

# Product Environmental Report

## 27-inch iMac with Retina 5K display

Date introduced  
August 4, 2020

### Made with better materials

**100%**

recycled tin in the solder of the main logic board

**60%**

recycled plastic in multiple components

### Energy efficient

**64%**

less energy consumed than the ENERGY STAR® energy efficiency limit

### Responsible packaging

**100%**

of the wood fiber comes from recycled and responsible sources

### Tackling climate change

**100%**

of final assembly suppliers for 27-inch iMac with Retina 5K display have committed to 100% renewable energy for Apple production

### Smarter chemistry<sup>1</sup>

- Arsenic-free display glass
- Mercury-free LED-backlit display
- Brominated flame retardant-free
- PVC-free
- Beryllium-free

### Apple Trade In

Return your device through Apple Trade In and we'll give it a new life or recycle it for free.

## Enclosure made with low-carbon aluminum

# Taking responsibility for our products at every stage

We take responsibility for our products throughout their life cycles—including the materials they are made of, the people who assemble them, and how they are recycled at end of life. And we focus on the areas where we can make the biggest difference for our planet: reducing our impact on climate change, conserving important resources, and using safer materials.

**We sell millions of products. So making even small adjustments can have a meaningful impact.**

## Carbon footprint

We continue to make progress in reducing Apple's contribution to climate change—by focusing on making energy-efficient products with renewable or recycled materials and with renewable energy. Use of more power-efficient graphics drove down the energy needed to power the device, helping reduce the carbon footprint of the 27-inch iMac with Retina 5K display by 12 percent compared to the previous generation.<sup>4</sup> And the low-carbon aluminum used in the enclosure is smelted using hydroelectricity rather than fossil fuels, which reduces the associated greenhouse gas emissions by 68 percent.<sup>5</sup> Apple is committed to using carbon life cycle assessments to identify opportunities to drive down product greenhouse gas emissions.

## 27-inch iMac with Retina 5K display life cycle carbon emissions

46%	Production
8%	Transport
45%	Use
<1%	End-of-life processing

# Source Materials

The tin in the solder of the main logic board is 100 percent recycled.

To conserve important resources, we work to reduce the material we use and aim to one day source only recycled or renewable materials in our products. And as we make this transition, we remain committed to the responsible sourcing of primary materials. We map many materials, some to the mineral source, and establish the strictest standards for smelters and refiners. We're proud to be recognized as a worldwide leader in the responsible sourcing of minerals in our products. Our product designs also consider the safety of those who make, use, and recycle our products, restricting the use of hundreds of harmful substances. Our standards go beyond what's required by law to protect people and the environment.

## Aluminum

Our focus on Apple's carbon footprint extends to the materials we source. So we prioritized low-carbon aluminum that was smelted using 100 percent hydroelectricity rather than fossil fuels for the enclosure, where the majority of the aluminum is located.

## Plastic

We're transitioning to plastics from renewable or recycled sources as alternatives to fossil fuel-based plastics. For the 27-inch iMac with Retina 5K display, we use 60 percent recycled plastic in multiple components.

## Tin

We use 100 percent recycled tin in the solder of the main logic board. Apple also requires 100 percent of identified tin, tantalum, tungsten, gold, and cobalt smelters and refiners to participate in third-party audits.<sup>6</sup>

## Smarter chemistry

The 27-inch iMac with Retina 5K display is free of harmful substances like beryllium, brominated flame retardants, PVC, phthalates, mercury in the display, and arsenic in the display glass.<sup>1</sup> And 100 percent of the materials in the 27-inch iMac with Retina 5K display are covered by our [Regulated Substances Specification](#). We go beyond what's required by aiming to understand the nonregulated substances in every part of every product—an effort that requires an industry-leading level of transparency through the entire supply chain. We consistently identify the makeup of over 75 percent by mass of Mac devices.

# Make

The Apple Supplier Code of Conduct sets strict standards for the protection of people in our supply chain and the planet that we all share. Every year, we assess our suppliers' performance in upholding the standards required by our Code.

