

Storm Data and Unusual Weather Phenomena - March 2012

| Location | Date/Time | Deaths & Injuries | Property & Crop Dmg | Event Type and Details |
|---|--------------------|----------------------|------------------------|------------------------------|
| ALABAMA, Central | | | | |
| (AL-Z029) RANDOLPH, (AL-Z037) TALLAPOOSA, (AL-Z038) CHAMBERS, (AL-Z042) LOWNDES, (AL-Z043) ELMORE, (AL-Z044) MONTGOMERY, (AL-Z045) MACON, (AL-Z046) BULLOCK, (AL-Z047) LEE, (AL-Z048) RUSSELL, (AL-Z049) PIKE, (AL-Z050) BARBOUR | | | | |
| | 03/01/12 00:00 CST | 0 | | Drought |
| | 03/31/12 23:59 CST | 0 | | |
| Periodic rainfall occurred across central Alabama during the first two months of 2012, however drought conditions continued to persist in the southeast sections of central Alabama. Although rain fell across the area during the latter part of the March, there was little relief felt and drought conditions persisted. | | | | |

| | 03/02/12 18:15 CST | | 0 | Source: NWS Storm Survey |
| <p>A tornado touched down in mainly hunting and forested lands just north of the Bragg community, where numerous soft and hardwood trees were snapped or uprooted. It then traveled northeast crossing Blue Hill Road, where one residence sustained minor roof damage; along with additional trees being either snapped or uprooted. Further northeast, the tornado crossed Alabama Highway 21 in the Beechwood Community, where the path width reached its maximum point. Multiple trees were uprooted and snapped, along with powerlines blown down and one large barn was completely destroyed. As the tornado tracked parallel to Alabama Highway 21, a home and large barn sustained significant roof and structural damage. Numerous outbuildings were destroyed and several pieces of large farm equipment were tossed approximately 100 yards. The tornado continued to the northeast just south of Hayneville, crossing County Roads 33 and 97, where additional trees were damaged along with one single family residence that sustained minor roof damage. The tornado began to weaken as it crossed Mimms Road and lifted near the intersection of County Road 26 and County Road 37.</p> | | | | |

| <p>A tornado initially touched down in rural southeast Perry County along Oscar Price Road, just northeast of Suttle. It followed a northeastward path through southeastern Perry County, before crossing the Oakmulgee Creek, moving into Dallas County. In this location, at least 1000 trees were snapped in a wide swath near County Road 282. The tornado proceeded to Paul M Grist State Park and blown out winds and tore shingles off at the park center. Additionally, two campers were toppled, and hundreds more trees were snapped. The tornado continued northeast toward Highway 22 and County Road 294, where a brick home sustained minor damage and hundreds more trees were snapped or uprooted. It continued to snap and uproot many more trees across northern Dallas County, before crossing into Autauga county, where it eventually lifted.</p> | | | | |

| <p>A tornado touched down just west of Interstate 65, south of exit 200 in Chilton County. Here, a few trees were snapped or uprooted. It quickly strengthened and grew to its maximum width of 700 yards as it crossed County Road 502. The tornado moved east across US Highway 31 near the intersection with County Road 526, 1.5 miles south of Verbena. The tornado intensified to 125 mph and destroyed one home and caused significant damage to another, as well as mowing down hundreds of trees around the two homes. The tornado continued to snap and uproot trees as it neared County Road 524, where it also destroyed two single-wide manufactured homes and caused significant damage to two homes. A total of thirteen homes were damage or destroyed in and around Verbena. The tornado then crossed into Coosa County, before it eventually lifted.</p> | | | | |

A tornado touched down just west of Highway 63 in western Tallapoosa County, where it uprooted and snapped scores of trees. It continued northeastward and passed just north of Wind Creek State Park, where it produced significant and widespread tree damage between Highway 128 and the shores of Lake Martin. The tornado caused significant damage to several homes in the Pineywoods Area. It then crossed Lake Martin and came ashore in the River Bend Subdivision, where it snapped or uprooted hundreds more trees. The tornado continued moving to the northeast and crossed Highway 280, just west of Midway, producing minor tree damage. It passed north of Jacksons Gap and passed just south of Eagle Creek, where it widened to over one-quarter mile. It destroyed one double-wide manufactured home and two single-wides. As the storm crossed Alabama 49, it lofted and destroyed a single-wide manufactured home, fatally injuring one individual. The tornado path broadened to approximately 1000 yards as it crossed Elder Road. Farther to the east, approximately 14 homes received mainly roof damage and scores of trees were snapped or uprooted on Buttston Road, just north of Denver Road. The tornado continued into eastern Tallapoosa County, and then moved into Chambers County, where it eventually lifted.

