Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

ALABAMA, Central

PICKENS COUNTY --- 1.1 WNW DANCY [33.03, -88.32], 1.6 NNW OWENS [33.34, -88.06]

02/02/16 16:34 CST		0		Tornado (EF2, L: 26.20 mi , W: 1200 yd)
02/02/16 17:09 CST	1	0		Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Pickens County and determined that the damage was consistent with an EF -2 tornado. Maximum winds were estimated to be around 135 mph. The tornado first touched down in southwestern Pickens County south of AL Hwy 32 and west of County Road 87. From there, it continued on a northeastward path across a large part of Pickens County. The tornado was caught live on Camera by local media just after it crossed the intersection of Hwy 32 and County Road 1, just west of Cochrane. It continued northeast to the Cochrane Campground on the Tombigbee River, where scores of trees were snapped, causing minor damage to one of the buildings on the campground. The tornado first reached EF-2 magnitude as it crossed private wooded land just south of County Road 78 snapping and uprooting hundreds of trees. As the tornado crossed Huff-Barnett Road, it mowed down a wide swath of trees, with a distinct classic convergence pattern of tree fall just east of Beaver Creek. The tornado continued northeastward across Al Hwy 14 causing damage to the federal prison, and then moved on to the Martin Luther King Road/Sapp community northwest of Aliceville. Here, the tornado reached its highest rated damage. Many of the homes in this portion of the Sapp community received some extent of damage, and several were destroyed. From there, the weakening tornado continued northeastward roughly parallel to AL Hwy 17 over open and forested rural Pickens County until it passed just west of Carrollton. The tornado reintensified and broadened somewhat, with a more significant tree-fall causing damage to a few homes on the west side of Carrollton. The tornado continued on the same northeastward path gradually weakening over rural areas before lifting near Herbert Windle Road southwest of Reform.

FAYETTE COUNTY --- 6.7 W NEWTONVILLE [33.54, -87.92], 3.3 ESE BELK [33.62, -87.88]

02/02/16 17:36 CST		0		Tornado (EF1, L: 6.12 mi , W: 500 yd)
02/02/16 17:45 CST		0		Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Fayette County and have determined that the damage was consistent with an EF -1 tornado. Winds were estimated to be around 90 mph.

The tornado touched down along Ashcraft Corner Cutoff and tracked northeast almost paralleling Alabama Highway 159 between County Roads 1 and 2. It then continued northeast along Owens Road before lifting along County Road 4. The damage consisted mainly of snapped and uprooted trees. The only structural damage found along the path was minor shingle and porch damage to one residence at the intersection of Alabama Highway 159 and Summers Drive.

LAMAR COUNTY --- 3.6 S BEAVERTON [33.88, -88.02], 2.5 E BEAVERTON [33.93, -87.99]

02/02/16 20:10 CST		0		Tornado (EF1, L: 4.13 mi , W: 400 yd)
02/02/16 20:16 CST		0		Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in northern Lamar County and have determined that the damage was consistent with an EF -1 tornado. Winds were estimated to be around 105 mph.

The tornado touched down along Christain Road near Taylor Springs Road. It moved north-northeast and caused major roof damage to one residence at the intersection of Pond Road and Garrison Road. From there, the tornado turned more to the northeast snapping and uprooting trees as it crossed County Road 49, Piney Grove Road, Pinewood Circle, and Turkey Branch Road. One residence on Pinewood Circle sustained minor shingle damage. The tornado continued northeast causing only tree damage until it lifted along Sorghum Hollow Road.

PICKENS COUNTY --- 2.5 W MELROSE [33.40, -88.16], 2.4 NNE MELROSE [33.43, -88.11]

02/02/16 23:02 CST		0		Tornado (EF0, L: 4.18 mi , W: 1400 yd)
02/02/16 23:08 CST		0		Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Pickens County and have determined that the damage was consistent with an EF -0 tornado. Winds were estimated to be around 85 mph.

The tornado touched down between Keasler Road and Heritage Road just north of the railroad tracks. It moved northeast crossing County Road 30, County Road 35, U.S. Highway 82, and Price Road Causing only tree damage. The tornado lifted before reaching County Road 45.

