

13-inch MacBook Air

Environmental Report

Model MC503, MC504

Date introduced

October 20, 2010

Environmental Status Report

The 13-inch MacBook Air is designed with the following features to reduce environmental impact:

- Arsenic-free display glass
- Brominated flame retardant-free
- Highly recyclable aluminum enclosure
- Mercury-free LED display
- PVC-free¹

Meets ENERGY STAR® Version 5.0 requirements

13-inch MacBook Air achieved a Gold rating from EPEAT²

Apple and the Environment

Apple believes that improving the environmental performance of our business starts with our products. The careful environmental management of our products throughout their life cycles includes controlling the quantity and type of materials used in their manufacture, improving their energy efficiency, and designing them for better recyclability. The information below details the environmental performance of the 13-inch MacBook Air as it relates to climate change, energy efficiency, material efficiency, and restricted substances.

Climate Change

Greenhouse gas emissions have an impact on the planet's balance of land, ocean, and air temperature. Most of Apple's corporate greenhouse gas emissions come from the production, transport, use, and recycling of its products. Apple seeks to minimize greenhouse gas emissions by setting stringent design-related goals for material and energy efficiency. The chart below provides the estimated greenhouse gas emissions for 13-inch MacBook Air over its life cycle.

Greenhouse Gas Emissions for 13-inch MacBook Air

Total greenhouse gas emissions: 330 kg CO₂e

Energy Efficiency

Because one of the largest portions of product-related greenhouse gas emissions results from its use, energy efficiency is a key part of each product's design. Apple products use power-efficient components and software that intelligently powers them down during periods of inactivity. The result is that the 13-inch MacBook Air is energy efficient right out of the box.

The 13-inch MacBook Air outperforms the stringent requirements of the ENERGY STAR Program Requirements for Computers Version 5.0. It has been designed to be even more efficient than previous models, consuming 13 percent less energy than the original MacBook Air. The following table details power consumed in different use modes.

Power Consumption for 13-inch MacBook Air

Mode	100V	115V	230V
Power adapter, no-load	0.11W	0.11W	0.14W
Off	0.24W	0.24W	0.29W
Sleep	0.85W	0.88W	0.92W
Idle—Display off / on	4.4W / 9.7W	4.4W / 9.5W	4.7W / 10.2W
Power adapter efficiency	87.6%	87.6%	86.4%

At only 10.2W in idle with the display on, the 13-inch MacBook Air is extremely energy efficient. To put that in perspective, it takes about six 13-inch MacBook Air computers in idle with the display on to equal the power consumed by a single household 60W lightbulb.

Battery chemistry

Lithium-ion polymer, 50 Whr; free of lead, cadmium, and mercury

The 13-inch MacBook Air packaging is extremely material efficient, allowing at least 15 percent more units than the original MacBook Air to fit in each shipping container.

Material Efficiency

Apple’s ultracompact product and packaging designs lead the industry in material efficiency. Reducing the material footprint of a product helps maximize shipping efficiency. It also helps reduce energy consumed during production and material waste generated at the end of the product’s life. Waste is further minimized by using batteries that last up to three times longer than typical notebook batteries. The 13-inch MacBook Air enclosure is made of aluminum and other materials highly desired by recyclers. The chart below details the materials used in this model.

Material Use for 13-inch MacBook Air

Packaging

The packaging for the 13-inch MacBook Air uses corrugated cardboard made from over 30 percent post-consumer recycled content and molded fiber made entirely from post-consumer recycled content. In addition, the packaging is extremely material efficient, allowing at least 15 percent more units to fit per shipping container than the original MacBook Air. The following table details the materials used in its packaging.

Packaging Breakdown for 13-inch MacBook Air (U.S. Configurations)

Material	Retail box	Retail and shipping box
Paper (corrugate, paperboard)	385g	723g
Molded fiber	—	189g
High-impact polystyrene	150g	150g
Other plastics	27g	27g

Restricted Substances

Apple has long taken the lead in restricting harmful substances from its products and packaging. As part of this strategy, all Apple products comply with the strict European Directive on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment, also known as the RoHS Directive. Examples of materials restricted by RoHS include lead, mercury, cadmium, hexavalent chromium, and the brominated flame retardants (BFRs) PBB and PBDE. The 13-inch MacBook Air goes even further than the requirements of RoHS Directive by incorporating the following more aggressive restrictions:

- Mercury-free display
- Arsenic-free display glass
- BFR-free
- Polyvinyl chloride (PVC)–free internal cables and power adapter DC cable
- PVC-free AC power cord for United States, Canada, Mexico, Colombia, El Salvador, Guatemala, Panama, Peru, Puerto Rico, U.S. Virgin Islands, and Venezuela

Recycling

Through ultra-efficient design and use of highly recyclable materials, Apple has minimized material waste at the product's end of life. In addition, Apple offers and participates in various product take-back and recycling programs in 95 percent of the regions where Apple products are sold. All products are processed in the country or region in which they are collected. For more information on how to take advantage of these programs, visit www.apple.com/recycling/.

Definitions

Electronic Product Environmental Assessment Tool (EPEAT): A program that ranks computers and displays based on environmental attributes in accordance with IEEE 1680. For more information, visit www.epeat.net.

Greenhouse gas emissions: Estimated emissions are calculated in accordance with guidelines and requirements as specified by ISO 14040 and ISO 14044. Calculation includes emissions from the following life-cycle phases contributing to Global Warming Potential (GWP 100 years) in CO₂ equivalency factors (CO₂e):

- **Production:** Includes the extraction, production, and transport of raw materials and the manufacture of the product, as well as product packaging.
- **Transport:** Includes air and sea transportation of the finished product and its associated packaging from the manufacturing site to continental distribution hubs. Transport of products from distribution hubs to the end customer is not included.
- **Use:** User power consumption assumes a four-year period. Consumption patterns are modeled according to European Commission and U.S. Environmental Protection Agency computer eco-design studies. Geographic differences in the power grid mix have been accounted for at a continental level.
- **Recycling:** Includes transportation from collection hubs to recycling centers and the energy used in mechanical separation and shredding of parts.

Energy efficiency terms: The energy values in this report are based on the ENERGY STAR Program Requirements for Computers Version 5.0 and/or ENERGY STAR Program Requirements for Single Voltage External AC-DC and AC-AC Power Supplies Version 2.0. For more information, visit www.energystar.gov.

- **Off:** Lowest power mode of the system when the battery is fully charged and the system is shut down. Also referred to as Standby.
- **Idle—Display on:** System is on and has completed loading Mac OS X; the display is set to its full brightness.
- **Idle—Display off:** System is on and has completed loading Mac OS X; the display is set to sleep.
- **Sleep:** Low power state that is entered automatically after 10 minutes of inactivity (default), or by selecting Sleep from the Apple menu. Wake-on-LAN is enabled.
- **Power adapter, no-load:** Condition in which the power adapter is connected to AC power, but not connected to the system.
- **Power adapter efficiency:** Average of the power adapter's measured efficiency when tested at 100 percent, 75 percent, 50 percent, and 25 percent of the power adapter's rated current.

Restricted substances: Apple defines a material as BFR-free and PVC-free if it contains less than 900 parts per million (ppm) of bromine and chlorine.

1. PVC-free AC power cord available in the United States, Canada, Mexico, Colombia, El Salvador, Guatemala, Panama, Peru, Puerto Rico, U.S. Virgin Islands, and Venezuela.
2. 13-inch MacBook Air achieved a Gold rating from EPEAT in the United States, Canada, France, Germany, and the UK.
