<b>ELMORE COUNTY --- 0.8 ENE BUTTS MILL [32.57, -85.96]</b>				

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	05/10/24 00:21 CST	0		Hail (2.50 in)
	05/10/24 00:26 CST	0		Source: Public

A social media photo confirmed that tennis ball size hail fell along Highway 14 west of Tallassee.

<b>PIKE COUNTY --- 0.9 SE (TOI)TROY MUNI ARPT [31.86, -86.01]</b>	05/10/24 02:06 CST	0	Thunderstorm Wind (MG 54 kt)
	05/10/24 02:07 CST	0	Source: ASOS

A 62 mph gust was measured at Troy Municipal Airport ASOS station (KTOI) at 3:07 AM CDT.

<b>BARBOUR COUNTY --- 0.2 S ALSTON [31.88, -85.45], 1.0 SSW EUFAULA [31.87, -85.15]</b>	05/10/24 02:30 CST	0	Thunderstorm Wind (EG 52 kt)
	05/10/24 02:56 CST	0	Source: Emergency Manager

Numerous trees and power lines were downed in the Eufaula and Clayton areas. A tree fell on an apartment building along Paul Lee Parkway in Eufaula, causing roof and structural damage.

An upper-level shortwave moving southward across the South along with an associated surface cold front instigated an outbreak of severe weather across Tennessee and North Alabama. This activity reached Central Alabama by the morning of May 9 in the form of a Mesoscale Convective System (MCS) which affected portions of the state east of I-65 with numerous reports of tree damage. A second wave of activity during the afternoon saw several developing supercells over the central and western part of the state, producing several instances of wind damage, hail, and flooding. Up to 4-inch hail fell in the Blount County community of Holly Springs. This activity congealed into a bow echo which heavily affected portions of Elmore, Tallapoosa, Macon, and Barbour counties with many trees and power lines downed. Another MCS passed through southern portions of Central Alabama overnight, resulting in more tree damage in Marengo and Barbour counties.

<b>WINSTON COUNTY --- 1.4 SSW HALEYVILLE POSEY ARP [34.26, -87.61]</b>	05/14/24 17:23 CST	0	Hail (1.00 in)
	05/14/24 17:28 CST	0	Source: Broadcast Media

Social media photos were received of quarter-size hail on the north side of Haleyville.

A surface low across Tennessee during the afternoon and evening of May 14 fostered a broken line of thunderstorms across northwest Central Alabama. Although largely below severe limits, one cell within the line briefly intensified and produced quarter-size hail near Haleyville.

<b>WALKER COUNTY --- 1.3 ENE DORA [33.74, -87.08]</b>	05/18/24 13:46 CST	0	Hail (0.88 in)
	05/18/24 13:49 CST	0	Source: Public

Hail up to nickel size fell in Dora.

<b>JEFFERSON COUNTY --- 2.2 SE THERMAL [33.78, -86.77], 3.5 NE DIXIANA [33.76, -86.63]</b>	05/18/24 14:10 CST	0	Thunderstorm Wind (EG 56 kt)
	05/18/24 14:32 CST	0	Source: Public

Numerous trees were uprooted east of Kimberly and north of Pinson along Mosley Loop Rd, Bone Dry Rd, Bradford Tafford Rd, Old Tennessee Pike Rd, and across Highway 75 at the Blount/Jefferson county line. Power poles were broken along Highway 75 as well.

<b>JEFFERSON COUNTY --- 2.6 N MAJESTIC [33.77, -86.76]</b>	05/18/24 14:15 CST	0	Hail (1.00 in)
	05/18/24 14:16 CST	0	Source: Public

Quarter-size hail was reported in a neighborhood along Self Creek Rd east of Kimberly.

<b>ST. CLAIR COUNTY --- 4.5 SW SPRINGVILLE [33.72, -86.52], 0.7 N SPRINGVILLE [33.78, -86.47]</b>	05/18/24 14:40 CST	0	Thunderstorm Wind (EG 50 kt)
	05/18/24 14:45 CST	0	Source: Emergency Manager

Power lines were downed along Will Keith Rd at Weems Rd and a large tree was snapped at a house along Forrest Dr in Springville.

**TUSCALOOSA COUNTY --- 3.9 NE FOSTERS [33.12, -87.66]**

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	05/18/24 15:03 CST	0		Hail (0.88 in)
	05/18/24 15:04 CST	0		Source: Public

Nickel-size hail fell along US 11/43 near the Black Warrior River.