We work closely with our suppliers to provide safe and healthy workplaces where people are treated with dignity and respect, and to reduce their environmental impact. Our requirements apply across our supply chain, and include the responsible sourcing of materials. From the strong foundation set by our Code, we go further—from helping suppliers transition to renewable energy, to providing educational opportunities for their employees, to supporting final assembly suppliers in reducing waste. All final assembly sites for iPhone, iPad, Mac, Apple Watch, AirPods, HomePod, and Apple TV have been certified as UL Zero Waste facilities.<sup>7</sup>

## Greener chemicals

All 27-inch iMac with Retina 5K display final assembly supplier sites use safer cleaners and degreasers in their manufacturing processes, as determined by the GreenScreen® assessment method.<sup>8</sup>

## Zero Waste to Landfill

The 27-inch iMac with Retina 5K display final assembly supplier sites do not generate any waste sent to landfill.<sup>7</sup>

## Supplier energy use

All 27-inch iMac with Retina 5K display final assembly suppliers are transitioning to 100 percent renewable energy for Apple production.

## Package and Ship

All virgin wood fiber in our packaging comes from responsibly managed forests.

To improve our packaging, we are working to eliminate plastics, increase recycled content, and use less packaging overall. All of the wood fiber in our packaging is either recycled or comes from responsibly managed forests.<sup>9</sup> And we have protected or created enough responsibly managed forests to cover all the virgin wood fiber we use in our packaging.<sup>10</sup> This ensures working forests are able to regrow and continue to clean our air and purify our water. The 27-inch iMac with Retina 5K display packaging uses expanded polystyrene foam, a material we are actively looking to replace in our packaging.

**64%**

of the packaging<sup>11</sup>  
is fiber based

**58%**

recycled content in  
fiber packaging

**100%**

of the virgin wood  
fiber in the packaging  
comes from responsibly  
managed forests<sup>9</sup>

# Use

The 27-inch iMac with Retina 5K display uses 64 percent less energy than the requirement for ENERGY STAR.

We design our products to be energy efficient, long lasting, and safe. The 27-inch iMac with Retina 5K display uses software and power-efficient components that intelligently manage power consumption. We also run our own Reliability and Environmental Testing Labs, so our products go through rigorous testing before they leave our doors. Our support continues throughout each product's life cycle, with regular software updates to keep devices current and a network of authorized repair professionals to service them, if necessary.

## Energy consumption of ENERGY STAR-rated products

Apple devices consistently rank among the high-performing products rated by ENERGY STAR—which was established to represent the 25 percent most energy-efficient computers on the market. The 27-inch iMac with Retina 5K display consumes 64 percent less energy than the requirement for ENERGY STAR.<sup>12</sup>

## Designed to last

To maximize durability, we assessed the 27-inch iMac with Retina 5K display in our Reliability Testing Lab, using rigorous testing methods that simulate customers' experiences.

## Made with smarter chemistry

We apply rigorous controls for materials users touch—all based on recommendations from toxicologists and dermatologists.

# Recover

Return your product with Apple Trade In and we'll ensure it has a long life or recycle it for free.

When products are used longer, fewer resources are extracted from the earth. That's why we launched Apple Trade In—it offers customers a seamless way to return their old devices to Apple. Customers can trade in eligible devices for an Apple Store Gift Card.<sup>13</sup> If a device is not eligible for credit, we'll recycle it for free. We also offer and participate in [product take-back and recycling collection programs](#) for 99 percent of the countries where we sell products—and we hold our recyclers to high standards. Our efforts to keep harmful substances out of our products also mean our materials are safer to recover and reuse.

## Apple Trade In

For more information on how to recycle your products at end of life, visit:

# Definitions

**Recycled materials:** Recycling makes better use of finite resources by sourcing from recovered rather than mined materials. Recycled content claims for materials used in our products have been verified by an independent third party to a recycled content standard that conforms to ISO 14021.