LAMAR COUNTY --- 0.9 WSW CREWS [33.90, -88.15], 0.9 WSW CREWS [33.89, -88.14], 0.7 WSW CREWS [33.90, -88.14], 0.8 WSW CREWS [33.90, -88.14]

02/02/16 23:30 CST		0		Flash Flood (due to Heavy Rain)
02/03/16 00:30 CST		0		Source: Fire Department/Rescue

The Fire Department reported up to one foot of water flowing across Waterworks Road near the intersection of Highway 278.

GREENE COUNTY --- 2.1 N MILLER [32.75, -88.08]

Storm Data and Unusual Weather Phenomena - February 2016

One single family residence and several outbuildings damaged in the town of Akron. Numerous trees uprooted across Hale County.

ETOWAH COUNTY --- 0.6 NW ORD [33.99, -85.99]

02/03/16 02:20 CST	0	Thunderstorm Wind (EG 50 kt)
02/03/16 02:22 CST	0	Source: Emergency Manager

Four homes on Riverside Drive in the city of Gadsden received minor damage, including loss of shingles and siding blown off. Power lines downed in the same area.

PERRY COUNTY --- 1.6 SSE RADFORD [32.58, -87.19], 4.0 SE PERRYVILLE [32.59, -87.07], 5.4 S BETHLEHEM [32.72, -87.10], 2.6 SSW LEVERT [32.71, -87.24]

02/03/16 03:30 CST	0	Flash Flood (due to Heavy Rain)
02/03/16 05:30 CST	0	Source: Emergency Manager

Several roads flooded and impassable across eastern Perry County. Roads flooded include County Road 30, County Road 64, and County Road 49.

A strong upper level system developed over the Central Plains and a surface low moved from the Mid Mississippi Valley into the Great Lakes. Although this was well removed from Central Alabama, the system was strong enough that winds at the surface and aloft increased significantly. This produced high wind shear. The combination of the high precipitable water values and unseasonably warm temperatures produced very unstable conditions across central Alabama. A cold front approached the region late Tuesday afternoon into Tuesday evening, a few supercell thunderstorms developed. Eventually, the storms became organized into a line and produced heavy rainfall and flash flooding.

MONTGOMERY COUNTY --- 2.8 SSW MATHEWS [32.24, -86.02], 0.5 S MATHEWS [32.26, -86.00]

02/15/16 16:00 CST	0	Tornado (EF0, L: 2.46 mi , W: 75 yd)
02/15/16 16:05 CST	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in northeastern Montgomery County and determined that the damage was consistent with an EF-0 tornado. Winds were estimated to be around 80 mph.

The tornado first touched down just south of Lawson Road, where it toppled 2 trees. It then proceeded northeast and paralleled Lawson Road. As the tornado approached Flowers Road, additional damage occurred to a metal building, where a portion of the roof and side panels were removed. Here, the tornado was at its strongest point with winds estimated at 80 mph. Roughly 300 yards past Flowers Road, additional 80 mph winds associated with the tornado collapsed another outbuilding. The tornado continued northeast, and additional large limbs were down until the tornado lifted before reaching Dani Lane.

PIKE COUNTY --- GOSHEN [31.72, -86.12]

02/15/16 17:59 CST	0	Thunderstorm Wind (EG 65 kt)

Storm Data and Unusual Weather Phenomena - February 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

National Weather Service meteorologists surveyed damage in southern Pike County and determined that the damage was consistent with an EF -1 tornado. Winds were estimated to be around 105 mph.

The tornado formed along a QLCS and first touched down over an area of clear-cut forest just northwest of AL Hwy 125, approximately 1.5 miles west-southwest of U.S. Hwy 231. Shortly after touching down, it reached its peak wind speeds of approximately 105 mph, where it uprooted or snapped 50 to 100 pine trees across a path that approached AL Hwy 125. A mobile home was destroyed and a home was damaged due to the falling trees. It continued east-northeast and crossed U.S. Hwy 231 about 9/10 of a mile south of the intersection of AL Hwy 125 and U.S. Hwy 231. The tornado caused minor roof damage to a home along U.S. Hwy 231, and then destroyed a partially covered horse arena before crossing an open field and snapping numerous trees along the tree line. From there, the tornado crossed Pike County Road 4423 and continued on the same path as it crossed Pike County Road 4421. Numerous trees were snapped or uprooted at both locations. The tornado appeared to broaden and weaken rapidly after crossing County Road 4421.

