Storm Data and Unusual Weather Phenomena - April 2008

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	04/01/08 00:00 CST		0	Drought
	04/30/08 23:59 CST		0	

Drought conditions improved slightly, mainly during the first half of the month. Huntsville improved from D3 (extreme) to D2 (severe), while Muscle Shoals improved from D2 (severe) to D1 (moderate). The extreme northwestern corner of Alabama was taken out of all drought entirely by the end of April.

Several locations received above normal rainfall for the month, mainly in southern middle Tennessee and along the Sand Mountain corridor from Cullman to Fort Payne. For these locations, it was their first above normal rainfall month since last summer, or even before. The last above normal rainfall month in Cullman had been in 2006. Areawide, rainfall totals generally ranged from three to six inches across the area, while normal is between four and five inches. The rain came to an abrupt end by mid-month and very little rain occurred during the second half of April.

A storm survey was completed in Colbert County Alabama. A tornado was determined to have touched down about two miles east of Tusculmbia along Highway 20 at the Colbert County Road Department. A building was heavily damaged at the road department. Initially, the tornado produced EF-1 damage for one half of a mile along Highway 72. Up to a 30000 square foot portion of a roof at the Whitesell distribution center was ripped apart by the tornado. The tornado maintained a maximum speed of 85 mph for approximately 1/2 of a mile before weakening as it crossed Highway 72. Its path width while maintaining EF-1 strength was 40 yards.

The Tornado then produced EF-0 damage the remainder of its 6.5 mile path. The width of the tornado was 20 yards, while an EF-0. The tornado abruptly dissipated near Cottontown, Alabama.

Rear flank downdraft winds likely produced damage to adjacent areas near the tornado including a porch being uplifted at a residence.

Heavy rainfall fell across the coastal counties on April 5. The heavy rainfall caused several streets to flood across the area. Many streets had to be closed because of high water for several hours. A couple of cars were partially submerged by the high water. Rainfall totals across the two counties were estimated to be between six and nine inches. The high water also caused Bayou Sara in Mobile county to rise above flood stage on April 5. Both the Styx and the Fish rivers in Baldwin counties also rose above flood stage on April 6. Water approached homes in both counties, but never made it into any of them.
