixed complementarity problems, with an emphasis on numerical implementation.

RECOMMENDED PREPARATIONS: It is recommended that students be familiar with or have taken EME 501, IE 505, or an equivalent graduate-level course in math programming.

EME 523: Stochastic Optimization Methods of Energy and Environmental Systems

3 Credits

This course covers the theory and implementation of computational methods for stochastic simulation and stochastic optimization, with an emphasis on algorithms and implementation. The course emphasizes the quantitative analysis or numerical modeling of complex systems in fields such as civil, environmental, energy, mechanical, and industrial engineering or energy, environmental, and natural resource economics. Topics include Monte Carlo simulation, quasi-random and pseudo-random sampling methods, Markov Chains, Dynamic Programming, Approximate Dynamic Programming, and Stochastic Programming decomposition techniques.

RECOMMENDED PREPARATIONS: It is recommended that students be familiar with or have taken EME 501, IE 505, or an equivalent graduate-level course in math programming.

EME 524: Machine Learning for Energy and Mineral Engineering Problems

3 Credits

This course provides an overview of the application of machine learning algorithms to problems in energy and mineral engineering. The course addresses the strengths and weaknesses of various machine learning

approaches, as well as appropriate testing and validation techniques for these complex models. Topics include machine learning applications in regression, classification, design optimization, and risk analysis. An emphasis of this course is for students to apply these methods to specific research problems of interest. Students with some background in statistics, but no previous formal training in machine learning algorithms will find this course most useful.

RECOMMENDED PREPARATIONS: Students are recommended to have had some previous basic training in statistics and experience with at least one programming language.

EME 525: Theory and Practice of Policy Analysis for Engineers

3 Credits

The course provides a broad introduction to analytical methods commonly used in science, technology, and energy policy analysis.

EME 526: Solar Utility and Portfolio Management

3 Credits

EME 526 covers the theoretical frameworks and quantitative methods for evaluating and designing solar resource projects. Methods will include quantitative solar resource measurement, forecasting, uncertainty quantification, dynamical systems modeling, and game theoretic models. Students will compare and assess alternative theoretical and quantitative approaches in terms of their ability to address a range of important objectives, including economic, technical constraints, robustness to uncertainty, varying risk preferences of stakeholders, and other ethical and cultural considerations. The course utilizes data sets and modeling resources drawn from actual case studies to provide students context in which to apply and evaluate the methods.

EME 527: Stochastic Modeling of Spatial Variability in Energy and Environmental Systems

3 Credits

This course covers the theory, methods, and implementation of modeling spatial variability and uncertainty with special consideration of the structure of energy, natural resource, and environmental system models. The course draws heavily upon geostatistical methods, and covers random functions, Semivariograms, Kriging, spatial simulation, and data assimilation into spatial simulation models.

EME 531: Thermodynamics of Energy and Mineral Systems

3 Credits

This course presents linear and non-linear irreversible thermodynamics as a means to explore the coupling between physicochemical, kinetic, and transport processes. Linear irreversible thermodynamics will be illustrated by well-known and practical phenomena such as Seebeck effect (thermocouple), Peltier effect (dehumidifier), Soret effect (thermal diffusion), etc. Non-linear irreversible thermodynamics will be used for demonstrating the phenomena of bifurcation, self-organization, and dissipative structures that take place in nature and human society. The self-organizing economy will also be discussed to show how the far-from-equilibrium thermodynamics can be applied to some economic phenomena.

EME 541: Electrochemical Science and Engineering Fundamentals

3 Credits

Fundamentals of electrochemical science and engineering based on electrochemical thermodynamics and kinetics. EME 541 Electrochemical Science and Engineering Fundamentals (3) The course focuses on the fundamental concepts of electrochemical science and engineering based on thermodynamics and kinetics. The course provides a synopsis of a variety of electrochemical systems and processes and shows their applicability for a number of industrial applications.

EME 551: Safety and Environmental Risk Analysis for Energy and Mineral Engineering Systems

3 Credits

In the energy and minerals sector, environmental health and safety (EHS) concerns have critical importance to engineering design, operations, and applied research. Contemporary experience has demonstrated that the integration of these priorities into the conceptualization, design, development, and management of energy and mineral technologies is essential. This course will begin with an overview of quantitative analytical techniques to assess probabilistic risks that arise due to the design and maintenance of engineered systems. The balance of the course will be devoted to study of effective approaches to analyzing, mitigating, and managing risk, environmental impacts, behavioral/psychological dimensions (e.g., cognitive biases), and the application and validation of interventions to achieve goals. The intent of this course is to give students an understanding of the challenges and successful approaches that should be part of every engineering project and operation.

Recommended Preparations: Students enrolling in this course are recommended to have acquired previous experience or training in probability and statistics.

EME 570: Catalytic Materials

3 Credits

Preparation and characterization of solid catalytic materials and the relationships between their surface, defect, and electronic properties and catalytic activity. MATSE (EME) 570 Catalytic Materials (3) This course covers the preparation and characterization of solid catalytic materials, and the relationships between the surface and electronic properties and pore structure of the materials and their catalytic activity and selectivity. The course includes the following materials: zeolites and molecular sieves; metals and alloys; metal oxides; metal sulfides; and other catalytic materials. Also included are the major applications of catalytic materials in chemical and petroleum industries and in other manufacturing industries for environmental protection. This course can be grouped into three parts: (1) introduction to catalysis and analytical techniques; (2) synthesis and characterization of catalytic materials; and (3) catalysis at surfaces of solid materials. The course is suitable for a broad spectrum of students in energy and mineral engineering, materials science and engineering, fuel science, chemical engineering, chemistry, solid-state science, and environmental engineering.

Prerequisite: CHEM 452 or similar course in chemical, materials or energy sciences and engineering
Cross-listed with: MATSE 570

EME 580: Methodology of Research in EME

3 Credits

Analysis of the methodology of the research process through a discussion of the methodology of reading and writing peer-reviewed publications. The students will learn how to more efficiently understand and explain the results available in the published literature, so that they can apply this methodology to organize, present, and discuss their own results by applying the essential principles of research ethics and integrity.

Prerequisite: EME 500

EME 581: Research and Geostatistics Methods

3 Credits

Presents methods essential for the conduct and analysis of scientific research and spatial characterization in energy and mineral engineering disciplines.

EME 589: Management and Design of Renewable Energy and Sustainability Systems

3 Credits

Most professional opportunities within renewable energy and sustainability systems require working in interdisciplinary teams on complex problems. This course will use a case-study approach to provide realworld management, and leadership, and research experiences and utilize the technical, economic, and ethical concepts learned in other course work in the field of renewable energy and sustainable systems (RESS). Following an intensive session on project management, team dynamics, and leadership, students will identify a team and external company or another stakeholder with a challenge relevant to the program. The teams will then conduct research evaluate alternatives, assess feasibility, and complete a detailed techno-economic analysis for their case. This analysis will serve as a platform from which to define sustainability metrics, evaluate alternatives, and assess feasibility and complete life-cycle and environmental impact analysis as part of the final design. Projects outcomes will be presented to both external stakeholders, and peers, and program faculty for constructive feedback that will be incorporated in the project final report.

Prerequisite: EME 504 , EME 801 , EME 802 , and BIOET533

EME 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of individual lectures by faculty, students or outside speakers on energy and mineral engineering issues.

Cross-listed with: PNG 590

EME 596: Individual Studies

1-9 Credits/Maximum of 12

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EME 597: Special Topics

1-9 Credits/Maximum of 12

Formal courses given on a topical or special interest subject which may be offered infrequently.

EME 597B: Geomechanics

2 Credits

Discussion of current and foundational research contributions in Geomechanics including ongoing work by current students

EME 597C: Creating University/Industry Collaboration

2 Credits

This course will provide students hands-on experience designing research programs to address external market needs that will lead to enhanced Penn State / external collaboration. Classroom lectures will cover topics important for design a new technology program.

EME 600: Thesis Research

1-15 Credits/Maximum of 999

Thesis research culminating into the doctoral degree in Energy and Mineral Engineering.

EME 601: Thesis Preparation

0 Credits/Maximum of 999

Thesis research after successful comprehensive exam culminating into the doctoral degree in Energy and Mineral Engineering.

EME 801: Energy Markets, Policy, and Regulation

3 Credits

Structure and function of energy markets; existing and emerging environmental regulations; decision-making by energy companies.

EME 802: Renewable and Sustainable Energy Systems

3 Credits

An overview of renewable energy technologies and sustainable energy system analysis.

EME 803: Applied Energy Policy

3 Credits

Provides in-depth exploration of energy policy development, implementation, and assessment at multiple governmental and corporate scales with emphasis on energy markets.

EME 805: Renewable Energy and Nonmarket Enterprise

3 Credits

Industry perspective on the resources, technologies, engineering approaches and externalities involved in deploying renewable energy businesses profitably and sustainably.

EME 807: Technologies for Sustainability Systems

3 Credits

This course examines strategies and applications of sustainable technologies in manufacturing, energy, water, transportation, food, and building systems.

EME 810: Solar Resource Assessment and Economics

3 Credits

Methods, economic criteria, and meteorological background for assessing the solar resource with respect to solar energy conversion technologies.

EME 811: Solar Thermal Energy for Utilities and Industry

3 Credits

Applications of solar thermal energy (STE) including district heating/cooling (buildings), industrial process heating, fuel synthesis, desalination, and materials processing.

Prerequisite: EME 810**EME 812: Utility Solar Power and Concentration**

3 Credits

Technical and theoretical background for utility scale solar energy conversion technologies to generate electric power.

Prerequisite: EME 810**EME 897: Special Topics**

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently; several different topics may be taught in one year or semester.

Energy, Environmental, and Food Economics (EEFE)

EEFE 510: Econometrics I

3 Credits

Econometrics is concerned with using aspects of economic theory, mathematics, and statistical inference to analyze economic phenomena and relationships. This course approaches econometrics with three broad considerations: 1. The role of econometrics in theoretical and applied economics; 2. The theoretical basis of econometrics; 3. The applied use of econometrics. Topics include general linear model, multicollinearity, specification error, autocorrelation, heteroskedasticity, restricted least squares, functional form, dummy variables, limited dependent variables.

Prerequisite: ECON 490; STAT 462; STAT 501**EEFE 511: Econometrics II**

3 Credits

Econometrics II builds on the foundations of EEFE 510 to provide students with a good understanding of econometric methods that are

frequently used in the empirical literature. Topics include endogeneity and moment-based estimators, linear systems of equations, maximum likelihood estimation, models for qualitative and limited dependent variables, models for time series data, models for panel data and treatment evaluation. This course is geared towards students who are interested in conducting empirical research on topics in applied economics and related fields.

Prerequisite: EEFE 510

EEFE 512: Applied Microeconomic Theory I

3 Credits

This course covers basic principles of microeconomic theory with the use of calculus. The emphasis is on applied theory and problem solving, rather than formal proofs and derivations. By developing knowledge of microeconomic theory and economic reasoning skills, the goal of the course is to provide a foundation for more advanced courses and for applied research at the graduate level. Students who successfully complete this course should understand and be able to apply the microeconomic theory needed to solve applied economic problems in the following areas: Consumer choice and demand; Producer choice and supply; Choice under uncertainty; Strategic decision-making (game theory); The functioning of competitive and monopolistic markets; General equilibrium and welfare analysis.

EEFE 519: Resource and Environmental Economics I

3 Credits

This course gives students an overview of essential theories and methods used in the economic analysis of natural resources. Objectives are to provide students with a command of theory and methods needed to teach the field and to conduct contemporary research. Topics include dynamic resource systems; dynamic optimization; nonrenewable resource theory; the Hotelling model; stock pollution externalities; common property; and option values.

Prerequisite: EEFE 512; ECON 502

EEFE 527: Quantitative Methods I

3 Credits

This is a course in quantitative economics and its applications, with heavier emphasis on linear models and how they relate to microeconomic theory in both static and dynamic settings. The first part of the course reviews the foundations of the mathematical analysis with the goal of modeling feasibility; i.e., the set of possible choices. This prepares us to next move to modeling the optimal choice with an extended presentation on optimization theory and application in the static setting. The final part of the course moves on to the methods for engaging in dynamic optimization.

Prerequisite: EEFE 512; ECON 502

EEFE 529: Foundations of Economic Welfare Analysis

3 Credits

How do we know which forms of economic organization are preferred to others? How do we evaluate who wins and loses within the economic sphere? How do we know when the allocation of goods and services by the economic system is societally optimal? How do we define what is societally optimal? When do government policies improve societal

welfare and when do they worsen it? How do we measure societal welfare? When should governments intervene in the economic system and to what extent? How large should the economic system be relative to the natural system? How much should present generations consume relative to future ones? Welfare economics is a branch of economics that seeks to answer these questions. In this course we will develop the concepts and tools needed to do so. Our primary focus will be on evaluating the efficiency and equity implications of public policies using modern theory and empirical methods. In the first part of the course we review the ways in which we can and cannot quantify the welfare of economic agents. We begin by reviewing the foundations of microeconomic theory which we use to analyze how the welfare of economic agents is altered due to exogenous changes in prices and/or income. Using these welfare measures, in the second part of the course we examine how public policies affect the welfare of economic agents using tools from public finance. Since our ultimate goal is applying welfare theory to empirical questions we will also review in part the empirical methods and tools required for conducting state of the art research in this area.

Prerequisite: ECON 510, ECON 512

EEFE 530: Applied Microeconometrics II

3 Credits

This course is designed to: (1) expose students to the most common econometric and statistical techniques used in applied microeconomic research and (2) give students an overview of the different types of micro data and the most common methods used to manipulate these data to create additional data sets and variables. The course is divided into three broad parts. The first part of the course focuses on computational, data, and methodological issues. The second and third parts of the course are divided equally between reduced-form/treatment effects methods and structural choice models and methods and other nonlinear structural and quasi-structural models. Each of the topics in the second and third part make use of the methods learned in the first part.

Prerequisite: EEFE 512, EEFE 510

EEFE 531: Applied Microeconometrics I

3 Credits

In this course, we will study microeconometrics, a subfield that encompasses specification as well as a variety of estimation, computational, and simulation methods that allow us to pursue specification and parameterization of econometric models suitable for analyzing micro-level data. We will see that these methods support an enriched basis for examining the validity of microeconomic theory, and also extend the analytics feasibly tackled by microeconomics. At the micro-level of empirical analysis, we will see our theory predicts high frequencies of corner solutions, abrupt switching, and discontinuities. In each case, these predictions are also apparent in micro data. Together, these conditions call for methods that go beyond simple continuous choice functions and equilibria often found adequate for aggregate static and dynamic modeling. Knowledge of these new methods is essential to empirical learning in most areas of contemporary applied microeconomics. These methods evolved to support the active application of microeconomic theories of micro-level behavior (e.g. discrete choice, corner solutions, cusps in dynamic paths) as well as to address peculiar features of micro-level data such as error-in-measurement, availability of only binary or polychotomous indicators of continuous variables, and substantial heterogeneity. Theory is relied upon

to specify models prior to estimation, to specify characteristics of data sets, and to interpret results.