BARBOUR COUNTY --- 1.8 NW LINDSEY [31.77, -85.50]

02/15/16 18:44 CST		0	Thunderstorm Wind (EG 55 kt)
02/15/16 18:46 CST		0	Source: NWS Storm Survey

Metal roofing peeled off chicken houses.

RUSSELL COUNTY --- 3.5 N UCHEE [32.40, -85.35], 1.9 NW HUGLEY [32.45, -85.25]

02/15/16 18:57 CST		0	Tornado (EF1, L: 6.80 mi , W: 400 yd)
02/15/16 19:04 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in northwestern Russell County and determined that the damage was consistent with an EF -1 tornado. Winds were estimated to be around 90 mph.

The tornado touched down just southwest of Huguley Road, where it quickly intensified and snapped or uprooted numerous trees. The tornado achieved maximum intensity at this location, with winds around 90 mph. The most concentrated tree damage to mostly softwood trees was also observed. Moving quickly northeastward, the tornado crossed Capps Road, Phillips Road, Willis Valley Road, and Herring Road. A large steel truss shed was completely destroyed on Herring and lofted upward over power lines. An adjacent single family home sustained shingle damage, and a brick chimney collapsed. These were the only structures damaged in this tornado. Continuing northeastward, the tornado crossed U. S. Highway 80. Sporadic tree damage was noted along Green Dudley Road before ending at Thomas Road.

RUSSELL COUNTY --- 0.9 SW UNLAND [32.41, -85.29]

02/15/16 19:00 CST		0	Thunderstorm Wind (EG 60 kt)
02/15/16 19:01 CST		0	Source: Broadcast Media

Several trees and power lines down on a home and vehicle.

RUSSELL COUNTY --- 2.3 SE UNLAND [32.40, -85.25], 1.5 NNW CRAWFORD [32.47, -85.19]

02/15/16 19:00 CST		0	Tornado (EF0, L: 6.58 mi , W: 250 yd)
02/15/16 19:07 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in northern Russell County and extreme southern Lee County and determined that the damage was consistent with an EF-0 tornado. Winds were estimated to be around 75 mph.

The tornado touched down just southwest of Padgett Road in northwestern Russell County, where sporadic tree damage was noted. As the tornado continued northeastward, the most significant tree damage was observed along Brown Road, where numerous trees were uprooted or snapped in a sporadic pattern. The tornado paralleled Brown Road for several miles, where a few homes sustained shingle damage. An outbuilding along Brown Road just southwest of Crawford sustained heavy roof damage. An uninhabited single family home sustained damage as a large cedar tree fell onto it just north of Crawford along Bleeker Road. The final tree damage from the tornado was noted just inside the Lee County line along County Road 179.

RUSSELL COUNTY --- 2.7 NW HUGLEY [32.46, -85.26]

02/15/16 19:03 CST		0	Thunderstorm Wind (EG 70 kt)
02/15/16 19:04 CST		0	Source: Broadcast Media

Numerous trees snapped and uprooted along Thomas Road.

RUSSELL COUNTY --- 2.1 NNW HUGLEY [32.46, -85.24]

02/15/16 19:05 CST		0	Thunderstorm Wind (EG 70 kt)
02/15/16 19:06 CST		0	Source: Public

Barn destroyed and numerous trees and power lines downed.

