Storm Data and Unusual Weather Phenomena - May 2022

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
At 10:28 AM on Wednesday, May 25th 2022, an EF-0 tornado touched down near an open-walled garage and caused minor roof damage to the metal roofing panels. The tornado then tracked north-northwest, crossing CR-34 and directly hitting an open-walled chicken house. While most of the roof was damaged, the open walls allowed for the tornado to more easily loft portions of the roof and cause damage to metal roofing panels, so a lower-end estimate of 70 mph was given. This was the maximum width identifiable in the damage pattern for the weak tornado, as roughly two-thirds of the building had roof damage. The tornado then continued north-northwest, uprooting a few trees before rapidly lifting. Due to waterlogged soils from antecedent heavy rainfall, a low-end wind estimate of 73 mph was provided for the uprooted trees. Overall, the tornado lasted less than a minute as it tracked a quarter-mile from south-southeast to the north-northwest embedded within a QLCS.

Storm Data and Unusual Weather Phenomena - May 2022

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

A deepening are of low pressure associated with a storm system centered over eastern Nebraska was in place Wednesday morning on May 25th. A warm sector was in place over much of northern Alabama east of this feature. Two lines of thunderstorms developed in this warm sector. The first line of convection occurred in the morning hours over northeastern Alabama and produced one supercell that was short lived. This supercell storm produced a brief tornado touchdown east of the Painter community. More strong to severe storms occurred with the second round of convection that affected NW Alabama with damaging winds before weakening as it moved further east during the afternoon hours.

A tornado touched down on the south side of Wilson Mountain Rd just south of the intersection with Key Turney Rd in Falkville , AL. The tornado snapped a couple of hardwood trees and did minor roof damage to a mobile home near its touchdown point. The tornado crossed Wilson Mountain Rd, heading generally in a NE direction and snapped and uprooted trees along its path. One of these hardwood trees fell on a shed at a residence on the north side of Wilson Mountain Rd. A few snapped and uprooted trees were observed along its path as it descended into Devils Cellar Hollow . A couple of large trees were also uprooted to the NE of there along a small section of Jewel Lesalle Ln. This was the last point damage was evident as the tornado moved into rugged, nearly inaccessible terrain. Special thanks to Morgan County, AL EMA for their assistance in this survey.