Prerequisite: (EEFE 512; ECON 502) and (EEFE 510; ECON 501) and (EEFE 511; ECON 510)

EEFE 532: Applied Computational Economics

3 Credits

Economists often find themselves in situations where closed-form solutions do not exist or econometric estimation is inappropriate due to data limitations or the nature of the problem. In these cases, numerical approaches, using computer-based methods, may be an economist's best option. In this course, we will explore four topics in the field of computational economics: computable general equilibrium modeling, growth modeling, uncertainty and formal monte carlo analysis, and agent-based modeling. The overall goal of this course is to provide students with an in-depth understanding of computational economics so that they are prepared to build unique mathematical models to address complex situations that have not yet been encountered. Students should have successfully completed a graduate-level course in microeconomic theory prior to enrolling in this course.

Prerequisite: EEFE 512

EEFE 535: Empirical Analysis in Food Marketing

3 Credits

This is the first course in the Ph.D. field sequence in Industrial Organization, including applications to food marketing. Industrial Organization is the applied study of firms and markets. IO typically focuses on differences across firms and markets, implying the need for a rich set of models. The course presents a series of models of increasing realism and complexity. At each stage, we review the relevant theory as a starting point and then do a detailed study of the empirical application of that theory to real world data with a discussion of the implications for economic policy in areas such as anti-trust, and environmental and food policy analysis.

Prerequisite: EEFE 512, EEFE 510

EEFE 536: Economics of Food Behavior and Health

3 Credits

A course in microeconomic consumer theory and estimation, and other economic approaches to consumer behavior, including applications to food and health. The core of the course will involve the microeconomic theory of the consumer and demand estimation. However, other topics relevant to consumer/household behavior may be discussed, such as Duality Theory, Integrability, Function Forms (Linear Expenditure System, Linear Demand, AIDS model, Translog Model, Rotterdam Model, EASI), Price Indices, Flexibility, Incorporating Demographics and Equivalence Scales, Separability, Intertemporal Choice, Household Production, Intrahousehold Allocations, Zeroes Problem, Aggregation, Savings Decisions, Behavioral/Neuroeconomics, Labor Supply, Hedonic Models, Useful Data Sets.

Prerequisite: (EEFE 510; EEFE 511; ECON 521) and EEFE 512

EEFE 541: Resource and Environmental Economics II

3 Credits

This course is designed to give students an overview of the field of Environmental Economics. The objectives of this course are to provide students with a basic understanding of the theoretical and methodological foundations used in Environmental Economics, and to explore recent advances in areas of contemporary policy interest.

Prerequisite: EEFE 511, EEFE 512

EEFE 550: International Economic Development and Agriculture

3 Credits

This course applies economic analysis to problems of economic development and growth. The course covers the economics of traditional (Malthusian) societies, transitions to modern economic growth, fertility and population growth, investments and intergenerational transmission in human capital, human capital and economic growth, and internal migration and structural transformation. Students who successfully complete this course will be able to demonstrate understanding of, articulate, and use in their own research economic models, theories, and applied research in these topics related to developing countries.

Prerequisite: EEFE 510, EEFE 512

EEFE 590: Colloquium

1-3 Credits

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

EEFE 600: Thesis research

1-15 Credits/Maximum of 999

Thesis research

EEFE 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

Ph.D. Dissertation Full-Time

Energy, Environmental, and Mineral Economics (ENNEC)

ENNEC 540: Economic Analysis of Energy Markets

3 Credits

This course uses economic analysis to explain the history of world energy and its regulation since 1945.

Prerequisite: ECON 502

ENNEC 560: Mineral and Energy Finance I

3 Credits

Introduction to theory of finance and application of financial tools to commodity market analysis. Emphasis on mineral and energy markets.

Prerequisite: approval of the department

ENNEC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research which are supervised on an individual basis and which fall outside the scope of formal courses.

ENNEC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Engineering (ENGR)

ENGR 501: Engineering Leadership for Corporate Innovation

3 Credits/Maximum of 999

Traditional and contemporary leadership theory is analyzed to determine effective strategies for leading projects and innovation within an engineering context. This course focuses on concepts and theory related to the study of leadership in an engineering context. Traditional and contemporary leadership theory will be analyzed to determine effective strategies for leading technical projects and innovation. Based on current literature and research into effective engineering leadership, students will focus on understanding concepts related to: technical communication, optimization of engineering teams, and diffusion of innovation. Financial concepts and Lean Sigma practices will be assessed for effective engineering leadership decision-making. Specific topics addressed related to the engineering leadership concepts include leadership in organizations, communications in the workplace, customer focus in organizations, financial knowledge, workforce focus in organizations, and operational excellence. Students who successfully complete this course will be able to: distinguish leadership theory relevant to an engineering context; recognize commonalities of leaders in successful organizations; explain concepts for how innovation is diffused throughout a corporate culture; define communication concepts relevant for leading change in a diverse technical environment; and recognize the ethical and social implications of engineering work in a global environment. The overall objective for this course is to provide theoretical understanding and practice of leadership and innovation in technical contexts within the global business environment.

ENGR 502: The Smart City

3 Credits

This interdisciplinary course provides students with a "big picture" overview of the several engineering systems at work in our economy and society. The course is organized around the "smart city" because this umbrella topic allows students not only to explore multiple engineering systems in a single course but also to comprehend their connectivity. In other words, students will understand how a given engineering system functions not in isolation but in harmony with others. Towards this end, the course is structured around a handful of "mega themes": Cyber Engineering, Green Engineering Technology and Sustainability, Societal Systems Engineering, Living Systems Engineering, Cyber-Physical Ecosystems, and Physical and Digital Infrastructure. Though students may enter the course knowing almost nothing about a given mega theme, they will likely recognize familiar elements within it. That is because each mega theme encompasses the methods and knowledge bases of traditional fields: electrical, civil, computer, mechanical, and

environmental engineering as well as biology, public policy, sociology, information systems, and homeland security, to name a few. After successfully completing this course, students will be able to explain how diverse engineering systems work in concert in cities; identify the major methods used in each of the major engineering areas (electrical, mechanical, civil, etc.); analyze interdisciplinary scholarship in engineering; explain how scholars deploy methods and knowledge bases from two or more fields to solve problems in engineering; apply this knowledge by designing an interdisciplinary research project; and communicate a research plan clearly and effectively through a written proposal and oral presentation.

Recommended Preparations: BS degree in related field.

ENGR 503: Interdisciplinary Research Methods in Engineering

3 Credits

ENGR 503 is a practical course that teaches students how to conduct interdisciplinary research in engineering. It equips students with the skills and tools they need to undertake research projects of their own in anticipation of the dissertation. Specifically, the course teaches students how to ask a research question, develop a methodology that can answer it, engage in ethical research, locate and cite sources, and report findings using an appropriate language and format. The course is also designed to aid students in their professional development. Towards this end, it explains the role of grant seeking, academic conferences, and scholarly journals in engineering. In sum, students may enter ENGR 503 unsure of both how to produce scholarship on their own and how to share it with the academic community. They will exit the course ready to launch their own research projects with faculty guidance and communicate their findings at conferences and through publications.

ENGR 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ENGR 594: Master's Paper Research

1-3 Credits/Maximum of 3

Investigation of a specific engineering problem and development of a scholarly written report in partial fulfillment of requirements for a master's degree in engineering.

ENGR 595A: Engineering Internship

1 Credits/Maximum of 4

ENGR 595A ENGR 595A Engineering Internship (1 per semester/ maximum of 4) This course will provide students with an opportunity to apply fundamental skills and academic concepts in a professional laboratory, industry, or government agency setting within the United States. The final grade (Pass/Fail) will be based on the final report submitted by the student, and by mid-point and final evaluations submitted by the employer. This course will be offered fall, spring, and summer, and may be repeated.

Full-Time Equivalent Course

ENGR 595I: International Engineering Internship

0.5-4 Credits/Maximum of 4

ENGR 595 ENGR 595I International Engineering Internship (1 per semester/maximum of 4) This course will provide students with an opportunity to apply fundamental skills and academic concepts in a professional laboratory, industry, or government agency setting outside of the United States. The final grade (Pass/Fail) will be based on the final report submitted by the student, and by mid-point and final evaluations submitted by the employer. This course will be offered fall, spring, and summer, and may be repeated.

Full-Time Equivalent Course

ENGR 596: Independent Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ENGR 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ENGR 597C: **SPECIAL TOPICS**

3 Credits

ENGR 599: Foreign Studies

1-12 Credits/Maximum of 24

Courses offered in foreign countries by individual or group instruction.

ENGR 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ENGR 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No Description.

ENGR 610: Thesis Research Off-Campus

1-9 Credits/Maximum of 999

No description.

ENGR 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

Ph.D. Dissertation Part-Time

ENGR 802: Engineering Across Cultures and Nations

3 Credits

Explores cultural differences and impact on business practices and team dynamics working on virtual project teams with global partner

universities. Engineering Across Cultures and Nations is a core course in the Engineering Leadership and Innovation Management graduate program and focuses on the primary knowledge areas and essential competencies required for successful engineers to live and work in today's global marketplace. Within the context of engineering, the course will examine individual and cultural differences and how they impact communication and team dynamics. Students who complete the course will be able to understand sources of conflict that can arise from multicultural teams and effectively use the tools and resources discussed in class to manage individual and team motivation and minimize or effectively deal with conflict, while harvesting the benefits of diversity as they work on a real world virtual team project. Within an engineering context, students who complete this course will be able to: demonstrate a proficiency in team-building, leadership, and service; construct creative solutions to engineering issues incorporating cultural differences among team members, suppliers, and customers; critically analyze personal and team-member competencies and biases; formulate and apply strategies to improve team dynamics, compose effective feedback, recognition, motivation, and corrective guidance for international/intercultural team members; evaluate business opportunities within international and cross-cultural markets; and examine moral, ethical, and legal dilemmas in cross-cultural environments. These topics will be explored in an engineering context through engineering projects, guest lecturers, and discussions. The overall objective of this course is to provide students with a conceptual understanding of the impacts of multi-cultural influence on engineering problems and the leadership theory applicable for effective team performance.

ENGR 804: Engineering Product Innovation

3 Credits

Develop competencies for leading new product/process development or participating in corporate spin-outs using entrepreneurial skills within a corporation. This course focuses on the development of the competencies required to become a successful new product leader or corporate innovator within an engineering context. Course topics include: identification and development of the knowledge, skills, and attitudes of entrepreneurial leaders; fundamentals of corporate entrepreneurship; methods to leveraging intellectual property (IP); and development and use of the Business Model Canvas (BMC) for product development and commercialization. These topics are central to leading new product/process development within an existing engineering corporation. Upon successful completion of this course, students will be able to: describe the successful engineering leadership competencies of a corporate innovator, discuss and apply leadership strategies for leading innovation and creativity within engineering teams, analyze corporate innovation successes and failures and identify factors that play a role, outline the innovation management process and determine barriers to implementation inside the organization, define a successful new product launch using the Business Model Canvas (BMC), and describe the value of intellectual property and patent process to new product innovation within a corporation.

ENGR 805: ELIM Capstone Project

3 Credits

This course applies and integrates knowledge and skills gained throughout the ELIM program on a culminating project within existing organizations. The capstone course is designed to provide an opportunity to apply and integrate the knowledge and skills that were gained throughout the Engineering Leadership and Innovation Management

(ELIM) program with strategic management concepts. Capstone projects will target opportunities, problems, and challenges of an existing organization. After successfully completing this course, students will be able to: identify and assess the impact of opportunities and threats in a company, including its industry and its set of competitors; identify and assess a company's internal strengths and weaknesses and suggest alternative strategies; define the business-level strategies of the company; define competitors, competitive rivalry, competitive behavior, and competitive dynamics; and describe corporate-level strategy of a company. The overall objective of this course is to demonstrate integration of theories, knowledge, and application of leadership and innovation to the needs of a dynamic global marketing place.

Prerequisite: ENGR 408, ENGR 411

ENGR 810: Doctor of Engineering Praxis Research

1-12 Credits/Maximum of 24

This course provides Doctor of Engineering students with the opportunity to identify an applied research problem and develop a praxis research project to address the problem/question. Students will investigate the literature relevant to the selected area(s) of interest. Students will develop and implement a comprehensive praxis research project to address the problem. Students will also disseminate the results in both a scholarly presentation (final oral exam) and praxis (final praxis research document).

ENGR 820: Applied Engineering Research Methods

3 Credits

This research methods course focuses on the development of competencies required to become a successful professional researcher in engineering fields. While other courses will focus on an engineering topic and provide some insights into the associated research methods, this course aims to provide an overview of research methods used throughout engineering disciplines and provide guidance for when and why different methods should be employed in professional research practice. Students should come into the class with a research area defined and the class will provide students with a framework to conduct their own research through a pilot study and, thereby applying these methods to their professional practice. Course topics include: research ethics, literature review, problem framing, experimental design, qualitative and quantitative data analysis, and data presentation in professional engineering research fields. These topics are central to conducting effective engineering research. Students that complete this course will be able to: Define ethical requirements for application in engineering research; Critique and review literature to identify gaps for future work; Design and implement an experiment; Analyze and defend qualitative and quantitative results; Write and structure effective research papers; And report and defend research decisions and conclusions. Overall the objective of this course is to provide students with the tools to conduct research experiments and defend results in order to prepare them for research at the graduate level.

Recommended Preparations: A qualifying statistics or numerical methods course should be taken prior to enrolling or concurrently.

ENGR 888: Seminar for Engineering Teaching Assistants

1 Credits

Study of recently established knowledge and methodologies as applied to practice. Significant interaction among students and with instructor is expected.

ENGR 890: Colloquium

1-3 Credits/Maximum of 3

Continuing, professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ENGR 896: Individual Studies

1-9 Credits/Maximum of 9

Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ENGR 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Engineering Design (EDSGN)

EDSGN 507: Systems Thinking

3 Credits

The theory and practice of systems thinking. General systems theory; system dynamics, emergent properties, structure, feedback and leverage.

Cross-listed with: SYSEN 507

EDSGN 547: Designing for Human Variability

3 Credits

Statistics, optimization, and robust design methodologies to design products and environments that are robust to variability in users.

Cross-listed with: ME 547

EDSGN 548: Interaction Design

3 Credits

Strategies in user-centered design, ergonomic product analysis, statistical data analysis, low and high fidelity prototyping, and innovative design techniques. EDSGN 548 Interaction Design (3) Interaction Design provides an integrative perspective on the types of human-centered design techniques that can be used to analyze existing consumer products and develop innovative solutions. In this class, students will learn qualitative (e.g., observations and surveys) and quantitative methods (e.g., emg sensing and eye tracking) to measure user interactions. This knowledge will be used develop design recommendations for future products. The material will be presented through a variety of hands-on activities including a semester long interaction design project which requires students to evaluate an existing product using human-centered design techniques, develop

solutions based on interaction design principles, prototype solutions, and evaluate their designs in a formal user study. Upon completion of this course, students will be able to identify appropriate research methods (quantitative and qualitative) for guiding interaction design decisions, conduct a user study, and develop design recommendations based on interaction design principles.