Storm Data and Unusual Weather Phenomena - February 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
LEE COUNTY --- 2.2 SSW J C MEADOWS XRDS [32.47, -85.19], 1.7 SSW J C MEADOWS XRDS [32.48, -85.18]				
	02/15/16 19:07 CST		0	Tornado (EF0, L: 0.51 mi , W: 250 yd)
	02/15/16 19:08 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in northern Russell County and extreme southern Lee County and determined that the damage was consistent with an EF-0 tornado. Winds were estimated to be around 75 mph. This tornado was a continuation of a tornado that moved out of Russell County.				
BARBOUR COUNTY --- 1.3 NW EUFAULA [31.89, -85.17]				
	02/15/16 19:16 CST		0	Thunderstorm Wind (EG 50 kt)
	02/15/16 19:18 CST		0	Source: Law Enforcement
Numerous trees uprooted around the city of Eufaula.				
A sharp 500 MB upper trof shifted eastward along the Lower Mississippi Valley. As the upper trof approached the Mississippi River, a surface low developed over southern Mississippi and deepened as it tracked northeast into central Alabama. A mixture of high precipitation (HP) supercells and line segments developed and consolidated into a quasi-linear convective system (QLCS) south of Interstate 85 and east of Interstate 65, producing straight-line wind damage and four tornadoes.				
PICKENS COUNTY --- 2.1 ENE REFORM NO PICKENS AR [33.39, -87.97], 1.2 S PALMETTO [33.46, -87.98]				
	02/23/16 16:22 CST		0	Tornado (EF0, L: 4.80 mi , W: 150 yd)
	02/23/16 16:31 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage northeast of the city of Reform and determined that the damage was consistent with an EF -0 tornado. Maximum winds were estimated to be around 85 mph. The tornado touched down in a wooded area near Wild Goose Creek, due south of the intersection of Ollie Bonner Road and Pickens County Road 49. From there, it moved on a slightly west of due north path as it crossed CR-49 and CR-3. The tornado ultimately lifted just north of where Beaver Creek Road crosses over Beaver Creek. The tornado remained over a rural and wooded area through almost its entire path, and damage largely consisted of trees that were either uprooted or snapped. In the area near Ollie Bonner Road and CR-49, one home and one shed each received minor roof damage.				
MARION COUNTY --- 4.6 SW WIGINTON [34.23, -87.92], 3.6 WSW WIGINTON [34.26, -87.93]				
	02/23/16 18:01 CST		0	Tornado (EF1, L: 2.22 mi , W: 300 yd)
	02/23/16 18:05 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in northern Marion County just southwest of the city of Hackleburg and determined that the damage was consistent with an EF-1 tornado. Maximum winds were estimated to be around 95 mph. The tornado touched down just south of the intersection of Robert Dyer Road and Howell Road, just off of US Hwy 43 southwest of Hackleburg. From there, the tornado moved on a north-northwest path and crossed Spurgen Dyer Road and Marion County Road 41. The tornado ultimately lifted after it crossed State Rock Road, just east of CR-32. Damage along the path was largely limited to trees that were either uprooted or snapped. A garage near the start of the path had part of its tin peeled back , and one home near the intersection of CR-41 and CR-167 received minor damage to its roof.				
SUMTER COUNTY --- 4.8 S SILOAM [32.36, -88.27]				
	02/23/16 18:47 CST		0	Thunderstorm Wind (EG 50 kt)
	02/23/16 18:48 CST		0	Source: Fire Department/Rescue
Several trees uprooted near the intersection of County 9 and County 10.				
ETOWAH COUNTY --- GADSDEN [34.02, -86.02], 2.4 SSW RAINBOW CITY [33.92, -86.04], 1.7 SW ROCK SPGS [33.91, -85.94], 3.2 S SONOMA [34.02, -85.93]				
	02/23/16 23:00 CST		0	Flash Flood (due to Heavy Rain)
	02/24/16 01:00 CST		0	Source: Emergency Manager
Several streets in the city of Gadsden flooded. A vehicle was partially submerged on 11th Street. Water across roadway on Tuscaloosa Avenue and at the intersection of Hoke Street and Stillman Avenue. Intersection of 6th Street and 6th Place impassable. Intersection of Pilgrims Rest and South Villaey Avenue impassable.				
SHELBY COUNTY --- 2.8 NE SHELBY SPGS [33.16, -86.67], 3.1 WSW COLUMBIANA [33.17, -86.65]				
	02/24/16 04:04 CST		0	Tornado (EF0, L: 1.11 mi , W: 80 yd)
	02/24/16 04:05 CST		0	Source: NWS Storm Survey

Storm Data and Unusual Weather Phenomena - February 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
National Weather Service meteorologists surveyed damage in southern Shelby County just southwest of the city of Columbiana and determined that the damage was consistent with an EF-0 tornado. Maximum winds were estimated to be around 75 mph. The tornado touched down along CR-97 near the intersection with CR-314. It then moved east-northeast over a largely rural and wooded area and crossed a small portion of CR-305 and Golden Rd before lifting along Peaceful Valley Rd. The majority of the damage consisted of snapped or uprooted trees. There was minor roof damage to a residence on CR-97, and a mobile home at the end of Golden Rd was partially shifted off its foundation .				

