WALKER COUNTY --- 0.6 E LEESPEER STATION [33.68, -87.24]				
	04/07/19 17:06 CST	0		Hail (1.00 in)
	04/07/19 17:06 CST	0		Source: Public
WALKER COUNTY --- 1.5 SSE BARNEY [33.70, -87.14]				
	04/07/19 17:29 CST	0		Hail (1.00 in)
	04/07/19 17:29 CST	0		Source: Trained Spotter
BLOUNT COUNTY --- 2.1 ESE BLOUNT SPGS [33.91, -86.77], 3.3 SE BANGOR [33.93, -86.74]				
	04/08/19 04:15 CST	0		Tornado (EF0, L: 2.18 mi , W: 325 yd)
	04/08/19 04:19 CST	0		Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in Blount County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 85 mph. The tornado touched down along Blount County Road 7 on the north side of Hayden Mountain and tracked east-northeast across inaccessible forested land.				
It crossed Graves Gap Road for the first time just north of Graves Gap Way, where four large hardwoods were uprooted, with one tree resting on a residence. The tornado continued to produce tree damage as it once again crossed Graves Gap Road, but also damaged a home and a barn near the intersection of Holt Circle and Graves Gap Road. A residence on Graves Gap Road sustained siding damage and lost a few shingles, and a barn had part of its roof damaged. The tornado dissipated soon after crossing Holt Circle.				
BLOUNT COUNTY --- 1.6 WNW ROYAL [34.08, -86.53], 1.2 SW BROOKSVILLE [34.16, -86.49]				
	04/08/19 04:44 CST	0		Tornado (EF1, L: 6.30 mi , W: 1175 yd)
	04/08/19 04:53 CST	0		Source: NWS Storm Survey

Storm Data and Unusual Weather Phenomena - April 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

National Weather Service meteorologists surveyed damage in Blount County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 90 mph. The tornado touched down along Graves Cemetery Road south of Blount County Road 26, where a few small trees were damaged. It tracked northeast across County Road 26, where two smaller farm buildings were destroyed, and continued northeast producing sporadic minor limb damage as it crossed Royal-Liberty Road. At this point the storm path widened to 1275 yards as it spread along a valley parallel to Highway 79. The damage also intensified as it crossed Martin Road, uprooting numerous hardwoods, snapping a grove of pines, and causing damage to chicken barns. From here the tornado crossed Highway 79, moving nearly parallel to it for the last 3 miles of the track. At this point the tornado uprooted or snapped numerous large hardwoods and softwoods. Several chicken barns were damaged, a larger hay barn was destroyed, with relatively minor damage to homes along Highway 79. The tornado dissipated in a wooded area just south of Highway 278.

A slow moving upper trough over the Southern Plains States produced a series of mesoscale convective systems that moved out of Mississippi and across north Alabama.

Drier air aloft produced steep mid level lapse rates each day which resulted in a number of hail reports on April 6th and 7th. Low level winds backed during the early morning hours on April 8th and briefly produced favorable conditions for a weak tornado.

MARION COUNTY --- 2.1 SSW SHOTTSVILLE [34.24, -88.14], 0.9 SW SHOTTSVILLE [34.26, -88.14]

04/13/19 22:57 CST	0	Tornado (EF1, L: 1.21 mi , W: 440 yd)
04/13/19 22:59 CST	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Marion County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 90 mph. The tornado touched down just southeast of the intersection of County Road 13 and Grant Road. It rapidly intensified as it tracked northward and crossed County Road 13, where it uprooted dozens of pine trees and a few hardwoods. The tin was partially torn off a small barn and was deposited to the west of the path. Just as quickly as the tornado intensified, it dissipated just north of County Road 13 before reaching County Road 56.

SUMTER COUNTY --- 1.2 E MC CAINVILLE [32.65, -88.20]

04/13/19 23:43 CST	0	Thunderstorm Wind (EG 50 kt)
04/13/19 23:43 CST	0	Source: Emergency Manager

Several trees uprooted along I-20 near mile marker 12.