**AUTAUGA COUNTY --- 0.8 SE PINE LEVEL [32.57, -86.46], 3.7 N FAYS [32.53, -86.42]**

05/25/24 16:35 CST	0	Hail (1.00 in)
05/25/24 16:38 CST	0	Source: Public

Quarter-size hail report from image relayed via broadcast media.

**A decaying Mesoscale Convective System (MCS) from the morning of May 24 over Tennessee produced an outflow boundary that sparked additional thunderstorm activity during the afternoon over Central Alabama. One of these storms produced quarter-size hail over Tuscaloosa County. The next day, in conjunction with a passing shortwave, more thunderstorms developed along an additional outflow boundary over the central part of the Alabama. This activity pushed southeastward during the afternoon, with additional activity forming in southern and western counties into the evening hours.**

**CHEROKEE COUNTY --- 1.4 N MT ZION [34.30, -85.72], 0.6 S FIRESTONE [34.27, -85.67]**

05/27/24 03:27 CST	0	Tornado (EF0, L: 3.41 mi , W: 550 yd)
05/27/24 03:31 CST	0	Source: NWS Storm Survey

A brief EF1 tornado with winds up to 105 mph formed along the leading edge of a QLCS in northern Cherokee County. Minor timber damage began along County Road 768 near County Road 47. The tornado continued to down trees as it crossed County Road 43. The tornado intensified as it paralleled County Road 275, snapping numerous trees along the southwestern slope of the canyon containing Johnnies Creek. The tornado weakened as it moved near the mouth of Little River Canyon, but continued to down trees as it crossed Highway 273. The tornado dissipated as it crossed the Little River near where it flows into Weiss Lake.

**CHEROKEE COUNTY --- 2.0 SE FIRESTONE [34.26, -85.64], 0.9 ESE BLAINE [34.14, -85.62]**

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	05/27/24 03:31 CST	0		Thunderstorm Wind (EG 61 kt)
	05/27/24 03:47 CST	0		Source: NWS Storm Survey

An area of tree damage, separate from the nearby tornado path, occurred along County Road 104 along Weiss Lake, where some trees fell on homes. The sporadic and divergent nature of the damage and wider path were consistent with straight line winds. Elsewhere, trees were also downed at Highway 273 and County Road 47 and along County Road 76 near Centre.

NWS Birmingham conducted a storm survey in areas such as Coaling, Vance, Woodstock, West Blocton, Green Pond, Helena, Pelham, and Alabaster. This survey was to assess a large area of reported wind damage associated with a severe thunderstorm bowing segment evident on KBMX RADAR. Observed damage along this path mainly consisted of uprooted or snapped trees, and fallen large tree limbs. Fallen timber caused damage to homes, vehicles, and power lines. Widespread power outages occurred as a result.

Wind damage throughout this path was consistent with straight-line winds, or winds that were not tornadic. Gusts of 60-70 mph were evident along a path approximately 10 miles wide and 80 miles long, and some higher intensity timber damage in the Coaling, Vance, West Blocton, Helena, and Alabaster areas suggest wind gusts up to 75 mph. The damage pattern across this path was divergent, and higher intensity damage areas exhibited divergent microburst characteristics. There was no sign of debris lofting on the damage survey, and no signs of rotation or lofted tornado debris after a thorough analysis of KBMX RADAR data.

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
----------	-----------	-------------------	---------------------	------------------------

Near Newell, a church on County Road 534 and a barn on County Road 59 sustained wind damage. Numerous trees were downed across the northern part of the county including along County Roads 25, 427, 51, and 37, adjacent to the path of the tornado along County Roads 427 and 51.

RANDOLPH COUNTY --- 4.0 NNW NEWELL [33.48, -85.44], 1.3 WSW COLD RIDGE [33.48, -85.39]				
	05/27/24 05:52 CST	0		Tornado (EF0, L: 3.17 mi , W: 350 yd)
	05/27/24 05:56 CST	0		Source: NWS Storm Survey

A brief EF1 tornado with winds up to 110 mph formed within a QLCS in northern Randolph County. The tornado began in a wooded area west of County Road 425 and began to snap tree branches and uproot trees. The tornado intensified after crossing County Road 427, snapping numerous trees between there and County Road 51. On County Road 51 multiple windows were blown out of a home with some minor roof damage also occurring. The roof was blown off an outbuilding causing its walls to collapse. Additional timber and outbuilding damage occurred as it crossed County Road 429 before the tornado dissipated in an inaccessible wooded area prior to reaching County Road 37. A tornado debris signature was observed on KFFC radar.

