<b>PICKENS COUNTY --- 3.0 NNW UNION CHAPEL [33.24, -88.15], 4.0 NNW CARROLLTON [33.33, -88.12]</b>				
	01/11/20 11:11 CST	0		Tornado (EF2, L: 6.33 mi , W: 1056 yd)
	01/11/20 11:20 CST	0		Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in northern Pickens County and determined that it was consistent with an EF2 tornado, with maximum sustained winds near 134 mph.				
A tornado touched down south of Highway 86, just on the south side of Coleman Road. The tornado tracked northeast and crossed Highway 86. Along Highway 86, there were at least three homes damaged with one home losing most of its roofing. Numerous hardwood and softwood trees were snapped off or uprooted at this location. The tornado continued northeast across Turnipseed Road, causing significant tree damage. The tornado tracked along Settlement Road where it likely reached its peak intensity. Numerous homes were damaged or destroyed on the west side of Settlement Road, while homes on the east side sustained minor damage. Of the homes destroyed, six were site-built homes. Four manufactured homes were completely destroyed, three of which had anchoring systems that failed. All four manufactured home frames were found considerable distances from the home sites. Three fatalities occurred in two of these manufactured homes on Settlement Road. In addition, all of the injuries were also on Settlement Road. The tornado continued through a forest and crossed Pine Grove Road near McDaniel Road. The farm at this location sustained significant damage with a home and at least two barns heavily damaged. Numerous hardwood and softwood trees were uprooted or snapped as well. From here, the tornado continued northeastward and began to weaken. It crossed Pearson Road, uprooting several trees before dissipating north of Pearson Road and west of Phoenix Road. At least 22 homes suffered varying degrees of damage.				
<b>SUMTER COUNTY --- GAINESVILLE [32.82, -88.17]</b>

Several trees uprooted in the town of Pittsview.

### BARBOUR COUNTY --- 1.3 SSW BAKERHILL [31.76, -85.31], 3.2 NE SANDY PT [31.81, -85.23]

	01/11/20 16:33 CST		0	Tornado (EF1, L: 5.80 mi , W: 275 yd)
	01/11/20 16:41 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in southeast Barbour County and determined that it was consistent with an EF1 tornado, with maximum sustained winds near 88 mph.

The tornado touched down near Threatt Road (County Road 18) just southwest of the town of Bakerhill. One tree was uprooted, and a dead tree was snapped at the starting point. The tornado tracked northeast over County Road 79 where several trees were snapped and uprooted. The tornado continued northeast where it crossed Highway 131. At this location vinyl siding was torn off the right side of a single family brick home. Near the home, there was debris including tin sheathing from a destroyed outbuilding, along with many snapped and uprooted trees. The tornado continued northeast and crossed Five Mile Road (County Road 36) where more trees were uprooted near and just north of Christian Grove Church. The tornado lifted east of Five Mile Road over an open field.

**A dynamic storm system brought severe thunderstorms to a large part of Central Alabama on January 11th. Deep southerly flow brought rich Gulf moisture northward into Alabama. Anomalously high surface temperatures and moisture content was present in the developing warm sector ahead of the storm system. A line of strong to severe thunderstorms developed ahead of a cold front and moved into west central Alabama late in the morning. The line of storms quickly moved through Central Alabama and exited southeastern areas around sunset.**

Although not every location experienced severe weather, widespread wind gusts of 40 to 60 mph were observed along the QLCS. Trees were snapped off or uprooted in numerous locations. Many homes, automobiles, and outbuildings were damaged or destroyed. Several locations likely received straight-line wind gusts of 75 to 80 mph.

## Storm Data and Unusual Weather Phenomena - January 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
<b>(AL-Z007) MORGAN</b>				
	01/04/20 04:00 CST		65K	Strong Wind (MAX 35 kt)
	01/04/20 07:00 CST		0	
<p>Around 4 am, a fishing tournament began at Ingalls Harbor in Decatur along Wheeler Lake. West-northwest winds of 15-25 mph with gusts over 30 mph were being reported at nearby weather stations. It is unknown, but the gusts may have been higher over open water. This occurred during an ongoing flooding event in the area, so flow along the Tennessee River into Wheeler may have also been elevated. At least 3 boats capsized after heading out and participants had to be rescued. Thankfully, no one was injured. The water temperature was reported to be 41 degrees.</p>

## Storm Data and Unusual Weather Phenomena - January 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
A large tree was knocked down onto an ambulance, injuring 3 occupants. The injuries were thankfully minor. The event occurred on Balch Road just north of U.S. Highway 72.				
<b>CULLMAN COUNTY --- 0.3 N HOLLY POND [34.17, -86.62], 0.5 N HOLLY POND [34.18, -86.62]</b>				
	01/11/20 13:03 CST		0	Tornado (EF0, L: 0.21 mi , W: 80 yd)
	01/11/20 13:08 CST		0	Source: NWS Storm Survey
A tornado touched down in the Holly Pond community near the center of town. The tornado caused minimal tree and roof damage as it quickly moved through the city. Minor roof damage was caused to the old WaterBrook restaurant, also blowing off siding at this location, and wrapping it around a cell phone tower northeast of the restaurant. From there, the tornado skipped northeast, causing minimal roof damage to the southwest corner of Holly Pond High School, where less than 20% of the roof was damaged, and portions of the awning were also damaged.				
<b>CULLMAN COUNTY --- 2.1 SSW FAIRVIEW [34.22, -86.69]</b>

## Storm Data and Unusual Weather Phenomena - January 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	01/11/20 14:10 CST		0.50K	Thunderstorm Wind (EG 43 kt)
	01/11/20 14:10 CST		0	Source: Emergency Manager

Thunderstorm winds produced minor non-specified damage to a mobile home.

A long-lived quasi-linear convective system moved into northwest Alabama between 6 and 9 AM, and gradually tracked east across the remainder of north Alabama through the midday and early afternoon hours. In advance of the line, strong southerly winds of 30 to 40 mph with gusts over 45 mph were reported. In some cases, trees and power lines were knocked down with these non-thunderstorm winds. The line of thunderstorms yielded numerous reports of thunderstorm wind damage, including trees and power lines being knocked down, along with some structural damage. A few weather stations measured wind gusts of 58 mph or higher as well. Storm surveys revealed 3 separate tornadoes: 1 EF0 and 1 EF1 in Cullman County, and 1 EF2 in Marshall County. Intense rainfall in a short period of time resulted in a few reports of brief flash flooding in northwest Alabama.

	01/15/20 22:37 CST		0.20K	Thunderstorm Wind (EG 43 kt)
	01/15/20 22:37 CST		0	Source: Law Enforcement

A tree was knocked down at the intersection of Milk Springs Road and Woodmont Drive. Time estimated by radar.

A line of thunderstorms dropped southeast through north Alabama ahead of a cold front during the middle to late evening hours of the 15th. A tree was knocked down in Colbert County, and multiple trees were knocked down in the Brownsboro community of Madison County. Wind gusts were measured at 40-50 mph along this portion of the line of thunderstorms as measured by RAWS and CWOP weather stations.
