Several trees uprooted in the town of Cuba.				
TUSCALOOSA COUNTY --- 0.5 SSW RIVER VIEW [33.21, -87.55], 1.5 ESE ROSEDALE [33.19, -87.55], 1.5 SW HOLT JCT [33.20, -87.52], 1.0 E RIVER VIEW [33.22, -87.53]				
	02/06/20 00:15 CST	0		Flood (due to Heavy Rain)
	02/06/20 03:15 CST	0		Source: Emergency Manager
Prolonged rainfall produced flooding along multiple streets within the campus of the University of Alabama in the city of Tuscaloosa. Roads flooded included University Drive, Campus Drive, 18th Street and 10th Avenue.				
SUMTER COUNTY --- 4.0 SE PARKER [32.61, -88.12]				
	02/06/20 01:47 CST	0		Thunderstorm Wind (EG 50 kt)
	02/06/20 01:47 CST	0		Source: Emergency Manager
Several trees uprooted near Bluffport Road.				
SHELBY COUNTY --- 0.3 WNW GURNEE JCT [33.20, -86.98], 0.3 S HELENA [33.30, -86.85]				
	02/06/20 01:57 CST	0		Tornado (EF2, L: 9.91 mi , W: 700 yd)
	02/06/20 02:09 CST	0		Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in western Shelby County and determined that it was consistent with an EF2 tornado, with maximum winds near 120 mph. The tornado touched down in a wooded area near Red Oak Rd and Hancock Creek and tracked northeast, moving across a largely uninhabited area along the Cahaba River. The tornado quickly intensified to EF2 strength where it snapped or uprooted thousands of soft and hardwood trees just south and east of Shelby County Road 1 in the Ward Creek area. The tornado crossed many bends along the Cahaba River as it approached the Moss Bend area where trees were snapped or uprooted. Further northeast, numerous trees were snapped or uprooted along a portion of Oak View Lane. The tornado continued northeast into the Old Cahaba neighborhood where several homes sustained minor roof and siding damage. The window to a home was also blown out along with additional damage to trees. The tornado continued northeast roughly paralleling Hillsboro Parkway where more trees were uprooted. The tornado dissipated just southeast of the Helena Amphitheater.				
BLOUNT COUNTY --- 2.2 SW HAYDEN [33.86, -86.80], 0.9 NE VILLAGE SPGS [33.78, -86.62], 1.3 ENE ONEONTA ROBBINS ARPT [33.98, -86.36], 1.7 W HIGHMOUND [34.15, -86.41]

Standing water over numerous roads across Blount County.				
JEFFERSON COUNTY --- MC CALLA [33.33, -87.02], 1.4 NNE HOOVER [33.34, -86.81], 2.3 SW ROCKY RIDGE [33.40, -86.72], 3.6 SSW QUEENSTOWN [33.60, -86.56], 0.7 SE HUFFMAN [33.59, -86.69]				
	02/06/20 02:00 CST	0		Flood (due to Heavy Rain)
	02/06/20 09:00 CST	0		Source: Emergency Manager
Widespread flooding across southern portions of Jefferson County. Standing water over Highway 31 in Vestavia Hills. Bent Brook and Trussville golf courses flooded.				
MARENGO COUNTY --- 2.9 NW OLD SPRING HILL [32.46, -87.80], 2.0 SSW ALFALFA [32.47, -87.78]				

Storm Data and Unusual Weather Phenomena - February 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/06/20 02:13 CST	1	0	Tornado (EF1, L: 1.29 mi , W: 400 yd)
	02/06/20 02:15 CST	1	0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in northern Marengo County and determined that it was consistent with an EF1 tornado, with maximum winds near 110 mph. The tornado touched down southeast of Demopolis, west of U.S. Highway 43. The tornado tracked northeast and produced damage near Starmont Lane and Orchard Drive. Several trees were uprooted or were snapped off. Two homes suffered minor damage. The most concentrated damage occurred at U.S. Highway 43 near County Road 54. This is the location where two manufactured homes were destroyed and two homes were damaged. The one injury and the one fatality occurred in the manufactured home that was totally destroyed. Several trees were blown down in this location as well. The tornado continued across U.S. Highway 43 where it destroyed a barn and uprooted many more trees. The tornado then lifted before it crossed French Creek.