Direct Fatalities: M57MH

A tornado initially touched down west of Highway 62 in western Tallapoosa County. The tornado moved along a northeastern path in eastern Tallapoosa County and then moved into Chambers County. It maintained a half mile wide path as it crossed County 55 near Sandy Creek, with winds as strong as 120 mph. Thousands of hardwood and softwood trees were snapped across this path. It continued to the northeast, crossing Chattahospee Creek, and then passing just north of Trammel Crossroads, where a single-wide manufactured home was destroyed. The tornado began to weaken and narrow as it continued into central Chambers County, before it lifted along County Road 160, about 2 miles northwest of Highway 431.

|----------|-----------|-------------------|---------------------|------------------------|
|----------|-----------|-------------------|---------------------|------------------------|

On March 2, 2012, a strong cold front moved through Central Alabama. Severe thunderstorms developed along and ahead of this front. Some of these thunderstorms were supercells. These supercells produced damage across southern and eastern sections of the area. Damaging straight line winds, tornadoes, large hail and localized flooding occurred with this event.

Alabama Highway 18 in Vernon was closed due to water covering the roadway.

Rain and thunderstorms associated with a slow-moving cold front spread into Central Alabama Thursday, March 8, 2012, and produced isolated wind damage in Lamar County. Rain and thunderstorms continued to push eastward across the area with the front, but due to limited instability, activity remained below severe limits.

An area of showers and thunderstorms developed and moved across portions of Tennessee during the morning of March 16th. An outflow boundary from this area of storms moved southward into east central Alabama. While the outflow boundary provided enough lift for thunderstorms to develop, daytime heating aided in the amount of instability. This led to pulse-like storms across the east, which produced a few instances of large hail.

LOWNDES COUNTY --- 4.0 SSE LUM [32.02, -86.65], 4.2 NNW CALHOUN [32.11, -86.59], 2.2 ENE CALHOUN [32.07, -86.54], 1.5 W FT DEPOSIT [31.98, -86.61]

| A tornado touched down initially just southwest of Pike CR 1 about 2.5 miles southwest of Troy Municipal Airport, where a large partially rotted tree was snapped, and several large tree branches at the edges of plowed fields were snapped. It proceeded northeastward across wooded land and rapidly intensified, becoming 700 yards wide as it crossed beeman creek. As it approached CR 1148, the tornado snapped numerous trees, also causing damage to 3 inactive chicken barns. One of the barns lost about 50 percent of the roofing, with structural damage to less than 20 percent of the rafters. Snapped trees also caused minor damage to 2 homes and a single-wide manufactured home. The tornado then weakened rapidly and dissipated over an open field less than a mile from the airport. | | | | |

A strong shortwave moved across the area during the evening hours on Saturday, March 31, 2012. With moderate instability in place (1500-2500 J/kg) and steep mid level lapse rates due to 500 mb temperatures of -18 degrees C, supercell thunderstorms produced widespread large hail across locations in northwest Central Alabama. Hail larger than golf balls was reported with numerous thunderstorms. In addition, thunderstorms tracked across the same areas, resulting in multiple rounds of large hail for the same locations.