RUSSELL COUNTY --- 2.6 N SEALE [32.34, -85.18]				
	05/27/24 13:15 CST	0		Hail (1.00 in)

PIKE COUNTY --- CHINA GROVE [32.03, -85.95]				
	05/27/24 16:08 CST	0		Hail (0.88 in)
	05/27/24 16:09 CST	0		Source: Broadcast Media

A photo received via social media showed nickel-size hail in the China Grove area.

A line of thunderstorms entered northern portions of Central Alabama after 4:30 AM CDT on May 27, producing scattered areas of wind damage and an embedded tornado in Cherokee County. Simultaneously, an area of intense thunderstorms moved northeastward from north of Meridian, Mississippi into the southern and eastern portions of the Birmingham metro area. This resulted in widespread tree and power line damage and occasional structure damage across northern Hale, southern Tuscaloosa, Bibb, Shelby, Jefferson, St. Clair, and Talladega counties. As the northern line progressed southeastward and later merged with the advancing thunderstorms moving east of Birmingham, a second tornado occurred over northern Randolph County at approximately 6:55 AM CDT. Additional activity occurred during the afternoon hours over the southeastern counties, with a few reports of nickel to quarter-size hail.

A tornado touched down on Grace Hill Lane, producing a brief path of damage behind a house and into a wooded area northeast of the Grace Hill Farms Paintball Facility. Here, the tornado snapped and uprooted several large oak trees, with a width of 90 yards and wind speed of 105 mph. The tornado then skipped northeast, producing sporadic hard and softwood tree damage along Cotton Belt Road and Patterson Hill Road. After crossing Alabama Highway 99, more sporadic tree damage was noted along and northeast of Chapman Hollow, Dupree Hollow, and Cabbage Ridge Roads. The tornado lifted in a field east of Cabbage Ridge Road just short of the Elk River.

A tornado touched down in a very remote portion of far northern Lawrence County near Melton Bluff . It moved across an agricultural field, causing minor damage to a large corn field. The tornado quickly intensified snapping off or uprooting a large forested area . The survey team noted several of these trees were medium to large size oak trees and significant damage was noted in this forested area. The tornado then descended Melton Bluff and crossed the Tennessee River into Limestone County.

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
The tornado descended Melton Bluff in Lawrence County and crossed the Tennessee River into Limestone County , moving ashore at the Brigadoon neighborhood. Public photos and videos confirm the tornado was over water before it moved on land. It caused damage at Inverness Place and this is where significant damage occurred to several homes. The home that had the greatest damage had all exterior walls facing the river collapsed, the roof of the main part of the house completely gone and the two story four car garage was collapsed with the roof also gone. The front of the house and interior rooms remained intact. Homes nearby had substantial roof damage, damaged vehicles, and other various exterior damage. Numerous large trees throughout the neighborhood were uprooted or snapped. Moving further into the subdivision, there was roof and exterior home damage to a lesser extent, fences knocked over by other debris and broken windows. The tornado lifted in a field outside of the subdivision.				
<b>LIMESTONE COUNTY --- 2.2 SE PETTUSVILLE [34.95, -86.93], 1.4 WSW ARDMORE ARPT [34.99, -86.90]</b>	05/08/24 19:45 CST	0	Tornado (EF1, L: 3.47 mi , W: 225 yd)

A tornado tornado touched down west of New Bethel Road , uprooting and snapping several large softwood trees and collapsing more than half of a private aircraft hangar. The tornado continued north-northeast, uprooting more large trees and snapping large branches near homes along Shipley Hollow Road, which is where the tornado reached its maximum intensity of 105 mph. Shingles were displaced on a roof of a single family house. Sparse tree damage occurred just west of Old Scrouge Rd as the tornado lifted.

