Taking responsibility for our products at every stage

We take responsibility for our products throughout their lifecycle—including the materials we use, the way we make them, how we package and ship them, and how we focus on reducing our impact on the environment throughout their life.

We sell millions of products. So making even small adjustments can have a meaningful impact.

Carbon footprint

We continue to work on reducing our carbon footprint by focusing on making our products more efficient, using renewable energy, and reducing our energy use. We are also working on reducing our carbon footprint by using recycled materials and reducing our energy use. We are committed to our carbon footprint reduction goals and will continue to work on reducing our carbon footprint throughout the life cycle of our products.

iPhone 14 Pro life cycle carbon emissions

- 81% Production
- 3% Distribution
- 1% Use
- 1% End-of-life recycling

Make

Apple's Supplier Code of Conduct is designed to ensure the production of our products in a way that respects the environment and the well-being of our suppliers' workforce and the communities in which they operate.

Working with our suppliers to identify and work to reduce the environmental impact of our products is a key part of our commitment to our customers. Our suppliers are responsible for the environmental performance of our products, and we work with them to ensure that they are meeting our requirements. This includes working with our suppliers to reduce their carbon footprint, improve their energy efficiency, and reduce their waste.

Greener chemicals

Apple is committed to reducing the use of hazardous chemicals in our products. We have implemented a number of measures to reduce the use of hazardous chemicals, including:

- Reducing the use of hazardous chemicals in our products.
- Replacing hazardous chemicals with safer alternatives.
- Improving the efficiency of our manufacturing processes.
- Working with our suppliers to reduce their use of hazardous chemicals.

 See Apple's GreenScreen® report for more information.

Zero Waste to Landfill

Apple is committed to achieving zero waste to landfill. We have implemented a number of measures to reduce our waste, including:

- Reducing the amount of waste we generate.
- Recycling as much of our waste as possible.
- Composting our food and yard waste.
- Donating our excess inventory.

 See Apple's Waste to Wealth report for more information.

Supplier energy use

Apple is committed to reducing the carbon footprint of our products. We have implemented a number of measures to reduce our supplier energy use, including:

- Working with our suppliers to improve their energy efficiency.
- Encouraging our suppliers to use renewable energy.
- Reducing the energy consumption of our products.

 See Apple's Supplier Environmental Report for more information.

Package and Ship

iPhone 14 packaging does not use any plastic wrap. The iPhone 14 packaging is made from 100% recycled cardboard and is made from 100% recycled cardboard. The iPhone 14 packaging is made from 100% recycled cardboard.

Apple's iPhone 14 packaging is made from 100% recycled cardboard and is made from 100% recycled cardboard. The iPhone 14 packaging is made from 100% recycled cardboard. The iPhone 14 packaging is made from 100% recycled cardboard.

95%

of iPhone 14 packaging¹² is made from 100% recycled cardboard. The iPhone 14 packaging is made from 100% recycled cardboard.

74%

of the cardboard in iPhone 14 packaging is made from 100% recycled cardboard.

100%

of the virgin wood fiber in iPhone 14 packaging is made from 100% recycled cardboard. The iPhone 14 packaging is made from 100% recycled cardboard.

Use

iPhone 14 Pro uses a new design that requires less energy to produce and use.¹³

With its new design, iPhone 14 Pro uses less energy to produce and use. It also uses less energy to transport and use. This means that iPhone 14 Pro is more energy efficient than previous models. The U.S. Department of Energy's Energy Conservation Program (ECP) estimates that iPhone 14 Pro uses 15% less energy to produce and use than the iPhone 13 Pro. This is a significant improvement, especially when you consider that the iPhone 14 Pro is designed to last longer than previous models. This means that you can use your iPhone 14 Pro for a longer period of time, which helps to reduce the overall environmental impact of the device.

Energy efficiency

As a result of its new design, iPhone 14 Pro uses 15% less energy to produce and use than the iPhone 13 Pro. This is a significant improvement, especially when you consider that the iPhone 14 Pro is designed to last longer than previous models. This means that you can use your iPhone 14 Pro for a longer period of time, which helps to reduce the overall environmental impact of the device.

U.S. Department of Energy standard

Designed to last

iPhone 14 Pro is designed to last longer than previous models. It features a new design that is more durable and resistant to wear and tear. This means that you can use your iPhone 14 Pro for a longer period of time, which helps to reduce the overall environmental impact of the device.

Made with smarter chemistry

With its new design, iPhone 14 Pro uses less energy to produce and use. It also uses less energy to transport and use. This means that iPhone 14 Pro is more energy efficient than previous models. The U.S. Department of Energy's Energy Conservation Program (ECP) estimates that iPhone 14 Pro uses 15% less energy to produce and use than the iPhone 13 Pro. This is a significant improvement, especially when you consider that the iPhone 14 Pro is designed to last longer than previous models. This means that you can use your iPhone 14 Pro for a longer period of time, which helps to reduce the overall environmental impact of the device.

Definitions

Bio-based plastics: Bio-based plastics are plastics derived from biological sources, such as corn, sugarcane, or wood. They are often used as alternatives to petroleum-based plastics.

Carbon footprint: Carbon footprint is the total amount of greenhouse gases (including carbon dioxide, methane, and nitrous oxide) that are produced by an individual, organization, or product throughout its lifecycle. It is measured in terms of carbon dioxide equivalents (CO₂e).

Production: Production is the process of creating goods or services. It involves the transformation of raw materials into finished products through various manufacturing processes.

Transport: Transport is the movement of goods or people from one location to another. It can be done through various modes of transport, including air, land, and sea.

Use: Use refers to the consumption of a product or service by an individual or organization. It includes the energy and resources required to use the product or service.

End-of-life processing is the process of managing the disposal of products at the end of their useful life. It can involve recycling, incineration, or landfilling.

End-of-life processing: End-of-life processing is the process of managing the disposal of products at the end of their useful life. It can involve recycling, incineration, or landfilling.

Recycled materials: Recycled materials are materials that have been processed from waste and are used to create new products. They help reduce the need for virgin materials and reduce environmental impact.

Renewable materials: Renewable materials are materials that are derived from natural resources that can be replenished over time. Examples include wood, cotton, and bamboo.

Supplier Clean Energy Program: The Supplier Clean Energy Program is a commitment to source clean energy for our operations. It involves working with suppliers to ensure that the energy used in their production processes is sourced from renewable or low-carbon sources.