A tornado developed near the Athens Country Club and Golf Course along Hatfield Lake Road off U.S. Highway 31. Several trees were snapped and uprooted along a path that crossed Interstate 65 and Strain Road. The tornado then tracked across Lindsay lane about one mile south of U.S. Highway 72. In the Canebrake neighborhood, numerous homes sustained significant roof loss with garage doors blown out and some exterior wall damage. Minor structural damage also occurred in the Indian Trace Community off Woodland Road. The tornado then crossed U.S. Highway 72 near Piney Creek and continued to track northeast. At Mooresville Road and Pepper Road, numerous homes sustained significant damage, including major roof loss. A brick garage was collapsed and numerous trees were snapped and uprooted. As the tornado continued tracking northeast across McCulley Mill Road, additional homes were damage, again sustaining major roof to homes occurred along Nick Davis Road near East Limestone Road. Damage continued to homes along Eagle Point Drive and Freedom Drive where a home lost its roof completely another homes received major roof loss, broken windows ad collapsed garages. The tornado then crossed into Madison County. This tornado obtained EF-2 status producing peak wind speeds of 125 mph.

| | 03/02/12 09:25 CST | | 0 | Tornado (EF3, L: 23.70 mi , W: 250 yd) |
| | 03/02/12 10:00 CST | | 0 | Source: NWS Storm Survey |

A tornado crossed from Limestone into Madison County just north of Orville Smith Road where a single wide modular home lost much of its roof and tree were snapped around it. Major structural damage occurred at the intersection of Yarbrough Road and Old Railroad Bed Road. This was one of the worst hit areas around the Harvest community. Damage to homes, mostly collapsed roofs and some exterior wall damage continued east along Yarbrough Road across Bridges Drive and Bedford Lane, just before Wall Triana Blvd. Also in this area, power poles were snapped near the base. Damage continued across State Highway 53 just south of Jeff Road. The tornado snapped and uprooted trees along Quarter Mountain Road, Carters Gin Road, and Beaver Dam Road just before Pulaski Pike. More significant damage bean to be seen along Patterson Lane, between Mount Lebanon Road and Harwell Lane where wood power poles were snapped, numerous trees uprooted and several homes had roof loss. A large metal barn/shed lost it's roof and some of it's walls were collapsed inward. Damage continued along U.S. Highway 231 at Meridianville Middle School where a concrete power pole was snapped an minor roof damage occurred to nearby buildings.

The tornado then strengthened between Hubert Road and Walker Lane along Mitzi Drive. In this area, EF-2 to low end EF-3 damage was found as several single story homes were destroyed with a loss of all walls. Other homes received significant damage with complete loss of roof and failure of exterior walls. Estimated path width in this area was 200-250 yards. Just northeast of this location along Charley Patterson Road, EF-3 damage occurred as 3 brick veneer/cinder block houses were reduced to rubble. The tornado continued to produce significant damage along Butler Road just south of Walker Lane where additional concrete power pols were snapped and large oak trees were snapped and uprooted. The damage path continued north of New Market, near Hillsboro, with additional trees snapped and uprooted and some roof shingles were lost to some residences. Damage here suggests the tornado was beginning to weaken. Along Davis Road, just south of Moe Road, numerous trees were snapped or uprooted with severe shingle loss to a house about 200 yards away from the road. Beyond this, the tornado appeared to weaken and lift as it moved across the higher plateau region of extreme northeast Madison County.

Storm Data and Unusual Weather Phenomena - March 2012

| Location | Date/Time | Deaths & Injuries | Property & Crop Dmg | Event Type and Details |
|---|--------------------|-------------------|---------------------|---------------------------------------|
| MADISON COUNTY --- 0.0 NW MERIDIANVILLE [34.85, -86.57], 1.4 E BUCKHORN [34.87, -86.44] | | | | |
| | 03/02/12 10:06 CST | | 0 | Tornado (EF2, L: 7.26 mi , W: 220 yd) |
| | 03/02/12 10:15 CST | | 0 | Source: NWS Storm Survey |
| <p>A tornado of EF-2 intensity with a peak wind speeds of 130 mph crossed portions of north central into northeast Madison County. The tornado began it's path just south of the Meridianville-Madison County Executive Airport off Meridianville Bottom Road where several trees were snapped. The tornado continued it's path eastward to Buckhorn High School before lifting at a farm across from the school on Winchester Road.</p> <p>The tornado snapped power poles and lines along Moores Mill Road just north of Darwin Road. The tornado then intensified and destroyed a silo just east of that location before snapping trees and collapsing a barn on Macon Lane. The EF-2 tornado continued east causing significant tree damage and structural loss to residences along Rube Robinson Road and Morning Mist Drive. Most residences experienced roof damage, including loss of shingles and windows blown out. One home on Morning Mist Drive completely collapsed and was torn off it's foundation. The tornado was at it's peak width of about 220 yards at this point, before narrowing to 50 to 100 yards as it re-crossed Rube Robinson Road. The tornado collapsed a roof and barn in this area, then crossed fields for about 1 mile before reaching residents adjacent to Buckhorn High School on Shady Oak Lane ad Maysville Lane. A residence experienced significant damage, with brick walls buckled and a large portion of the roof torn off. A nearby cinder block wall of a garage collapsed.</p> <p>The tornado then tracked through the Buckhorn High School campus at a width of up to 100 yards. A block building used by the ROTC students adjacent to the stadium collapsed. Several portions of the roof of the high school were torn off. Several cars in the parking lot were moved, twisted, and damaged with some windows blown out. The tornado then crossed Winchester Road and severely damaged a farmhouse, snapped and uprooted trees and strewn debris downwind across an adjacent cotton field where the tornado is believe to have lifted.</p> | | | | |

