

Storm Data and Unusual Weather Phenomena - March 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
ALABAMA, Central				
HALE COUNTY --- 2.7 WSW GREENSBORO [32.68, -87.62], 2.0 ESE GREENSBORO [32.69, -87.55]				
	03/03/20 06:04 CST		0	Tornado (EF0, L: 4.34 mi , W: 220 yd)
	03/03/20 06:12 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in eastern Hale County and determined that it was consistent with an EF0 tornado, with maximum winds near 75 mph.				
The tornado touched down near Royal Estates Drive, just southwest of the town of Greensboro. The tornado tracked east-northeast where it snapped and uprooted numerous trees near a ballpark on Highway 69. Nearby homes suffered structural damage due to fallen trees, as well as varying degrees of minor roof and siding damage. Farther downstream, tree damage was observed on Cherokee Terrace where numerous pines were uprooted. The tornado continued east-northeast where minor structural damage was observed near Centerville Street and Avery Drive. The tornado then turned to the east and east-southeast where it uprooted several trees on County Road 7 before dissipating near Whitsitt Creek.				
BIBB COUNTY --- 4.1 W ACTIVE [32.86, -87.05], 1.6 ESE LAWLEY [32.86, -86.94]				
	03/03/20 06:28 CST		0	Tornado (EF1, L: 6.21 mi , W: 525 yd)
	03/03/20 06:38 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage in far southeast Bibb County and determined that it was consistent with an EF1 tornado, with maximum winds near 110 mph.				
The tornado touched down in a heavily wooded area just west of Liberty Road in southeast Bibb County. The tornado intensified to EF1 strength where it knocked a manufactured home off the foundation, and displaced a nearby vehicle. Nearby, extensive tree damage was observed with at least several dozen trees snapped or uprooted. The tornado continued on an eastward path where it continued to cause extensive tree damage, as well as damage to at least three homes along Maude Tower Road and County Rd 29. The tornado then tracked over a heavily wooded area near Trail Branch before crossing Highway 82. It then caused numerous trees to be snapped or uprooted near the Lawley Fire Department and Community Center. The tornado dissipated just east of County Road 36 near Oakmulgee Creek.				
SUMTER COUNTY --- 6.9 S SILOAM [32.33, -88.26]				
	03/04/20 04:40 CST		0	Thunderstorm Wind (EG 50 kt)
	03/04/20 04:41 CST		0	Source: Fire Department/Rescue
Several trees uprooted and a shed destroyed on Bumkun Road.				
MONTGOMERY COUNTY --- 1.8 N STRATA [32.06, -86.30]				
	03/04/20 06:01 CST		0	Thunderstorm Wind (EG 50 kt)
	03/04/20 06:02 CST		0	Source: Emergency Manager
Several trees uprooted on Hickory Grove Road, near the intersection of Highway 331.				
PIKE COUNTY --- (TOI)TROY MUNI ARPT [31.87, -86.02]				
	03/04/20 06:41 CST		0	Thunderstorm Wind (MG 59 kt)
	03/04/20 06:43 CST		0	Source: ASOS
KTOI ASOS reported a peak wind gust of 59 mph. Multiple reports of trees uprooted across the city of Troy.				
BULLOCK COUNTY --- PEROTE [31.95, -85.70]				
	03/04/20 06:50 CST		0	Thunderstorm Wind (EG 50 kt)
	03/04/20 06:52 CST		0	Source: Public
Numerous trees uprooted in the community of Perote.				
BARBOUR COUNTY --- 0.5 SSE PRATTS [31.82, -85.52]				
	03/04/20 07:18 CST		0	Thunderstorm Wind (EG 50 kt)
	03/04/20 07:20 CST		0	Source: Emergency Manager
Several trees uprooted along Highway 51 between the towns of Louisville and Clayton. Trees also uprooted along Highway 239 and County Road 25.				
BARBOUR COUNTY --- 1.4 N TEXASVILLE [31.74, -85.43]				

