## Storm Data and Unusual Weather Phenomena - April 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
National Weather Service meteorologists surveyed damage in southeast Cleburne County and determined that a brief tornado touched down and damage was consistent with an EF0 tornado, with maximum sustained winds near 60 mph. The tornado hit a chicken house along County Road 10, removing portions of the chicken house roof and scattering it across the nearby pasture. A nearby resident captured the small rope tornado on video.				
<b>CHEROKEE COUNTY --- 2.3 W LAWRENCE [34.23, -85.56]</b>				
	04/05/17 15:45 CST	0		Hail (1.00 in)

<b>TALLAPOOSA COUNTY --- 0.5 NE NEWSITE [33.04, -85.76]</b>				
	04/05/17 15:50 CST	0		Thunderstorm Wind (EG 65 kt)
	04/05/17 15:53 CST	0		Source: NWS Storm Survey
Several wind damage points were surveyed by the National Weather Service and the cause of the damage is straight line winds. At the first location on Hwy 49, a large, well-built barn sustained damage with one wall destroyed along with significant roof damage. There were also several large softwood trees uprooted. At a second location, numerous softwood trees along Hwy 22 were uprooted. While this damage was in an inconsistent path, the uprooted trees lay in a divergent pattern indicating that the damage was consistent with straight line winds. Upon further investigation, the radar data showed the damage occurred within proximity of the rear flank downdraft of a supercell. It was also noted that there was an absence of a tornadic debris signature in the correlation coefficient.

<p>National Weather Service meteorologists surveyed damage in northwestern Chambers County and determined that the damage was consistent with an EF1 tornado, with maximum sustained winds near 90 mph. The tornado touched down along CR 116 just west of the Union Hill community where several trees were uprooted and large branches were snapped. The tornado continued east, crossing CR 123, where a barn sustained minor damage and several additional trees were snapped. Adjacent to CR 123 and CR 53, a small fire station, barn and additional trees sustained significant damage. The tornado lifted just beyond CR 53, east of Union Hill where more trees were observed to have minor damage.</p>

<p>Several trees uprooted in the town of Smiths Station.</p>				
<p>April 5th was a very active severe weather day across central Alabama. During the pre-dawn hours, a warm lifted northward into south central Alabama. Supercells formed along the advancing warm front, producing numerous reports of large hail and a few reports of wind damage and isolated tornadoes. A second round of severe storms developed during the afternoon and evening as an upper level short wave trough approached the area from the west.</p>

<b>A upper level short wave trof approached north Alabama on the afternoon of April 22nd. An intense line of thunderstorms developed over northern Mississippi and tracked eastward across north Alabama, producing sporadic wind damage.</b>				
<b>MONTGOMERY COUNTY --- 2.9 E GARTERS HILL [32.18, -86.07], 2.6 S MATHEWS [32.23, -86.00]</b>				
	04/27/17 08:03 CST		0	Tornado (EF1, L: 5.48 mi , W: 250 yd)
	04/27/17 08:13 CST		0	Source: NWS Storm Survey
NWS Meteorologists surveyed damage in far eastern Montgomery county and determined the damage was consistent with an EF1 tornado, with maximum sustained winds of 105 mph. The tornado touched down about 2 miles NW of the Matthews Community, just north of US Highway 82. The first damage was located on Perry Lane and on Hayneville Ridge Road. A few trees were snapped off and some other tree damage was noted. The tornado traveled northeastward and knocked a few more trees down along Old Pike Road. The strongest and most concentrated damage occurred as the tornado approached the Bullock County Line. Numerous trees were snapped off around Stowers Road and along the remained of the damage path. A few homes sustained minor roof damage and one outbuilding had its roof removed. The tornado crossed into Bullock County just south of the intersection of Stowers Road and County Road 37.