	05/08/24 20:11 CST	0	Source: NWS Storm Survey	
A tornado touched down in the Hill Chase neighborhood on the west-facing slope of Rainbow Mountain. Several trees were uprooted in this neighborhood, with at least two trees on houses. The tornado continued east-southeast over Rainbow Mountain where additional trees were uprooted or snapped, fences damaged, and at least one power pole was toppled. The tornado damaged more trees in the Highland Lakes neighborhood, on the east-facing slope of Rainbow Mountain. Numerous trees were uprooted in this area with a snapped trunk of at least one weaker, softwood tree. This damage indicator was reduced to account for the condition of the tree. The tornado then continued eastward across Slaughter Road. More trees were uprooted along Mingo Road. Minor damage was observed in the Creekwood neighborhood and into the Indian Creek basin where the tornado lifted.				
<b>MADISON COUNTY --- 1.9 WSW HUNTSVILLE MILLS ARP [34.74, -86.58], 2.5 W GURLEY [34.70, -86.42]</b>	05/08/24 20:28 CST	0	Tornado (EF2, L: 9.51 mi , W: 550 yd)

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
A tornado initially touched down on Walker Avenue NE as indicated by snapping of large branches and significant leaf litter . The tornado continued generally southeast resulting in several large trees uprooted between Walker Avenue NE and Randolph Avenue SE . This track continued east through Maple Hill Cemetery to just north of Sun Valley Road SE with several additional trees both uprooted and snapped . North of Dug Hill Estates, the tornado continued to uproot hardwood trees and snapped a cedar tree before moving eastward along the southern facing slope of the adjacent ridge. Just to the east of the ridge along Dug Hill Road, hardwood trees were snapped and uprooted. Snapped trees were observed along the relatively steep sloped southern portion of Watson Grande Way. The tornado then tracked generally east into McMullen Cove and continued to distribute leaf litter and snap small branches before beginning to peel some siding on single family homes. The tornado then intensified and caused partial uplift of roofs on the eastern side to four houses on Kenhurst Lane SE. Roofing material was lofted one block east on Abby Glen Way , where there was also additional scattered shingle damage.

05/08/24 21:53 CST	0	Source: NWS Storm Survey

A combination of NWS Storm Survey crews, drone imagery, and supplemental Worldview 3 satellite imagery determined that an EF-1 tornado tracked through southeast Huntsville just north of Governors Drive. All damage noted was from snapped tree limbs and uprooted trees along this track. The track continued across Monte Sano, past Dug Hill Road, lifting just before Watson Grande Way.

05/08/24 21:57 CST	4.50M	Tornado (EF3, L: 3.95 mi , W: 880 yd)
05/08/24 22:06 CST	0	Source: NWS Storm Survey

A tornado touched down on Highway 71 in Jackson County, snapping hard and softwood trees to begin its path. The tornado continued between County Roads 425 and 322, producing minor damage to the roof of a small farm building. The tornado then overturned a camper and injured two people downstream along County Road 422. Also at this location, a well-built home was partially destroyed. A mobile home was moved off its foundation here as well, with a third of the roof of a hay barn and a horse trailer destroyed. Projectiles were found in the field across the street from this home, with 2x4s impaled a foot to 18" in the ground at this location. Further south and east along State Road 40, large 100+ year old oak trees that were 4-5 foot in diameter were blown down onto a house, collapsing two exterior walls. Windows were sucked out at this location as well prior to the trees falling when the tornado passed just north of the house. Up the street, a well-built home sustained major damage when the tornado ripped the garage off of the house and sheared it to the north and east into the rest of the dwelling. EF-2 wind speeds of 135 mph were noted at this location.

Widespread fallen trees south of State Road 40 were noted and surveyors found damage indicators and degrees of damage consistent with EF-3 (140 mph) tornado damage. The tornado was the strongest and widest at this point along the path, at 880 yards or around 1/2 mile. Along County Road 125, a well built shop building was completely destroyed. The metal building structure was well-anchored with H-beams anchored with large bolts and plates at the bases to the foundation. The bolts were snapped and severely bent, along with the plates. On one corner, a large 4-5 foot section of the foundation was ripped off the ground and strewn about 10 feet away with the column anchoring still intact. A 20,000 pound 18-wheeler cab was tossed more than 150 yards into the field across County Road 125. Other nearby semi-trailers that were parked on the property were strewn in the same direction as well, though most were shifted 50-100 feet. The tornado then proceeded into DeKalb County.