SHELBY COUNTY --- 2.3 E NELSON [33.23, -86.54]

02/24/16 04:14 CST	0	Thunderstorm Wind (EG 60 kt)
02/24/16 04:16 CST	0	Source: Public

Several trees uprooted. One fell on a house and another on a barn. Power lines downed in same area. One tree snapped.

A trough of low pressure at 500 milibars was analyzed near the New Mexico and Texas border. A weak shortwave trough was also analyzed across northwest Mississippi. At the surface, a stationary front was draped from McComb, Mississippi, eastward to near a Tuscaloosa to Anniston, Alabama line. A surface low began to deepen over east Texas producing strengthening low level wind fields. Despite limited surface based instability over central Alabama due to persistent low clouds, the atmosphere was characterized by deep shear and increasing instability aloft.

ALABAMA, North

LAWRENCE COUNTY --- 0.9 NW MOULTON [34.49, -87.29], 0.9 NW MOULTON [34.49, -87.29], 0.9 NW MOULTON [34.49, -87.29], 0.9 NW MOULTON [34.49, -87.29]

02/02/16 21:25 CST	0	Flood (due to Heavy Rain)
02/03/16 00:00 CST	0	Source: Trained Spotter

A spotter reported water making it into a home near Moulton.

A potent storm system which produced a large tornado in central Alabama remained active through early Wednesday. While thunderstorm activity was very minor in North Alabama, heavy and persistent rainfall caused some minor flash flooding concerns. Reports of 3" of rain in several location with high soil moisture caused small creeks and poor drainage areas to flood. A flash flood warning was issued for Franklin, Morgan, and Lawrence Counties.

<p>A strong low pressure system moved northeast through Mississippi and across the northwest tip of Alabama during the overnight hours of the 23rd into the 24th. Bands of moderate to heavy showers and a few thunderstorms occurred ahead of this cold front and low across north Alabama. A wake low was generated behind one of the heavier precipitation bands and spread gusty winds of 35 to 50 mph across central into northeast Alabama during a period from approximately 10 pm through 1 am LST. Winds gusted up to 60 mph at one location downing multiple trees. Emergency management and media received several reports of trees and power lines being knocked down in these areas, with power outages reported. Gusty winds of 25 to 40 mph continued through the morning hours, with a few more reports of power outages.</p>

HOUSTON COUNTY --- 2.4 E KELLY SPRINGS [31.27, -85.41], 3.0 WNW KINSEY [31.31, -85.38]				

Storm Data and Unusual Weather Phenomena - February 2016

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/23/16 22:34 CST		75K	Tornado (EF1, L: 3.66 mi , W: 900 yd)
	02/23/16 22:39 CST		0	Source: NWS Storm Survey

This was the fourth tornado to develop in northwest Houston county, spawned by the same thunderstorm. The tornado began just south of Westgate Parkway, and then quickly intensified, snapping 5 power poles near Westgate Parkway and Technology Drive. Several houses in nearby neighborhoods had some roof damage and a barn also had roof damage. The remainder of the track was mostly tree damage with the tornado ending just south of the Henry-Houston county border, still in Houston county. This tornado was rated EF1 with max winds estimated near 100 mph. Damage cost was estimated.

HENRY COUNTY --- 2.2 W HEADLAND [31.35, -85.38], 1.7 NW HEADLAND [31.36, -85.36]

	02/23/16 22:38 CST		50K	Tornado (EF1, L: 1.09 mi , W: 300 yd)
	02/23/16 22:40 CST		0	Source: NWS Storm Survey

This tornado was the fifth tornado to be spawned by the same parent thunderstorm in southeast Alabama, this time in Henry county. The tornado initially developed near CR-83 and the city limits of Headland, where large trees were uprooted. The tornado crossed a wooded area near a creek and then ended near Knowles Road and CR-16 where a house had roof damage, an RV was overturned, a shed was destroyed, and some large trees were uprooted. This tornado was rated EF1 with max winds estimated near 100 mph. Damage cost was estimated.

HENRY COUNTY --- 3.4 W MILLER [31.44, -85.21], 3.0 W MILLER [31.44, -85.20]

	02/23/16 22:54 CST		0	Tornado (EF0, L: 0.40 mi , W: 100 yd)
	02/23/16 22:55 CST		0	Source: NWS Storm Survey

A short tornado track was determined along CR-53 just north of its intersection with CR-26. This was a concentrated area of damage with large trees uprooted and snapped near a residence. One of the trees had a small amount of debarking with large limbs removed. This tornado was rated EF0 with max winds estimated at 85 mph.