HALE COUNTY --- 0.4 NNW GALLION [32.51, -87.70], 2.0 E CEDARVILLE [32.61, -87.64]

04/14/19 00:26 CST	0	Tornado (EF0, L: 8.72 mi , W: 220 yd)
04/14/19 00:35 CST	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Hale County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 80 mph. The tornado touched down on the south side of E Z Street just south of Highway 80 and tracked northeast where it knocked over a trailer at Mount Olive Missionary Baptist Church. The tornado continued northeast across Gallion Road where it caused timber damage and ripped most of the metal roofing and sides off a large metal shed. Timber damage continued as it moved northeast, impacting portions of Davis and Hall Roads. A home just west of Hall Road suffered minor damage to shingles and overhangs while a home on the north end of Hall Road was impacted by an uprooted tree that resulted in partial roof damage. A large shed between Hall Road and Highway 69 lost nearly all of its metal roof. North of the damaged shed, a home suffered minor siding damage. The tornado then tracked northeast, causing timber damage as it crossed Highway 69 and destroying a shed along with damaging another larger shed. Notable timber damage was observed north and northeast of this point as the tornado moved east of Highway 69 into uninhabited and inaccessible areas. Tornado damage was evident from Prairie Oaks Ranch located on Pecan Road. The tornado caused damage to several trees on the property and some fencing along Cat Bottom Road. The tornado moved northeast across open fields with timber damage along a tree line found along County Road 10. The tornado tracked northeast across County Road 9 where it ripped some metal tin off of a barn and caused additional tree damage. The tornado moved across open fields until it impacted portions of a tree line along a farm road just west of Highway 9. Additional timber damage was found further north along County Road 9 as the tornado turned more northeast. The tornado caused sporadic tree damage before lifting just south of County Road 16.

TUSCALOOSA COUNTY --- 1.8 SSW HAGLER [33.01, -87.36], 1.8 NNE HAGLER [33.05, -87.34]

04/14/19 01:20 CST	0	Tornado (EF1, L: 3.51 mi , W: 475 yd)
04/14/19 01:25 CST	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Tuscaloosa County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 105 mph. Although it was uncertain as to the exact location of initial touchdown due to inaccessible land, a TDS detected by the KBMX WSR-88D indicates the tornado touched down just north of the Bibb-Tuscaloosa county line. The first damage from the tornado was near Highway 82 near the intersection with Hagler-Coaling Road, where a few weakened large trees were snapped. Several trees fell into the highway but were removed before the survey. As the tornado crossed Highway 82, it intensified rapidly, uprooting scores of hardwood trees, removing the roof off a small barn, and peeling all the shingles off of a home. A cow was killed by one of the falling trees. The tornado continued north-northeastward over a hill and then down across Hagler-Coaling Road. The tree damage was not as concentrated, but several large hardwoods were snapped or uprooted, and a home sustained roof damage. The tornado lifted just east of Hagler-Coaling Road.

TUSCALOOSA COUNTY --- 2.2 SE DUDLEY [33.15, -87.27]

Storm Data and Unusual Weather Phenomena - April 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	04/14/19 01:55 CST		0	Thunderstorm Wind (EG 50 kt)
	04/14/19 01:55 CST		0	Source: Public

Several trees uprooted on Wire Road between the cities of Vance and Coaling.

PERRY COUNTY --- 3.6 ENE SPROTT [32.69, -87.16], 2.3 S BETHLEHEM [32.77, -87.10]

	04/14/19 02:21 CST		0	Tornado (EF0, L: 6.67 mi , W: 400 yd)
	04/14/19 02:31 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Perry County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 80 mph. The tornado touched down near Iveys Chapel Church Road where a few trees were snapped. The tornado tracked northeast across inaccessible terrain until it crossed Mount Pilgrim Church Road where it uprooted some trees. The tornado continued northeast where it neared County Road 219 and removed a small portion of a farm shed. The tornado continued across agricultural fields then caused timber damage as it neared areas of trees. The tornado caused damage to homes just south of Melton Lane off of Highway 219. The tornado ripped nearly half of the roof off of a home and damaged siding. On the northwest side of the home strong winds pulled out two of the three support columns for the carport and that resulted in the roof partially collapsing. The tornado moved north along Highway 219 where it continued to cause notable timber damage. The tornado then tracked northeast across County Highway 183, where more timber damage occurred. The tornado continued northeast before dissipating near Barnette Road.

SHELBY COUNTY --- 1.9 NNW SIMMSVILLE [33.35, -86.69], 5.6 SW DUNAVANT [33.43, -86.63]

	04/14/19 03:05 CST		0	Tornado (EF0, L: 6.48 mi , W: 600 yd)
	04/14/19 03:14 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Shelby County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 80 mph. The tornado touched down just northeast of County Road 11 near County Road 36. This area was inaccessible, and the tornado start point was based upon a NEXRAD tornado debris signature from the KBMX radar. The tornado navigated rough terrain across Ivy Branch and into the northwest portion of a subdivision along Reach Crest Road and Reach Crest Drive, where thin tree trunks were snapped and other trees were uprooted. One tree was uprooted and fell onto a sports utility vehicle, damaging the rear door and knocking out the window. A nearby residence suffered notable roof damage resulting in three holes that penetrated the ceiling sheet rock and causing water damage to portions of the second level.