05/08/24 22:24 CST	0	Source: NWS Storm Survey

A tornado continued to track from Jackson into DeKalb County , snapping and uprooting softwood trees over the relatively rural landscape along Melton Drive and Elliot Road. Further east and southeast, the tornado moved across the intersection of Culver, Keith, and Lacey Roads, snapping and uprooting more softwood trees. The tornado crossed State Road 40, peeling back tin on several chicken houses between State Road 40 and Valley Road, causing the structural integrity of one of the houses to be compromised. Additional softwood trees were uprooted and snapped near the intersection of County Roads 714 and 120 along State Road 40 as well, with the loss of several roof panels to a shed structure at a house located here.

A large oak tree fell onto a house on County Road 665 at 670. The tornado skipped along uprooting and snapping more hard and softwood trees before lifting near the intersection of County Road 611 and State Road 40.

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
A tornado touched down on County Road 122, snapping and uprooting hard and softwood trees, just east of County Road 91. The tornado continued moving to the east-southeast, snapping and uprooting widespread trees along CR 122. Though there were numerous softwood trees that were damaged, notably, there were several large 4-6 foot in diameter oak trees that were likely 100 years or older that were snapped and uprooted. This led to the slightly higher rating of the tree damage. Any structural damage along this path was from trees that were knocked over by the tornado, and minimal roof loss was noted in this location.				
<b>MADISON COUNTY --- 2.4 NE FISK [34.99, -86.55], 3.0 E NEW MARKET [34.89, -86.38]</b>	05/09/24 03:03 CST	0		Tornado (EF1, L: 12.00 mi , W: 215 yd)

A tornado crossed the Tennessee state line from Lincoln County impacting western portions of Bevills Church Road northeast of Hazel Green , uprooting a large hardwood tree and breaking large branches. The tornado moved east-southeast producing damage along portions of Manley Road, where a large uprooted tree fell on a house causing roof damage. The tornado proceeded to break large tree branches as it moved near the intersections of Butler Road with Mint Road and Walnut Grove Road. There, it produced loss of shingles to a home and scattered areas of broken tree branches. Tornado damage was observed again near the intersections of Mint Springs Road with New Market Rd. Trees were uprooted and large branches snapped along New Market Road as the tornado continued southeast into New Market. Here, large tree branches were broken, including some uprooted trees just east of town along Hurricane Road. The tornado broke large tree branches sporadically along Hurricane Road and near the intersection of Dodson Lane and Upper Hurricane Road before dissipating.

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
	05/09/24 03:31 CST		0.16M	Tornado (EF1, L: 0.30 mi , W: 108 yd)
	05/09/24 03:32 CST	0		Source: NWS Storm Survey

A brief tornado touched down on a ridgeline northwest of Princeton, and then crossed a field as it uprooted and snapped trees before crossing County Road 508. At this location, numerous hardwood and softwood trees were knocked down. Some of the hardwood trees uprooted here were 6-7 feet in diameter, with several pine trees snapped about 10 feet above the ground. It was at this point that the tornado was the strongest, with up to 104 mph winds. Also at this location, a manufactured home (single-wide) sustained major damage, with the home shifting about 10-15 feet back from its original location. There were no tie-downs for the home noted, but more than half of the roof was destroyed with insulation strewn for about 30 yards into the trees behind the home. Further south and east of this location, the tornado dissipated as it crossed over the terrain just east of Lick Fork.

A tornado touched down about 0.5 miles northwest of the intersection of Old Mill Creek Road and County Road 243. High resolution satellite imagery in this area indicated multiple trees were uprooted. The tornado continued southeast to just north of the intersection of County Road 243 and Alabama Highway 79. The tornado uprooted and snapped trees at this location, one of which fell on a home causing damage to the roof structure. On the east side of Highway 79, further spotty damage occurred. Here, the tornado uprooted and snapped trees before lifting approximately one third of a mile east of Highway 79.

05/09/24 04:17 CST	0		Source: NWS Storm Survey

A tornado touched down on County Road 432 north of County Road 88 where several large limbs were snapped off of hardwood trees. The tornado then tracked south-southeast, just west of Pisgah, causing sparse tree limb damage before crossing County Road 372 and uprooting and snapping several trees near a residence. At this point, the tornado tracked southeast along County Road 58, uprooting several trees along the way, before it crossed Highway 71 and tracked southward. The track was more difficult to identify south of County Road 425, as it intersects with the Henegar EF-3 tornado which occurred the evening of the 8th. The track was identifiable once more along Highway 40 where it continued southward before lifting along County Road 392 with only sparse tree damage noted.