Direct Fatalities: U??MH

HALE COUNTY --- 1.5 NNW PRAIRIEVILLE [32.54, -87.71]

02/06/20 02:14 CST	0	Thunderstorm Wind (EG 50 kt)

	02/06/20 10:43 CST		0	Thunderstorm Wind (EG 50 kt)
	02/06/20 10:43 CST		0	Source: Emergency Manager
Several trees uprooted and power lines downed on Lee Road 136.				
Heavy rainfall and severe storms affected Central Alabama on February 5th and 6th as several impulses emanated from a deep upper trough centered over the central United States. This event yielded tornadoes, damaging winds, and flooding.				
<p>The northward progression of a warm front allowed a seasonably warm and moist air mass to overspread the region on Wednesday, February 5th, with afternoon temperatures in the 70s and dew points in the 60s. The initial round of convection on this day included areas of rain with embedded thunderstorms producing gusty winds as well as hail. There was a relative lull in thunderstorm activity during Wednesday evening, before the next upper-level impulse arrived, alongside a cold front and nearby surface low. This round of activity began its formation to the west in Mississippi and then moved through Alabama late Wednesday night through midday Thursday, February 6th. This round of convection produced widespread moderate to heavy rainfall, resulting in more substantial flooding. Some storms became tornadic due to the favorable wind shear and instability in place, while others produced damaging straight-line winds. Due to the overall wet and breezy conditions, trees fell in numerous locations from wind not associated with thunderstorms.</p>				
JEFFERSON COUNTY --- 3.7 WSW MUD CREEK [33.38, -87.21], 1.5 NNE COALBURG [33.60, -86.86], 1.7 W QUEENSTOWN [33.65, -86.56], 4.1 E KIMBREL [33.27, -87.00]

	02/13/20 04:12 CST		0	Tornado (EF1, L: 2.10 mi , W: 300 yd)
	02/13/20 04:15 CST		0	Source: NWS Storm Survey

Storm Data and Unusual Weather Phenomena - February 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

National Weather Service meteorologists surveyed damage in northwest Tallapoosa County and determined that it was consistent with an EF1 tornado, with maximum winds near 90 mph. The tornado began northeast of Alexander City along Campground Road where some tree damage was initially observed. The tornado tracked eastward where it increased in intensity and width. The worst damage occurred along Town Creek Road where the road bends northward along Hillabee Creek. In that area, many trees were snapped or uprooted. There were just a few structures within the path of the tornado. One home had minor shingle loss and failure of a window frame, along with damage to outbuildings. One home had damage to a window from flying debris. One home had a bit more in the way of shingle loss and shifting of the ridge vent, shifting of porch columns (likely due to uplift of the porch overhang), and a window blown out of a truck. Due to the number of uprooted trees (the most notable damage indicator in this case), this tornado was assigned a low-end EF1 intensity. The tornado then crossed Hillabee Creek in a weakening state and dissipated.

A deepening surface low tracked north of Alabama during the overnight hours of February 12th. A trailing cold front triggered of line of strong to severe storms across central Alabama. Storm-relative helicity values near 300 m2/s2 over east Alabama helped initiate a weak tornado over Tallapoosa County.

BLOUNT COUNTY --- 0.6 E GUM SPGS [34.05, -86.66], 3.9 SSE SNEAD [34.05, -86.34], 0.9 SE MC LARTY [34.17, -86.39], 1.9 WSW SUMMIT [34.19, -86.53]

<p>A tornado uprooted a couple trees near Petertown Road, which runs parallel to the MS/AL border and continued slightly northeastward toward Allsboro Road. As the tornado crossed Allsboro Road, it caused more widespread damage along Bishop Lane. Several trees were uprooted while a few softwoods were snapped.</p> <p>Structural damage, in the form of small farm buildings/sheds, was observed further down Bishop Lane. These structures sustained roof damage while one building also had a collapse of its walls. The tornado continued eastward and uprooted two more trees before lifting about three quarters of a mile east of Allsboro Road.</p>

Storm Data and Unusual Weather Phenomena - February 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/06/20 13:58 CST		0	Flood (due to Heavy Rain)
	02/06/20 17:00 CST		0	Source: Broadcast Media

Car submerged in floodwaters off of Mooresville Road close to Highway 20. Report relayed via social media.