Prerequisite: EDSGN 547 or I E 479 or IST 501 or equivalent
Cross-listed with: IE 548

EDSGN 549: Design Decision Making

3 Credits

Complexity of design-making; state-of-the-art methods and tools. EDSGN (IE) 549 Design Decision Making (3) Students in this course will internalize the importance of information and decision-making in design; understand the complexities due to uncertain information, multi-person decision making, technology obsolescence, competitive priorities; become familiar with state-of-the-art methods and tools for design decision-making; and, demonstrate the application of this knowledge in the context of a collaborative design project. Learning in this course will be facilitated in an "apply what you have learned" fashion with ample opportunities for students to demonstrate their learning through in-class participation, discussion of solved problems, hands-on design projects. Strategies, methods, and means of the design process will be discussed and practiced to include such things as understanding client needs, generating design concepts, and evaluating design ideas.

Cross-listed with: IE 549

EDSGN 558: Systems Design

3 Credits

Systems engineering, principles, practices, and applications of systems engineering in analysis, design, development, integration, verification and validation of complex systems. EDSGN 558 Systems Design (3) The course is intended for engineering students who aspire to careers in systems design and those who wish to broaden their knowledge so as to address systems problems. The principal objectives of this course are: (1) to bring systems theory, systems thinking, systems engineering, and systems management together into a single framework and to integrate them such that successful system design is possible; and (2) to immerse the student in the principles, practices, and application of systems engineering through selected readings, textbook study, lectures, and homework assignments and as members of a multidisciplinary systems development team on a systems design project. The course is designed to immerse students in the principles, practices and application of systems engineering within the design, development, integration and deployment of complex systems. Students will learn the special functions and responsibilities of systems engineers in comparison to analysts, design specialists, test engineers, project managers and other members of the systems development teams. They will acquire the knowledge, skills and mindset necessary to be successful as part of a major system development project and will acquire the leadership, problem-solving and innovation skills necessary for success. The objective of this course is to immerse traditional engineering students in the principles, practices, and application of systems engineering and design through selected readings, textbook studies, lectures, homework assignments, and a team design project. This course begins with an overview of systems engineering as a discipline, which prepares the student for the course topics/modules that follow. The course addresses the "hows" and "whys" of systems analysis, design, and development. Students will: 1) learn how

to bridge the gap between capturing user needs and the development of systems by honing skills in the technical activities of systems analysis, systems design, and systems development; 2) learn how to translate abstract visions of the stakeholders and users into a language of specifications, architectures, and designs to direct the system hardware and software development activities resulting in a system that satisfies user needs without latent defects, delivered on schedule, within budget, and profitable for the developing entity; 3) acquire an understanding of systems engineering as a problem-solving solution development discipline that requires a comprehensive understanding of how to analyze systems and how systems are organized, structured, defined, and employed by the user; and, 4) apply the knowledge gained from these lessons toward the analysis, design, and development of a system as members of a multi-disciplinary team.

EDSGN 561: Data Mining Driven Design

3 Credits

The study and application of data mining/machine learning (DM/ML) techniques in multidisciplinary design. CSE 561 / EDSGN 561 / IE 561 / IST 561 Data Mining Driven Design (3) This course examines how theoretical data mining/machine learning (DM/ML) algorithms can be employed to solve large-scale, complex design problems. Knowledge Discovery in Databases (KDD) is the umbrella term used to describe the sequential steps involved in capturing and discovering hidden, previously unknown knowledge in large databases. The course begins with foundational information regarding engineering design and provides an overview of KDD and the emergence of the digital age. Students will investigate data acquisition and storage techniques where they will learn the difference between stated and revealed data as related to design. Students will construct their own databases and learn essential techniques in data base queries (SQL) and management. Data transformation techniques, such as binning and dimensionality reduction, will be examined in the data transformation section of the course. This course has a design-driven focus, which will enable students to solve real-life design challenges spanning diverse domains. Students will work on project-based exercises aimed at proposing novel data mining algorithms, or employing existing algorithms to solve design problems in fields relating to engineering, healthcare, financial markets, military systems, to name a few. Data visualization techniques will also be studied to help communicate complex data mining models in a timely and efficient manner.

Cross-listed with: CSE 561, IE 561, IST 561

EDSGN 562: Design for Additive Manufacturing

4 Credits

Additive manufacturing (AM, colloquially 3D printing) is rapidly changing the face of modern manufacturing. This layer-by-layer manufacturing approach allows for parts to be created with significant levels of complexity and in cost-effective small batches, with reduced raw material waste when compared with traditional manufacturing processes. This technology has given rise to the need for Design for Additive Manufacturing (DfAM) techniques capable of accounting for both the possibilities and restrictions offered by AM in product design. However, due to the relative youth of the technology, understanding of how to properly establish and evaluate these design considerations is still evolving. In this course, students will be exposed to research in the field of DfAM that aims to establish an understanding of both opportunistic possibilities (e.g., lattice structures, topology optimization, and mass customization) and quantify restrictive limitations (e.g., minimum feature

size and support material removal) when designing products for creation with additive manufacturing. The material will be presented through a combination of literature investigations and design exercises viewed through the lens of research in the DfAM field. The objectives of the course include describing the role that DfAM plays in the greater field of additive manufacturing, identifying similarities and differences between existing DfAM approaches and frameworks, synthesizing opportunistic DfAM approaches and how they improve product quality and novelty, identifying and quantifying restrictive DfAM considerations through experimentation, and identifying and discussing key areas of future research to advance the field of DfAM.

CONCURRENT: IE 527

Cross-listed with: AMD 562

EDSGN 571: Compliant Mechanism Design

3 Credits

Compliant mechanisms are devices that exploit mechanical compliance to obtain motion. These devices are frequently seen in organisms and natural systems. In this course, students will gain compliant mechanism design skills transferable to virtually all mechanical design applications. Students will develop the ability to assess design challenges and their compatibility with compliant mechanisms and will improve their mechanical design intuition by understanding the relationships between flexibility, strength, displacement, and force. Students draw on these principles as they study current research literature, theoretical frameworks, and methodologies, predominantly the pseudo-rigid-body model, to synthesize new knowledge in the field of compliant mechanisms. Students grow their abilities to expand the frontiers of compliant mechanism research as they create new design methods. Students will gain experience in the emerging field of origami-based design. Students' capacity to produce creative scholarly products will be reinforced in compliant mechanism design projects, where students will conceptualize, model, prototype, test, and convey compliant mechanism theories and designs.

EDSGN 581: Engineering Design Studio I

3 Credits

Cross-disciplinary teams learn in a studio environment to consider broad aspects and context of engineering design activities. EDSGN 581 Engineering Design Studio I (3) Students examine engineering design from a broad perspective, including design thinking, systems design, and societal contexts. Students bring together many disparate aspects of their previous engineering and non-engineering experiences and investigate new aspects. The material will be presented through a variety of hands-on activities including design projects. Current and best industry practices will also be examined. This course provides a unique opportunity to explore material from many engineering fields and other disciplines within the context of design. This course is a precursor to Engineering Design Studio II (i.e., EDSGN 582). The course will be taught using a studio model.

EDSGN 582: Engineering Design Studio II

3 Credits

Cross-disciplinary teams in an engineering design studio environment with project emphasis on technical and analytical depth. EDSGN 582 Engineering Design Studio II (3) The course is a continuation of Engineering Design Studio I (i.e., EDSGN 581) and will be conducted using

a studio model. The course requires students to bring together the many disparate aspects of their previous engineering and non-engineering experiences. The course material will be presented through a variety of hands-on activities including design projects. Current and best industry practices will also be studied. Students will integrate the depth and breadth of their engineering and personal experiences and focus on analysis and performance prediction throughout the life cycle of the design.

Prerequisite: EDSGN581

EDSGN 585: Engineering Design Portfolio

1 Credits

Preparation of a portfolio summarizing the student's experience with engineering design research and practice. EDSGN 585 Engineering Design Portfolio (1) Industries seeking to fill positions in engineering design frequently ask for a portfolio representing the applicant's work. In this course, students will work with a faculty mentor (i.e., course instructor) to create a design portfolio that reflects the depth of their research and design experience. The portfolio consists of two parts: a detailed white paper or report and a short graphical summary. The graphical summary represents the breadth of the student's experience. Students will reflect on their experiences, identify critical milestones, opportunities for growth, and successes and present these experiences as vignettes in their portfolio. Those examining this element of the portfolio will gain insight into the growth and talent of the engineering designer it represents. The portfolio is mutually beneficial - for the students and the prospective employer.

Prerequisite: EDSGN582

EDSGN 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

EDSGN 594: Research Topics

1-12 Credits/Maximum of 12

Supervised student activities on research projects identified on an individual or small-group basis.

EDSGN 595: Internship

1-9 Credits/Maximum of 9

Supervised off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required.

EDSGN 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EDSGN 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

EDSGN 599: Foreign Studies

1-2 Credits/Maximum of 4

Courses offered in foreign countries by individual or group instruction.

International Cultures (IL)

EDSGN 600: Thesis Research

1-15 Credits/Maximum of 999

No description

EDSGN 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

EDSGN 890: Colloquium

1-3 Credits/Maximum of 3

Continuing, professionally oriented seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

EDSGN 896: Individual Studies

1-9 Credits/Maximum of 9

Creative projects with a professional orientation, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EDSGN 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject with a professional orientation that may be offered infrequently.

Engineering Management (ENGMT)

ENGMT 501: Engineering Management Science

3 Credits

Mathematical models involving optimization, simulation and forecasting to provide quantitative solutions to engineering management problems; scheduling, distribution, inventory control.

ENGMT 510: Economics and Financial Studies for Engineers

3 Credits

Economic feasibility of projects, systems and products. Project budgets, estimation, return on investment, supply and demand, and earned value management.

ENGMT 511: Engineering for Energy and the Environment

3 Credits

Engineering analysis of new technologies with environmental consideration leading to alternative energy sources and sustainable development.

ENGMT 520: Systems Optimization

3 Credits

Theory/practice of linear programming will be developed including determination of optimum mix of products, levels of staffing, blending, network analysis, multi-period planning.

ENGMT 530: Engineering Law

3 Credits

Overview of the legal system and legal issues applied to engineering: contracts, bidding, proposals, torts, professional liability, the intellectual property.

ENGMT 539: Engineering Management Strategy

3 Credits

Project- and discussion-based capstone to the engineering management program.

Prerequisite: 27 credits in the engineering management program

ENGMT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ENGMT 841: Application of Statistics in Quality and Continuous Improvement in Engineering

3 Credits/Maximum of 999

Application of quality tools to improve products and processes including lean processes and six sigma principles. ENGMT 841 is about learning to apply sophisticated statistical tools for the continuous improvement of products and processes in the manufacturing and service industries. Students will learn how to identify defects (nonconformation to specifications) and provide appropriate solutions that will not only eliminate defects, but also improve the performance. They will be able to take samples from the population, apply appropriate statistical tools and relate the sample characteristics to the population. Students will also apply various control charts to identify the variations in the process and be able to separate the common and special cause variations. Students will be expected to apply the various phases of LEAN and Six Sigma methodologies to a project that will identify various nonvalue added activities and improve the product or process performance.

ENGMT 897: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

Engineering Mechanics (EMCH)

EMCH 500: Solid Mechanics

3 Credits

Introduction to continuum mechanics, variational methods, and finite element formulations; application to bars, beams, cylinders, disks, and plates. E MCH (M E 560) 500 Solid Mechanics (3) This course introduces students to the fundamental principles and basic methods used in solid mechanics. Using indicial notation and integral formulations provides a foundation for more advanced study in continuum mechanics (E MCH 540) and finite element analysis (E MCH 560) specifically and in mechanics in general. The materials behavior is restricted to linear elastic and the emphasis is on stress analysis. Students are expected to have an understanding of elementary mechanics of materials (such as E MCH 013). The course objectives are to: 1) provide students with a firm foundation in solid mechanics. 2) introduce continuum mechanics concepts, variational methods, and the formulation used in finite element analysis. 3) enable students to formulate and solve the boundary value problems commonly encountered in the analysis of structures. The study of solid mechanics starts with the definition of stress and strain and how the two are related by material law. Field equations that relate strain to displacement, ensure a single valued displacement field, and the balance momentum are formulated. These are partial differential equations that can only be solved subject to known boundary and initial conditions. The field equations and boundary conditions comprise a boundary value problem that is usually difficult to solve exactly. Variational methods are used to bound or approximate the solution. The finite element method employs variational methods to formulate generic elements and is a computational tool for solving boundary value problems for complex geometries.

Cross-listed with: ME 560

EMCH 505: Wearable Electronics

3 Credits

Recent advances in wearable electronics have led to the development of powerful biomedical devices that monitor vital physiological signals and provide means of treatment. Conventional electronics today are formed on the planar surfaces of brittle wafer substrates and are not compatible with the textured skin or tissue surfaces. Therefore, stretchable and resorbable electronics are the two missing links in the design process of implantable monitors and in-vivo therapeutics. Novel design strategies present unique opportunities to address the challenges in such a potential medical device that (a) integrates with human physiology, and (b) dissolves completely after its effective operation. In this course, we will apply novel strategies to address challenging issues in these emerging electronics, with examples ranging from sensors for thermal, mechanical, electrical, and electrochemical monitoring to integrated systems that can serve as human-machine interfaces and biomedical devices. This course covers a broad range of topics related to the novel strategies for the emerging electronics, including design and analysis of stretchable and dissolvable electronics, manufacturing techniques for biomedical devices, characterization techniques of soft sensors and actuators, applications, and opportunities for these emerging electronics, among others.

Cross-listed with: ESC 505

EMCH 507: Theory of Elasticity and Applications

3 Credits

Equations of equilibrium and compatibility; stresses and strains in beams, curved members, rotating discs, thick cylinders, torsion and structural members.

Prerequisite: E MCH213

EMCH 514: Engineering Science and Mechanics Seminar

1 Credits/Maximum of 99

Current literature and special problems in engineering mechanics.

Cross-listed with: ESC 514

EMCH 516: Mathematical Theory of Elasticity

3 Credits

Fundamental equations and problems of elasticity theory; uniqueness theorems and variational principles; methods of stress functions and displacement potential; applications.

Prerequisite: E MCH540

EMCH 520: Advanced Dynamics

3 Credits

Dynamics of a particle and of rigid bodies; Newtonian equations in moving coordinate systems; Lagrange's and Hamilton's equations of motion; special problems in vibrations and dynamics.