**A significant outbreak of tornadoes occurred in two waves during the evening of the 8th and early morning hours of the 9th. The first wave occurred as multiple supercell thunderstorms developed across southern middle Tennessee and far north central Alabama. These storms moved east during the evening hours, producing ## tornadoes in north central and northeast Alabama.**

**A break in the activity was then followed by a line of thunderstorms that dropped southeast through southern middle Tennessee into north central and northeast Alabama after Midnight through the early morning hours. The line produced tornadoes in southern middle Tennessee, a couple of which continued into northeast Alabama. Additional tornadoes occurred with the line in far northeast Alabama.**

## Storm Data and Unusual Weather Phenomena - May 2024

A large tree limb was knocked into power lines, causing a power outage for about 1400 customers.

**A cluster of supercells developed around the Midnight hour and moved east as a line of thunderstorms in Tennessee dropped southeast. The two areas merged together and continued to move southeast. The thunderstorms produced damaging winds and large hail. Particularly hard hit was Jackson County where up to 3,000 customers were left without power. Power outages also affected 1,400 in Harvest in Madison County and 900 in DeKalb County. Several roads were blocked by fallen trees and utility lines.**

05/10/24 03:02 CST	75K	Tornado (EF0, L: 4.43 mi , W: 125 yd)
05/10/24 03:20 CST	0	Source: NWS Storm Survey

A tornado touched down along Hooper Cherry Road early on the morning of May 10th. Initial damage was to trees. Additional damage occurred along A.J. Register Road, where significant damage to outbuildings was noted. The tornado continued southeastward, crossing Cottonwood Road near County Road 33. Roof damage to farm buildings was observed here. Additional tree and roof damage was noted along Gene Terry Road south of Nobles Road . The tornado dissipated shortly after this point. The damage was consistent with an EF-0 rating and maximum winds of approximately 85 mph. Special thanks to Houston County EMA for assistance with this damage survey.

May was an incredibly busy month defined by heat, heavy rain, and severe thunderstorms. The main weather event occurred on the 10th when tornadoes and swaths of intense straight-line winds ravaged the Tallahassee area. A severe squall line plowed through parts of SE AL, the FL Panhandle and Big Bend early that morning and produced a total of 6 confirmed tornadoes. Three tornadoes went through Leon County, of which two, each rated EF-2 (max winds of 115 mph), simultaneously converged on Tallahassee. That same storm also was responsible for destructive wind damage in excess of 100 mph with the FAMU Weatherstem site reporting a peak gust of 84 mph, while the Tallahassee Airport gusted to 66 mph. The former surpassed the 83-mph record gust at KTLH from 9/11/1990! The resultant impacts were widespread power outages, downed/snapped/uprooted trees, and 400+ broken utility poles (exceeding Hurricane Hermine/Irma/Michael combined, per the City of TLH). Unfortunately, there were two storm-related fatalities in Tallahassee.

## Storm Data and Unusual Weather Phenomena - May 2024

Location	Date/Time	Deaths & Injuries	Property & Crop Dmg	Event Type and Details
In addition to the tornado, swaths of significant straight line wind damage were surveyed in Monroe County Alabama, including in the community of Vredenburgh where a large pine tree destroyed a residence (estimated 90 mph), near Buena Vista and Rikard's Mill where damaging winds uprooted and snapped trees (90 mph), along a private camp site east of State Highway 265 where numerous trees were snapped (100-110 mph), and near the community of Beatrice where additional trees were downed (90 mph).