	04/27/17 08:13 CST		0	Tornado (EF0, L: 0.11 mi , W: 250 yd)
	04/27/17 08:14 CST		0	Source: NWS Storm Survey
NWS Meteorologists surveyed damage in far western Bullock County and determined the damage was consistent with an EF0 tornado, with maximum sustained winds of 75 mph. This tornado began in far eastern Montgomery County and crossed into Bullock County just south of the intersection of Stowers Road and County Road 37. The tornado lifted near County Road 37.				
<b>PIKE COUNTY --- 2.3 E CORCORAN [31.83, -85.93], 1.8 WSW CATALOE [31.87, -85.86]</b>				
	04/27/17 10:25 CST		0	Tornado (EF1, L: 4.89 mi , W: 150 yd)
	04/27/17 10:35 CST		0	Source: NWS Storm Survey
NWS Meteorologists surveyed damage in central Pike County just northeast of the city of Troy and determined the damage was consistent with an EF1 tornado, with maximum sustained winds near 95 mph. The tornado formed just south of the intersection of Highway 29 and Radio Station Road. The tornado snapped and uprooted dozens of trees as it moved through residential areas south of Highway 29, damaging or destroying several outbuildings and causing minor shingle and overhang damage to homes. In addition, a mobile home was flipped over onto its roof just before Thomas Road, but did not appear to be well-anchored. The tornado crossed Highway 29 just west of the Dunn community. As the tornado crossed County Road 7757, one large hardwood tree was snapped and another was uprooted, falling on a home. The tornado paralleled County Road 7761, continuing to snap and uproot dozens of additional softwood and hardwood trees. A poorly built shed was completely destroyed near the intersection with CR 7759 with tin lofted well downstream. Tree damage began to diminish farther northeast and the tornado dissipated before reaching Highway 223.				
<b>BARBOUR COUNTY --- 1.9 NE HELLS XRDS [31.92, -85.51], 2.9 NE HELLS XRDS [31.93, -85.49]</b>				
	04/27/17 15:18 CST		0	Tornado (EF0, L: 1.18 mi , W: 75 yd)
	04/27/17 15:22 CST		0	Source: NWS Storm Survey
NWS Meteorologists surveyed damage in central Barbour County and determined the damage was consistent with an EF0 tornado, with maximum sustained winds of 65 mph. The tornado touched down in a wooded area between Williams Spur and County Road 51, just northwest of the city of Clayton. The tornado caused sporadic tree damage, mostly branches. Some of the areas were completely inaccessible. Two hunters filmed the tornado as it went by.				

## Storm Data and Unusual Weather Phenomena - April 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<b>BARBOUR COUNTY --- 0.8 SSW ALSTON [31.87, -85.46], 0.6 E ALSTON [31.88, -85.44]</b>				
	04/27/17 16:59 CST		0	Tornado (EF0, L: 1.28 mi , W: 175 yd)
	04/27/17 17:03 CST	3	0	Source: NWS Storm Survey
<p>NWS Meteorologists surveyed damage in central Barbour County and determined the damage was consistent with an EF0 tornado, with maximum sustained winds of 85 mph. The tornado touched down in the Clayton City Limits along Highway 30, just east of Mill Drum Place. The tornado tracked northeast and uprooted a few trees on Clayton Street and Midway Street. One of these large trees landed on a mobile home. One adult and two children were injured at this location on Midway Street. The tornado continued northeast and went through the eastern part of Clayton. Several trees were uprooted and several structures suffered minor damage or trees landed on them. The tornado lifted at Oak Avenue just before Browder Street.</p> <p><b>A pre-frontal trough moved into Central Alabama on Tuesday night, April 26th. This boundary slowly pushed southward and was accompanied by some showers and thunderstorms. The east to west boundary drifted into south central Alabama on the morning of April 27th. The combination of shear, lift along the boundary, increased low level moisture and instability produced by insolation was just enough to spin up a few weak tornadoes.</b></p>

<b>FRANKLIN COUNTY --- 3.9 SSW POGO [34.52, -88.15], 2.5 SE PLEASANT SITE [34.50, -88.04]</b>				
	04/22/17 14:28 CST		0	Tornado (EF0, L: 6.32 mi , W: 200 yd)
	04/22/17 14:49 CST		0	Source: NWS Storm Survey
The tornado, originating in Tishomingo Co (MS), continued across the MS-AL state line into Franklin Co (AL). Heavy tree damage was noted near the state line which was consistent with a tornado debris signature and velocity couplet on the Columbus MS (KGWX) WSR-88D, about 5.5 miles north of Red Bay, AL. The debris signature tracked east over heavily forested area that was not accessible by vehicle. Additional heavy tree damage was located near the end point which was consistent with the last debris signature seen on radar. The majority of the tree damage consisted of small to medium sized trees snapped, branches twisted with one or two trees uprooted.