**Bio-based plastics:** Bio-based plastics are made from biological sources rather than from fossil-fuel sources. Bio-based plastics allow us to reduce reliance on fossil fuels.

**Renewable materials:** We define bio-materials as those that can be regenerated in a human lifespan, like paper fibers or sugarcane. Bio-materials can help us use fewer finite resources. But even though bio-materials have the ability to regrow, they are not always managed responsibly. Renewable materials are a type of bio-material managed in a way that enables continuous production without depleting earth's resources. That's why we focus on sources that are certified for their management practices.

**Supplier Clean Energy Program:** Since the electricity used to make our products is the largest contributor to our overall carbon footprint, we're helping our suppliers become more energy efficient and transition to new renewable energy sources. As part of this program, Apple and our suppliers are working to generate and procure more than 4 gigawatts of new renewable energy worldwide by 2020. This goal represents approximately one-third of our current manufacturing carbon footprint.

**Carbon footprint:** Estimated emissions are calculated in accordance with guidelines and requirements as specified by ISO 14040 and ISO 14044. There is inherent uncertainty in modeling carbon emissions due primarily to data limitations. For the top component contributors to Apple's carbon emissions, Apple addresses this uncertainty by developing detailed process-based environmental models with Apple-specific parameters. For the remaining elements of Apple's carbon footprint, we rely on industry average data and assumptions. Calculation includes emissions for the following life cycle phases contributing to Global Warming Potential (GWP 100 years) in CO<sub>2</sub> equivalency factors (CO<sub>2</sub>e):

- **Production:** Includes the extraction, production, and transportation of raw materials, as well as the manufacture, transport, and assembly of all parts and product packaging.
- **Transport:** Includes air and sea transportation of the finished product and its associated packaging from manufacturing site to regional distribution hubs. Transport of products from distribution hubs to end customers is modeled using average distances based on regional geography.
- **Use:** Apple assumes a three or four-year period for power use by first owners based on the product type. Product use scenarios are based on historical customer use data for similar products. Geographic differences in the power grid mix have been accounted for at a regional level.
- **End-of-life processing:** Includes transportation from collection hubs to recycling centers and the energy used in mechanical separation and shredding of parts. For more information on the carbon footprint, visit [apple.com/environment/answers](http://apple.com/environment/answers).

# Endnotes

<sup>1</sup> Apple defines its restrictions on harmful substances, including definitions for what Apple considers to be "free of," in the [Apple Regulated Substances Specification](#). Every Apple product is free of PVC and phthalates with the exception of AC power cords in India, Thailand (for 2-prong AC power cords), and South Korea, where we continue to seek government approval for our PVC and phthalates replacement. Apple products comply with the European Union Directive 2011/65/EU and its amendments, including exemptions for the use of lead such as high-temperature solder. Apple is working to phase out the use of these exempted substances where technically possible.

<sup>2</sup> The 27-inch iMac with Retina 5K display achieved a Gold rating in the United States and Canada, in accordance with IEEE 1680.1 or UL 110, and is listed as such on the Electronic Product Environmental Assessment Tool ([EPEAT](#)) Registry. EPEAT registers computers, displays, and mobile phones based on environmental requirements in these standards. For more information, visit [www.epeat.net](http://www.epeat.net).

<sup>3</sup> Greenhouse gas emissions were calculated using a life cycle assessment methodology in accordance with ISO 14040 and 14044 standards and based on the 27-inch iMac with Retina 5K display with 3.1GHz 6-core processor and 256GB storage configuration. We often update our carbon models to leverage new information. As a result, our estimate for the carbon footprint of the previous generation—the 27-inch iMac with Retina 5K display with 3.0GHz 6-core processor and 1TB storage—decreased from 993 kg CO<sub>2</sub>e (as published in its Product Environmental Report) to 938 kg CO<sub>2</sub>e.