A strong influx of moisture, along with a potent upper level jet stream and incoming cold front brought multiple rounds of showers and thunderstorms, some heavy from the early morning of the 5th through the early morning of the 6th. The first round yielded heavy rainfall in northwest Alabama through southern middle Tennessee during the early morning of the 5th. A second round occurred with a line of thunderstorms during the late morning and midday hours. Intense rainfall in a short period of time led to several instances of flash flooding of small creeks and streams. Several roads were closed or barricaded as a result.

Then, a strong to severe line of thunderstorms developed in Mississippi during the afternoon of the 6th and rolled east through all of north Alabama and southern middle Tennessee during the evening hours. A supercell embedded along the line produced an EF-1 tornado in western Colbert County. As the line progressed east, several reports of wind damage were received. These storms also produced intense rainfall on top of already saturated grounds, producing flash flooding, followed by areal flooding that last through the entire day and into the nighttime hours of the 6th. Once again, several roads became impassible and were closed or barricaded.

This was followed by another band of showers and thunderstorms that lifted northeast from west central and central Alabama through far northeast Alabama during the early morning hours of the 6th.

(AL-Z001) LAUDERDALE, (AL-Z002) COLBERT, (AL-Z003) FRANKLIN, (AL-Z004) LAWRENCE

	02/06/20 21:00 CST		0	Winter Weather
	02/07/20 02:00 CST		0	

Rain changed to snow in northwest Alabama during the evening hours of the 6th as a powerful upper level trough swept northeast through the region. The snow tapered off shortly after Midnight on the 7th. Snow accumulations of 0.5 to 1.5 inches were reported in far northwest Alabama.

(AL-Z009) JACKSON

	02/08/20 04:00 CST		0	Winter Weather

North American Lighting on 6th Street was closed due to flooding.				
Another heavy rainfall event unfolded across the area from the 10th through the 11th, with the vast majority of the Hydrologic Service Area receiving anywhere from 2-4 inches of rainfall. Isolated reports of 5-6 inches of rainfall occurred in a few spots across the area. Due to already saturated soils in place, widespread flash flooding (at onset) and then flooding continued for much of the event, with some spots still dealing with lingering nuisance flooding a couple of days later.

Storm Data and Unusual Weather Phenomena - February 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	02/12/20 17:13 CST		0	Tornado (EF1, L: 3.75 mi , W: 400 yd)
	02/12/20 17:17 CST		0	Source: NWS Storm Survey

A tornado touched down west of Lauderdale County Road (CR) 25, in the Green Hill community. Trees in a forested area west of CR 25 were snapped and uprooted. Structural damage occurred near the intersection of CR 25 and Turrentine Road, where part of the roof on a single-family home was removed, a cinder block shed was demolished, and two smaller sheds were completely destroyed. The tornado continued northeast to the intersection of CR 363 and 144, where most of the trees surrounding a single-family home were snapped or uprooted. The tornado appeared to weaken somewhat as it continued northeast to the intersection of CR 33 and 39, where shingles were blown off several single-family homes and more trees were snapped or uprooted. Numerous trees were snapped and uprooted along CR 39, further northeast along CR 369, and again on CR 39 as that road turns to the north. The last evidence of damage with the tornado was to a single-family home along CR 464.

A tree was knocked down at mile marker 49 on Highway 157. Time estimated by radar.

MARSHALL COUNTY --- 1.5 NNW GUNTERSVILLE LAKE [34.50, -86.19]

02/12/20 19:59 CST	0.20K	Thunderstorm Wind (EG 43 kt)
02/12/20 19:59 CST	0	Source: Emergency Manager

An old and rotten tree was knocked down on Highway 79.

A solid line of mostly low-topped showers with a few embedded thunderstorms pushed east from Mississippi and western Tennessee across north Alabama and southern middle Tennessee during the late afternoon through mid evening hours. A tornado developed along the line in Lauderdale County near Green Hill, producing a measured wind gust of 76 mph on an Amateur Radio weather station, also knocked down the two 40 foot radio towers the equipment was attached to. The tornado tracked east-northeast crossing into Lawrence County in Tennessee, knocking down trees, power lines, and damaging a few homes. In addition, the line of showers produced wind gusts of 35 to 50 mph, with a few pockets of 60 mph winds or higher. Due to saturated soils, even sub-severe winds were able to knock down larger limbs and a few trees. Power lines were also knocked down in some areas.