Quarter sized hail was reported.				
<b>CULLMAN COUNTY --- 2.2 NW JONES CHAPEL [34.24, -87.08], 2.8 SSE JONES CHAPEL [34.18, -87.04]</b>				
	04/22/17 16:40 CST		0	Tornado (EF1, L: 4.39 mi , W: 200 yd)
	04/22/17 16:55 CST		0	Source: NWS Storm Survey

A National Weather Service and Emergency Management survey team determined a 200 yard swath of tornado damage adjacent to widespread straight-line wind damage. The tornado was an EF-1 with maximum winds estimated at 100 mph.

The tornado appeared to develop near the intersection of CR 1043 and CR 1047 where roof damage to a farm house was noted. The tornado continued near CR 1043 and uprooted several trees before heavily damaging a farm structure west of the CR 1043 and CR 1082 intersection.

Sporadic tree limb damage was noted between CR 1082 and CR 1039 north of Jones Chapel. South of Jones Chapel, several chicken houses were severely damaged by the tornado before dissipating near the CR 991/992.

<b>CULLMAN COUNTY --- 3.3 NW JONES CHAPEL [34.25, -87.09], 1.2 SE JONES CHAPEL [34.21, -87.04]</b>				
	04/22/17 16:40 CST		0	Thunderstorm Wind (EG 91 kt)
	04/22/17 16:55 CST		0	Source: NWS Storm Survey

A National Weather Service and Emergency Management survey team found a large swath of straight-line wind damage in the Battleground area. Significant soft and hardwood tree damage was noted near CR 1082, CR 1055, and CR 1087. Damage appeared to track south of Jones Valley through CR 988. The wind swath was approximately 1.5 to 2 miles in width and maximum wind speeds were estimated at 105 mph as 2 large barn structures were completely destroyed near CR 1087. Nearly all damage was oriented to the east-southeast, which was the general storm motion.

<b>CULLMAN COUNTY --- 4.4 SW JONES CHAPEL [34.18, -87.11]</b>

A chicken house was damaged by thunderstorm winds.

<b>JACKSON COUNTY --- 77.9 ENE CARROLL XRDS [34.79, -86.15], 80.0 ENE CARROLL XRDS [34.79, -86.11]</b>				
	04/22/17 16:40 CST		0	Tornado (EF0, L: 2.19 mi , W: 200 yd)
	04/22/17 16:45 CST		0	Source: NWS Storm Survey

A National Weather Service survey team in coordination with Jackson County Emergency Management and the University of Alabama in Huntsville found evidence of an EF-0 tornado near the Skyline area. Damage indicators in the form of extensive softwood tree damage (uprooted or snapped) were found in the vicinity of areas north of CR 17 and east of CR 79.

North of CR 17, west of Manning Dr., several trees were snapped looking into the valley on the south face of Fork Mountain. Damage continued in a 150-200 yard path through Manning Dr. which uprooted several trees in a noticeable convergent pattern (east to east-northeast). Peak winds of approximately 85 mph were observed at this location.

Several trees were uprooted or sustained large limb damage east of Manning Dr. toward CR 79. The tornado appeared to begin to shrink and decrease in strength near CR 79. A few uprooted trees were noted east of CR 79 in the vicinity of Gizzard Point Rd.

It is worth noting that some areas outside of the path, mainly to the south, experienced some tree damage as well. Based off radar signatures, and orientation of debris, this was caused by straight line winds adjacent to the tornado.

<b>CULLMAN COUNTY --- 2.1 NNW JONES CHAPEL [34.25, -87.06]</b>

	04/30/17 13:20 CST		0	Source: NWS Storm Survey
A NWS survey team determined the minor damage across portions of northern Cullman County was attributed to an EF-0 tornado with peak winds of 75 MPH.				
A strong, bowing line of storms moved quickly through Cullman County during the afternoon of April 30. Within the bowing segment, rotation was detected on radar which tracked through the north central portions of the county.				
The damage team found several EF-0 damage indicators in the Vinemont area in the form of uprooted softwood trees and large limb damage. General storm motion from the severe line was northeast. Debris was observed either in a convergent pattern or oriented in sporadic directions.				
The tornado continued north of CR 1422 and CR 1518 toward the Cullman-Morgan Co. line, south of Eva. In this area, the most concentrated area of damage was observed near CR 1526. Amongst several trees uprooted, a metal roof was blown off a large garage/barn and pushed into a single family residence. Additionally, minor roof shingle damage was reported further north on CR 1526. The tornado likely dissipated near CR 1527.

