

Preventing Medication Errors

Steps you can take to help

- 1. Make sure that all of your child's doctors and pharmacists know:**
- **Everything** your child is taking, including prescription and over-the-counter medicines, and dietary supplements, such as vitamins and herbs
 - Any allergies and adverse reactions your child has to medicines
 - Your child's weight and age
-

- 2. When your doctor writes a prescription for your child:**
- Make sure you can read it.
 - Go over the prescription with your doctor. Ask for information about your child's medicines in terms you can understand.
-

- 3. When you visit the pharmacy:**
- Ask your pharmacist any questions about the directions and other information on the prescription label.
 - Ask your pharmacist any questions about using the device for measuring your child's liquid medicine.
 - Be aware of what your medicine looks like.
 - Ask for written information about:
 - What is the medicine for?
 - How am I supposed to give it; how many times a day and at what time, with or without food, and for how long?
 - What side effects may occur? What do I do if they occur?
 - When will my child start to feel better?
 - Is the medicine safe to give with other medicines or dietary supplements?
 - What do I do if I miss a dose?
 - How do I properly store the medicine?
-

- 4. When you are at home:**
- Store medicines in a safe location that is high enough to keep away from young children to reach or see.
 - Use a medicine log to keep track each time you take or give medicine.
 - Keep track of the number of refills you have left so you don't run out of medicines. This will give you time to call the doctor for more refills if needed

If you have any questions about your medicines after you get home, call your pharmacist at: 206-987-2138.