The tornado continued northeast where limited uplift to a roof occurred and a wind turbine ventilator was torn off the roof and found over 20 feet away from the home. Across the street along a narrow drainage basin, the funneling of inflow winds likely caused wind speed acceleration that knocked over a heavy metal outdoor grill, tore a few downspouts from their wall anchoring, and downed some fencing by snapping the support posts and blowing the wood at least 10 feet. Further northeast a small portion of a covered drive suffered some uplift of sheathing at North Shelby Baptist Church, where a few trees were snapped or uprooted near the entrance of Belcher Drive. To the east of Highway 280, multiple trees were snapped or uprooted along a portion of Old Highway 280 road near Salsler Lane. The tornado tracked north-northeast of this point through uninhabited and inaccessible areas and then reached the Highland Lakes Subdivision where it crossed Highland Lakes Drive and affected areas along Southledge Road. The majority of damage here was due to snapped or uprooted trees though some minor roof damage was noted to a home along Southledge Road. Further northeast along Southledge Road near Ledge Circle, a home lost some shingles and a portion of a backyard fence was downed due to the winds.

The tornado continued northeast and affected some areas along Highland Lakes Trail, Springhill Lane, Springhill Court, Mountain Trace, and Watersedge Circle. Nearly all of the damage in this area was to uprooted or snapped trees. One home did lose a window likely due to a falling tree. Further northeast the tornado produced tree damage on portions of Knollwood Drive, Watermill Circle, Highland Lakes Trail, Sandhurst Circle, Grove Park Parkway, and Grove Park Circle. Along Grove Park Parkway there was some roof damage to a home along with minor damage to two signs and one street light along the roadway. The tornado damage was confined to trees as it continued northeastward affecting portions of Milners Lane, Crescent Circle, Milners Way, Milner Road West, Milner Way, Hugh Daniel Drive, and Greystone Cove Drive. The tornado gradually weakened in this area and dissipated shortly before reaching Lake Hardwood Drive.

SHELBY COUNTY --- 1.1 NW CALERA [33.11, -86.79], 0.3 NW DARGIN [33.15, -86.77]

	04/14/19 03:14 CST		0	Tornado (EF0, L: 2.97 mi , W: 125 yd)
	04/14/19 03:19 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Shelby County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 70 mph. The tornado touched down near County Road 16 where it crosses the Vulcan Quarry, causing minor timber damage across Shelby County Road 16 that blocked the roadway. The tornado continued to the north-northeast through inaccessible forested areas and crossed the northern extent of the quarry where no damage was reported by personnel. The tornado moved nearly due north and caused some minor timber damage as it crossed Shelby County Road 22 and uprooted trees as it moved across Sharpsburg Circle. A nearby home had a portion of its wooden fence supports broken due to the winds. Behind a house three trees were uprooted. A few trees were uprooted at the eastern end of Ivanhoe Lane. Further to the north, the tornado crossed Roszburg Drive and Roszburg Place, causing significant roof damage to one home, broke apart portions of five fences, deposited plywood and some roofing material on the roof of other homes, uprooted a few trees and tore a small portion of a roof off of an upstairs room. The tornado then continued northward, between Little John Circle and Nottingham Drive, where it dissipated.

ETOWAH COUNTY --- 1.9 N GLENCOE [33.98, -85.93], 0.7 NNW HOKES BLUFF [34.01, -85.88]

Storm Data and Unusual Weather Phenomena - April 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	04/14/19 05:28 CST		0	Tornado (EF1, L: 3.76 mi , W: 95 yd)
	04/14/19 05:33 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Etowah County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 95 mph. This tornado began near Taylor Road where a large tree was uprooted and light trim damage was done to a house. Damage intensity rapidly increased as the tornado crossed Rabbittown Road. One residence had significant damage done to its roof and an exterior wall, along with broken windows. A car was also picked up/shifted. A second residence, which appeared to have very little/no anchoring, was greatly shifted from its foundation with heavy roof damage and broken windows. Across the street, a third residence had significant roof and wall damage, along with broken windows. The pattern of fallen trees in this vicinity indicated a cyclonic wind pattern, helping to confirm tornadic winds despite the storm's presentation on radar.