| <p>A tornado of up to EF-1 intensity produced peak wind speeds of 90 mph. The tornado snapped and uprooted trees just west of Highway 65 near Francisco. The tornado tracked into far southwestern Franklin County in Tennessee for about another quarter of a mile before lifting. This tornado was spawned from the supercell thunderstorm which had produced an EF-3 tornado in east central Limestone into northern Madison Counties earlier in the morning. It is unknown if additional damage occurred with this tornado in the higher terrain of northeast Madison and northwest Jackson Counties as these areas were inaccessible by ground vehicle.</p> | | | | |

| A tornado of EF-0 intensity with peak wind speeds of 85 mph touched down on the west side of Edgewood Road/County Road 65 a little south of the intersection with Coffman Road. Several trees were uprooted in this area with large branches from hardwood trees also snapped. The tornado moved in an easterly direction crossing County Road 26 and Old Elkmont Road. Minor and very sporadic tree damage was noted along the path. The width narrowed to less than 50 yards as it moved further east and finally lifted near the intersection of U.S. Highway 31 and Interstate 65. The last signs of any tornado damage were a few snapped and twisted tree limbs in this area. | | | | |

| A tornado was up to EF-1 intensity and peak wind speeds of 100 mph began a path in the Thach community, just west of the intersection of Thach Road and Oak Grove Road. The tornado moved nearly due east paralleling Thach Road for much of it's life cycle. The tornado appeared to skip along it's path, leaving some structures and trees intact but damaging others. The tornado finally lifted east of Highway 251. Numerous softwood and hardwood trees were snapped and uprooted along the tornado path. Several homes along the path had minor structural damage with lost of shingles, siding damage, and damage to one garage. One home had more significant damage to a section of it's roof. A well-constructed barn lost most of it's roof. | | | | |

| Quarter sized hail was reported. | | | | |
| <p>North Alabama experienced a portion of a much larger outbreak of tornadoes and severe weather from the Ohio Valley south through the Tennessee Valley to the Gulf Coast in advance of a strong cold front. The storms came in two waves. The first began during the mid-morning hours when two tornadic supercells developed across north central Alabama. The tornadoes (one EF-3 and one EF-2) tracked rapidly east-northeast across northeast Limestone and northern Madison Counties.</p> <p>During the early afternoon, numerous thunderstorms re-erupted across north Alabama, including several supercells. Most of these storms were large hail producers, in one case up to softball sized. Three additional weak tornadoes were spawned in Limestone County. There were also reports of isolated wind damage. One last band of storms rolled through parts of north central and northeast Alabama during the mid evening hours as the cold front moved through.</p> | | | | |

| Lightning struck a female who was taking photos with a cell phone of a storm with her arm outside the home through a doorway. The female felt a surge of electricity through her arm, into her neck and out her wrist which appeared bruised. She then fell backwards and suffered a seizure for several minutes, then called 911 for emergency assistance. She was hospitalized overnight and released the next morning. The Morgan County emergency manager reported at least 3 fires sparked by lightning their county. Two 46000 volt circuits were also damaged in Decatur with about 4250 utility customers losing power for a few hours. | | | | |