HOUSTON COUNTY --- REHOBETH [31.13, -85.43]

	02/23/16 23:00 CST		50K	Thunderstorm Wind (EG 60 kt)
	02/23/16 23:00 CST		0	Source: Broadcast Media

Roof damage occurred to some homes in the Rehobeth area. Damage was estimated.

HENRY COUNTY --- 0.6 NW HARDWICKBURG [31.50, -85.16], 0.7 N HARDWICKBURG [31.50, -85.15]

	02/23/16 23:02 CST		0	Tornado (EF1, L: 0.50 mi , W: 150 yd)
	02/23/16 23:03 CST		0	Source: NWS Storm Survey

A short tornado path was observed along CR-65 just to the east of its intersection with Highway 95. Many large trees were snapped or uprooted along this short path. This tornado was rated EF1 with max winds estimated around 105 mph.

HOUSTON COUNTY --- COLUMBIA [31.29, -85.11]

	02/23/16 23:20 CST		0	Thunderstorm Wind (EG 50 kt)
	02/23/16 23:20 CST		0	Source: Social Media

Trees were blown down near a residence in Columbia.

An unusually strong upper level trough and area of low pressure moved across the southeast states during the Feb 23-24 period, bringing with it numerous reports of wind damage and tornadoes. The low level jet was particularly strong with very strong 0-1 km shear values in excess of 60 knots. The 0-1 km helicity values were in excess of 1000 m²/s² in some areas with CAPE values around 500 j/kg. There were a total of 11 tornadoes across southeast Alabama and southwest Georgia, including 9 EF1 tornadoes and 2 EF0 tornadoes.

ALABAMA, Southwest

MOBILE COUNTY --- 5.0 SSW MOBILE [30.63, -88.11]

	02/03/16 04:19 CST		10K	Thunderstorm Wind (EG 52 kt)
	02/03/16 04:21 CST		0	Source: NWS Storm Survey

NWS storm survey confirmed the damage located on Demetropolis Road near US Highway 90 was the result of straight line winds near 60 mph. The winds resulted in roof damage and a broken window at the Red Cross building with sporadic facade damage to the rest of the building complex. A large metal sign was blown down at the Seafood Market across the street. A few trees were uprooted and numerous small to large tree branches were blown down.

A strong cold front moved across the area. Ahead of the front a line of showers and thunderstorms moved across. The stronger storms produced damaging winds which caused damage in southwest Alabama.

This tornado was produced from the same parent supercell thunderstorm that produced the EF-3 tornado in Century, FL. The tornado in Conecuh County first touched down south of County Road 6 and quickly strengthened as it crossed the road. EF-2 intensity damage was observed at the Johnsonville Volunteer Fire Department which was completely destroyed. Significant tree damage was noted in the area and a well built home suffered extensive roof damage. The tornado continued to the northwest toward the Johnsonville Circle area where a few homes suffered roof damage. A single wide mobile home on Johnsonville Circle was destroyed. The mobile home was not anchored. Damage in this area was consistent with EF-1 intensity. The tornado lifted in the woods just to the northeast of the end of Clinton Drive.

A severe thunderstorm wind gust tore a large street lamp out of a brick column. Radar observed winds of 53 knots just above the surface.				
COVINGTON COUNTY --- 0.5 NNE SOUTH [31.46, -86.62], 5.0 NNE SOUTH [31.51, -86.58]				
	02/15/16 17:00 CST		0.10M	Tornado (EF1, L: 4.53 mi , W: 50 yd)
	02/15/16 17:02 CST	1	0	Source: NWS Storm Survey
This tornado was produced from the same parent supercell that produced tornadoes in Conecuh and Escambia Counties in Alabama as well as Escambia County Florida. The Covington County tornado first produced sporadic tree damage on Lloyd Mill Road. The tornado reached peak intensity of EF-1 when it moved across Swinson Road and destroyed a single wide mobile home. One person in the home suffered minor injuries. The tornado continued northeast and produced further sporadic tree damage and minor roof damage to a few residences. It lifted and dissipated on Boykin Road just south of the Butler County line.