	05/10/24 00:52 CST	0		Thunderstorm Wind (EG 61 kt)
	05/10/24 00:54 CST	0		Source: Public
High winds downed numerous trees on County Road 56.				
<b>MONROE COUNTY --- 0.9 WSW MIDWAY [31.71, -87.06], 0.8 SSW MIDWAY [31.71, -87.06]</b>				
	05/10/24 01:03 CST	0		Tornado (EF2, L: 0.56 mi , W: 1200 yd)
	05/10/24 01:04 CST	0		Source: NWS Storm Survey
A unique, long track multi-vortex EF2 tornado occurred from just south-southwest of Midway, Alabama, tracking east-southeast through Georgiana, Alabama on the morning of May 10th, 2024. This tornado began south of Midway west of County Road 5 where it quickly intensified to EF2 strength after crossing this road. The tornado wiped out an entire section of forest with numerous low tree snaps and uproots at this location. As the tornado continued east-southeast, it weakened briefly until reaching County Road 79. Here the tornado became a large multi-vortex with at least 4 to 5 distinct sub-vortices that spanned from just north of County Road 106 to just north of County Road 79 in Commerce, indicating the larger parent tornado vortex was upwards of 0.7 miles wide (1,200 yards). Several of the sub-vortices were around EF1 to EF2 intensity, and where several of these vortices merged into the center of the tornado path north of Commerce, nearly the entire forest sustained tree snaps or uproots. As the tornado continued southeast, it crossed County Road 33 where a potential satellite tornado or sub-vortex rotated in from the southwest. EF2 tree damage including numerous tree snaps or uproots were noted east of this location after the sub-vortex merged into the main tornado track. Periodic high-end EF1 to low end EF2 tree damage persisted through State Highway 106 and Hank Williams Road. Here the tornado broke down into at least 5 sub-vortices that once again were confined within a .7 mile diameter. Each sub-vortex was around mid to high end EF1 intensity with its own focused convergent damage path. Along the centerline of the tornado track, low end EF2 damage to trees occurred in the area. The tornado continued southeast towards I-65, flipping a manufactured home a couple times along State Highway 106 across from the gas station. The tornado became much narrower and weaker as it continued into Georgiana, periodically uprooting or snapping trees along its path. The final observable damage location was near and just east of Taft Skipper Road where a couple outbuildings were destroyed, and a small swath of trees were uprooted in a convergent pattern. This survey was able to be completed with the assistance of NASA SPoRT, NASAMSFC, NASA CSDA and the NASA Disasters Program providing high resolution Planet satellite imagery and with Digital Globe Maxar for high resolution Worldview satellite imagery. Without the availability of this remote sensing imagery, the true path length, width, track, and intensity of this tornado would not have been able to be determined.				
<b>CONECUH COUNTY --- 6.3 W NIXONVILLE [31.71, -87.06], 2.8 ESE NIXONVILLE [31.68, -86.91]</b>				
	05/10/24 01:04 CST	0		Tornado (EF2, L: 9.41 mi , W: 1200 yd)
	05/10/24 01:12 CST	0		Source: NWS Storm Survey
A unique, long track multi-vortex EF2 tornado occurred from just south-southwest of Midway, Alabama, tracking east-southeast through Georgiana, Alabama on the morning of May 10th, 2024. This tornado began south of Midway west of County Road 5 where it quickly intensified to EF2 strength after crossing this road. The tornado wiped out an entire section of forest with numerous low tree snaps and uproots at this location. As the tornado continued east-southeast, it weakened briefly until reaching County Road 79. Here the tornado became a large multi-vortex with at least 4 to 5 distinct sub-vortices that spanned from just north of County Road 106 to just north of County Road 79 in Commerce, indicating the larger parent tornado vortex was upwards of 0.7 miles wide (1,200 yards). Several of the sub-vortices were around EF1 to EF2 intensity, and where several of these vortices merged into the center of the tornado path north of Commerce, nearly the entire forest sustained tree snaps or uproots. As the tornado continued southeast, it crossed County Road 33 where a potential satellite tornado or sub-vortex rotated in from the southwest. EF2 tree damage including numerous tree snaps or uproots were noted east of this location after the sub-vortex merged into the main tornado track. Periodic high-end EF1 to low end EF2 tree damage persisted through State Highway 106 and Hank Williams Road. Here the tornado broke down into at least 5 sub-vortices that once again were confined within a .7 mile diameter. Each sub-vortex was around mid to high end EF1 intensity with its own focused convergent damage path. Along the centerline of the tornado track, low end EF2 damage to trees occurred in the area. The tornado continued southeast towards I-65, flipping a manufactured home a couple times along State Highway 106 across from the gas station. The tornado became much narrower and weaker as it continued into Georgiana, periodically uprooting or snapping trees along its path. The final observable damage location was near and just east of Taft Skipper Road where a couple outbuildings were destroyed, and a small swath of trees were uprooted in a convergent pattern. This survey was able to be completed with the assistance of NASA SPoRT, NASAMSFC, NASA CSDA and the NASA Disasters Program providing high resolution Planet satellite imagery and with Digital Globe Maxar for high resolution Worldview satellite imagery. Without the availability of this remote sensing imagery, the true path length, width, track, and intensity of this tornado would not have been able to be determined.