Prerequisite: E MCH212 , MATH 250

EMCH 521: Stress Waves in Solids

3 Credits

Recent advances in Ultrasonic Nondestructive Evaluation: waves; reflection and refraction; horizontal shear; multi-layer structures; stress; viscoelastic media; testing principles.

Prerequisite: E MCH524A , E MCH524B

Cross-listed with: ACS 521

EMCH 523: Ultrasonic Nondestructive Evaluation

3 Credits

Methods, techniques, applications of Ultrasonic Nondestructive Evaluation wave propagation; signal processing and pattern recognition applied to UNDE; practical laboratory demonstrations.

EMCH 524A: Mathematical Methods in Engineering

3 Credits

Special functions, boundary value problems, eigenfunctions and eigenvalue problems; applications to engineering systems in mechanics, vibrations, and other fields.

Prerequisite: MATH 250 or MATH 251

EMCH 524B: Mathematical Methods in Engineering

3 Credits

Boundary-value problems in curvilinear coordinates, integral transforms; application to diffusion, vibration, Laplace and Helmholtz equations in engineering systems.

Prerequisite: E MCH524A , E SC 404 , or MATH 411

EMCH 524C: Mathematical Methods in Engineering

3 Credits

Green's functions applied to problems in potentials, vibration, wave propagation and diffusion with special emphasis on asymptotic methods.

Prerequisite: E MCH524B , E SC 406H , or MATH 412

EMCH 527: Structural Dynamics

3 Credits

Dynamic behavior of structural systems; normal modes; input spectra; finite element representation of frameworks, plates, and shells; impedance; elastic- plastic response.

Prerequisite: E MCH470 or E MCH571

EMCH 528: Experimental Methods in Vibrations

3 Credits

Investigation of one or more degrees of freedom, free and forced mechanical vibrations, vibration properties of materials, nondestructive testing.

Prerequisite: E MCH470 or E MCH571

EMCH 530: Mechanical Behavior of Materials

3 Credits

Engineering materials mechanical responses; stress/strain in service context of temperature, time, chemical environment; mechanical testing characterization; design applications.

EMCH 532: Fracture Mechanics

3 Credits

Stress analysis of cracks; stable and unstable crack growth in structures and materials; materials fracture resistance.

Prerequisite: E MCH500

EMCH 533: Scanned Image Microscopy

3 Credits

Imaging principles, quantitative data acquisition techniques, and applications for scanned image microscopy are discussed. E MCH 533 Scanned Image Microscopy (3) Scanned Image Microscopy comprises advanced techniques yielding new information in the form of highly resolved micro- and nano-scale images of surfaces and sub-surfaces of materials. The objectives of the course are (1) to endow students with a basic understanding of the principles behind scanned image microscopy, (2) to impart them skills to operate the high-resolution equipment, and (3) to train them to interpret the images obtained. Thus

the course includes presentation of imaging principles (i.e. basic physics and design of instruments including the sensors), quantitative data acquisition techniques (including error analysis) and applications of scanned image microscopy. The course not only emphasizes scanning acoustic microscopy and ultrasonic atomic force microscopy, but it also includes environmental scanning electron microscopy and scanning laser confocal microscopy. These four microscopy techniques are too advanced to be routine and are intended for advanced characterization on the nano- and micrometer scales.

Prerequisite: E MCH440

EMCH 535: Deformation Mechanisms in Materials

3 Credits

Deformation of crystalline/amorphous solids and relationship to structure; elastic, viscoelastic and plastic response over a range of temperatures and strain rates. EMCH 535 / MATSE 564 Deformation Mechanisms in Materials (3) The course will study the relationship between the deformation mechanisms in materials and their structure. The types of deformation behavior considered in the course are linear elasticity (isotropic or anisotropic), viscoelasticity and plastic deformation. For the elastic behavior, the emphasis will be on the way elastic behavior is controlled by atomic structure and microstructure. The constitutive laws that describe this behavior and the assumptions on which they are based will be introduced. The next phase of the course considers the range of deformation behavior from purely viscous (linear or non-linear) to viscoelastic. Initially, the emphasis will be on the effects of temperature and strain history and the way this behavior is described by mechanical analogs. The effect of structure on creep and stress relaxation will be described. The use of linear viscoelasticity in describing the sintering process will also be included. In ductile crystalline materials, deformation is associated with the movement of dislocations. The types of dislocations, their stress fields and energies will be described. These aspects will then be combined with structural features by including considerations of slip geometry and obstacles to dislocation motion. This approach will allow strengthening methods to be identified and quantified. Finally, creep mechanisms in crystalline materials at high temperature will be discussed and quantified.

Prerequisite: E SC 414M or MATSE436

Cross-listed with: MATSE 564

EMCH 536: Thermal Stress Analysis

3 Credits

Thermoelasticity, thermal shock, and design.

Prerequisite: E MCH400 or E MCH500

EMCH 540: Introduction to Continuum Mechanics

3 Credits

Algebra and analysis of tensors; balance equations of classical physics; the linear theories of continuum mechanics.

EMCH 541: Structural Health Monitoring

3 Credits

Technology development to address maintenance and safety concerns related to the aging aerospace/mechanical/civil infrastructure. E MCH 541 Structural Health Monitoring (3) Structural Health Monitoring

(SHM) is the monitoring of the condition of a structure or system using autonomous sensory systems and any intervention to preserve structural integrity. It is nondestructive evaluation with a sensory system that stays in place and enables condition-based maintenance. SHM is a broad multidisciplinary field both in terms of the diverse science and technology involved as well as in its varied applications. However, at its essence are three fundamental elements: sensing, data analysis, and decision making. The technological developments necessary to enable practical structural health monitoring are originating from scientists and engineers in many fields including physics, chemistry, materials science, biology, and mechanical, aerospace, civil, and electrical engineering. SHM is being implemented on diverse systems and structures such as aircraft, spacecraft, ships, helicopters, automobiles, bridges, buildings, civil infrastructure, power generating plants, pipelines, electronic systems, manufacturing and processing facilities, biological systems, and employed for the protection of the environment and for defense. The objectives of SHM are to: improve public safety, reduce maintenance costs, improve readiness, and foster a paradigm shift in design.

EMCH 542: Physical Principles in Biomedical Ultrasonics

3 Credits

Physical principles of advanced ultrasonic imaging and quantitative data acquisition techniques in fields of biology and medicine. E MCH (ACS) 542 Physical Principles in Biomedical Ultrasonics (3) This course focuses on the phenomenon of ultrasound in the context of medical and biological applications, systematically discussing physical principles and concepts. Concepts of wave acoustics are examined and practical implications are explored - first, the generation and nature of acoustic fields and then their formal descriptions and measurement. Real tissues attenuate and scatter ultrasound in ways that have interesting relationships to their physical chemistry, and the course includes coverage of these topics. This course also includes critical accounts and discussions of the wide variety of diagnostic and investigative applications of ultrasound that are available in medicine and biology. The course encompasses the biophysics of ultrasound and its practical applications to therapeutic and surgical objectives. The course utilizes finite element methods for simulation.

Cross-listed with: ACS 542

EMCH 544: Multiscale Modeling of Materials

3 Credits

This course discusses the key issues of the conventional simulation methods at single length and time scales. The course starts with a revisit of mechanics of materials, statistical mechanics, and thermodynamics and kinetics of materials, which form the fundamental basis for the development of physical-based simulation models. Conventional simulation methods at single length scale will then follow, including the quantum mechanical simulations, molecular dynamics, finite element simulations, and phase field modeling. Emphasis will be placed on the coupling strategies bridging different length and time scales. The multiscale methods will be delivered in combination with interesting materials phenomena spanning nanostructured and biological materials.

Prerequisite: EMCH 461

EMCH 550: Variational and Energy Methods in Engineering

3 Credits

Application of variational calculus and Hamilton's principle to various conservative and nonconservative systems; closed form and approximate technique.

EMCH 560: Finite Element Analysis

3 Credits

General theory; application to statics and dynamics of solids, structures, fluids, and heat flow; use of existing computer codes.

Prerequisite: E MCH213

EMCH 571: Foundations of Structural Dynamics and Vibration

3 Credits

Modeling approaches and analysis methods of structural dynamics and vibration.

Prerequisite: AERSP304 , E MCH470 , M E 450 , or M E 570
Cross-listed with: AERSP 571, ME 571

EMCH 581: Micromechanics of Composites

3 Credits

A rigorous application of mechanics to the understanding of relationships between microstructure and thermomechanical properties of composites.

Prerequisite: CERSC414 or CERSC502 or E MCH471 or E MCH507

EMCH 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

EMCH 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

EMCH 597A: **SPECIAL TOPICS**

3 Credits

EMCH 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

EMCH 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

EMCH 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

No description.

Cross-listed with: ESC 602

EMCH 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

EMCH 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Engineering Science (ESC)

ESC 501: Solar Cell Devices

3 Credits

Principles of photovoltaic energy conversion and their utilization in engineering devices. Emphasis on current solar cell research and development efforts. ESC 501 Solar Cell Devices (3) Photovoltaic energy conversion using organic and inorganic absorbers and liquid and solid materials is examined in depth. The emphasis is on photovoltaic energy conversion using sun light and covers solar cell device physics, materials, and design as well as all four types of photovoltaic structures; i.e., homojunctions, heterojunctions, surface barrier cells, and dye sensitized cells. Basic topics covered in the course include: solar spectra and industry standards; material properties and physics key to photovoltaic structures; and the role of scale in photovoltaics including the use of nano-structures. Computer modeling topics include an introduction to the AMPS code for transport analysis and an introduction to Maxwell's equations solvers for light trapping analysis. The use of such codes in the design of solar cells for light, carrier collection, and efficiency optimization is explored. Solar cell industry developments and research advancements are discussed throughout the course.

Prerequisite: E E 442 or PHYS 412

Cross-Listed

ESC 502: Semiconductor Heterojunctions and Applications

3 Credits

Theory, fabrication techniques, and electronic applications of semiconductor heterojunctions, including metal-semiconductor and electrolyte-semiconductor junctions.

Prerequisite: E SC 314 or E SC 414M

ESC 503: Low Dimensional Nanoelectronics

3 Credits

This course will cover advanced concepts which are essential to understand modern state-of-the art electronic devices based on novel nanomaterials. The course is designed for experimentalists, material scientists, and device physicists who are interested to learn how carrier transport takes place in low dimensional semiconductors such as zero dimensional quantum dots, one dimensional nanotubes (CNT),

quasi-one dimensional nanowires, and two dimensional nanosheets (graphene, MoS₂). The course will begin with a review of semiconductor physics which includes Fermi-Dirac statistics, dispersion relationship (E-k), density of states, electron density, various definition of carrier velocities, and discussion on traditional drift-diffusion (DD) model for carrier transport. We will then adopt a bottom-up approach to understand current flow through a device with only one energy level, which will eventually lead to the formalism of Landauer-Datta (LD) transport model for ballistic conductors. The concept of quantum conductance and transport modes will be taught. We will also learn how to incorporate different scattering mechanisms into the LD model. The LD model will be used to understand current flow through a carbon nanotube (CNT), graphene, and MoS₂. Next, the LD model will be extended to describe heat flow in nanomaterials which forms the basis of various thermoelectric phenomena such as the Seebeck effect, Peltier cooling, etc. The second part of the course will focus on the electrostatics and transport in ballistic and quasi-ballistic metal-oxide-semiconductor field effect transistors (MOSFETs). We will learn how to solve Poisson's equation self-consistently with LD model for Si MOSFET and extend it to ultra-thin-body-silicon-on-insulator (UTMSOI) FETs, FinFETs, CNTFETs, graphene and MoS₂ FETs. The advantage of ultra-thin body channel material for MOSFET scaling and how nanomaterials help in overcoming short channel effects will also be taught. Concepts such as quantum capacitance limit will be introduced. Contact resistance and related issues will also be extensively taught. Various beyond Boltzmann novel device concepts tunnel FETs, phase change FETs, negative capacitance FETs, excitonic FETs, strain FETs for low power computing will be introduced. In the third part of the course we will learn multiple quantum mechanical effects related to transport in nanomaterials such as Quantum Hall effect, energy level broadening, and Coulomb Blockade phenomena in quantum dots. We will also learn multi-electron picture through Folk's Space in order to understand many body interactions. Finally, we will study the matrix version of Schrodinger equation to derive band-structure of different nanomaterials using nearest neighbor semi-empirical approach in orthogonal basis. Generalized transport equations will be obtained using Non Equilibrium Green's Function (NEGF) formalism. Students will be asked to do literature reviews on multiple topics taught in the course. They will also use their learning and solid foundation developed through out the course to execute group projects that are either exploratory in nature or relevant to the state-of-the-art technological problems of the semiconductor industry. This will prepare them for independent and innovative research.

ESC 505: Wearable Electronics

3 Credits

Recent advances in wearable electronics have led to the development of powerful biomedical devices that monitor vital physiological signals and provide means of treatment. Conventional electronics today are formed on the planar surfaces of brittle wafer substrates and are not compatible with the textured skin or tissue surfaces. Therefore, stretchable and resorbable electronics are the two missing links in the design process of implantable monitors and in-vivo therapeutics. Novel design strategies present unique opportunities to address the challenges in such a potential medical device that (a) integrates with human physiology, and (b) dissolves completely after its effective operation. In this course, we will apply novel strategies to address challenging issues in these emerging electronics, with examples ranging from sensors for thermal, mechanical, electrical, and electrochemical monitoring to integrated systems that can serve as human-machine interfaces and biomedical devices. This course covers a broad range of topics related to the novel strategies for the emerging electronics, including design and analysis

of stretchable and dissolvable electronics, manufacturing techniques for biomedical devices, characterization techniques of soft sensors and actuators, applications, and opportunities for these emerging electronics, among others.

Cross-listed with: EMCH 505

ESC 507: Bioarchitecture

3 Credits

Fundamentals of biological architecture observed in nature with emphasis on symmetry and topology with examples from recent literature. Bioarchitecture is the use and implementation of concepts and principles from nature to design functional materials, devices, and systems. Inspired by the structure and utility of biological surfaces, various surfaces have been engineered with micro- and nanoscale features. Bio-derived materials hold great promise to provide a broad range of industrial solutions. These materials can be shaped into various geometries such as fibers, colloids, and thin films. Recombinant expression or direct extraction of bio-derived materials from biological organisms can provide a new generation of recyclable-engineered materials. Understanding the structures and functional characteristics of biological architecture will expedite the design, fabrication, and synthesis of eco-friendly, recyclable, advanced materials, with novel physical properties.

ESC 514: Engineering Science and Mechanics Seminar

1 Credits/Maximum of 99

Current literature and special problems in engineering mechanics.

