

Storm Data and Unusual Weather Phenomena - January 2017

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

ALABAMA, Central

(AL-Z039) MARENGO, (AL-Z040) DALLAS, (AL-Z041) AUTAUGA, (AL-Z042) LOWNDES, (AL-Z043) ELMORE, (AL-Z044) MONTGOMERY, (AL-Z045) MACON, (AL-Z046) BULLOCK, (AL-Z047) LEE, (AL-Z048) RUSSELL, (AL-Z049) PIKE, (AL-Z050) BARBOUR				
	01/01/17 00:00 CST		0	Drought
	01/03/17 12:00 CST		0	

Heavy rainfall during the first few days of January lead to rainfall amounts of 6-8 inches across the southeast portions of central Alabama.

(AL-Z011) MARION, (AL-Z012) LAMAR, (AL-Z014) WINSTON				
	01/01/17 00:00 CST		0	Drought
	01/2 /17 12:00 CST		0	

Above normal rainfall totals during the first three weeks of January greatly reduced the moderate drought conditions that encompassed the northwest portions of central Alabama.

(AL-Z030) SUMTER, (AL-Z031) GREENE, (AL-Z032) HALE, (AL-Z033) PERRY, (AL-Z035) CHILTON, (AL-Z036) COOSA, (AL-Z037) TALLAPOOSA, (AL-Z038) CHAMBERS				
	01/01/17 00:00 CST		0	Drought
	01/2 /17 12:00 CST		0	

Significant rainfall totals during the first three weeks of January greatly reduced the severe drought conditions that encompassed the south central portions of central Alabama.

(AL-Z013) FAYETTE, (AL-Z015) WALKER, (AL-Z017) BLOUNT, (AL-Z018) ETOWAH, (AL-Z019) CALHOUN, (AL-Z020) CHEROKEE, (AL-Z021) CLEBURNE, (AL-Z022) PICKENS, (AL-Z023) TUSCALOOSA, (AL-Z024) JEFFERSON, (AL-Z025) SHELBY, (AL-Z026) ST. CLAIR, (AL-Z027) TALLADEGA, (AL-Z028) CLAY, (AL-Z029) RANDOLPH, (AL-Z034) BIBB				
	01/01/17 00:00 CST		0	Drought
	01/31/17 23: CST		0	

Above normal rainfall across central Alabama significantly reduced the drought severity, but many counties along the I-20 corridor remained at or above D2 drought intensity levels.

A warm front lifted northward during the morning hours on January 2nd. Cold temperatures aloft created steep mid level lapse rates and several of the storms produced hail, mostly below 1 inch. During the afternoon, a low level jet developed across south Alabama increasing the instability across region. Precipitable water values also increased to above 1.5 inches, setting the stage for heavy rainfall and flash flooding.

After over a week of near-record to record high temperatures, several upper-level disturbances followed by a strong upper-level low pressure system produced multiple rounds of severe weather across Central Alabama. This system was characterized by strong upper-level winds and very cold upper-level temperatures. The first round produced one brief, weak tornado in St. Clair County on the evening of January 19. The second round occurred on the morning of January 20 with 12 tornadoes across Marengo, Elmore, Macon, Lee, Pike, and Barbour Counties. A third round produced damaging straight line winds on the night of January 21, including in the Birmingham metro area where the Birmingham airport measured a 75 mph wind gust and in Oneonta where 80 mph straight-line winds caused significant damage. A brief tornado also occurred in Tuscaloosa County with this activity. Finally, a fourth round moved through during the day on January 22 with 3 tornadoes across Bullock and Lee Counties.

ALABAMA, North

(AL-Z001) LAUDERDALE, (AL-Z008) MARSHALL, (AL-Z010) DEKALB				
	01/02/17 1 :1 CST			Stro g 37 t
	01/02/17 21:00 CST	0		

As a strong upper level trough moved through the region on the evening of Jan. 2, a wake low formed at the rear of an associated area of showers. Gusty winds of approx. 35 to 45 mph resulted during the mid evening hours in north Alabama. The winds knocked down trees and power lines in at least three counties.

	01/07/17 0 :00 CST	0		

Minor winter weather was observed Jan 6 - Jan 7. With a very cold air mass in place, a minor moisture return wrapping around on the backside of a surface low centered SE of the region produced light snow fall accumulations, generally around 0.50". However, higher amounts were reported in the higher elevation in DeKalb County.

Additionally, cold air convection from the NW produced widespread apparent temperatures around 0F on the morning of Jan 7. Widespread sub-zero temperatures were observed in Franklin Co (AL).

An upper level disturbance to the west of the north central Gulf Coast produced a large area of precipitation as a cold front was moving south through the area. Temperatures dropped to at or slightly below freezing in portions of far inland southwest Alabama, resulting in freezing rain and sleet.

longwave trough axis over the southern plains that was very slow to move east, allowing several strong shortwaves to move across the north central Gulf Coast in the southwest upper level flow. The first round of severe weather on the morning of January 21st resulted in 2 strong tornadoes over the WFO Mobile County Warning area along with straight line wind damage. Large hail was the predominate hazard with the second round of storms on the evening of January 21st. A combination of straight line winds and large hail impacted the region on the morning of January 22nd.