Storm Data and Unusual Weather Phenomena - March 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	03/04/20 07:25 CST		0	Thunderstorm Wind (EG 50 kt)
	03/04/20 07:26 CST		0	Source: Emergency Manager
Several trees uprooted along Stark Bros Road and Bud Gary Road.				
A very moist and convergent zonal flow pattern set the stage for several rounds of severe weather across the southern portions of central Alabama on March 3rd/4th. A weak cold front pushed south of I-20 on March 3rd and triggered a cluster of strong to severe storms, including a few weak tornadoes. Another round of severe storms impacted areas south of I-85, producing high winds.				
<hr/>				
TALLADEGA COUNTY --- 1.3 N CURRY [33.50, -86.02]				
	03/11/20 14:55 CST		0	Hail (1.25 in)

Dime to quarter size hail.				
<hr/>				
GREENE COUNTY --- 6.8 ESE FORKLAND [32.60, -87.78]				
	03/11/20 15:46 CST		0	Hail (1.00 in)
	03/11/20 15:47 CST		0	Source: County Official
Dime to quarter size hail at the Greene County Electric Plant.				
An fast moving MCS tracked southeast across central Alabama during peak heating and maximum instability. The leading edge of the storms encountered an air mass that had sufficient deep layer bulk shear and CAPE in the hail growth zone for the production of large hail.				
<hr/>				
LAMAR COUNTY --- 1.3 N HIGHTOGY [33.72, -88.10]				
	03/29/20 01:12 CST		0	Hail (3.00 in)
	03/29/20 01:12 CST		0	Source: Public
Very large hail reported near County Road 17.				
<hr/>				
WINSTON COUNTY --- 0.7 ESE ADDISON [34.19, -87.17]				
	03/29/20 01:58 CST		0	Thunderstorm Wind (EG 50 kt)
	03/29/20 01:59 CST		0	Source: Emergency Manager
Several trees uprooted along Old Highway 278.				
<hr/>				
WINSTON COUNTY --- 1.5 NE ADDISON [34.21, -87.16]				
	03/29/20 01:59 CST		0	Thunderstorm Wind (EG 50 kt)
	03/29/20 02:00 CST		0	Source: Emergency Manager
Several trees uprooted and power lines downed along Sardis Airport Road.				
A band of strong to severe storms ahead of a cold front moved through north Alabama during the overnight hours on March 28th. Temperatures during the overnight hours set record warm readings, and this produced steep low level lapse rates. Cold air aloft and strong mid level shear also contributed to the production of robust storm updrafts.				
<hr/>				
TUSCALOOSA COUNTY --- TUSCALOOSA [33.20, -87.57]				
	03/31/20 06:25 CST		0	Thunderstorm Wind (EG 50 kt)

National Weather Service meteorologists surveyed damage in northwest Pike County and determined that it was consistent with an EF0 tornado, with maximum winds near 70 mph. Damage was limited to a few snapped and uprooted pine trees along its path. A tornado debris signature was noted with this storm.				
<hr/>				
PIKE COUNTY --- HENDERSON [31.67, -86.07]				
	03/31/20 09:33 CST		0	Thunderstorm Wind (EG 50 kt)
	03/31/20 09:34 CST		0	Source: Public
Several trees uprooted in the town of Henderson.				
<hr/>				
PIKE COUNTY --- 1.3 SSW (TOI)TROY MUNI ARPT [31.85, -86.03], 1.3 SE (TOI)TROY MUNI ARPT [31.86, -86.00]				
	03/31/20 09:34 CST		0	Tornado (EF0, L: 1.61 mi , W: 80 yd)
	03/31/20 09:36 CST		0	Source: NWS Storm Survey
National Weather Service meteorologists surveyed damage near the Troy Municipal Airport in northern Pike County and determined that it was consistent with an EF0 tornado, with maximum winds near 80 mph.				
The tornado formed near the intersection of Lake Road and Oak Grove Road just southwest of Troy Municipal Airport. Branches and a couple of trees were uprooted along Oak Grove Road. The tornado continued east-northeastward, removing the roof from a barn and uprooting a few more trees, before crossing the north-south runways at the airport. The tornado passed south of the terminal and very near the KTOI ASOS. Winds backed from 200 degrees to 170 degrees and then veered to 260 degrees while gusting to 47 mph. The tornado uprooted a few trees before dissipating west of Highway 231.				
<hr/>				
PIKE COUNTY --- 0.7 W SANDFIELD [31.90, -85.81], 0.2 NE SANDFIELD [31.90, -85.80]				
	03/31/20 09:51 CST		0	Tornado (EF0, L: 0.83 mi , W: 180 yd)
	03/31/20 09:52 CST		0	Source: NWS Storm Survey

Storm Data and Unusual Weather Phenomena - March 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
National Weather Service meteorologists surveyed damage in northeast Pike County and determined that it was consistent with an EF0 tornado, with maximum winds near 75 mph. The tornado formed in a wooded rural area south of Highway 223 and the Sandfield community. Several trees were uprooted as it crossed a dirt road and County Road 6615. The tornado appeared to dissipate prior to reaching the Bullock County line. A brief tornado debris signature was also observed on the KMXX radar.				