| Lightning sparked a house fire on Union Road. Time and location estimated with the NCDC Severe Weather Data Inventory. Specific damages unknown. | | | | |
| Numerous thunderstorms erupted during the afternoon and continued into the evening hours as an upper level disturbance interacted with a very unstable air mass. The weather pattern and atmospheric environment was more similar to early Summer. A mix of hail and damaging wind reports were noted with frequent cloud-to-ground lightning sparking several small fires. At the Huntsville International Airport, a 71 mph wind gust was measured during the evening from a severe thunderstorm. | | | | |

| | 03/18/12 00:00 CST | | 0 | Wildfire |
| | 03/22/12 00:00 CST | | 0 | |

A wildfire developed in western Lauderdale County on the afternoon of the 18th north of Waterloo. A second fire developed on the 19th northeast of Waterloo near County Road 90. One trailer home was destroyed by this wildfire. The larger wildfire scorched over 700 acres. On the 20th, gusty southeast winds of 20 to 30 mph combined with unseasonably warm temperatures in the middle 80s contributed greatly to the fire's spread.

| 03/31/12 16:40 CST | 0 | Thunderstorm Wind (ES 78 kt) |
| 03/31/12 17:10 CST | 0 | Source: NWS Storm Survey |

A swath of wind damage downed numerous trees and power lines, and destroyed one farm outbuilding. The path of damage began off County Road 434 just south of State Highway 24 north of the Five Points community. Here, severe small trees were snapped. Just southeast of this area along County Roads 434 and 324, a farm outbuilding was completely destroyed by peak winds estimated to be 90 mph. Continuing to move south-southwest along a path, several more trees were snapped or uprooted along County Road 87 heading south towards Five Points.

Near the Oakville community, several more small to moderate size trees were snapped along County Road 336. A pocket of winds estimated at 70 to 80 mph impacted a small area along County Road 203 around the Jesse Owens Memorial Park and Museum. At the park, a metal light pole was bent back slightly and a small outhouse was pushed off its foundation and partially destroyed. Tree branches were snapped around the park and near the museum, but no structural damage occurred to the actual museum.

Heading farther south toward the interchange of State Highways 157 and 36 near Speake, an area of trees were either snapped or uprooted by estimated wind speeds of 75 mph. All the uprooted trees were lying in a south-southwest direction. Outside of a few snapped tree branches along County Road 81 just south of Speake, no additional damage was noted.

Joe Wheeler Electric Membership Corporation reported a power outage that affected at least 831 customers.

MORGAN COUNTY --- 0.9 SW TRINITY [34.61, -87.09]

Storm Data and Unusual Weather Phenomena - March 2012

| Location | Date/Time | Deaths & Injuries | Property & Crop Dmg | Event Type and Details |
|----------|-----------|-------------------|---------------------|------------------------|
|----------|-----------|-------------------|---------------------|------------------------|

A very unstable environment along with an approaching weak surface trough dropping through Tennessee ignited several supercell thunderstorms during the mid afternoon through mid evening hours. A couple of the supercell storms tracked from southern and southwester middle Tennessee through northwest and north central Alabama, producing long swaths of large hail, in some cases very large hail up to tennis and softball sized. One of the storms produced a narrow swath of damaging winds across eastern Lawrence County, including the Speake community. The winds destroyed a barn and garage, and knocked several trees and power lines down in this area.

ALABAMA, Southeast

(AL-Z065) COFFEE, (AL-Z066) DALE, (AL-Z067) HENRY, (AL-Z068) GENEVA, (AL-Z069) HOUSTON

This tornado was seen by at least two people. One person was driving along Highway 52 near Hartford, and the other person who was an instructor pilot out of Ft. Rucker saw it touch down briefly in a peanut field for around 1 minute. No known damage occurred.

Several subtle upper level shortwaves affected the area during a three day period between March 1-3 as a broad long-wave upper level trough located west of the area slowly progressed eastward. Subtle surface boundaries were also in the area with a relatively warm, moist and unstable airmass in place. Instability values approached 2000 j/kg with low level shear around 30 knots and deep layer shear around 50 knots. Several tornadoes occurred in the National Weather Service Tallahassee forecast area with numerous instances of straight line wind damage, heavy rain, and localized flooding as well.