Storm Data and Unusual Weather Phenomena - February 2020

Several tree and power lines were blown down in Geneva county.

DALE COUNTY --- 0.7 N MIDLAND CITY [31.32, -85.49]

02/06/20 11:25 CST			10K	Thunderstorm Wind (EG 55 kt)
02/06/20 11:25 CST			0	Source: 911 Call Center

Dale county received 14 reports of trees down and 5 power lines down in the county.

A strong cold front affected the region with strong low level winds. A squall line pushed through the area with numerous reports of wind damage. In addition, the strong low level winds ahead of the front resulted in strong non-thunderstorm winds gusts around 50 mph at times.

ALABAMA, Southwest

CLARKE COUNTY --- TALLAHATTA SPGS [31.90, -87.82]

02/06/20 03:55 CST			0	Thunderstorm Wind (EG 52 kt)
02/06/20 03:57 CST			0	Source: Emergency Manager

High winds damaged a roof on a home on Tallahatta Springs Road near Huggins Road.

A line of thunderstorms ahead of a cold front moved across the area and produced high winds which caused some damage in southwest Alabama.

CLARKE COUNTY --- 3.5 N WOODBLUFF [31.98, -88.07], 2.4 W COFFEEVILLE [31.75, -88.14], 3.0 SW JACKSON MUNI ARPT [31.44, -87.93], 1.5 SSE JACKSON [31.50, -87.87]

02/07/20 00:00 CST			0.25M	Flood (due to Heavy Rain)
02/29/20 23:59 CST			0	Source: Emergency Manager

Flooding on the Tombigbee River in Clarke County started on February 7th, 2020 and did not end until March 17th, 2020. At the Coffeerville Lock and Dam, the river crested at 46.85 feet on February 22nd, which is right near the major flood level of 47 feet. At Leroy, the river crested at 33.35 feet on February 22nd, which is in moderate flood levels. In total, 18 structures were flooded along the river in Clarke County. Two of the structures had 2 to 3 feet of water in them. Most of the structures are camp houses, but approximately 4 of them are primary residences.

MONROE COUNTY --- 10.5 NW HYBART [31.93, -87.51], 4.8 SW CHRYSLER [31.29, -87.78], 2.5 W MINEOLA [31.28, -87.67], 3.0 NW MEXIA [31.53, -87.44], 8.6 N HYBART [31.94, -87.39]

02/09/20 00:00 CST			0	Flood (due to Heavy Rain)
02/29/20 23:59 CST			0	Source: Emergency Manager

Monroe County started to experience flooding from the Alabama River on February 9th with the river not falling below flood stage until March 3rd. At Claiborne Lock and Dam, the river crested at 53.66 feet on February 25th, which is in major flood stage and the 5th highest crest on record. The lock and dam was flooded and shut down during the peak of the flooding. Numerous areas along the river in Monroe County were inaccessible for several weeks.

MOBILE COUNTY --- 0.8 SW SARALAND [30.81, -88.08], 1.5 SSE MT VERNON [31.05, -88.02], 3.5 SE FT STODDARD [31.07, -87.94], 5.0 ESE SARALAND [30.80, -87.99]

02/12/20 00:00 CST			0	Flood (due to Heavy Rain)
02/29/20 23:59 CST			0	Source: Official NWS Observations

Moderate to major flooding on the Tombigbee and Alabama Rivers resulted in significant flooding downstream along the Mobile River and Bayou Sara. The Mobile River at Barry Steam Plant crested at 17.08 feet and the Bayou Sara crested at 7.9 feet, the third highest crest on record. Hunting camps along the Mobile River were significantly flooded. Areas in and around Saraland close to Bayou Sara were inaccessible for a long period of time due to the prolonged flooding. Damage estimates were not currently available.

Excessive rainfall across northern and central Alabama and Mississippi as well as in parts of the Tennessee Valley, resulted in very significant rises along the Alabama River and Tombigbee Rivers in southwest Alabama. This major flooding also resulted in other rivers flooding across the Mobile River Delta, including the Bayou Sara at Saraland.