Thunderstorm winds nearly detached a steeple completely from the roof of a church in Stevenson.

A squall line tracked east-northeast through northern Alabama from midday through the early evening hours. The storms produced several reports of trees and limbs being knocked down. One home weather station report an 87 mph wind gust in Cullman County in the vicinity where pine trees were snapped. NWS Damage Assessment Team also found indications of an EF-0 tornado embedded in a bowing line in far northern Cullman County.

## Storm Data and Unusual Weather Phenomena - April 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<b>DALE COUNTY --- 1.5 SW DALE COUNTY LAKE [31.46, -85.65]</b>				
	04/05/17 09:15 CST		2K	Thunderstorm Wind (EG 50 kt)
	04/05/17 09:15 CST		0	Source: 911 Call Center

Trees were blown down at Boykin Ave and Don Circle with a power line down as well.

<b>HENRY COUNTY --- 3.0 NNW COATES [31.76, -85.16], 3.9 NNE COATES [31.77, -85.13]</b>				
	04/05/17 09:50 CST		0.50M	Tornado (EF2, L: 2.01 mi , W: 1140 yd)
	04/05/17 09:59 CST		0	Source: NWS Storm Survey

The tornado touched down in extreme southeastern Barbour County in the White Oak community producing EF1 damage on White Oak Drive. The tornado then crossed Sandy Creek into Henry County's White Oak subdivision producing mostly EF1 damage across the entire width of the neighborhood between Sandy Creek and White Oak Creek. However, a double-wide manufactured home on Laurel Drive was shifted about 8 feet despite being strapped to the ground by 2 to 3 foot anchors which were completely pulled from the ground. This justified EF2 damage in this location with winds estimated at 115 mph. The tornado then crossed the Walter F. George Reservoir, also known as Lake Eufaula, into the state of Georgia with EF1 damage on the eastern shore of the lake along County Road 28. The tornado came ashore at the Quitman-Clay County line producing damage in both counties primarily in the form of uprooted trees. The trees damaged several homes. Debris from a lakeside porch was lofted and deposited on the opposite side of the home and strewn across an adjacent field. The tornado continued northeastward across rural Quitman County hitting the Self Family Farm on Self Road. The tornado did significant damage to the roof of a well constructed brick home, removing the majority of the roof. The walls of a brick outbuilding collapsed. There were also numerous trees snapped or uprooted adjacent to the home, two of which were debarked. This damage was consistent with EF2 winds of about 115 mph. Just northeast of the house, an irrigation pivot was toppled with the northern portion falling toward the southwest and the southern portion falling in the opposite direction. The tornado continued northeast across more rural areas causing EF1 damage to trees on County Road 82 before lifting shortly thereafter.

**Severe weather during the first week of April resulted in a couple of tornadoes and several reports of hail and straight line wind damage across the tri-state area.**

<b>CRENSHAW COUNTY --- LUVERNE [31.72, -86.27]</b>				
	04/03/17 07:52 CST		1M	Thunderstorm Wind (EG 78 kt)
	04/03/17 07:54 CST		0	Source: NWS Storm Survey
Most of the damage in and around the city of Luverne was produced by a corridor of enhanced straight line winds with top winds estimated as high as 90 mph. Significant tree and power line damage was observed in the city with a few homes suffering significant shingle damage. A few homes were also damaged by fallen trees. A few businesses in downtown Luverne suffered major roof loss. The greatest damage occurred on Fourth Street where a single wide mobile home was pushed off its unanchored foundation and destroyed.

## Storm Data and Unusual Weather Phenomena - April 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A deep upper level low moving across the southern plains contributed a strong onshore flow across the north central Gulf Coast. The combination of the prolonged southerly winds and above normal tides resulted in minor coastal flooding in portions of Mobile County.

---

(AL-Z061) UPPER MOBILE, (AL-Z063) LOWER MOBILE

04/30/17 19:28 CST	15K	Strong Wind (MAX 44 kt)
04/30/17 23:59 CST	0	

Strong winds developed behind a line of showers and thunderstorms and caused tree limb damage and scattered power outages.