The tornado continued northeastward, knocking down additional trees as it crossed Highway 278. Several outbuildings were destroyed and tossed downwind at a residence located along Tidmore Bend Road. The tornado then crossed the Coosa River and caused light roof damage to a dock as well as knocked down some trees before dissipating just before Alford Bend Road.

CHEROKEE COUNTY --- 4.0 ESE SLACKLAND [34.10, -85.77]

04/14/19 05:50 CST	0	Thunderstorm Wind (MG 54 kt)
04/14/19 05:50 CST	0	Source: Emergency Manager

Wind gust of 62 mph reported at the EMA office.

PIKE COUNTY --- 3.4 WSW HENDERSON [31.66, -86.13], 3.1 W HENDERSON [31.67, -86.12]

04/14/19 05:50 CST	0	Tornado (EF0, L: 1.00 mi , W: 150 yd)
04/14/19 05:52 CST	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in southwest Pike County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 70 mph.

The tornado initially touched down north of County Road 6, several miles south of Goshen. It tracked north-northeast mainly over rural farmlands and open fields. Due to the lack of road access, the path width and length were estimated. Wind speeds were based on trees uprooted west of County Road 2243. The survey was prompted by a distinct TDS from the Fort Rucker WSR-88D.

CHEROKEE COUNTY --- 1.1 E BLANCHE [34.37, -85.58]

04/14/19 05:54 CST	0	Thunderstorm Wind (EG 50 kt)
04/14/19 05:54 CST	0	Source: Public

Several trees uprooted on County Road 89.

PIKE COUNTY --- 1.6 W GOSHEN [31.72, -86.15], 0.5 WNW GOSHEN [31.72, -86.13]

04/14/19 05:57 CST	0	Tornado (EF0, L: 1.09 mi , W: 50 yd)
04/14/19 05:59 CST	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in far western Pike County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 70 mph.

The tornado initially touched down just west of Jones Bridge Road in Crenshaw County.

The tornado crossed into Pike County just north of Greenville Avenue and lifted west of the town of Goshen. Damage in Pike County consisted mostly of uprooted trees and a gas station suffered minor damage.

PIKE COUNTY --- 1.5 WSW TROY [31.79, -85.99], 1.2 SE CORCORAN [31.82, -85.96]

04/14/19 06:10 CST	0	Tornado (EF1, L: 2.81 mi , W: 300 yd)
04/14/19 06:16 CST	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in Pike County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 95 mph.

The tornado touched down in a mobile home community named Hunters Mountain Mobile Estates. Several mobile homes sustained major damage. Around one dozen mobile homes were moved off their foundations, while several were observed to have rolled multiple times. Several of these mobile homes were occupied, but only minor injuries were reported. Two cars were also rolled in the area of greatest damage. The tornado tracked northeast crossing Highway 231, where power poles were snapped and several businesses sustained minor damage. It then tracked just west of downtown Troy, where trees were uprooted and large branches were broken. The tornado crossed Highway 29 where additional businesses sustained minor damage, including an awning and several roofs. Several homes north of downtown sustained minor roof damage along with nearby uprooted trees. The tornado then tracked northeast and lifted near Gibbs Street, just southwest of Troy Elementary School.

Storm Data and Unusual Weather Phenomena - April 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
RUSSELL COUNTY --- 1.7 E KAOLIN [32.43, -84.97], 1.9 ESE GIRARD [32.44, -84.97]				
	04/14/19 08:14 CST		0	Tornado (EF0, L: 0.57 mi , W: 50 yd)

National Weather Service meteorologists surveyed damage in northeast Russell County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 85 mph.				
The tornado began at the Phenix City Water Treatment facility where several uprooted and snapped trees were observed along with substantial roof damage to the facility headquarters. It then tracked across State Docks Road before moving across the Chattahoochee River and into Georgia.				
(AL-Z037) TALLAPOOSA				
	04/14/19 10:58 CST		0	High Wind (MAX 50 kt)
	04/14/19 10:58 CST		0	
A very potent storm system moved out of the Southern Plains States and into the Central Gulf Coast Region Saturday and into Sunday morning. This system produced widespread severe weather from Texas to Alabama, including numerous tornadoes. A line of severe storms moved into West Alabama shortly before midnight Saturday night and progressed eastward across all of Central Alabama. The line of storms produced pockets of damaging straight line winds, localized flooding, and several tornadoes.