Carbon footprint	
27-inch iMac with Retina 5K display	27-inch iMac with Retina 5K display (2019)
3.1GHz 6-core processor and 256GB storage 824 kg CO <sub>2</sub> e	3.0GHz 6-core processor and 1TB storage 938 kg CO <sub>2</sub> e
3.3GHz 6-core processor and 512GB storage 857 kg CO <sub>2</sub> e	3.1GHz 6-core processor and 1TB storage 938 kg CO <sub>2</sub> e
3.8GHz 8-core processor and 512GB storage 858 kg CO <sub>2</sub> e	3.7GHz 6-core processor and 2TB storage 951 kg CO <sub>2</sub> e

# Endnotes

<sup>4</sup> The 27-inch iMac with Retina 5K display was used for comparison as the most recently released and similar device. Preproduction 27-inch iMac with Retina 5K display with 3.1GHz 6-core processor and 256GB storage was compared to shipping 27-inch iMac with Retina 5K display with 3.0GHz 6-core processor and 1TB storage since these are the two lowest configurations offered.

<sup>5</sup> Enclosure greenhouse gas emission reduction is based on a comparison to average primary aluminum ingot.

<sup>6</sup> Third-party assessments seek to confirm sourcing practices and are part of our responsible sourcing program. In addition, our efforts consider conflict, human rights, and other risks.

<sup>7</sup> Final assembly supplier sites for the 27-inch iMac with Retina 5K display are third-party certified as Zero Waste by UL LLC (UL 2799 Standard). UL requires at least 90 percent diversion through methods other than waste to energy to achieve Zero Waste to Landfill (Silver 90–94 percent, Gold 95–99 percent and Platinum 100 percent) designations.

<sup>8</sup> Only chemicals that meet GreenScreen® benchmark 3 or 4 are considered safer and preferred for use. Final assembly sites for the 27-inch iMac with Retina 5K display are among the 18 final assembly supplier facilities that have adopted these safer cleaners. GreenScreen® is a comprehensive hazard assessment tool that evaluates substances against 18 different criteria. For more information, visit [www.greenscreenchemicals.org](http://www.greenscreenchemicals.org).

<sup>9</sup> Responsible sourcing of wood fiber is defined in Apple's [Sustainable Fiber Specification](#). We consider wood fibers to include bamboo.

<sup>10</sup> For more information about our work to protect and create responsibly managed forests, please read our [Environmental Progress Report](#).

<sup>11</sup> Breakdown of U.S. retail packaging by weight.

<sup>12</sup> Energy consumption and energy efficiency values are based on the ENERGY STAR Program Requirements for Computers, including the max energy allowance for the 27-inch iMac with Retina 5K display. For more information, visit [www.energystar.gov](http://www.energystar.gov). ENERGY STAR and the ENERGY STAR mark are registered trademarks owned by the U.S. Environmental Protection Agency.

- Off: Lowest power mode of the system when iMac is shut down. Also referred to as Standby.
- Sleep: Low power state that is entered automatically after 10 minutes of inactivity (default), or by selecting Sleep from the Apple menu. Wake for network access enabled. Connected to Ethernet.
- Idle—Display on: System is on and has completed loading macOS. Display brightness was set as defined by ENERGY STAR Program Requirements for Computers, and Auto-Brightness was turned off. Connected to Ethernet.
- Power supply efficiency: Average of the power supply's measured efficiency when tested at 100 percent, 50 percent, and 20 percent of the power supply's rated output power.

Mode	Power consumption for 27-inch iMac with Retina 5K display		
	100V	115V	230V
Off	0.40W	0.43W	0.43W
Sleep	1.44W	1.39W	1.36W
Idle—Display on	31.1W	31.2W	31.0W
Power supply efficiency	90.0%	90.0%	90.0%

<sup>13</sup> Trade-in values vary based on the condition, year, and configuration of your trade-in device, and may also vary between online and in-store trade-in. You must be at least 18 years old. In-store trade-in requires presentation of a valid, government-issued photo ID (local law may require saving this information). Additional terms from Apple or Apple's trade-in partners may apply.