Cross-listed with: EMCH 514

ESC 515: Research Practices in Engineering

3 Credits

This course is designed to help incoming graduate students prepare to conduct independent thesis research as part of a research group and become part of the broader research enterprise at Penn State. It introduces students to various elements in the research practices domain categorized as discovery and innovation, cooperation, governance, daily life, resources, and career. The elements of discovery and innovation are to: know the state of the art and knowledge gaps, know how to formulate a research objective, know the past literature, think critically and make connections, know what colleagues in your community do, create intellectual merit, and know what facilities are available. Cooperation entails: sharing information, cooperatively developing documents, developing modular procedures/codes, and being part of a team. Participation in governance involves: reviewing the work of others (publications and proposals) and knowing how to become part of professional societies and the review process for funding agencies. Daily life includes knowing the scientific method in general, how research groups function, documentation of progress, ethical norms, the forms of bias, safety standards, handling data and the associated ethics, protecting privacy, how to work with human subjects, humane treatment of animals, and reporting misconduct. Conducting research requires resources and knowing about funding sources, labor and material costs, and lab usage fees. Research practices are integral to establishing a career through planning, networking, dissemination of results, and incorporation of feedback into plans and documents. This course will introduce students to a range of good research practices in Engineering. Topics covered will include: the organization of a research group; a set

of standard tools for performing research including writing, bibliographic organization, version control, data management and backups; tools and good practices for collaboration; good laboratory practices; responsible conduct of research. A large fraction of the course will focus on how to design and conduct research, including reading papers critically, developing bibliographies, writing papers, designing a research project, and writing a research proposal. Full participation in the course satisfies the university requirements for scholarship and research integrity training.

Recommended Preparation: This course is intended for incoming graduate students to prepare them to become independent researchers.

ESC 518: Bioprinting

3 Credits

This course covers the principles of bioprinting in tissue engineering and regenerative medicine for use in fabrication of biomedical related products such as implants, tissue scaffolds, engineered tissues, organs and biological systems. Topics include Tissue Engineering, 3D Printing, Layered Manufacturing and Rapid Tooling in Medicine, Design for Bioprinting, The Bioink, Extrusion-based Bioprinting, Droplet-based Bioprinting, Laser-based Bioprinting, Bioprinters and their components, Application Areas of Bioprinting and New Frontiers in Tissue Engineering such as Organ Printing.

Cross-listed with: BIOE 518

ESC 520: Engineering at the Nano-scale

3 Credits

Engineering at the nano-scale, its current applications, its future directions, and its impact on society are the subjects of E SC 520. The uniqueness of the nano-scale is addressed by first reviewing the basic aspects of our picture of the physical world (e.g. Newtonian and quantum mechanics, geometrical and physical optics) and then exploring the relative impact of these aspects on physical, chemical, and biological phenomena at the nano-scale. Which phenomena dominate as a function of scale and how this competition affects properties and structures is explored in detail allowing the opportunities of the nano-scale to emerge. Impact of the uniqueness of the nano-scale on engineering and the possibilities offered for engineering applications, ranging from manufacturing processing to better building materials to better drug delivery systems, are discussed throughout the course. These creative possibilities afforded by engineering at the nano-scale are highlighted by a varying array of applications taken from fields including medicine and biotechnology, agriculture and food, environmental mitigation, electronics and spintronics, opto-electronics, photonics, sensing, materials, transportation technology, energy production, energy storage, and informatics.

Prerequisite: E SC 412

ESC 521: Pattern Transfer at the Nano-scale

3 Credits

Engineering at the nano-scale often requires creating and then transferring a pattern when fabricating a desired nano-scale structure. This course explores the basic processes of pattern design and then addresses the techniques used to transfer a nano-scale pattern to a surface or structure. The course looks into pattern transfer techniques that employ particles, photons, and additional chemical and physical

means as the transfer mechanisms. Included in the photon approaches are studies of deep UV and X-ray pattern transfer. Particle transfer mechanisms discussed include ion and neutral particle approaches. Physical-contact pattern transfer is also explored including discussions of nano-imprinting lithography, nano-molding lithography, and scanning probe lithography. Chemical pattern transfer is another approach to pattern transfer and one that uniquely uses chemical processes to create patterns. Examples to be discussed in this course include molecular self-assembly lithography and block co-polymer lithography. Emerging pattern transfer techniques, such as magneto-lithography, will be included in E SC 521 for completeness. In many of these pattern transfer methodologies, a "writing" of the transferring pattern into some intermediary medium termed a resist is required. In pattern technologies requiring resists, the resist materials and their positioning as well as required physical and chemical properties will be discussed.

Prerequisite: ESC 520

Cross-listed with: NANO 521

ESC 522: Fabrication and Characterization for Top-down Nano-manufacturing

3 Credits

There are two broad approaches to fabrication and manufacturing at the nano-scale. They are bottom-up and top-down nanofabrication. The two approaches are complementary, with the former having strong ties to biology and the latter having very strong ties to traditional semiconductor processing. E SC 522 focuses on top-down nanofabrication which makes use of two distinct approaches: additive processes and subtractive processes. These are studied in detail in this course by first focusing on the additive processes which deposit or grow materials. The effort then shifts to the subtractive processes which remove materials with a mixture of chemistry and physics, in techniques varying from wet chemical etching to deep ion etching. Achieving nano-scale features with top-down techniques is controllable and verifiable with today's characterization techniques. This control and verification aspect is an integral part of top-down fabrication at the nano-scale. Characterization tools commonly used in top-down nanofabrication are discussed in this course in the context of process development and manufacturing. These tools include optical microscopies, electron and ion beam microscopies, spectroscopies, and scanning probe techniques.

Prerequisite: ESC 521.

Cross-listed with: NANO 522

ESC 523: Fabrication and Characterization for Bottom-up Nano-manufacturing

3 Credits

There are two broad approaches to fabrication and manufacturing at the nano-scale: bottom-up and top-down nanofabrication. These are complementary with the former having strong ties to biology and the latter having strong ties to traditional semiconductor processing. E SC 523 focuses on the bottom-up approaches, which provide an increasingly important alternative to top-down techniques. Bottom-up approaches to nano-scale fabrication mimic nature in harnessing fundamental chemical or physical forces operating at the nano-scale to assemble basic units into larger structures. The bottom-up, or self-assembly, techniques explored in this course cover material synthesis, structure fabrication, and material and structure characterization. The production of 0-D, 1-D, 2-D, and 3-D materials will be discussed and then the assembly of these materials into structures will be explored. Fabrication topics to be

covered will include block co-polymer manipulation, vapor-liquid-solid growth, the Langmuir-Blodgett technique, surface functionalization, molecular self-assembly, DNA Origami, and bacterial and viral assembly. The characterization techniques to be covered will include those emerging tools capable of ultra-precise resolution such as tip-enhanced Raman scanning microscopy, scanning helium ion microscopy, and magnetic resonance sub-nanometer imaging.

Prerequisite: E SC 412, E SC 520, E SC 521

Cross-listed with: NANO 523

ESC 525: Neural Engineering: Fundamentals of Interfacing with Brain

3 Credits

Biophysical basis of neural function, measurable signals, and neural stimulations.

ESC 527: Brain Computer Interfaces (BCI)

3 Credits

Biophysical basis of non-invasive brain signals (electroencephalograms); real-time signal processing.

ESC 529: Neural Control Engineering

3 Credits

The ability to use formal control theory to observe and control neuronal systems is rapidly becoming more feasible as our models of neural systems become more realistic and as our advances in nonlinear Kalman filtering become more sophisticated. This course will explore the cutting edge of nonlinear state estimation of neuronal systems and the construction of control algorithms based on that state estimation. We will give an overview of several canonical neuroscience models, which represent experimental systems that can be controlled: the Hodgkin-Huxley equations, their reduction with the Fitzhugh-Nagumo equations, the Wilson-Cowan model of cortex, and recent models of Parkinson's disease. We will then apply nonlinear state estimation to measurements from such systems and construct control algorithms that interact with such models.

RECOMMENDED PREPARATIONS: Students without a background including calculus, differential equations, and linear algebra should consult with the instructor.

Cross-listed with: PHYS 529

ESC 531: Neuroethics: Science, Technology, and Society

3 Credits

This course provides a close examination into the field of neuroethics and the responsible application of advances in neuroscience research and neuroengineering. Neuroethics is a relatively young and interdisciplinary field of inquiry that aims to be a platform for different stakeholders, including neuroscientists, clinicians, lawyers, engineers, policy makers and the general public to discuss the future of neuroscience and the different applications of neurotechnologies. Neuroethics is a field that brings normative, descriptive, theoretical and practical considerations at the table. This course will cover topics such as different perspectives on neuroethics, its scope and role in recent brain initiatives, ethical and societal implications of brain imaging for medical and non-medical purposes, ethical and societal implications of the use of pharmacological and neuromodulation interventions on the brain, uses of neuromodifiers for enhancement purposes, issues around personhood and other

emerging topics relevant to neuroethics. Among the ethical issues examined in the course are issues related to mental privacy, safety considerations, responsibility, agency, and social justice.

Recommended Preparation: An understanding of ethics, societal implications of technology, and neuroscience or neurotechnology background. Courses in functional and integrative neuroscience, as well as courses that provide a grounding in bioethics
Cross-listed with: BIOET 531, NEURO 531

ESC 534: Advanced Solidification Processes in Metallic Materials

3 Credits

The emergence of advanced manufacturing processes, such as additive manufacturing, has introduced high levels of uncertainty in well-established process - structure - property- performance relationships. A comprehensive understanding of solidification across spatial and temporal scales is needed in order to identify the underlying phenomena driving these unique structures and properties. In this course, the processes driving solidification and the properties of liquid metals will be covered to provide a framework for understanding more complex solidification processes in multi-component systems. Building on a fundamental understanding of both the thermodynamics and kinetics of solidification processes, the properties of interfaces and nucleation and growth will be studied across a range of material systems, including those exhibiting eutectic and peritectic transformations. With this basic knowledge, the role of complex processing conditions and their impact on multi-component alloy systems will be investigated for conditions prevalent in advanced manufacturing processes and correlated with advanced and emerging characterization tools.

Recommended Preparation: Students in this course should have a basic understanding (undergraduate level) of physical metallurgy principles, including solidification, solid-state phase transformations, heat treatment, and thermomechanical processing.

Cross-listed with: MATSE 534

ESC 536: Wave Propagation and Scattering

4 Credits

Survey of analytical and numerical methods for solving acoustic, electromagnetic and elastic wave propagation and scattering problems.

Prerequisite: E MCH524A or E MCH524B

ESC 537: Multiple Scattering Theories and Dynamic Properties of Composite Materials

3 Credits

Acoustic, dielectric, elastic dynamic properties; periodic, random composites; wave propagation and scattering; attenuation, dispersion; super- viscous absorption; sonar, optical, ultrasonic applications.

ESC 540: Laser Optics Fundamentals

3 Credits

Selected topics in optics and laser physics, and their application in laser-materials processing. E SC 540 Laser Optics Fundamentals (3) Over the past two decades, new technologies such as laser-materials processing have moved from laboratory research to commercial applications. Engineers must now understand and apply many concepts of physics that in the past lay outside the boundaries of engineering. This course is

intended for graduate students and practicing engineers whose exposure to physics has been limited to two or three undergraduate courses. It summarizes theories of geometric optics, physical optics, quantum optics and laser physics relevant to laser-materials processing, and it is designed to bridge the gap between abstract concepts and applications. Upon completion of this course, students will have developed sufficient proficiency in these theories to understand the intricacies of their use and application in laser-materials processing as described in the current technical literature. The student's accomplishment will be evaluated by mid-semester and final examinations. E SC 540 will be offered each fall semester. Classes will meet twice a per week; each class will be 75 minutes long. The enrollment for this course is anticipated to be 15 to 30 students.

ESC 541: Laser-Materials Interactions

3 Credits

Laser beam interactions with metallic, ceramic, polymeric and biological materials; effects of wavelength, power, spatial and temporal distributions of intensity. E SC 541 Laser-Materials Interactions (3) This course covers laser beam interactions with metals, insulators, semiconductors, polymers and biological materials relevant to laser-materials processing, and is designed to bridge the gap between abstract concepts and applications. Interactions such as heat flow, thermal stresses, melting, material removal, property changes and plasma effects are related to laser characteristics such as wavelength, power and the spatial and temporal distribution of intensity. Upon completion of this course the student will have developed sufficient knowledge of laser-materials interactions to understand their application in the current technical literature on laser-materials processing. The student's accomplishments will be evaluated by mid-semester and final examinations. This course will be offered each year in the spring semester. The class will meet once a week; each class period will be 150 minutes long. The enrollment for the course is anticipated to be 15-30.

ESC 542: Laser-Integrated Manufacturing

3 Credits

Integration of lasers into manufacturing processes: laser-assisted surface modifications; laser joining; laser-based material shaping processes. E SC 542 Laser-Integrated Manufacturing (3) E SC 542 is intended for graduate students and practicing engineers who have completed E SC 540 and E SC 541. It utilizes classroom lectures to provide a basis for students to develop an understanding of the integration of laser systems into manufacturing processes. Various lasers applicable to macro-processing, optical systems and manipulation components are discussed in terms of integration for industrial processing of materials, which include laser-assisted surface modification, laser joining and laser-based material removal processes. The unique characteristics and attributes of laser processing are discussed and contrasted with other contemporary manufacturing processes. Students will participate in a group project to develop and design an integrated system for selected laser manufacturing processes. Upon completion of this course, the student will understand the system requirements for laser-based manufacturing processes in terms of processing capabilities, equipment capabilities, safety requirements and economic considerations. This course will be offered each year in the fall semester. Classes will meet once per week; each meeting period will be 150 minutes long.

Prerequisite: E SC 540

ESC 543: Laser Microprocessing

3 Credits

Laser microprocessing of engineered and biological materials for electronic, opto-electronic, MEMS and medical/therapeutic applications. E SC 543 Laser Microprocessing (3) This course is intended for graduate students and practicing engineers who have completed E SC 540 and E SC 541. It covers laser processing to produce features and modify properties in metals, organic polymers, inorganic insulators, superconductors, semiconductors and biological materials on the meso, micro and nano scales. The lectures comprise analysis and discussion of selected technical papers on the use of laser microprocessing in electronic, opto-electronic, MEMS and medical-therapeutic applications. Upon completion of this course, the student will have developed sufficient knowledge of laser microprocessing to understand its applications as described in the current technical literature. This course will be offered each year in the spring semester. Classes will meet once per week; each class period will be 150 minutes long.

Prerequisite: E SC 540**ESC 544: Laser Laboratory**

3 Credits

Laser systems for materials processing, safety, critical processing parameters, diagnostic measurements, automation, sensing and control. E SC 544 Laser Laboratory (3) This course is intended for graduate students and practicing engineers who have completed E SC 540 and E SC 541. It covers laser systems for materials processing such as carbon dioxide, neodymium-YAG and ultraviolet laser systems; safety; identification of critical process parameters; measurement of spatial and temporal distributions of intensity, power, polarization, absorptivity and reflectivity; beam and work piece manipulators; automation' methods of sensing and process control. Students will attend lectures, observe demonstrations and perform hands-on measurements. Upon completion of this course, the student will have developed sufficient proficiency in laser techniques to perform them safely in a laboratory setting and to understand the intricacies of their use as described in the current technical literature on laser-materials processing. The student's accomplishment is evaluated by laboratory reports and a final examination. This course will be offered each summer.

