

# 27-inch iMac

## Environmental Report

Model MC813, MC814

### Date introduced

May 3, 2011

### Environmental Status Report

27-inch iMac is designed with the following features to reduce environmental impact:

- Arsenic-free display glass
- Brominated flame retardant-free
- Energy Efficient Ethernet enabled<sup>1</sup>
- Highly recyclable aluminum and glass enclosure
- Mercury-free LED-backlit display
- PVC-free<sup>2</sup>

Meets ENERGY STAR® Version 5.2 requirements

Achieves a Gold rating from EPEAT<sup>3</sup>

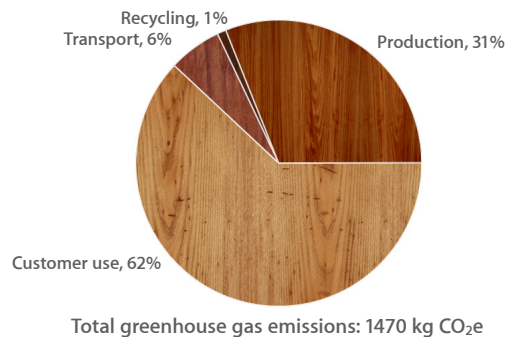

## Apple and the Environment

Apple believes that improving the environmental performance of our business starts with our products. The careful environmental management of our products throughout their life cycles includes controlling the quantity and type of materials used in their manufacture, improving their energy efficiency, and designing them for better recyclability. The information below details the environmental performance of the 27-inch iMac as it relates to climate change, energy efficiency, restricted substances, and material efficiency.

## Climate Change

Greenhouse gas emissions have an impact on the planet's balance of land, ocean, and air temperatures. Most of Apple's corporate greenhouse gas emissions come from the production, transport, use, and recycling of its products. Apple seeks to minimize greenhouse gas emissions by setting stringent design-related goals for material and energy efficiency. The chart below provides the estimated greenhouse gas emissions for the 27-inch iMac over its life cycle.

### Greenhouse Gas Emissions for 27-inch iMac

## Energy Efficiency

Because the largest portion of product-related greenhouse gas emissions results from its use, energy efficiency is a key part of each product's design. Apple products use power-efficient components and software that can intelligently power them down during periods of inactivity. The result is that the iMac is energy efficient right out of the box.

The 27-inch iMac outperforms the stringent requirements of ENERGY STAR Program Requirements for Computers Version 5.2. Designed to be even more efficient than previous models, it consumes at least 85 percent less power in off mode than the original 15-inch iMac. The following table details the power consumed in different use modes.

### Power Consumption for 27-inch iMac

Mode	100V	115V	230V
Off	0.48W	0.40W	0.45W
Sleep	1.30W	1.27W	1.36W
Idle-Display off / on	42.2W / 143W	42.4W / 143W	42.5W / 140W
Power supply efficiency	87%	87%	87%

## Continuous improvement of iMac design

The 27-inch iMac retail packaging consumes 21 percent less volume and weighs 18 percent less than the original 15-inch iMac packaging.

## Material Efficiency

Apple's ultracompact product and packaging designs lead the industry in material efficiency. Reducing the material footprint of a product helps maximize shipping efficiency. It also helps reduce energy consumed during production as well as material waste generated at the end of the product's life. The enclosure of the 27-inch iMac is made of aluminum and other materials that are highly desired by recyclers. The chart below details the materials used in this model.

### Material Use for 27-inch iMac

## Packaging

The packaging for the 27-inch iMac uses corrugated cardboard made with a minimum of 25 percent post-consumer recycled content. In addition, its packaging is extremely material efficient, consuming 21 percent less volume than the original 15-inch iMac. The following table details the materials used in its packaging.

### Packaging Breakdown for 27-inch iMac

Material	Retail box	Retail and shipping box
Paper (corrugate, paperboard)	2320g	4120g
Expanded polystyrene	570g	570g
Polypropylene (film, fabric)	79g	79g
Other plastics	31g	31g

## Restricted Substances

Apple has long taken the lead in restricting harmful substances from its products and packaging. As part of this strategy, all Apple products comply with the strict European Directive on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment, also known as the RoHS Directive. Examples of materials restricted by RoHS include lead, mercury, cadmium, hexavalent chromium, and the brominated flame retardants (BFRs) PBB and PBDE. The 27-inch iMac goes even further than the requirements of the RoHS Directive by incorporating the following more aggressive restrictions:

- Arsenic-free display glass
- BFR-free
- Mercury-free LED-backlit display
- Polyvinyl chloride (PVC)-free internal cables
- PVC-free AC power cord for the United States, Canada, Mexico, Colombia, El Salvador, Guatemala, Panama, Peru, Puerto Rico, U.S. Virgin Islands, and Venezuela

## Recycling

Through ultra-efficient design and the use of highly recyclable materials, Apple has minimized material waste at the product's end of life. In addition, Apple offers and participates in various product take-back and recycling programs in 95 percent of the regions where Apple products are sold. All products are processed in the country or region in which they are collected. For more information on how to take advantage of these programs, visit [www.apple.com/recycling/](http://www.apple.com/recycling/).

---

## Definitions

**Electronic Product Environmental Assessment Tool (EPEAT):** A program that ranks computers and displays based on environmental attributes in accordance with IEEE 1680.1-2009. For more information, visit [www.epeat.net](http://www.epeat.net).

**Greenhouse gas emissions:** Estimated emissions are calculated in accordance with guidelines and requirements as specified by ISO 14040 and ISO 14044. Calculation includes emissions from the following life-cycle phases contributing to Global Warming Potential (GWP 100 years) in CO<sub>2</sub> equivalency factors (CO<sub>2</sub>e):

- **Production:** Includes the extraction, production, and transport of raw materials as well as the manufacture of the product and product packaging.
- **Transport:** Includes air and sea transportation of the finished product and its associated packaging from the manufacturing site to continental distribution hubs. Transport of products from distribution hubs to the end customer is not included.
- **Use:** User power consumption assumes a four-year period. Consumption patterns are modeled according to European Commission and U.S. Environmental Protection Agency computer eco-design studies. Geographic differences in the power grid mix have been accounted for at a continental level.
- **Recycling:** Includes transportation from collection hubs to recycling centers as well as the energy used in mechanical separation and shredding of parts.

**Energy efficiency terms:** The energy values in this report are based on the ENERGY STAR Program Requirements for Computers Version 5.2 for integrated desktop computers. For more information, visit [www.energystar.gov](http://www.energystar.gov).

- **Off:** Lowest power mode of the system when iMac is shut down. Also referred to as Standby.
- **Sleep:** Low power state that is entered automatically after 10 minutes of inactivity (default), or by selecting Sleep from the Apple menu. Wake-on-LAN is enabled.
- **Idle-Display off:** System is on and has completed loading Mac OS X; the display is set to sleep.
- **Idle-Display on:** System is on and has completed loading Mac OS X; the display is set to its full brightness.
- **Power supply efficiency:** Average of the power supply's measured efficiency when tested at 100 percent, 50 percent, and 20 percent of the power supply's rated output power.

**Restricted substances:** Apple defines a material as BFR-free and PVC-free if it contains less than 900 parts per million (ppm) of bromine and of chlorine.

1. Energy Efficient Ethernet requires a compliant switch to enter low-power mode.
2. PVC-free AC power cord is available in the United States, Canada, Mexico, Colombia, El Salvador, Guatemala, Panama, Peru, Puerto Rico, U.S. Virgin Islands, and Venezuela. All other countries have PVC-free internal cables only.
3. 27-inch iMac achieved a Gold rating from EPEAT in the United States and Canada.