Storm Data and Unusual Weather Phenomena - April 2019

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<p>A tornado began southwest of the intersection of Highpoint and McAllister Roads and north of Bearden Rd. Numerous hardwood trees were either uprooted or had large limb damage. As the tornado approached Highpoint Road, it caused minor roof damage to two single-family homes and destroyed a large shed, that was unanchored to its foundation. Damage indicators further upstream were consistent with the assessment at Highpoint Road. A mix of hardwood and softwood trees were either snapped or uprooted along portions of Nixon Chapel Road and Section Line Road. A more concentrated area of heavy tree damage, with significant mobile home roof damage and minor single home roof damage, was noted in an area between Windsor Road and Mt. Olive Road, likely where the tornado peaked in intensity.</p>				

The tornado continued north-northeast toward U.S. Highway 431. The tornado started to quickly weaken as it crossed the junction of Oneonta Cutoff Road, Turnpike Road and County Road 205. Sporadic tree damage was observed around this location, causing power line damage. Finally, the tornado approached Highway 431 and damaged air-conditioning units and caused minor roof damage to two large retail buildings. Very minor limb damage was noted north of 431 where the tornado dissipated.

A tornado just before daybreak produced up to EF-1 damage in Marshall County from northwest of Douglas to south of Guntersville.

LIMESTONE COUNTY --- 2.7 SW WHEELER LAKE NORTH [34.80, -87.18]

04/13/19 19:25 CST	0	Hail (1.75 in)

	04/14/19 02:19 CST		0	Source: Public
Multiple trees were knocked down and power outages were reported in this area.				
<p>During the evening of the 13th, isolated low-topped supercells develops in central moving into north Alabama north of an advancing warm front. One of the storms produced large hail up to the size of tennis balls in Limestone County.</p> <p>Later in the evening of the 13th and through the early morning hours of the 14th, multiple lines of thunderstorms developed in Mississippi ahead of a strong cold front and shifted slowly east into north Alabama. The individual line segments at times broke off into more super-cellular thunderstorms. A couple of these produced tornadoes in Franklin and Colbert Counties. Several other reports of thunderstorm wind damage were received. In addition, gusty south-southeast winds developed ahead of the advancing line of thunderstorms. Gusts over 40 mph were reported, and also knocked a few trees/limbs down in northwest Alabama.</p> <p>Intense rainfall rates were observed with the thunderstorms at times, and in some cases a few areas received multiple periods of thunderstorms. Rainfall amounts of 2-3 inches in just 1 to 2 hours was reported. Rapid runoff from this rainfall resulted in flash flooding in a few locations of northwest Alabama. In Franklin County, EMA reported a high water rescue and a road that was washed out near the town of Vina. Other reports of flash flooding were reported by Colbert County EMA.</p>

A tree was blown down onto County Road 121.

HOUSTON COUNTY --- 0.7 N LUCY [31.02, -85.04]

	04/19/19 05:30 CST		0	Thunderstorm Wind (EG 50 kt)
	04/19/19 05:30 CST		0	Source: Law Enforcement

A tree was blown down in the Lucy area.

This event was characterized by a mid-level shortwave becoming negatively tilted in the Tennessee Valley and attendant surface low pressure. The strong wind field associated with this system included another anomalously strong low-level jet, with 925 hPa winds sampled on the 12Z/19 TAE Sounding around 40 knots! This advected warm, moist, and unstable air northward, ahead of a pre-frontal trough which served as a focusing mechanism for convection. Instability was initially lacking Thursday Night, but increased on Friday, with Mixed Layer CAPE ranging from 1-1.5k J/kg. Furthermore, the 12Z/19 TAE Sounding revealed Surface Based CAPE of nearly 2.4k J/kg, which is a record for the date per SPC Sounding Climatology! The instability and Bulk Shear (0-6 km) over 50 knots overcame the poorer mid-level lapse rates, and the QLCS intensified as it moved east of the Flint and Apalachicola Rivers on Friday. Despite Shear (0-1 km) around 35 knots on the 12Z/19 TAE Sounding, the hodograph revealed a more unidirectional wind within this layer, however there may have been slightly more veering based on the nearby observations from TLH.

COFFEE COUNTY --- 2.1 N ELBA [31.44, -86.07]

	04/25/19 17:25 CST		1K	Lightning
	04/25/19 17:25 CST		0	Source: Emergency Manager

Lightning struck a transformer on Highway 87 near Elba.