Prerequisite: E SC 540**ESC 545: Engineering and Scientific Principles of Additive Manufacturing**

4 Credits

In additive manufacturing (AM), components are fabricated via sequential joining using a bonding agent, curing, sintering, or fusing. AM fabrication of metals, ceramics, polymers, and organics has been demonstrated and is actively being used in industry and academia. ESC 545 / AMD 545 explores these processes with a focus on the fundamentals of sintering and fusion of metals, ceramics, and polymers. The topic is multi-disciplinary, requiring examination of individual AM system components, the physics of energy-material interactions, and the materials science at play during heat-reheat cycles. Opportunities for process sensing and real-time control are explored, as well as the role of post-process technologies in realizing serviceable components. These topics will lead to a discussion of methods and strategies to optimize component properties and characteristics. Current and potential impacts of AM on society are also covered.

Recommended preparations: A course in engineering materials and/or engineering analysis is highly desired but not required.

Cross-listed with: AMD 545

ESC 546: Advanced Metallic Material Feedstocks for Additive Manufacturing

4 Credits

Additive manufacturing (AM) processes use a variety of metallic material forms to produce complex components. These material forms can vary from metallic powders with a rather wide range of size distributions to metal wire to sheet and other more complex composite material types. Knowledge of the processing of these different feedstock forms along with means to characterize them is needed to develop AM processes and procedures capable of being more widely used, particularly in critical applications. In this course, the production, handling, blending, and characterization of common metallic and composite feedstock materials will be covered. Feedstock forms to be addressed include metal and metal-ceramic composite powders, wire, and sheets, along with new product forms becoming available. A multi-disciplinary approach will be taken to elucidate the connections between production, characterization, and handling to develop an understanding of the role of feedstocks on the resulting process-structure-property relationships for AM processes and products.

Prerequisite: ESC 545 CONCURRENTS: MATSE 567, IE 527**ESC 550: Power Semiconductor Devices**

3 Credits

Power electronic devices: Physics of operation, materials, architectural design, processing, reliability of operations, reliability with applications and challenges. E SC 550 Power Semiconductor Devices (3) The design and operation, of the emerging transformative power semiconductor devices, is founded on basic quantum mechanics and solid state physics principles. Power Semiconductor Devices, PSDs, handle high currents, high voltages and operate at high temperatures. Consequently, PSDs are complex in design, and challenging in long-term reliability. We study the fundamentals of PSDs architecture, processing, reliability, materials and characterization. We study Schottky- and P-i-N- rectifiers, the low power range MOSFETs transistors, the middle power range IGBT transistors, and high power range Thyristors. It is estimated that more than 50% of world electricity passes through power semiconductor devices; hence, optimizing the performance and reliability of these emerging power devices coupled with advancing power materials processing may lead to significant future energy savings. The subject matter is appropriate to students of physical sciences, electrical and materials engineering; in addition to broadening their knowledge base, it exposes them to this frontier research area and a new career-path option.

ESC 551: High Power Energy Storage

3 Credits

High-power energy storage technologies including advanced batteries, ultracapacitors, and flywheels. E SC (M E) 551 High Power Energy Storage (3) The course focuses on high-power, in-vehicle energy storage technologies used in hybrid electric vehicles, including advanced batteries, fuel cells, ultracapacitors, and flywheels. An interdisciplinary approach with mechanical, materials, electrical, and chemistry-based concepts provides the foundation to understand the operation and application of these energy storage devices. The course provides a

synopsis of hybrid electric and fuel cell vehicle design, control, and simulation to determine the effect of energy storage components on performance and fuel efficiency.

Cross-listed with: ME 551

ESC 555: Neuroscience Data Analysis

3 Credits

Modern methods for the analysis of neural data. E SC 555 Neuroscience Data Analysis (3) Modern neuroscience experimental methods can generate enormous amounts of complicated data, and a wealth of techniques has sprung up drawing from a wide variety of fields to analyze it. In this course, students will learn how to utilize a toolbox of mathematical and computational techniques to analyze electrophysiological, optical and anatomical data. This course will cover the biophysical origin and measurement of brain signals, as well as the theoretical background of modern analysis methods and their practical implementation. Topics covered include spectral methods, neural encoding and decoding, information theory and image analysis.

Prerequisite: Prerequisite or concurrent: BIOL 469 or equivalent

ESC 562: Solid State Phase Transformations in Metallic Materials

3 Credits

Metallic material systems or alloys are used across a wide range of applications. In order to obtain the desired properties, these materials are subjected to a range of thermo-mechanical processing steps and post-processing heat treatments which drive phase transformations while the material is in the solid state. The mechanisms of these solid-state phase transformations involve a wide range of fundamental materials science concepts, including crystallography, nucleation, grain growth, and diffusion. Practitioners must have knowledge across a range of materials disciplines, including thermodynamics, kinetics, and crystallography, in order to synthesize and capture the complex processes occurring over a wide range of spatial and temporal scales. Knowledge of these fundamental concepts along with their interactions over a range of length scales is applicable across a range of conventional and emerging materials processing fields, from primary steelmaking through heat treatment of nickel and aluminum-base alloys through the additive manufacturing of a wide range of advanced materials. In this course, a comprehensive study of solid state phase transformations in metallic materials will be undertaken. Beginning with the underlying crystal structures prominent in common alloy systems, the role of diffusion and nucleation and grain growth will be undertaken to describe the early stages of phase transformations. The resulting interfaces between different phases will be investigated along with the orientation relationships and the development of equilibrium precipitate morphologies. Building on solid state nucleation theory, microstructural development and precipitation and growth of secondary phases in both equilibrium and non-equilibrium conditions will be studied, to include common invariant transformations as well as spinodal decomposition, order-disorder transformations, and the formation of bainite and martensite. These fundamental materials processes will then be investigated for conditions prevalent in advanced manufacturing processes and correlated with advanced and emerging characterization tools.

Recommend Preparation: A basic understanding of solidification, solid-state phase transformations, heat treatment, and thermomechanical

processing, such as MATSE 259, EMCH 211, and EMCH 213. MATSE 410, 425, 427, or equivalent is preferred but not required. Cross-listed with: MATSC 562

ESC 577: Engineered Thin Films

3 Credits

Broad overview of the preparation-characterization-property relations for thin films used in a wide range of industrial applications.

Prerequisite: MATH 251 , PHYS 237

ESC 581: Microelectromechanical Systems/Smart Structures

3 Credits

Methods of micromachining, smart structure fabrication. Design, modeling for physical, chemical, biomedical microsensors/actuators. Smart structures and microsystems packaging/integration.

Prerequisite: E SC 414M

ESC 582: Micro- and Nano-Structured Light Emitting Devices

3 Credits

Principles and applications of Micro- and Nano-Structured Light Emitting Devices.

ESC 583: Micro- and Nano-Optoelectronic Devices and Applications

3 Credits

Principles and applications of micro- and nano-optoelectronic devices.

ESC 584: Bioarchitecture

3 Credits

Fundamentals of biological architecture observed in nature with emphasis on symmetry and topology with examples from recent literature. Bioarchitecture is the use and implementation of concepts and principles from nature to design functional materials, devices, and systems. Inspired by the structure and utility of biological surfaces, various surfaces have been engineered with micro- and nanoscale features. Bio-derived materials hold great promise to provide a broad range of industrial solutions. These materials can be shaped into various geometries such as fibers, colloids, and thin films. Recombinant expression or direct extraction of bio-derived materials from biological organisms can provide a new generation of recyclable-engineered materials. Understanding the structures and functional characteristics of biological architecture will expedite the design, fabrication, and synthesis of eco-friendly, recyclable, advanced materials, with novel physical properties.

ESC 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ESC 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently.

ESC 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ESC 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ESC 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

No description.

Cross-listed with: EMCH 602

ESC 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

ESC 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

English (ENGL)

ENGL 501: Materials and Methods of Research

3 Credits

Materials and techniques of research in English and American literary history; form and content of these. Required of all graduate students with an English major.

ENGL 502: Theory and Teaching of Composition

3 Credits

Study of grammar, logic, rhetoric, and style in their applicability to teaching composition.

ENGL 506: The English Language

3 Credits

A problem-centered approach to literary and oral forms of English, utilizing historical and analytic perspectives.

ENGL 507: English Composition Studies

3 Credits

An overview of composition studies, with particular attention to the schools of writing pedagogy.

Prerequisite: EDUC 452 , ENGL 409 , Bachelor's degree, permission of the program

ENGL 510: Post-Colonial Theory

3 Credits

The term post-colonial within itself has manifold meanings and implications. It is also considered a controversial term as many wonder exactly what is post to colonialism. In this class, we will explore colonial discourse theory, the roots of European imperialism and racism, and feminist constructions in relation to post-colonial theory. We will engage with and read critical theory, literature, and film to analyze the relations of power that (re)generate the roles of domination and dominated, and the in-between states of negotiation.

Cross-listed with: AFR 510

ENGL 511: Thesis Workshop and Professional Writing

3 Credits

Professional writing for graduate students. ENGL 511 Thesis Workshop and Professional Writing (3)This course helps graduate students in all fields develop a clear, professional, prose style. Every week they give the instructor five or so pages of their writing and get detailed feedback. Several times during the semester, their week's assignment is read and commented on by the whole class in workshop. By learning how to suggest improvements to their classmates, members learn how to see and fix their own writing problems as well. In addition to style, classes discuss organization, mechanics, formats, and any special problems pertaining to the students' projects and to writing in their specialties. Students must have approximately 30 pages of professional-level writing on hand to revise for this course. Evaluation is based on weekly assignments, on a test, and on a case study.

ENGL 512: The Writing of Fiction

3 Credits/Maximum of 15

Supervised workshop in advanced techniques of writing fiction.

ENGL 513: The Writing of Poetry

3 Credits/Maximum of 15

For the student with considerable experience in writing poetry; a workshop devoted to advanced poetic technique.

ENGL 515: The Writing of Nonfiction

3 Credits/Maximum of 15

Supervised workshop in advanced nonfiction techniques.

ENGL 521: Old English Language

3 Credits

An introduction to the main features of the Old English language; readings in simple Old English prose and poetry.

ENGL 522: Beowulf

3 Credits

Reading and critical analysis.

Prerequisite: ENGL 521

ENGL 530: The Literature of Biography and Autobiography

1-3 Credits/Maximum of 6

Study of biographical and autobiographical theory and practice through analysis of major English and American works in each genre.

ENGL 535: Studies in Jewish American Literature

3 Credits

This course offers students a working analytical familiarity with the history of Jewish writing in the United States (in North American context) and with both the history and the current state of professional study of it. Attention will be paid both to dominant and alternative narratives of this literature. Major historical topics include the earliest, pre-19th century Jewish writers in America; 19th century Jewish American writers; writers of the great Ashkenazi immigration wave of 1881-1924; interwar proletarian and modernist writers; postwar writers of assimilation; the mainstreaming of Jewish American literature in the 1950s and 1960s; post-"breakthrough" Jewish American writers; and 21st-century Jewish American literature and the new immigration. The course analyzes the development of the professional field of Jewish American literary study, including its prehistory and origins in Wissenschaft-based historicism; the professionalization of the field in the Viet Nam era; the growing dominance of so-called New Jewish Cultural Studies of the '80s and '90s; and new theoretical approaches of the first decades of the 21st century. Finally, the course examines the key debates and faultlines in the field today, including the divide between historicist and critical approaches; differences between English Department-based and Jewish Studies-based Jewish American literary study; the situation of Jewish American literary study vis-à-vis Americanist literary study and English Department-based literary study more generally; Cultural Studies-based approaches to the field vs. Literary Studies-based approaches; Comparativist approaches vs. non-Comparativist approaches; the move toward interdisciplinarity; and the ongoing struggle to theorize the field.

Cross-listed with: JST 535

ENGL 540: Studies in Elizabethan Prose and Poetry

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include figures such as Spenser and Sidney.

ENGL 541: Medieval Studies

1-3 Credits/Maximum of 12

Studies in medieval English literature. Topics studied might include medieval romances, drama, or major figures aside from Chaucer.

ENGL 542: Middle English Literature

3 Credits

A survey of Middle English literature, exclusive of Chaucer. ENGL 542 Middle English Literature (3) This seminar offers a survey of Middle English literature, exclusive of Chaucer, through a close study of some of its characteristic forms and genres. The course begins with the linguistic features of Middle English, with attention to the major dialects of assigned texts (dialect instruction will continue throughout the semester as appropriate). Readings concentrate on several major forms and genres

(such as romance, debate poetry, religious writing, lyrics) and authors (such as La?amon, the Pearl Poet, Margery Kempe, Lydgate, Malory). The course combines close reading and translation with ranging investigation into literary contexts and traditions. Considering the multilingual culture of medieval England, students may also read analogue and source literature in languages such as French and Latin (all of which will be taught in translation). Discussion of assigned texts will be situated within the relevant scholarship and criticism (current and historical).

ENGL 543: Studies in Early Seventeenth-Century Literature

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Donne, Herbert, Jonson, Bacon.

ENGL 545: Chaucer

1-3 Credits/Maximum of 12

Major and minor works of Geoffrey Chaucer. The works studied will vary from year to year.

ENGL 546: Milton

3 Credits

The poetry and prose of John Milton.

ENGL 548: Elizabethan and Jacobean Drama

1-3 Credits/Maximum of 12

English drama from 1558 to 1642, exclusive of Shakespeare.

ENGL 549: Shakespeare

1-3 Credits/Maximum of 12

Special problems of sources, chronology, text, characterization, and motivation in the drama.

ENGL 550: English Literature 1660-1800

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Dryden, Swift, Pope, Johnson, Fielding, Gibbon.

ENGL 553: Literacy Studies

3 Credits

An overview of current research on literacy, with particular attention to language, thought, and learning and their applications to writing. ENGL 553 Literacy Studies (3) ENGL 553 will present current research on literacy, with an emphasis on language acquisition, learning theory, and their applications for writing pedagogy.1. Instructional, Educational, and Course Objectives:As a result of having completed the course, students will be able to: Demonstrate a clear understanding of current theories of literacy, including the reciprocity of writing and thinking, speaking and reading. Articulate and discuss various approaches to instruction, including uses of writing in the classroom and writing to learn. Compare and contrast traditional and current approaches to teaching writing. Demonstrate and apply the concepts of the curriculum models for teaching writing. Utilize practical methods for identifying goals and applying theory to instructional plans.2. Students' evaluation will be

based on their knowledge and understanding of instructional objectives, demonstrated in written assignments, class discussions, and other assignments.

