<b>DALLAS COUNTY --- 2.6 NE LAKE LANIER [32.45, -87.14], 3.1 NE LAKE LANIER [32.46, -87.14]</b>				
	06/06/19 15:07 CST	0		Tornado (EF0, L: 0.75 mi , W: 60 yd)
	06/06/19 15:09 CST	0		Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in northern Dallas County and determined that it was consistent with an EF0 tornado, with maximum sustained winds near 75 mph.				
A brief tornado developed in a low topped convective shower. The tornado touched down near the Potter Station community where it snapped small trees and large tree limbs along County Road 214, just north of County Road 945. A home on the east side of County Road 214 sustained damage when the carport was lifted upward off its supports. This resulted in additional roof damage as well as minor damage to the brick facade. A window was blown out of the house and one car was damaged due to the falling carport. The roof was being replaced at the time this damage occurred. At this point, the tornado reached its maximum intensity of around 75 mph. The tornado tracked north producing additional sporadic tree damage before lifting just south of County Road 209. At the last discernible damage point, a tree fell and damaged a large outbuilding. No additional damage was noted north of County Road 209, though access to those areas was very limited.

Thunderstorms that originated in northeast Texas during the afternoon of the 19th, evolved into a larger complex sped east-northeast during the evening and overnight hours through northern Louisiana, southern Arkansas, northern Mississippi and southwest Tennessee. The complex pushed through middle Tennessee and north Alabama between Midnight and 4 am. The gust front along the leading edge of the showers and thunderstorms produced measured wind gusts of 35-51 mph. The highest measured gust was in Trinity in Morgan County. Several reports were received of large limbs and trees being knocked down. This resulted in a few minor power outages.