BARBOUR COUNTY --- 1.3 SE COTTON HILL [31.82, -85.26], 2.6 ENE TERESE [31.82, -85.13]				
	03/31/20 10:34 CST		0	Tornado (EF2, L: 7.85 mi , W: 350 yd)
	03/31/20 10:46 CST		0	Source: NWS Storm Survey

National Weather Service meteorologists surveyed damage in southeast Barbour County and determined that it was consistent with an EF2 tornado, with maximum winds near 130 mph.

The tornado formed in a wooded area west of Lee Parker Lane, just north of Highway 131 and to the northeast of the town of Baker Hill. The tornado tracked northeastward uprooting trees and causing minor roof damage to two residences along Five Mile Road. It continued to snap trees as it tracked through a wooded area. The tornado crossed Highway 131 near Leroy Road where two residences and a mobile home suffered minor damage. The tornado intensified as it crossed Highway 431 with the most significant damage in the Country Club of Alabama neighborhood, along the south side of Pebble Beach Drive. Large sections of roofs were removed from a few well built residences with collapse of some exterior walls. The tornado crossed the Walter F. George Reservoir along the Chattahoochee River and continued into Quitman County in Georgia.

A strong upper level disturbance caused a wave of low pressure to form along a quasi-stationary front and move eastward along the Highway 80 and Interstate 85 corridors. This allowed a warm front to lift northward across the southeast portions of Central Alabama. North of the warm front, a line of showers with sporadic lightning strikes along an inverted trough was able to produce damaging winds despite a cool and stable air mass at the surface, knocking down numerous trees from Tuscaloosa County to Randolph County during the first part of the morning. A QLCS ahead of the cold front moved eastward later in the morning from Lowndes County to Barbour County, producing sporadic damaging winds. Additionally, bookend vortices and embedded supercell structures several weak tornadoes and one strong tornado.

ALABAMA, North

Flooding reported around the intersection of Mount Hester Road and Rickard Cutoff Road. Depth of water unknown.				
Showers and thunderstorms repeated dropped heavy rainfall across far northwest Alabama and adjacent sections of southwest Tennessee. Rainfall amounts of 1.5-3 inches fell in these areas during the early morning hours of the 23rd. This all fell on already saturated ground, and caused several small creeks and streams to flood. Lauderdale County EMA relayed several reports of flash flooding in their county, which prompted the closure of several roads and a few bridges.

Storm Data and Unusual Weather Phenomena - March 2020

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	03/24/20 16:39 CST		0	Tornado (EF1, L: 8.16 mi , W: 200 yd)
	03/24/20 16:51 CST		0	Source: Emergency Manager

The tornado touched down in western Tishomingo County in northeast Mississippi producing EF-1 damage, before crossing into Colbert County, Alabama just north of the Natchez Trace Parkway. As the tornado entered Colbert County, dozens of trees were snapped or uprooted and a single-family home received minor roof damage. The tornado continued on an easterly path, crossing Natchez Trace Parkway and uprooting several more trees. As the tornado reached Mynot Road, a chicken house was destroyed and a few trees were uprooted. The tornado continued to the east-northeast, uprooting a couple of trees before lifting near White Pike Road.

WSW flow aloft prevailed as two shortwaves moved through the elongated, positively tilted longwave trough. At the surface, a mostly stationary frontal boundary strengthened. At the same time, increasing southerly low-level flow resulted in greater warm air advection south of the frontal boundary. There were scattered reports of wind damage and hail across the tri-state area.

High winds snapped trees in the Gateswood community.

An area of low pressure and trailing cold front moved across the southeastern states. A very warm and moist air mass developed ahead of this system and allowed strong to severe storms to develop. The thunderstorms produced several reports of wind damage across southwest and south central Alabama.