Prerequisite: EDUC 452 or ENGL 409 ; Bachelor's Degree and permission of program

ENGL 554: Studies in Early American Literature

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Bradstreet, Taylor, Mather, Franklin, Edwards, Paine.

ENGL 555: Visualizing Gender

3 Credits

This course analyzes how gender identities relate to the creation, use, and analysis of visual artifacts and bodily practices. Visual texts condition and are conditioned by intersectional embodiments of gender. In an attempt to understand and critically evaluate the role visual culture plays in our gendered lives as a dominant conduit of knowledge and identity production, this seminar examines visual processes and objects as they are informed and shaped by a nexus of gender, race, sexuality, class, nationality, and other forms of identity. The visualization of gendered forms of identity involves codes that produce bodies as signifiers of chaos, order, beauty, disease, nature, culture, evil, and virtue, including actions bisected according to binaries of masculinity and femininity. The seminar employs analytical approaches to these dynamics, including feminist, queer, and critical race theories of the visual as ways of interrogating a range of visual artifacts and bodily practices. After surveying key foundational texts, the course predominantly engages contemporary works and practices along complex gender matrices, including new directions in visual culture from the 1990s onward.

Cross-listed with: VSTUD 555

ENGL 556: Reading Film

3 Credits/Maximum of 12

A practical and historical approach to film theory and analysis. This seminar develops critical visual literacy by examining a range of practices in cinema study, with emphases on the relation of film to literature and the analysis of film meaning. The course asks how to read a film, and considers the multiple ways that films combine framing, movement, editing, narrative, character, and genre toward the production of culture, ideology, identity, desire, poetic imagery, and community. Students will explore a wide range of critical methods, and will view one to two films per week. Readings will range from novels to classic film theory, cultural studies, belles-lettres, film criticism, radical poetics, apparatus theory, media theory, and contemporary philosophy.

Cross-listed with: COMM 556, VSTUD 556

ENGL 557: Authors and Artists

3 Credits

This course explores formal and historical links between literature and art in modernist movements. "Ut pictura poesis" (like painting [is] poetry). This statement, originally articulated by the ancient Roman poet Horace, has been quoted and debated ever since. Links between art and literature have exerted a formative influence on the development of modern fiction and poetry as authors and artists in various avant-

garde groupings collaborated and competed to generate modes of artistic expression appropriate to modernity. This course examines those interactions. Course objectives are to bring together for comparative examination: - formal or generic relationships between texts and images at particular historical moments. - issues of creative collaboration and cross-pollination between writers and artists, which have been crucially important in the history of literature and poetry. - conceptions of creativity as these have been expressed by writers using the figure of the artist. This course allows students to explore the ways knowledge of literature and skills in critical reading can be rewardingly brought to bear on the visual arts, and to consider how visual art can illuminate the workings of literature both for individual readers and in the classroom.

Cross-listed with: VSTUD 557

ENGL 558: Nineteenth-Century British Fiction

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Dickens, Thackeray, the Brontes, George Eliot, Hardy.

ENGL 560: American Romanticism

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Hawthorne, Melville, Emerson, Thoreau, Whitman.

ENGL 561: Studies in the Romantic Movement

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Blake, Wordsworth, Coleridge, Byron, Shelley, Keats.

ENGL 562: Studies in the Literature of Victorian England

1-3 Credits/Maximum of 12

Figures will vary from year to year. Writers studied might include Tennyson, Browning, Arnold, Newman, Ruskin, Trollope.

ENGL 564: Studies in Nineteenth-Century American Literature

1-3 Credits/Maximum of 12

Writers will vary from year to year. Writers studied might include Cooper, Poe, Dickinson, Twain, James.

ENGL 565: Period Studies in African-American Literature

3 Credits/Maximum of 9

Studies of periods in African-American literature. Periods might include the Harlem Renaissance or the Black Arts Movement.

ENGL 566: Genre Studies in African-American Literature

3 Credits/Maximum of 9

Genre will vary from year to year, but will include categories such as poetry, fiction, essays, sermons, autobiographies, short stories.

ENGL 567: Thematic Studies in African-American Literature

3 Credits/Maximum of 9

Exploration of key concepts in African-American culture as manifested in various literary discourses.

ENGL 568: Gender Issues in African-American Literature

3 Credits/Maximum of 9

Gender issues in African-American literature and culture. Issues may include the Black woman writer or Gay and Lesbian writers.

ENGL 570: The Writer as Critic: Reviewing Contemporary Poetry, Fiction, and Non-Fiction

3 Credits

Students will write and revise book reviews of poetry, fiction, and non-fiction for a variety of newspapers and literary magazines. ENGL 570 The Writer as Critic: Reviewing Contemporary Poetry, Fiction, and Non-Fiction (3) In this class, students will read books and write reviews of those books, following a detailed schedule of readings and assignments established in the syllabus. Success in this class depends upon the student's ability to set priorities, organize materials, followup on initial contacts with presses and editors, and revise all reviews to publishable standards. Students begin by reading published book reviews and two texts (one poetry, one fiction) assigned by the instructor. Analyzing the structure of the published reviews, students draft model 200- and 550-word reviews, using the published reviews as guides. As the course progresses, students contact publishing houses and presses to request review copies, while simultaneously writing to editors with project proposals. With longer reviews--700 and 1,000 words--students engage complex issues about the economics and politics of publishing. Readings from the course Sampler (provided by instructor) inspire students to position themselves as literary citizens in the national conversation about contemporary writing. "The Writer as Critic" supplements the MFA course offerings in non-fiction. Students in all genres may practice advanced expository prose while gaining a practical skill. For students in the MFA program, this course fulfills a literature seminar requirement. Students will be evaluated on the quality of final reviews, the timely completion of all drafts, participation in editing teams, and final portfolio of correspondence. This course, for which MFA students have first priority, will be offered approximately every other year with a maximum of 12 students.

ENGL 571: Writer in the Community

3 Credits

Students study the theory and practice of creative writing pedagogy in non-university settings.

ENGL 573: Studies in Twentieth-Century British Literature

1-3 Credits/Maximum of 12

Major figures studied will vary from year to year. Writers studied might include Yeats, Conrad, Joyce, Shaw, Lawrence, Auden.

ENGL 574: Studies in Twentieth-Century American Literature

1-3 Credits/Maximum of 12

Figures studied will vary from year to year. Writers studied might include Dreiser, Wharton, Eliot, Hemingway, Fitzgerald, Faulkner, O'Neill, Williams.

ENGL 575: Experimentation and Modernism in Twentieth-Century British and American Fiction

1-3 Credits/Maximum of 12

Figures studied will be drawn from the era of Joyce and Virginia Woolf to the present.

ENGL 576: Studies in Twentieth-Century American Fiction

1-3 Credits/Maximum of 12

Concentrated study in such major American writers as Hemingway, Faulkner, and Fitzgerald.

ENGL 577: Contemporary Fiction

1-3 Credits/Maximum of 12

Exploration of contemporary English language fiction.

ENGL 580: Comics and Graphic Novels

3 Credits

A survey of comics and graphic novels, primarily in English. This seminar provides a survey of the comics medium and an introduction to the academic field of Comics Studies. Students acquire facility in the structural and formal analysis of comics and sequential narrative, as well as knowledge of significant critical theories and methodologies within the field of Comics Studies. Assigned primary texts may be targeted to a particular genre, mode, historical period, or creator(s). While the course has a general focus on North America, students may also read texts from European, Japanese, and/or South American traditions (all of which will be taught in translation), not to exceed 25% of the course. Discussion of assigned texts will be situated within relevant scholarship and criticism (current and historical).

Cross-listed with: VSTUD 580

ENGL 582: Survey of Contemporary Literary Theory

3 Credits

Exploration of the dimensions of discourse as reflected in recent theories of rhetoric, poetics, and literary criticism.

ENGL 583: Studies in Critical Theory

1-3 Credits/Maximum of 12

Study of specific contemporary critical approaches to literature and application to English and/or American literary works.

ENGL 584: Studies in Rhetoric

1-3 Credits/Maximum of 12

Specific rhetorical problems, issues, or figures; topics will change from year to year.

ENGL 586: Readings in Literature

1-12 Credits

Programs of readings designed to meet specific needs of individual students.

ENGL 589: Studies in American Poetry

1-3 Credits/Maximum of 12

No description.

ENGL 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars that consist of a series of individual lectures by faculty, students, or outside speakers.

ENGL 596: Individual Studies

1-12 Credits/Maximum of 12

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

ENGL 597: Special Topics

1-9 Credits/Maximum of 18

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ENGL 597E: ****SPECIAL TOPICS****

3 Credits

ENGL 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ENGL 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ENGL 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in teaching and orientation to other selected aspects of the profession at The Pennsylvania State University.

Enterprise Architecture (EA)

EA 594: Research Topics

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small group basis.

EA 871: Enterprise Architecture Foundations I

3 Credits

Theoretical foundations and practice of enterprise architecture.

EA 872: Enterprise Architecture Foundations II

3 Credits

Develops additional capabilities for justifying Enterprise Architecture decision making.

Prerequisite: IST 871

EA 873: Enterprise Modeling

3 Credits

EA 873 is intended to provide an exposure to the foundational concepts and practices of effective enterprise modeling for EA. It explores the general and specific uses and effectiveness of architectural modeling approaches to describe an organization, and examines model-based tools to support, influence, and enable organization planning and decision-making. Emphasis is placed on understanding different modeling approaches, standards, and styles and in the use and interpretation of the models. Students will use enterprise modeling approaches and technology tools to develop descriptive models and understand the use and role of the enterprise architecture repository relative to reusability of models.

Prerequisite: EA 871; BA 809

EA 874: Enterprise Information Technology Architecture

3 Credits

Enterprise Architecture (EA) is the analysis and design of an enterprise in its current and future states from a strategy, business, and technology perspective. It helps to integrate and manage IT resources from a strategic and business-driven viewpoint. This course is intended to provide an exposure to the foundational concepts associated with each of the three primary layers of the enterprise information technology architecture stack: the enterprise applications architecture, the enterprise data architecture, and the enterprise technology infrastructure architecture. The course provides a fundamental understanding of the major components and functions of these layers in order to have a comprehensive understanding of the enterprise. Students will acquire knowledge about the key foundational aspects of these three technical layers of the enterprise architecture, learn what decisions need to be made in each layer, and learn how the layers interrelate. The perspectives covered in the class can be organized roughly by their level of analysis: overview of the enterprise technology stack, the enterprise application architecture, the enterprise data architecture, the enterprise technology infrastructure architecture, the enterprise security architecture, and current issues surrounding the enterprise information technology architecture. Students will compare and contrast the different layers of the enterprise information technology architecture and describe the interrelationships between the different layers of the enterprise information technology architecture.

Prerequisite: EA 871

EA 876: Architecting Enterprise Security and Risk Analysis

3 Credits/Maximum of 999

Analytical skills to produce credible, meaningful answers to critical risk management questions across enterprise architecture layers, including the supply chain. This course develops analytical skills to produce credible and meaningful answers to critical risk management questions across the enterprise architecture layers, including the supply chain. These extended enterprise risks originate from both natural and human-instigated hazards. Topics include critical thinking, enterprise analysis, risk assessment and associated analysis methods, risk communication, and risk control.

Prerequisite: EA 871

EA 878: Enterprise Architecture Leadership

3 Credits

Develops additional capabilities for leading, communicating, and implementing Enterprise Architecture. EA 878 Enterprise Architecture Leadership (3) Enterprise Architecture is recognized as a key catalyst that organizations can use to make progress towards a state of optimal operational efficiency whereby integrated information maximizes interactions between all stakeholders, both internal and external. Poor leadership, decision-making, and management are often cited as top reasons for enterprise architecture failure. This course is intended to synthesize major concepts presented in prior courses under the broad umbrellas of leadership and decision making. One of the major goals of a well-constructed enterprise architecture program is to facilitate the design and implementation of enterprise processes and systems that support the effective and efficient movement and dissemination of timely information across the enterprise. This information is critical to effective decision making and effective leadership. The course will deepen knowledge in the areas of effective EA leadership and management as well as in the areas of enterprise change management, effective communications, negotiation, organization political considerations, and interpersonal skills. An examination of research findings, the sharing of professional experiences, and the exploration of the characteristics of high-performing organizations and the kind of leadership that contributes to their performance will be core to the course. The perspectives covered in the class can be organized roughly by their level of analysis: EA leadership, EA decision making and strategic planning, and EA management and communication. For each general topic area, core readings are used to define standard vocabulary, concepts and relations, methods and criteria for evaluation, and implications for enterprise architecture. This course is designed to tie major concepts together and help the student understand how topics such as strategy, understanding organizations, enterprise modeling, enterprise technologies, etc. are interrelated and support effective decision making and leadership. Students will complete written assignments that focus on solidifying the understanding of the course content and participate in on-line discussions of EA topics with fellow students that will bring out real-world experiences in dealing with EA issues, challenges, and opportunities. Student teams will also participate in the analysis of case studies presented by industry experts, where students explore team dynamics, diagnostics, and management related to effective EA leadership. Students will also complete a semester long capstone team research project that is shaped by outcome discussions with respect to one or more areas covered in the course. The teams will present their final projects to the other members of the class at the end of the course. Key topic lectures will feature industry experts.

Entomology (ENT)

ENT 518: Insect Natural History

2 Credits

Experiential learning in field ecology highlighting insect dynamics, diversity and adaptations in terrestrial and aquatic systems. ENT 518 Insect Natural History (2) This is an experiential learning course in field ecology highlighting insect dynamics, diversity and adaptations in terrestrial and aquatic habitats. On site sessions will introduce ecological processes and natural history from a variety of habitats. Students will gain experience in field sampling and collection techniques, field notebook documentation, GPS use, and specimen databasing. Course is designed for those with limited field experience with insects. The course is intended for new graduate students in Entomology and Ecology. Insect adaptations across multiple habitats are observed in natural, agricultural, and forestry settings and the underlying ecological processes, anthropogenic interactions, and agro/forestry ecosystem management approaches are introduced. A team of faculty and staff from Entomology, and various outside instructors accompany students to various field sites to characterize the attributes, problems, and solutions relative to insect abundance and diversity in each setting. Students learn a wide variety of field sampling and collection methods, sight and key identification to order and major family levels, and standard curation and databasing techniques for arthropods collected for scientific purposes. Methods taught include a variety of light and pheromone trapping, pit traps, sticky traps, malaise traps, sweep netting, and sequential sampling. Curation methods including spreading and pinning, and alcohol and other preservation liquids and drying for immature insects are covered. Community diversity and Shannon Index and advanced statistical characterization of community complexity methods are applied to differing community data that are gathered by teams of students during their chosen mini projects as well as the aquatic community sampling results for Spring Creek vs. Cherry Run. A student collection is required, and at the end of the week each collection is evaluated and graded. Student field notebooks are kept throughout the course and these too are evaluated on the last day and then returned to the students for their continued use. The course is offered over a 5-day period at the end of the insect "active season" with collection and sampling activities requiring natural light or darkness for a variety of the species studied. For example, aquatic insect stream sampling must be done in daylight and collecting for mosquitoes and other insects must be done at dusk or at night with specialized traps. It is essential that this course be completed prior to night temperatures in the 50's and before the first killing frost.

Prerequisite: one of the following courses: ENT 425 , ENT 402W or ENT 410 , BIOL 436 , BIOL 446 , or ECLGY510

ENT 520: Frontiers in Insect Science

4 Credits

This graduate course is designed to provide an overview of the diversity of subjects that fall within the subject of entomology.

ENT 522: Critical Thinking and Professional Development in Entomology

6 Credits

This is a required course for Entomology graduate students focusing on developing the professional skills needed for a successful career in basic or applied research. ENT 522 Critical Thinking and Professional Development in Entomology (6) This required course for Entomology

graduate students focuses on developing the professional skills needed for a successful career in basic or applied research. Major topics addressed include (i) effective scientific communication, (ii) the mechanisms of research funding and peer review, (iii) critical evaluation of scientific evidence and arguments, (iv) basic principles of study design, and (v) research ethics and effective collaboration. Students engage in a variety of classroom activities - including lectures, discussions, and peer review of written assignments - and interact with instructors possessing expertise in each of the particular subject areas addressed, as well as with guest instructors working on cutting-edge topics in insect science and related fields. The course emphasizes practical application of the material presented to students' own research. Over the course of the semester, each student reviews relevant literature and develops and refines a research proposal based on their own scientific interests.

ENT 530: Seminar in Insect Science

1 Credits/Maximum of 4

Seminar in insect science. Topics range from insect phys & immunology to chemical ecology & epidemiology. ENT 530 Seminar in Insect Science (1 per semester/maximum of 4) This class will examine current issues in insect science. Topics for a semester will range from insect physiology, immunology and disease to population ecology, agroecology, and biodiversity. The intent is to generate useful discussions that will help participants advance their own understanding of the broader debate about various research topics in insect science. Specific topics will change each semester allowing students to choose those topics of the greatest interest. Topics will be proposed by faculty with expertise in specific areas. Seminal articles, peer-reviewed literature, government and industry reports, webpages and government regulatory documents will be selected by the faculty member proposing the topic to broaden and deepen student understanding of the topic area. Class participation is expected during discussions and oral presentations of topic areas will be expected.

Prerequisite: Prerequisite or concurrent: ENT 520

ENT 532: Insect Biodiversity and Evolution

4 Credits

This course is designed to teach students about insect taxonomy, evolutionary history, collection and preservation techniques, morphology, fossils, and natural history. Lab work focuses on adult forms, especially of insects found in Pennsylvania. Students learn how to handle specimens, use diagnostic keys, and identify insects by sight. Collecting techniques will be honed during field trips. Upon completion of this course students will be able to: (1) teach others how to collect, preserve, and transport insect specimens; (2) name and sight-identify all insect orders and several common local families; (3) label a generalized insect diagram with external anatomy terms; (4) draw a phylogenetic tree of relationships between insect orders; (5) demonstrate understanding of how to read a phylogenetic tree, what kinds of data are used to estimate trees, how those data are analyzed, and what it means to be monophyletic; (6) describe key innovations and life history strategies of major insect lineages; (7) solve taxonomic problems and describe how species and other taxa are named and described, i.e., understand the fundamentals of taxonomic practice; (8) name and briefly describe the latest developments in insect biodiversity research; (9) explain how hexapods inform us about biodiversity and influence our conservation decisions.

ENT 535: Statistical Techniques in Entomology

3 Credits

Research methods course covering experimental design and analysis in entomology, ecology, and the agricultural science. ENT 535 Statistical Techniques in Entomology (3) This natural sciences study design, analysis and interpretation course is for graduate students in ecological and agricultural sciences. The goal of this course is to provide students with the tools needed to conduct quantitative studies. The course focuses on study design and methodology by covering topics such as the relationship between study design and data types and data collection, and interpretation of results.

ENT 539: Chemical Ecology of Insects

3 Credits

Interactions of insects with environmental chemicals, including natural and synthetic compounds; host finding and other behavior modifying cues.

ENT 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

ENT 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses

ENT 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

ENT 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

ENT 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

No description.

ENT 602: Supervised Experience in College Teaching

1-3 Credits/Maximum of 6

Supervised experience in development of instructional materials, organizing and conducting lectures, laboratories, and evaluating students in Entomology courses (1-599).

ENT 603: Foreign Academic Experience

1-12 Credits/Maximum of 12

Foreign study and/or research constituting progress toward the degree at a foreign university.

Entrepreneurship (ENTR)

ENTR 500: Innovation and Entrepreneurship

1-3 Credits

Practical and theoretical insights into analyzing a new business opportunity that you have created. ENTR 500 Innovation and Entrepreneurship (1-3) In this course, you will explore the individual, group, organizational, and inter-organizational levels of analysis. You will gain both practical and theoretical insights from the course as well as creativity, innovation, and entrepreneurship by focusing on the initial identification and quantification of an innovative opportunity and presentation to stakeholders.

ENTR 502: Business Modeling and New Venture Creation

2-3 Credits

ENTR 502 focuses on the process of launching a new venture, in a corporate setting or as a new startup, including identifying a problem or market opportunity, developing business models, forming a team, financing, analyzing markets, assessing the competitive environment, and planning to acquire leadership talent. A business model canvas framework is used as the primary tool for describing, analyzing, and designing business models. In essence, this course identifies and defines the key components necessary to develop a formal business plan. Concepts and techniques explore new venture creation business strategies, including different approaches for business model development. Students will gain insight into how to translate new ideas into viable projects and business ventures. Students will learn the importance of understanding markets, customer segments, and the competitive landscape, as well as how to obtain funding for new ventures. Lastly, the issue of how to acquire leadership and human resource talent to make a new venture viable over time is investigated.

ENTR 503: Garber Venture Capital Practicum

1-2 Credits/Maximum of 2

Structure investment opportunities, conduct due diligence, and potentially invest funds from the Smeal College of Business Garber Venture Capital Fund.

ENTR 504: Essentials of Business Planning

2 Credits

Create a concise and coherent business plan for a start-up or a new corporate initiative.

ENTR 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

ENTR 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or semester.

ENTR 810: Emerging Trends, Technology, and Corporate Innovation

3 Credits

This course explores emerging trends and disruptors in technology and industry that create new markets and influence decision making, product development, business models, and business practices associated with innovation. This course covers the major areas of concern that affect disruptive innovation and examine the role of disruptive innovation in fostering new business ventures. Specific examples of disruptive innovation will be analyzed. Students will gain insight into how breakthroughs in technology, science, and business modeling play out in establishing new products and markets. Students will be exposed to, and investigate, the best practices of key industries (e.g., healthcare, manufacturing, banking, retail, etc.) and organization functions (e.g., marketing, finance, research and development, sales, etc.) as they relate to fostering and supporting innovation and entrepreneurship in a business enterprise. Students will learn the importance of taking an interdisciplinary approach to thinking about and planning innovation projects and programs, in terms of both internal and external forces.

ENTR 820: Corporate Innovation Strategies and Entrepreneurial Methods

3 Credits

This course is designed to survey and explore the methods used to foster innovation and entrepreneurship in a corporate setting. Emphasis will be placed on the methods used in organizations to foster creativity, innovation, and new venture creation. This course covers both tactical and strategic approaches to innovation and entrepreneurship, and examines these in multiple contexts, including technology, business process, product, and strategy. Furthermore, the course will expand on widely accepted frameworks and perspectives for managing innovation, such as agile product development, and the lean startup approach. Students will also delve into the more abstract notion of how to create and enable an organizational culture of innovation, manage conflict, and negotiate agreements effectively. Lastly, a final objective of the class is to ensure students understand how to protect and manage intellectual property.

ENTR 830: Entrepreneurial Business Planning and Strategy Execution

3 Credits

This course is designed to allow students to integrate, synthesize, and apply what they have learned in prior courses, and gain further insight into two major drivers of business success, innovation and entrepreneurship. As such, this course will serve as a culminating experience in innovation and entrepreneurship learning. The strategic implications of innovation are examined, including an emphasis on how to be critically aware of factors which may inhibit or facilitate innovation in an organization or team. Students will gain insight into how to write a business case to clearly and effectively outline the pros and cons of taking a specific course of action. Business case development will also rely on how to perform cost-benefit analysis. The course will also teach students the key issues, elements, and approaches associated with translating a sound business model into a compelling business plan.

(preferably for a new venture). The key elements of a formal business plan will be explored in-depth, including how to write an executive summary, product description, market assessment, team formation plan, pricing models, sales forecasting, financial planning, and implementation planning. The course will emphasize the context and issues associated with developing a formal business plan, developing and understanding business models, and using the planning process to formulate and execute implementation strategies. Various implementation approaches will be compared and contrasted. The course will also enable students to construct business models and plans that present key points in a direct, clear, and appealing way.

Prerequisite: ENTR 810 and ENTR 502 and ENTR 820

Environmental Engineering (ENVE)

ENVE 540: Biodegradation and Bioremediation

3 Credits

Microbial degradation and transformation of organic and inorganic contaminants. Principles of current bioremediation technologies for soil and groundwater contaminants.

Prerequisite: ENVE 411

ENVE 550: Chemical Fate and Transport

3 Credits

Chemical fate and transport modeling of environmental systems as applied to ecological systems, treatment technologies, and human health exposure assessments. ENVE 550

ENVE 569: Environmental Risk Assessment

3 Credits

Overview of ecological and human risk, including hazard identification, dose response, exposure assessment, and risk characterization.

ENVE 591: Research Methods in Environmental Engineering

1 Credits

Preparing a research proposal, critical reading of literature, understanding ethics in research, experimental design, data analysis and presentation. ENVE 591 Research Methods in Environmental Engineering (1) The goal of this course is to provide information for graduate students regarding the pertinent research methodology that applies to their research projects in environmental engineering and sciences. Understanding research methods is the key to generating valid research results which can be used to guide the design, operation, and evaluation of environmental treatment assessment, treatment, and control operations and facilities. Valid research results also require proper quality control and quality assurance plans and ethical research conduct and practices. This course will provide foundational information regarding how to conduct an effective literature review, set up research hypotheses, prepare research experiments, collect and analyze research data, discuss research results, and summarize research findings. For research result dissemination, this course will teach students how to prepare and submit research manuscripts for publication in scientific journals and technical conference proceedings. Patent application preparation also will be briefly introduced in the course instruction. The course also will provide

two hours of instruction on research/professional ethics, focusing especially on plagiarism and data falsification/fabrication.

Prerequisite: E P C590

ENVE 594: Research Topics

1-18 Credits/Maximum of 18

Supervised student activities on research projects identified on an individual or small-group basis.

ENVE 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

Environmental Pollution Control (EPC)

EPC 590: Colloquium

1 Credits

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

EPC 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

Epidemiology (EPID)

EPID 595: Internship

1-18 Credits/Maximum of 18

Supervised, research-oriented, off-campus, nongroup instruction, including field experiences, practicums, or internships. Written and oral critique of activity required

EPID 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including non-thesis research, that are supervised on an individual basis and which fall outside the scope of formal courses.

EPID 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 0

EPID 611: Ph.D. Dissertation Part-Time

0 Credits/Maximum of 999

No description.

Finance (FIN)

FIN 506: Portfolio Theory and Policy

3 Credits

Rigorous examination and analysis of asset-holder behavior under conditions of risk and uncertainty.

FIN 531: Financial Management

3 Credits

An intensive examination of techniques available to aid the financial manager in decision making.

Prerequisite: ACCTG511 or ACCTG512 ; B A 533 , SC&IS535

FIN 532: Financial Decision Processes

3 Credits

Financial decision making under uncertainty; positive and normative models and current issues in financial management.

FIN 550: Financial Analysis and Valuation

2 Credits

Builds upon and reinforces the theoretical and institutional finance frameworks learned in introductory business finance.

Prerequisite: B A 531

FIN 570: Financial Modeling

2 Credits

Introduces and applies equity, debt, derivative models and computational techniques using Excel and Visual Basic for Applications. FIN 570 Financial Modeling (2) This course focuses on developing models, making calculations, solving real-world problems, and applying theories. Nearly all the theories applied in this course are from the area of investment management (not corporate finance). However, the concepts, tools, and skills are immediately applicable to corporate finance (such as real option valuation, treasury and cash management, capital budgeting and cost of capital calculation, analysis of M&A and financial restructuring, financial statement and logistical simulations, and programming of routine corporate finance problems.

FIN 577: Financial Engineering and Corporate Strategy

1-3 Credits

This course provides an overview of some of the important issues and problems encountered in recognizing exposures to risk in both financial and non-financial firms, and provides students with a strategic decision-making perspective. Considerable importance will be placed on how exposures to risk affect the firm, and how risk exposures can be re-engineered to enhance firm value. An overview of financial markets and the major sources of risk exposure to the firm will be provided. Measurement of risk exposures will be discussed and various methods of managing and controlling risk will be explored. Tools of the financial engineer 'futures, options, swaps, and other derivatives' will be explained and applications will be demonstrated.

RECOMMENDED PREPARATIONS: Smeal M.B.A. Core Courses

FIN 588: Seminar in Corporate Finance Research

3 Credits

FIN 588 will provide students with a foundational doctoral-level understanding of key concepts within corporate finance such as contracting frictions, financing, investment, M&A, and corporate governance. Students will be required to demonstrate mastery of both the conceptual and methodological underpinnings of each core concept. Upon completing the course, students should be well-equipped to teach an introductory undergraduate or masters-level corporate finance course at a four-year college or Ph.D.-granting institution.

FIN 590: Colloquium

1-3 Credits/Maximum of 3

Continuing seminars which consist of a series of individual lectures by faculty, students, or outside speakers.

FIN 596: Individual Studies

1-9 Credits/Maximum of 9

Creative projects, including nonthesis research, which are supervised on an individual basis and which fall outside the scope of formal courses.

FIN 597: Special Topics

1-9 Credits/Maximum of 9

Formal courses given on a topical or special interest subject which may be offered infrequently; several different topics may be taught in one year or term.

FIN 599: Foreign Study--Finance

1-12 Credits/Maximum of 12

FULL-TIME GRADUATE-LEVEL FOREIGN STUDY AT AN OVERSEAS INSTITUTION WITH WHOM LINKAGES HAVE BEEN ESTABLISHED.

Prerequisite: acceptance in established exchange program International Cultures (IL)

FIN 600: Thesis Research

1-15 Credits/Maximum of 999

No description.

FIN 601: Ph.D. Dissertation Full-Time

0 Credits/Maximum of 999

NO DESCRIPTION.

FIN 610: Thesis Research Off Campus

1-15 Credits/Maximum of 999

No description.

FIN 805: Multinational Managerial Finance

3 Credits
